that the Eight Oil Company had holdings in 30-23. I don't know personally that the lands that the Associated were on and made [**2486**] application for were in 30-23. I have not even that actual information. I did not have a conversation with Mr Wible and Mr Klipstein in the streets of Bakersfield and in the Southern Hotel after that contest was initiated by the Associated Oil Company or in its behalf, against the Eight Oil Company and its locators, wherein those men asked why the contest was initiated against these lands as I was the geologist of the Southern Pacific Company and presumably of the Associated Oil Company. I did not say that the Southern Pacific Company and the Associated Oil Company did not know of my interests in the Eight Oil Company and that I had kept it a secret. I had no meeting with Mr S. P. Wible in the year 1904 in my office in San Francisco in which we discussed the location of the even sections which the Eight Oil Company afterwards acquired or claimed to own in Township 30 South, 23 East. I did not at that time advise Mr Wible to take up these lands with the proper number of associates for their petroleum values. I did not then arrange that Josiah Owen should take an interest which should be sufficient to protect me and that he should hold my interest in those mineral locations in secret trust for me. I had no conversation with Mr Wible in my office in which I informed him that Josiah Owen had reported to me on township 30 South, 23 East, that the lands were mineral lands and that I thought it would be well to have these

even numbered sections located next to the railroad sections which are involved in this suit. I never [2487] told Mr Wible at any time that I would be glad to have the even sections in 30-23 located for their mineral values and that you would want to be in on it. I never discussed the even sections of 30-23 adjoining the lands in this suit with Mr Wible before September, 1908. I had absolutely nothing to do with the location of these lands nor did I advise the location of any lands in either township 30-23 or 30-24. I know nothing whatever about the formation of the Eight Oil Company at the time it was organized. I did not instruct Josiah Owen at the time it was formed to see that I got my share of the capital stock of the company.

Q Well, did you at any time tell him to get your share of the capital stock?

A I didn't have to tell him to get it. He—

Q He understood it?

A He—that the—My share was paid for as we went along, and it was fully understood.

Q Fully understood that he was to get it for you?

A I was to have my part of his shares.

Q Yes. And he took two-ninths, didn't he, of the capital stock of that company?

A Two-eighths, wasn't it?

Q Two-ninths, one-ninth for you and one-ninth for himself?

A No sir.

Q Didn't he?

A No sir. [2488]

Q Did you get an equal amount of stock with him?

A I did.

Q You knew those sections of lands were taken because of their suppose mineral values, didn't you?

A They were not taken, as I understood it, with the original Eight Oil Company.

Q Well, you knew that whoever did take them took them for their mineral values under mining locations, didn't he?

A They took them for their speculative value.

They did unquestionably enter those lands under the laws of the United States as mineral lands or they wouldn't have had them. The first locations by the men who afterwards formed the Eight Oil Company were in sections 31 and 32 of Township 31-23 and in section 4 of Township 32-23. I don't think the lands in 31 were sold. I think they were under contract to Captain Matson of the Honolulu Oil Company. These lands were located in 1908 and subsequently it was found that there were other locators and a compromise was made by which these locators who afterwards formed the Eight Oil Company, received the north half of 31, the south half of 32 and eighty acres of the southwest quarter of 4. 4 is in Township 32 South, 23 East. The others were 31-23. The contract with Captain Matson's company was that they would drill the wells necessary to patent these lands for one of the holdings of 31. The south half of 32 was sold to some one else under the same conditions. I had no hand in the arrangements personally but I am simply telling what I heard had

been done. Some [**2489**] arrangements were made with someone else for patents for eighty acres in section 4 on the same terms of one half the property. The work on 31 and 32 of 31-23 was completed and patents were gotten and the one hundred and sixty acres in 31 were sold. The parties who drilled these lands were drilling for oil and they certainly did get it. Those were oil lands. I think that the one hundred and sixty acres that was sold by the Eight Oil Company was sold for $1500 an acre. The other land that was sold for probably as much. The total capital stock of the Eight Oil Company is $32,000 at a dollar a share. I owned a one-twelfth interest. After these sales the Eight Oil Company declared a dividend. I don't know exactly how much I got but I think it was over $20,000. All the holdings of the Eight Oil Company were taken up under the mining laws of the United States. I claim I have no information although I hold a one-twelfth interest in the total capital stock of the Eight Oil Company, that the Eight Oil Company claims to own any land in 30-23. My information is to the contrary and to the effect that the Eight Oil Company has no claim on any lands in 30-23. They have minerals claims in 30-24 which are in the Elk Hills, in the eastern part of the Elk Hills. I acquired my interest in the Eight Oil Company in this manner. In July or August of 1908 Mr Owen told me he had taken up these lands in 30-23 and 32-23 of which I have spoken and that drilling had been or was progressing in that part of the field; it would be necessary for the locators of these lands to get busy,

and asked me to go in with him in paying the assessments on those lands. I [2490] acquired my interest by paying every dollar as much as Mr Owen and exactly the same as every other man in the Company. I was not permitted to come in and share in those lands because of my geological advice and I did not begin advising Mr Wible before the patents issued in this case to take up the even sections in 30-23 adjoining lands in this suit. Not to my recollection did I ever discuss in my office in San Francisco before the fire in 1906 the mineral character of the even sections of land in 30-23. I don't remember ever having see Mr Wible in San Francisco prior to 1906. I don't know when the suit was instituted or whether I was in Bakersfield at that time or not. I didn't know that the Associated Oil Company had any suit against the Eight Oil Company in 30-23. As far as I have any recollection there is no truth about Mr Wible telling me in Bakersfield that a contest had been started by the Associated Oil Company and of his asking me as the geologist of the Southern Pacific Company why that suit was started. I did not at that time tell him the Southern Pacific Company and the Associated Oil Company knew nothing about my holdings in the Eight Oil Company and I have no personal knowledge of the suit or contest referred to, brought in behalf of the Associated Oil Company against the locators. I never met Mr Klipstein but once and I didn't, so far as I have any knowledge, talk with Mr Klipstein at that time in Bakersfield about the mineral character of the lands in 30-23. At

the time I met him it was on the streets of Bakersfield. He passed where I was talking with someone else and I was [**2491**] introduced to him. I had just come in from the field. I was standing at a machine and he passed and somebody introduced me to him and that is the only time I have ever seen him. Section 30 in 30-24 is one of the sections which was located by the men who formed the Eight Oil Company. I recall having a talk about that section. I recall the fact that a suit had been brought involving that section and my recollection is that it was told me they had receiver's receipts or had done the work or something. I don't recall just exactly what it was. I did not in connection with that talk tell Mr Wible or Mr Klipstein that the Associated Oil Company and the Southern Pacific Company did not know of my connection with the Eight Oil Company and that I didn't want them to know it. I never kept it a secret from those companies. As a matter of fact they did know of my connection with the Eight Oil Company and there is a letter in the files to show it so far as the Southern Pacific Company is concerned. Mr. Klipstein at that time on the streets of Bakersfield did not tell me about the prospects of the Eight Oil Company over there in 30-23 and I did not say that they looked good. Mr Hunt that was associated with me and Mr Owen was from San Francisco. He was interested in the holdings of the Eight Oil Company and put up the same amount of money that Mr Owen and I did and received one-third of Mr Owen's proportion of the total stock. Mr Owen had two shares

and he divided it into three parts. The reason I had Mr Owen hold a share for me and not hold it in my own name was that it was not taken for me originally. I did not say to [**2492**] Mr Wible and have a thorough understanding that Mr. Owen was to hold my share for me. Mr Owen went into this matter without any consultation with me and I didn't know thing about it for sometime after he had gone into it. I have no personal information as to how many sections of land the Eight Oil Company or the locators who formed the Eight Oil Company, or their predecessors in interest, located in the Elk Hills. They probably located parts of four or five sections. I have not any personal information regarding it. I had absolutely nothing to do with the taking up of the sections in the Elk Hills. I didn't know anything of it until after it was done. I was not interested in acquiring an interest in the Eight Oil Company holdings which were mineral lands. I was not interested in acquiring the holdings of the locators who afterwards formed the Eight Oil Company. I was helping Mr. Owen out in these three locations down here in 31-23 and 32-23. I knew nothing about the work that had been in contemplation on 30-24 until after they had gone into it; didn't even know that the Eight Oil Company would handle it until some time after they did handle it. I didn't know that the Eight Oil Company and the locators were the same people. Mr Josiah Owen told me in 1908 he had interests in some locations in 30-24. When you ask me if I discussed with any member of the Eight Oil Company

or any stock holder of that company the contests now pending in the United States Land Office the mineral locations which formed the basis [**2493**] of the Eight Oil Company's holdings in the Elk Hills, my answer is "I don't remember anything positively except a conversation I had with Mr Wible, I think some time last summer, in which he was telling me or showing me some samples of Fuller's earth and oil. That is the only conversation I remember with regard to it. This oil and Fuller's earth came off of section of 30-24, the lands of the Eight Oil Company. The Eight Oil Company are attempting to acquire patent to these lands in 30-24 under the mining laws of the United States for Fuller's earth, as I understand it. The land was located for Fuller's earth and petroleum also. They have money enough in their treasury from the sales of land to put up any expense in respect to those contests. Mr Owen in his life time never discussed with me, prior to patent, the probability that the selection of lands which formed the basis of the patent in this suit would be rejected by the Land Office because of the petroleum bearing character of the lands and that the odd sections involved in that application would be thrown back and opened to entry as a part of the public domain. I have no personal knowledge, whatever, that Mr Owen told Mr Wible to watch out for the odd sections because undoubtedly the railroad company could not maintain that application because the lands were mineral in character. I have not any personal knowledge of the trip which was made by Josiah Owen and

Mr Wible to Visalia to look into the matter of the survey of the lands in this suit, or of the trip made by them to San Francisco to the Surveyor [2494] General's office in respect to the same matter. I don't remember of Mr Wible ever being at my office in San Francisco before the fire in 1906 or at any other time. He has not been in my office repeatedly and discussed the location of the even sections in 30-23 with me nor has he discussed their mineral character. I regard Mr Wible as a truthful man. I have always found him so. I never stated to Mr S. P. Wible that I had a report from Mr Josiah Owen on lands in 30-23, which show these lands to be mineral in character. Not prior to these lands in 30-24 having been taken up by the locators did I ever tell Mr Wible at any time that I had a report from Mr Josiah Owen showing that the lands in the Elk Hills in 30-24 were mineral lands. I think it was in October 1908 Mr Owen wrote me that he had found quantities of Fuller's earth in 30-24. Fuller's earth is a mineral but not a mineral in the strict sense of the term. Mr Owen did not mention any actual townships in his report but merely mentioned he had found Fuller's earth on two or three sections on the anticline north of the lake and the fact that he located the lands in 30-24 is evidence that that is what he meant. When you ask me if Mr Wible and Mr Klipstein last summer in Bakersfield had not "jumped" me about this contest of the Associated Oil Company, my answer is "I don't remember meeting Mr Klipstein in Bakersfield. Mr Wible may have jokingly said something

about it, I don't know, but never in any seriousness whatever. I don't remember even such a—And, anyhow, the matter was not true, because my connection with the Eight Oil Company is a fully known fact to the Southern Pacific Company. It was so known [**2495**] to that company before this suit was commenced. After this suit was started and shortly after the testimony of Mr Haberkern and Mr Wible and Mr Klipstein, associates in the Eight Oil Company, I went to Bakersfield and looked over the files and papers of Mr Owen in connection with this suit as my files were not complete and I wanted to know if there was anything in Mr Owen's files in connection with the reports on these lands that I didn't have. I found there this letter of March 25th and some township plats and some copies of fragmentary reports on townships and some things of that kind that I had not in my files, or any memorandum of. I had copies of my correspondence with Mr Owen and I introduced here a mass of carbon copies from my Houston office relating to these California oil lands . My purpose was not to go up there to see whether Mr Owen had not inadvertently kept some copies of reports showing these lands in this suit to be mineral and I did not find any such papers as that. I am interested in the Buena Vista Land and Development Company. I own one-tenth of the capital stock of that company. That company owns a great deal of land which was taken under agricultural scrip, in the Buena Vista hills and vicinity. They bought from Mr Wible a scrip title to a quantity of land in there.

I think there is about five or six sections up there altogether and I believe that those sections of land which they have are oil lands. The Buena Vista Land and Development Company are endeavoring simply to get possession of the property they bought in buying the scrip title to the lands. I don't know anything about what kind of scrip [**2496**] it is. It is a matter concerning which I have no knowledge personally as I had nothing to do with it further than to pay my money in for stock.

Q Well, you know their lands, don't you?

A I know which the lands are, or did know, I couldn't state it on the map. But I know that there was—that they had section 10 and the southwest quarter of Section 4 under placer location or title by mineral location and patent.

Q Well, how about the other sections?

A The others, as I understood, they bought—that they had been taken up under some variety of scrip, and that the state had—in which the state was interested.

Q State scrip?

A State scrip.

Q Yes.

A And that the state had given them their rights as far as they had given it, whatever that may be, and they bought those rights from Mr Wible, and that afterwards it was found that they had to be listed, or something at Washington and patent issued in that way.

Q By Mr Lewers—Is that the same S. P. Wible that has been referred to?

A Yes sir; the same.

Q By Mr Mills—I am not interested where they got the scrip. I am asking you whether the Buena Vista Land & Development Company are not now attempting to acquire the title by patent by the use of state scrip? [2497]

A. I don't know enough about the way those things are operated to be able to answer that question definitely. I simply know they have been waiting for patents on that land.

Q. Well, you know that there is a contest initiated and pending against their holdings there, by an oil company or in its behalf, claiming that the lands are petroleum lands, now pending before the land office, don't you?

A. I have heard of such a suit. I know nothing of it personally.

Q. Now, regardless of where the Buena Vista Land & Development Company obtained scrip, in which I am not interested at all, why did it place such scrip upon what you now concede to be and knew at all times, did you not, as oil land?

A. So far as I know the Buena Vista Land Company didn't place its scrip on any land.

Q. Why did the Buena Vista Land & Development Company now seek to get a patent by the use of that scrip when you yourself say that that land is oil land and you know it?

A. The scrip was on the land, the land had been

adjudged by the United States surveyors as agricultural land, accepted by the state, and they bought that title. They are trying to make their title good.

Q. You justify it because the Surveyor General had returned it as agricultural land, then?

A. So far as anyone knew at the time, it was [2498] agricultural land.

Q. Well, is that so? Can't you answer that question?

A. What is that?

Q. I say you seek now to justify their action by the fact that the Surveyor General had returned those lands as agricultural lands?

A. I am not justifying their action. I am just telling you the fact.

Q. Don't you know the lands *which form of* this suit were returned in 1902 by the Surveyor General as mineral lands because of their petroleum values?

A. I do not.

By Mr. Mills—You are perfectly willing to receive the benefits of those scrip locations not conceded to be mineral lands, aren't you?

A. I had gone in there and bought any land at that time with that kind of title that I considered the title covered the land properly; I could try and make that title good.

Q. What title are you talking about, Mr. Dumble?

A. I say any title, any title that was a title to the land.

Q. Well, does the Buena Vista Land Company claim to have a title to the land?

A. I understand that they do.

Q. They simply filed scrip, haven't they, in an attempt to get a title?

A. No sir. **[2499]**

Q. By Mr. Mills—Mr. Dumble, don't you think that it is your duty as a stockholder in the Buena Vista Land & Development Company, now that you concede that those lands are petroleum lands, to disclose your belief to the United States Land Office where that contest is pending?

A. I don't consider that I have any duty whatever in the premises.

Q. You are after the patent, aren't you, for those lands?

A. I am a stockholder in the company. I have absolutely nothing to do with its management, nor have I ever had.

Q. Well, you have advised the company geologically, haven't you?

A. I have not.

Q. And you have attempted to sell their lands for them, haven't you?

A. I tried my best to get a sale made for them.

Q. So that you have dabbled a good deal in the affairs of that company, haven't you?

A. No, only to that extent, and that because it was brought to me by other people.

Q. Well, haven't you yourself taken up the matter with people on your own initiative to help dispose of those lands or those holdings which the Buena Vista

Land & Development Company have in their agricultural scrip?

A. I don't remember having done so. I remember two parties having come to me in regard to it. **[2500]**

Q. What parties were they?

A. The Associated Oil Company for one.

Q. Who else?

A. My recollection is that the—Mr.—Oh, I can't remember his name—Canfield, I think—no, that is not it; he was working with Captain Matson.

Q. Crandall?

A. Crandall, yes sir; that is my recollection now.

Q. Was that all the people that you broached on that subject?

A. That is all that I approached.

Q. You think it is perfectly right, then, for that company to attempt to maintain agricultural scrip on those lands when you as a stockholder and geologist know that they are mineral lands because of their oil-bearing character?

A. As long as they were taken up properly I think that they have as much right to maintain their rights to their title as they would if the patent had issued prior to their having bought it.

Q. And didn't you have some such freedom from responsibility, moral responsibility, when you, Mr. Dumble, proposed the selection of the lands in this suit under an agricultural grant, when you knew that they were petroleum lands?

A. I never proposed the application for lands in this suit, or had anything whatever to do with it.

Q. You throw the entire responsibility on Mr. Eberlein, do you? **[2501]**

A. Absolutely.

I don't remember the date that oil was first found in the Buena Vista Hills. I remember the bringing in of the Honolulu well, No. 1, in section 10 or 11 in 32-24 but I can't give the date. As far as I know that was the first well brought in. I remember it was in the winter subsequent to 1908. I don't know that there had been a discovery of oil in the Buena Vista Hills up to July 1, 1908. Prior to 1908 I regarded the Buena Vista Hills as an ideal spot for the accumulation of petroleum because of the structure of those hills. Their structure was apparently a dome and my information was that there were asphalt seeps on section 11, I believe it was, immediately adjoining the east line of section 10. I regarded the Buena Vista Hills as prospective oil; not positive. That particular place was based solely upon the structure and that indication in Section 11 and my opinion was based largely upon Mr. Owen's statement of the conditions. At that time I don't think I had been in the Buena Vista Hills themselves. I had only seen them at a distance. Mr. Owen had made a verbal report to me on the Buena Vista Hills and besides the report as to the structure and asphalt seep I don't remember now what other indications Mr. Owen told me about but I considered what he gave me as a good recommendation for prospective oil. I

also regarded his general information respecting the hills, and his belief from what he had seen in there. The subject of the employment of F. M. Anderson, as I recollect it, came up in my room in the Union Trust Building in San Francisco **[2502]** Mr. Anderson made application for a position under me bringing me a letter from Mr. Mills, at that time the Land Commissioner of the Central Pacific Railroad Company. That was in March, 1903, if I am not mistaken. Mr. Anderson was under Mr. Owen although they worked different fields largely. The land which was actually included in the proposed lease of August 2, 1904, to the Kern Trading and Oil Company according to my computation, was in the neighborhood of sixty odd thousand acres. Of this land Mr. Owen regarded twenty three to twenty five thousand acres as either productive oil lands, first class, second class and third class, and I have in my files a list which indicates where those twenty three thousand acres of land are. I recall the list of classified lands containing 93,311 acres to which my attention was called yesterday. That list was the result of a great deal of work done there by Mr. Owen and under his direction in the West side fields. I think the work was done in 1904 or the spring of 1905. I received files from Mr. Owen at different times but none that I have been able to identify. Search has been carefully made but we have been unable to find any classification in the files at any place.

RE-DIRECT EXAMINATION.

The letter which you show me was written by me on September 18, 1907, to Mr. W. F. Herrin. Attached to this letter is a list of lands for transfer from the Southern Pacific Railroad Company to the Kern Trading and Oil Company. The letter and attached list were offered in evidence and marked Defendants' Exhibit 159 and are as **[2503]** follows:

"Form 2103 919

SOUTHERN PACIFIC COMPANY

Office of File 110.

Consulting Geologist.

San Francisco, Cal. Sept. 18, 1907.

Mr. Wm. F. Herrin,

Chief Counsel, Building.

Dear Sir:—The original lease from the Southern Pacific Railroad Co. to the Kern Trading & Oil Co. for oil lands in Kern, Fresno and Kings Counties, which was drawn by your office in 1904 having been destroyed by the fire, and no copy of it being now in existence, Mr. Calvin instructs me to request that you draw up another lease, covering the same points as nearly as possible.

The original lease was for a period of ten years with the privilege of renewal so long as the production of oil continued.

The royalty was 10% of the gross production, oil used for development purposes excepted.

As some of the lands included in this lease were already under lease, the Kern Trading & Oil Co. took

them over subject to the conditions of such leases, agreeing to pay the S. P. R. R. Co. the amount of royalty named on such leases during their occupancy and operation by the original lessees. These are all of the general conditions that I can now recall.

The list of lands covered by the original lease has been enlarged in accordance with Mr. Calvin's instructions to cover all lands that we now believe to be [2504] probable oil lands, and the amended list is attached hereto.

Will you please give this your early attention in order that it may be put through as soon as practicable.

Yours very truly,

ETD-F E. T. Dumble.

Enclosure:

LANDS FOR TRANSFER FROM SOUTHERN PACIFIC RAILROAD COMPANY TO KERN TRADING & OIL COMPANY.

KERN DISTRICT:

Township 29 S., R. 28 E,	
N-½, N-½ of SW-¼,

The three expense accounts which are attached and marked Defendants' Exhibit 160, are my personal expense accounts for July, August and September, 1904. These expense accounts do not include the expenses of anyone besides myself. The treasurer's

voucher, 1130, dated October 22, 1903, was a payment to me of $500. This is the amount I carried in the field to make necessary cash payments there. At Sour Lake during the rush of business it was necessary to pay cash for day labor and also for hauling and incidentals. No part of that sum was expended for the personal expenses or trips of myself or Thomas J. Griffin. The traveling expenses of the individual officers or employees of the Rio Bravo Oil Company were paid on presentation of signed personal expense blanks similar to those introduced and vouchers made of those. There is not in any of these books any voucher made to me or to anyone in my behalf to cover any part or all of the personal, traveling or other expenses of Thomas J. Griffin on any trip that he made with me at any time. I never at any time paid any of the traveling expenses of Thomas J. Griffin nor did I arrange to have any expenses for any trip for him at any time to California paid. Mr. Markham left Texas for California about the first of April, 1904. I don't remember of his having returned to Texas until after his resignation from the Southern Pacific Company **[2507]** in the fall of 1904. I don't remember the month. I had correspondence with Mr. Markham in San Francisco in the month of September, 1904. I was not at Welsh or any other place with Mr. Markham in the presence of Thomas J. Griffin at any time during the time Mr. Griffin was employed by the Rio Bravo Oil Company. I made my last trip to San Francisco in 1903 arriving there on about the 5th of November and remained

there until the 12th of December when I went to Houston remaining there until the 20th of January, 1904. No one accompanied me on this trip from Houston to San Francisco on November 1, 1903. On that trip I came by the coast route. At that time on my visit to San Francisco I did not take up anything concerning the construction of a lubricating or refining plant at Welsh. My recollection of the first time when that matter was brought up was in the spring of 1904 about March or April, and when you ask me if I had anything personally to do with the negotiation of any contract between the Rio Bravo Oil Company and the Spindletop Power Company for the supply of oil my answer is, "I may have read the contracts over to see whether the specifications for oil were correct but so far as the contracts themselves were concerned I had nothing to do with them. Mr. Markham acted for the Rio Bravo Oil Company and Mr. Bass for the Spindletop Power Company in the negotiations of these contracts." My idea when I received this large map of 1902 which Mr. Owen obtained from the Land Department, was that it covered very much greater territory than any **[2508]** possible oil lands. I had information from Mr. Treadwell on that subject and also I had my own knowledge of the region from what I could see in traveling over it. Mr. Treadwell informed me that there had been a blanket reservation put on covering practically all lands owned by the company in the valley. Referring to the first list that was made by the Southern Pacific Railroad Company to the Kern Trading and Oil Com-

pany in 1904, royalties were paid to the Southern Pacific Company by the Kern Trading and Oil Company under that lease, the voucher being made regularly from the first of April, 1904.

RE-CROSS EXAMINATION.

I made Mr. Eberlein a statement on the first of every month showing exactly what royalties had been earned by the S. P. R. R. Company and approved a bill from the S. P. R. R. Company for such royalties for voucher by the Kern Trading and Oil Company. I made Mr. Eberlein a statement on the first of May, 1904, for all royalties that had been earned. It was sent to his office and a statement was made afterward that on the first of each month so far as I know. Not to my knowledge did I meet Special Agent Ryan when he was sent out by the United States Land Office at Washington to examine the lands. When you ask me if the attempt on the part of that company to acquire an agricultural grant of lands which I and my men knew to be mineral was the reason that I took it upon myself five days before the patent issued in this case to suggest in my letter to Mr. Bancroft that the papers covering the transfer, namely, the lease of lands in McKittrick and Coalinga [2509] districts from the S. P. R. R. Company to the K. T. & O. Company my answer is, "I have stated that I merely made that recommendation to Mr. Bancroft because of deference to Mr. Eberlein's wishes in the matter" and when you ask me why I was so keen about examining only patented land and demanded lists of land from the

Southern Pacific Railroad Land Department which showed only lands which had just been selected and not patented, also which were not even surveyed, and why I took the trouble to get those lands as I was not examining them, my answer is, "We didn't ask for them until some time after this." The only lists that we asked for was in connection with the general report that was asked for on lands at a subsequent time. When you ask me if I didn't receive a list from the Land Department of the Southern Pacific Railroad Company showing the lands which had been selected but still unpatented, my answer is, "Mr. Eberlein sent us that map but we didn't ask him for the unpatented lands. I did not at that time know that the Land Department of that railroad company had lists of lands marked "Patented lands", another list marked "Selected but unpatented lands", another list marked "Unselected unpatented lands" and another marked "Unsurveyed unselected lands", and when you ask me if I did not receive a list of lands in the McKittrick district showing that those lands in the Elk Hills were selected but unpatented, my answer is, "I received nothing whatever except that map accompanying the letter of October 8th. That map showed on its face that those lands were selected but still unpatented. It **[2510]** also showed lands which were unselected and even unsurveyed" and when you ask what I wanted it for if I was only concerned in the patented lands my answer is "I didn't want it; I didn't ask for it."

Q. It was sent in response to your request, was it not—and you so testified?

A. It was sent, in response to my request, showing the lands in—on the list of the Kern Trading and Oil Company, to which Mr. Eberlein objected as their not having patents for, and in one case, that we had included the McKittrick townsite; and we asked him to give us a map showing what it was that they had and didn't have, in order that we might get our list correct.

Q. You wanted to know what lands would inure to that company, didn't you, under an agricultural grant?

A. I did not.

Q. You didn't?

A. No.

Q. Then you wanted to know what lands would inure to it if you could select them as mineral and represent them as non-mineral?

A. I did not.

Q. Now, have you been able to refresh your recollection, so that your mind is still not a blank, upon the language which you used some three years after that conversation you had with Mr. Eberlein, when you stated, "Early in December we had a further conference on the matter and you explained that you were rushing certain lands for final patent and that the immediate execution of the lease showing our idea of what were oil lands might interfere **[2511]** with you and we agreed to defer the execution until that danger was passed." Have you now any recollec-

tion, out of the blankness of your mind, as to what you meant by that "danger"?

A. So far as the word "rushing" is concerned—

Q. I am asking you now about the "danger"?

A. No danger to us. It was the danger that he might have—

Q. A danger to the land agent who had to make the non-mineral affidavit is that what you mean? The danger of being indicted, perhaps? Was that what you had in your mind?

A. It was not.

Q. What danger did you refer to, if you have refreshed your recollection now?

A. I have not refreshed it any more than it was before. I have simply restated it.

Q. Is your mind still a blank?

A. I have not stated that it was a blank. I simply say that I don't remember any special danger in regard to it, except that it would interfere with his work.

Q. Mr. Dumble, you know now, don't you, if you remembered three years after that conversation, and placed it in cold type—you now remember what the subject of conversation was, and you do now remember, to be honest, that Mr. Eberlein warned you at that time—

A. He did not.

Q. —of the position you were putting him in, with your knowledge of these lands, when he was making a **[2512]** non-mineral affidavit?

A. He did not, or I had no knowledge of them as mineral lands.

The letter to Mr. Bancroft bears witness that Mr. Eberlein thought there might be some danger to him and for that reason I asked that it be held up as a matter of policy, such as he suggested. I did not know as a personal matter when I had that conversation with Mr. Eberlein that Mr. Eberlein believed that there was a danger in that matter on account of his having made a non-mineral affidavit.

Q. And you knew that if the United States land officers, having charge or jurisdiction in the premises, had seen your letter of 1907 to Mr. Eberlein, in which you say that "you agreed with him that it was best to hold up that list until that 'danger' was past", they would have inquired into that matter, if that letter had been written prior to the patent in this case?

A. That was the only danger, as I understood it—that they might inquire into the matter.

Q. Then, why didn't you at that time go and disclose—

A. They had passed on them as agricultural lands.

Q. They had never passed on those lands as agricultural lands, and you know it.

A. Well, I don't.

Mr. Lewers—And you know that your statement is incorrect. **[2513]**

Mr Mills—I know my statement is absolutely according to the facts.

Q. Now, when you knew that fact, why didn't you, as a citizen of the United States, having some

moral responsibility in the premises, disclose what you know to the United States Land Office, so that this fraud could not be perpetrated upon the government?

A. I had no knowledge that there was any mineral wthatever in 30-23—absolutely none.

Q. You knew very well, Mr. Dumble, that Mr. Owen had examined those lands and this anticline across the very lands in suit, and you knew that the structure was favorable for the accumulation of petroleum, didn't you?

A. The anticline cut no figure in it whatever, because there were no indications of oil connected with it.

Q. Didn't you say, Mr. Dumble, in your letter to Mr. Kruttschnitt, that there were a number of untested anticlines which showed good and favorable signs for the accumulation of petroleum?

A. I didn't include that one.

Q. What untested anticlines did you have reference to?

A. They were noted on that map of Mr. Owen's.

Q. Yes. And that was one of the untested anticlines, wasn't it?

A. Surely; but not one of those mentioned.

Q. Did you specifically designate which untested anticline you meant? **[2514]**

A. The letter itself.

Q. The letter shows there are certain untested anticlines. It didn't mention them, did it?

A. It showed the ones that he considered oil-bearing.

Q. Did you think it was your duty to the railroad company, knowing the facts as you knew them. and rehearsing them in your letter to Mr. Eberlein three years after the patent issued, where you acknowledged and conceded there was a danger, to withhold that information from the United States Land Office?

A. I had no duty in the premises to either party, because, so far as I was aware, the lands in 30-23 were non-mineral lands; and the only reason for my agreeing with Mr. Eberlein was the danger, I take it, that there would be a delay and a looking into the matter when we were trying to get the patents through.

Q. You knew that Mr. Treadwell had withdrawn all of the lands around the lands in this suit—

A. I did not.

Q. —on that map? You have so testified, Mr. Dumble?

A. I have not testified that Mr. Treadwell withdrew them.

Q. Well, you knew they had been withdrawn by the land department on the advice of somebody, didn't you?

A. I knew that a blanket reservation had been placed on practically all the lands owned by the company in the valley. **[2515]**

Q. And that all these lands, the lands in this suit, were completely surrounded by that reservation?

A. Yes; and lots of others.

Q. Now, why didn't you disclose that fact to the Land Office?

A. Well, the government makes reservations for many miles around anything that shows any mineral indications and holds them out. Why should not the railroad, or anybody else?

Q. When you discovered that there was an anticline running across those lands there, and knew of that break in Section 22, in 30-24, if you knew of it at that time, why didn't you then disclose that fact to the land office?

A. I was not in the employ of the land office. They had their own men examining those fields. I didn't know of a break in 30-24. And the anticline in 30-23 showed no indications of oil.

I have looked over the testimony of two or three witnesses in this case. I have had my own testimony and Mr. Wible's and Mr. Overton's and Mr. Eberlein's and Mr. Treadwell's and I also read Mr. Stone's testimony. I may have read the testimony of one or two others that I don't remember. If Mr. Stone testified that it was throguh my suggestion because of reasons best known to myself, namely, that these lands were oil bearing lands, that these lands were rushed to selection, my answer to that is that I made no such suggestion. I do not know that Mr. Stone had been in the service of the Southern Pacific Company for upwards of thirty years. I had no knowledge that Mr **[2516]** Stone, because of his long service, was retired on a pension and is still drawing a pension from the company.

I do not remember going out in a carriage with Mr. Markham from the field to the tank farm, in company with Mr. Markham and Mr. Griffin, as testified by the latter; Mr. Markham was in San Francisco; I could not have had any conversation at that time about Mr. Eberlein; I did not go to Welsh with Mr. Markham during the time Mr. Griffin was there; Mr. Markham was in San Francisco at that time.

No conversation ever took place between myself and Thomas J. Griffin as testified by him on the Southern Pacific property, or the Rio Bravo proper, at Sour Lake, in Texas about twenty miles northwest of Beaumont, wherein he says there was no one present, and that a conversation came over Rio Bravo well No. 107, discussing the depth that the first strata was struck, or the probability of striking a lower strata and the gravity of oil that we would find at a lower strata; I did not tell him about a low gravity oil of Kern County, or the Kern field, and Sunset and McKittrick, or say that I would like to find an oil of that lower gravity, that it would be much better fuel oil without so much danger of fire, or suggest that if well No. 107 quit flowing or quit producing that I was going to take it up with New York and get an appropriation to deepen that well or go down and make a test of it; it is not true that I said to Griffin that the California field was the coming field or that he ought to go there and get in, the territory was so large, that I knew every foot of it, and had been over it in person.

There is not a word of truth in Griffin's testimony that I said to him that the territory in those Califor-

nia fields was so large that one could hardly put down a hole without getting oil, or that we owned a great deal of it, or that we had not taken out patents on a great deal of it, but expected to do so. **[2517]**

The Texas oil was as fine a fuel oil as we could find, and that oil was heavy enough for all purposes. It was a fairly good producer; it was not a gusher; I think its total production in its whole life was not more than 40,000 barrels; its was brought in in December, 1903; it was a shallow well. As a matter of fact, we would not expect to get heavier oil by going deeper; that is contrary to the facts of the oil business; furthermore, had I wanted to deepen that, I had full authority to do so without going to New York for permission. I had not been over the oil lands of California in person.

No such conversation as Mr. Griffin relates ever took place between himself and myself on the train in the spring of 1904 or at any time, and I never had a conversation with Griffin in California; I never made any such statement to anyone; I was never in the Elk Hills or on the lands in township 30-23 that are in controversy in this suit; up to the time that the patents were issued there had never been a report made to me either by Mr. Treadwell, Mr. Owen or Mr. Anderson **[2518]**

JULIUS KRUTTSCHNITT, a witness called and sworn on behalf of the defendants, testified as follows:

DIRECT EXAMINATION.

I am the chairman of the executive committee of the Board of Directors of the Southern Pacific Company. From April, 1904, to January, 1913, I was director of maintenance and operation of this company and as such was in charge of its oil developments. From 1901 to April 1, 1904, I was a Vice President and assistant to the President of this company. I was located at that time in San Francisco. When I became director of maintenance and operation I was located in Chicago up to November, 1911, when my office was transferred to New York where it is at the present time.

While I was Vice President and assistant to the President, my powers were very much the same as when I was director of maintenance and operation. The chief difference between the two titles was that after 1904 my jurisdiction extended over the Union Pacific System as well as that of the Southern Pacific. While I was assistant to the President, who was Mr. Harriman, he occasionally instructed me to look after other matters that were foreign to operation and maintenance.

From 1903 on I had charge of the operations of the Kern Trading & Oil Company in California and of the Rio Bravo Oil Company in Texas. Both of these companies were really departments of the Southern Pacific Company for exploiting oil lands and pro- **[2519]** ducing oil for fuel purposes on the railroad. Mr. E. T. Dumble had active charge of the field work

of the Kern Trading & Oil Company and reported to me as his superior officer. In matters of detail he reported to local operating officials in Texas and in California. In the latter place he reported to Mr. Markham, to Mr. Calvin and also to Mr. Bancroft, who was General Manager for a short time.

While I was located in California my knowledge of oil field conditions came in a general way from the newspapers and in a more special way from the reports that Mr. Dumble made to me from time to time. I had no knowledge of the locations of land containing oil belonging to the company other than what I gained from the reports of my subordinates.

I had absolutely nothing to do with the patenting of lands to the Southern Pacific Company except this. I knew in a general way as it was a matter of common talk, that the patenting of the company's lands from 1902 to 1904 was very much in arrears. This work was in the hands of the Land Department but after my appointment as assistant to the President, and particularly after Mr. Eberlein was sent to California, I was instructed by Mr. Harriman to cooperate with Mr. Eberlein in the work he was sent out there to do. I was not in charge of his work, but was asked to assist him.

Mr. Eberlein was sent out to California to push the patenting of the company's indemnity lands and to investigate the workings of the two land departments then in existence. That of the Southern Pacific Railroad Company was in charge of Mr. Madden, and Mr. Mills was land agent of the Central Pacific.

I know of no special reason influencing the application for patent at that time on the part of the railroad company except that before Mr. Huntington's death there had been considerable complaint that the government was very slow in patenting these lands **[2520]** to the company. I often heard Mr. Huntington himself speak of this.

Referring particularly to the lands which are involved in this suit, the first information I now recollect ever having received concerning that land or any land in the vicinity, was in 1903. Mr. Harriman had instructed me to push the use of oil fuel on our locomotives. I had done a little in this direction during Mr. Huntington's life and Mr. Harriman was much impressed with the economies that might be effected in this way.

Under these conditions one of the first things to be done was to ascertain what lands the company had which were available for oil production. Mr. Treadwell, after the excitement resulting from the finding of oil in Southern California, had recommended for reservation from sale, nearly all of the indemnity lands in Southern California. It was evidence to me that this reservation was entirely too broad. It took the company's lands entirely off the market, so when Mr. Dumble was put in charge of this work, one of the first things I told him to do was to review these reservations of lands from sale and to make up a list of those the land department should not be permitted to sell.

I instructed Mr. Dumble to make this examination some time in 1903. The examination was made and maps showing the results were sent to me in the autumn of 1903. I remember receiving Mr. Dumble's letter of September 21, 1903, which is defendants' Exhibit No. 119. I don't have the original of that letter as it was left in my files in San Francisco and was undoubtedly burned.

I recognize defendants' Exhibit No. 156 as either the original or a copy of the map that was sent me with this letter by Mr. Dumble. I cannot say after this length of time that it is an exact copy but in a general way it shows the condition of our lands as I understood it at that time.

I think at that time there were some oil developments **[2521]** at or near the town of McKittrick; but this map is a map of the company's indemnity lands, classified as proven oil lands, probable oil lands and possible oil lands. There were no developments in this township 30-23 at that time,(and I had no knowledge of the existence of oil or the possible existence of oil in that township at that time other than the coloring on this map that shows a possibility in the extreme southwest section of that township. The section I am referring to is section 31.

In 1903, Mr. E. T. Dumble was under my direction and control and I may say in a general way he has been under my direction the entire time he has been with the company. But in 1903 he was under my immediate direction as I was the executive officer in

control of the oil production of the company during that time.

The Kern Trading & Oil Company was formed for the purpose of developing oil on lands owned by the railroad company and also for the purpose of collecting royalty oil on some lands that at that time had been leased to outsiders. In addition to this it was to purchase oil for the operation of the railroad. I do not know at whose suggestion the company was incorporated. It was really organized as a fuel oil development and purchasing department of the Southern Pacific Company.

At the time the Kern Trading & Oil Company was formed and began its operation in the field, there was absolutely no secrecy in connection with it. It was not formed for the purpose of prospecting or determining the character of land not yet patented to the railroad company. Such an idea never occurred to me, or, as far as I know, to any other officer of the company. There was no effort or intention, either under my direction or that of anybody else of which I had knowledge, to have Professor Dumble or any of his men examine lands not yet patented in order to obtain advance information concerning their oil character. Neither I nor Mr. Dumble as my subordinate, had anything to do with the patenting [2522] of lands.

There was absolutely no arrangement between myself, as the person in charge of oil production, and Judge Cornish, or any other official of the Southern Pacific Company or any of its subordinate companies,

by which I asked or suggested, directly or indirectly, that these other officials should acquire land from the government by patent because I had learned that it was oil land.

As I have said, I was put in charge of the development of oil. To facilitate this development the Kern Trading &Oil Company was incorporated in the early part of 1903. One of the first questions considered was what land this company should begin operating on and also what land should be reserved from sale. I wanted all such lands turned over to this company so as to have control over them and prevent their sale. We had had trouble some years before as the land department had sold extremely vaulable oil lands. I did not want that repeated and I wanted the lands placed under the control of Mr. Dumble so as to be positive that they could not be sold. This led to my telling him, I think in June, 1903, to have an examination made of lands owned by the company, so that we could take them off the market and, as far as their sale and development was concerned, take them out of the control of the land department.

It was my purpose to have all lands that were considered to be either actual oil lands, probable oil lands or possible oil lands, turned over to the Kern Trading & Oil Company so that it could control them. The policy of operation of the Kern Trading & Oil Company spoken of in Mr. Dumble's letter of September 21, 1903, was originally outlined by myself, and this letter and report is in response to a request I made for maps classifying the property. I remember re-

ceiving Defendants' Exhibit No. 123, Mr. Dumble's letter of November 20, 1903, enclosing a list of lands to be leased to the Kern Trading & Oil Company and I remember **[2523]** comparing that list with the maps at that time and finding that they agreed. When I received this letter I had not acquired any information concerning these lands in addition to what appeared in the maps and reports I have already referred to.

It is my understanding that the lands shown in this list accompanying Exhibit No. 123 were included in the lease that was subsequently drawn up. I remember receiving the various letters concerning the details of this transaction that Mr. Dumble has testified concerning. The papers in this transaction were sent to me for approval and I recollect that I approved them and instructed Mr. Dumble to proceed accordingly. Each important step in this matter was referred to me. After I decided upon the transfer to the Kern Trading & Oil Company I turned the matter over to Mr. Dumble to take it up with the attorneys and have it put in shape. I have no doubt that all of my correspondence was burned in the San Francisco fire.

I was in immediate charge of operations in California until April, 1904, when Mr. C. H. Markham took my place there. He remained as manager for possibly a year and was succeeded for a few months by Mr. Bancroft who occupied the place until we selected Mr. Calvin as a permanent general manager.

I think I probably learned first that land in town-

ship 30-23 had been selected and patent was being applied for at some time while this lease was in course of preparation. The lease was a long time in preparation and I knew that after Mr. Eberlein reached California there was some friction between him and Mr. Dumble, because the latter had recommended a lease that included one section in this township and Mr. Eberlein had an application pending for a patent to nearby lands. I do not know exactly when this difficulty arose, but it was during the time the lease was being considered. Mr. Eberlein protested against the lease and delayed signing it as land agent. He conceived the idea that the **[2524]** signing of this lease or the reservation of these lands was detrimental to something he was doing, and attempted to arrogate to himself the power of vetoing the lease.

I do not think that Mr. Eberlein made any objections to me in person, but I know through Mr. Dumble that he would not sign the lease. This difficulty with Mr. Eberlein did not have the slightest effect on my belief concerning the character of the lands in township 30-23. I had looked over the list of lands in this lease in connection with the map that had been furnished me. I had told Mr. Dumble to inspect these lands in the lease and report on them and I accepted the selection he made. It included only section 31 of township 30-23 and this was marked on the map as "possible" oil land. I did not care whether Mr. Eberlein signed the lease or not. The lands in the lease belonged to the Southern Pacific Railroad Company, every share of stock of which company was owned

by the Southern Pacific Company. The object of the lease was simply to put the matter in shape for the accounting department for bookkeeping purposes. As a matter of fact, we proceeded with the development of oil on a part of these lands regardless of Mr. Eberlein's refusal to sign the lease and he never objected to our doing so. I was acting under the orders of the president and he knew it.

I have my own belief about Mr. Eberlein's reasons for refusing to sign this lease. He had come out to California charged with certain duties by Judge Cornish, the Vice President in charge of lands. Judging from his talks with me he evidently thought that he was the king pin so far as anything relating to the company lands was concerned. He knew I had instructions to develop oil on lands of the company and I have never been able to trace his objections to signing the lease to anything except pique because he had not been consulted and considered himself slighted.

At the time this question arose with Mr. Eberlein, I **[2525]** did not dream that there was anything irregular in connection with the application to patent these lands. It is true there was a misunderstanding between Mr. Dumble and Mr. Eberlein, in consequence of which the latter would never sign the lease. But the lands then were not supposed to be worth anything for oil producing purposes, and they have never been considered worth anything since; and they are not worth anything now. The lands in township 30-23, I should say from what I have seen of that country, are fit for nothing except poor grazing or agricul-

tural purposes. From the information I have, however, I do not consider that they have any value for oil purposes. Most of my information concerning them is based on reports of my subordinates. I have been at McKittrick and from there I looked over that whole country. As far as I am concerned, with all due respect to California, I would not give fifteen cents an acre for the whole township; and if it were not for this imputation of fraud on the part of the officers of the Southern Pacific Company I would say today that every acre we own in the township might be sold for anything they could get for it, if they could find anybody foolish enough to buy it for what it is worth.

From the time I first acquired any information concerning lands in the immediate vicinity of those involved in this suit down to the present, and during all the time I have been in charge of oil production in connection with the Kern Trading & Oil Company, I have not at any time desired to obtain or considered as worthy of being obtained, any of the lands in township 30-23 for oil purposes. I did not at any time direct or suggest to Mr. Eberlein or anyone else that these lands be selected for patent. The only reference to me in connection with these lands seems to be a letter written me on October 12, 1903, by Mr. Chambers, our attorney in Washington. This letter is in evidence, and evidently refers to a letter that I write Mr. Chambers from **[2526]** New Orleans dated October 9, 1903, with which I sent him certain papers that I had re-

ceived from Mr. Eberlein who had asked me that the patenting of certain lands be expedited. As I have said, I had nothing to do with the patenting of lands, but had been instructed by Mr. Harriman to assist Mr. Eberlein in carrying out his work in California. When his letter came to me I evidently referred it to Mr. Chambers and asked him to help the matter along. In this letter Mr. Eberlein appears to have asked that special attention be given to the patenting of a selection list which he then expected to file. There was nothing known to me at that time requiring special attention to be given this particular list. But I knew that the patenting of the company's lands was very much in arrears and that Mr. Eberlein had been sent to California to expedite the patenting of lands in general. Therefore, if he had sent me a request to patent the North Pole I would have sent it on and asked Mr. Chambers to get after the department about it. In short, I had no idea when this letter was sent me where the lands referred to were. I did not have any information indicating that these particular lands were desirable. My understanding of Mr. Eberlein's request was that he was simply carrying out his general plan of patenting lands due to the Southern Pacific Railroad Company.

Mr. Eberlein was a nervous, energetic, strenuous person; everything he went into he went into apparently heart and soul, as if it was the only thing to be attended to; and this letter, and I have no doubt others, and oral requests made on me, to expedite this, that and the other, were made by him in furtherance

of the work he was sent out to do. In other words, he was thoroughly wrapped up in it and he did everything he could to push it along, and it occurred to me on numerous occasions that the selection of Mr. Eberlein had been extremely apt, because of his capacity for driving and pushing. **[2527]**

In this same letter from Mr. Chambers there is a reference to the fact that a special agent of the government by the name of E. C. Ryan had been directed to report upon certain lands in California. I was not acquainted with this man and do not have the slightest recollection of ever having seen him or had communication with him either written or oral. The first I ever heard of any examination of lands by him was evidently through this letter, but as I was simply helping Mr. Eberlein along, the letter produced little or no impression on me. I have only recently learned that Mr. Ryan did make such an examination.

Up to the time this suit was brought I never heard any suggestion that there was anything irregular concerning the selection of the lands involved. I have never considered that there was anything in connection with this transaction that required to be concealed and I don't know of anything that we have concealed. Down to the present time I have heard of absolutely nothing indicating that any fraud had been committed in connection with this selection by any offiical of the companies concerned. As I have already said, the land was not considered oil land in 1903 and 1904, the government evidently taking the same view because it patented the land to the com-

pany. It has been taken up and wildcatted by a number of concerns since that under the impression that there might be oil there, and I understand they have all given up in disgust.

I am not aware of any system of examination of lands not yet patented for the purpose of acquiring advance information concerning their oil character. No such thing was ever suggested to me by Judge Cornish or by any other executive official of any of the companies concerned. I have never known of its existence and have never had any reason to suspect it. I was in charge or control of the oil production of the Southern Pacific Company operating under direct instructions from Mr. Harriman and there [2528] has been no one over me in charge of that work.

The proposed lease we then had under consideration did not include any of the lands involved in this suit, but it did include section 31 in the same township which had been patented by this company prior to that time. I don't think that this lease of 1903 and 1904 was executed by Mr. Eberlein. He said he would never sign it and I don't think he did. I have some recollection of being in San Francisco several years later at which time the question came up concerning a re-examination of lands to be included in a lease to the Kern Trading & Oil Company, but I really do not know whether Mr. Eberlein ever did sign this lease or not. It was a matter of so little importance that I did not watch it. I don't think that the lease which is in force today includes any of the lands that are involved in this suit.

In 1902 while I was assistant to the President, I had no consultation with Judge Cornish. I went to New York four or five times a year or oftener to confer with Mr. Harriman at his request and was in touch with his views concerning California matters so far as my work was concerned. Mr. Harriman seldom answered letters and would let them accumulate and when he had a stack of them he would telegraph me to go to New York and we would take them up.

While I was in California in 1903 and early in 1904, Mr. Eberlein frequently dropped into my office and talked about the matters he was working on. He made no formal reports to me but he did discuss what he was doing. Up to the time I left California on April 1, 1904, I was the only official of the company with whom he could take up such matters.

The object of all of these conferences that Mr. Eberlein had with me was to generally discuss the situation in California as to the things he was trying to do. There were a great many of these conferences and the particular thing that I was to help him **[2529]** about was the investigation of the conduct of the land department and in pushing the patenting of lands. I had no concern or interest in having the patenting of these particular lands pushed ahead rapidly in any way because of their known or hoped-for oil character. I had no idea what lands Mr. Eberlein was applying for and never concerned myself with that at all. My interest was not in any way influenced by hope or wish on my part to acquire lands that should be used for the production of oil. We had at

that time a great many thousand acres of land in our possession which we thought was oil land which we thought was enough to keep us busy for a long time. On numerous occasions offers of land were made to the company which were said to be choice lands, but I always answered that we had enough of our own to keep us busy for years and that I didn't propose to recommend the acquisition of any more. I desire to state with all the emphasis at my command that I had nothing to do with the patenting of lands except as already stated and I had no interest whatever in pushing the patenting of these particular lands in dispute.

I was not concerned or solicitous about obtaining a patent to these particular lands as distinguished from any other lands. My interest was simply and solely to carry out the instructions of my superior officer, the president, to help matters along and that Mr. Eberlein was engaged in. Neither Mr. Eberlein nor Professor Dumble or anybody else told me in 1903 or 1904 that these particular lands involved in the present suit were desirable because they were in the vicinity of oil fields and might produce oil. No one ever told me that. I did receive maps sent in response to requests, many of which were marked possible oil lands, but these did not include any of the lands involved in this suit. Until I heard of some of this friction between Mr. Eberlein and Mr. Dumble to which I have already referred, I had no idea that Mr. Eberlein was trying to patent any lands any-

where near [2530] the lands that had been even examined by Mr. Dumble and his assistants.

I did not see defendants' Exhibit No. 157, the map which you say Professor Dumble testified was sent him in 1903 by Mr. Owen, until some time in 1912, when Mr. Dumble showed it to me. The date, March 25, 1903, in pencil on that map was put there by me at that time to indicate the date of the map. If I had seen this map in 1903 and had also known at that time that Mr. Eberlein was asking for a patent to lands in township 30-23, I would not have thought that his application was irregular. The legend on the margin of this map shows a yellow square and opposite it the words "land supposed to contain oil" and none of this yellow color appears in township 30-23. The anticlinals represented on this map running through the south half of township 30-23, would not have led me to believe that the application was irregular as the legend on the map distinctly states that the lands supposed to contain oil are colored yellow and there is none of this color anywhere near the anticlinals in that township. My understanding is that an anticline is the ridge of a hill and that its existence does not mean that there is necessarily oil. There are other anticlines shown on this map which are colored yellow, but the one in township 30-23 is not.

If it had been my purpose in 1903 to fraudulently obtain a patent to the lands involved in this suit in township 30-23, it would have been the height of folly for me to have advised or permitted the execution of a lease to the Kern Trading & Oil Company, including

section 31 in that township and other sections adjoining section 31.

There was no plan on the part of the railroad company to obtain patents to lands near known oil fields in the hope that lands so patented would turn out to be oil land. There was never any thought of that sort; still less any attempt made. I don't **[2531]** think that any of the employees of the company under my supervision in the oil development department could have had any part in such an attempt without my knowing it sooner or later, and I have never heard the slightest suggestion of their being engaged in anything of that sort. In the latter part of May 1912, I read what purported to be an interview given out by the Attorney General in which it was suggested that the higher officers of the Southern Pacific would be shown to have been involved in fraudulent entries of oil lands. There was absolutely no truth in that statement.

Cross-Examination.

I do not know whether Mr. Eberlein's selection of the land involved in this suit was the first one that was made by him. I was not concerned with the question of patenting other than that I on one or more occasions did forward letters in which he requested that the patenting of lands be expedited.

My attention has been called to the Chambers' letter of October 12, 1903. In forwarding this letter I did not pay any attention to the location of the lands, my object being simply to assist Mr. Eberlein.

I had been in McKittrick prior to that time on several occasions beginning probably shortly after 1895,

but I cannot give you the dates. I remember being there with Mr. Treadwell but I cannot specify the year.

In 1903 and 1904 I was a director and second Vice-President of the Southern Pacific Railroad Company and as I recollect it, I held these positions for several years before I left California. But as such officer I had nothing to do with the land matters of that company except to the extent I have already testified and it is not true that I had immediate charge of its land affairs.

When the geological department of the Southern Pacific Company was organized it was the understanding with our geologist **[2532]** that he should examine from time to time any and all lands owned by any of our railroad companies. It is possible that I directed Mr. Dumble to examine lands owned by the Southern Pacific Railroad Company as early as 1902 and I may have done the same thing with Mr. Treadwell, his predecessor. I have no recollection of this, however. I do not remember ever giving any orders to Mr. Owen and don't think that I did as I made it a rule not to give a man orders except through his superior officer. I have no doubt talked to Mr. Dumble about these matters but I don't think I ever gave Mr. Owen any orders direct.

It is also possible that I may have requested lists of land from the land department of the Southern Pacific Railroad Company. And it is possible that on some of these maps unpatented areas may have been included, but that was not because of any request of

mine. I remember seeing Mr. Owen in my office some once or twice but I do not recollect what he came to my office for.

I don't remember going in to the oil fields with either Mr. C. P. Huntington or Mr. H. E. Huntington. Mr. C. P. Huntington died in 1900. Mr. H. E. Huntington had charge of the lands of the Southern Pacific Railroad Company up to the time Mr. Harriman assumed the presidency of the Southern Pacific. I do not have the least recollection of meeting L. G. Sarnow, who you say testified that he had met me in the old field with Mr. Huntington.

Before Mr. Dumble took charge of operations in the oil field, Mr. Treadwell was developing oil for us and he reported to me concerning his work. I had considerable confidence in him at the time and I have never had any cause to abate any of this confidence. Mr. Treadwell was a fairly good oil expert for his time. He was engaged by me in California and was later asked to go down to Texas to see if we could get some oil wells there for the use of the company. He bought two or three pieces of land for us at Spindletop in Texas and I know he bought other pieces which we **[2533]** did not care to take over and which he retained himself. He also bought some small pieces of land for us near the town of McKittrick in California. He bought these in his own name, no doubt to cover up the fact that our company was purchasing the lands. All of these purchases were referred to me and I did not approve all of these that he made and he afterwards kept some of the lands for himself. There

was no secrecy, however, about the fact that he was the oil expert of the company. There never was any question or difficulty with Mr. Treadwell concerning the purchase of these lands or concerning the money used by him. We have a good accounting system and I know that we did not pay for any lands that we did not receive.

I do not believe that I ever directed Jerome Madden, the land agent of the Southern Pacific Railroad Company, to withdraw from sale land in Kern County which I believed to be valuable for petroleum. Such orders were given to Mr. Madden quite frequently but not by me as I had nothing to do with him or his department. I would write letters to Mr. Harriman stating what lands I thought should be reserved and he would either pass the letter to Mr. Madden or in some other way would have the reservation made.

Neither Judge Cornish nor Mr. Eberlein had anything whatever to do with the work that Mr. Harriman had instructed me to do, which was to get the Southern Pacific locomotives burning oil just as quickly as I could. There was no effort to keep Judge Cornish or Mr. Eberlein in the dark about the operations of the Kern Trading & Oil Company. There was no darkness, there was no secrecy, there was no intimation of fraud until ten or twelve or thirteen years after this company was formed. There was no reason why Judge Cornish and Mr. Eberlein should be consulted about the affairs of the Kern Trading & Oil Company. Mr. Harriman had instructed me to develop oil and to use it on the locomatives. The details

by which these lands were to be transferred were no doubt [2534] decised by the Law Department. I don't know at that time just what the reasons were, but at any rate it was determined to form the Kern Trading & Oil Company to develop oil, to purchase oil and to handle existing leases. The Southern Pacific Company controlled all of these lands and the sub-lease to the Kern Trading & Oil Company was only made for bookkeeping and accounting purposes. There was never any secrecy about it.

It was not necessary to get Mr. Eberlein's signature to this lease, although it was desirable as a matter of form. I considered it of very little importance whether Mr. Eberlein signed the lease or not and in fact we proceeded with the development of oil regardless of the fact that he refused to sign the lease.

As I have stated, it is my impression that Mr. Eberlein refused to sign this lease because of pique, owing to the fact that he had not been consulted and considered himself slighted. It is also probable that owing to the fact he was charged with the selection and patenting of lands he felt that the leasing of adjoining lands for oil purposes might throw some doubt on his selection, just as a man might feel who desired to acquire farming lands from the government and whose tenant was discrediting his representations to the government by carrying on mining operations on adjacent land.

I do not think that I ever saw the letter written by Mr. Eberlein to Judge Cornish dated September 3, 1904, appearing at page 1775 of the transcript.

Taken in connection with other parts of the letter, the part that has been referred to warrants the conclusion that Mr. Eberlein was piqued. The latter part of the letter was evidently intended to excite some fear in the mind Mr. Cornish, as he had evidently tried to excite fear in the minds of Mr. Dumble and others, that if this lease was persisted in it would get us in trouble with the government. I do not think that Mr. Eberlein had just cause to protest against the activity of Mr. **[2535]** Dumble examining lands for their oil character which were not yet patented as I do not believe that any such thing occurred.

It was none of Mr. Dumble's business to examine unpatented lands. But if he did so I think it is quite natural that Mr. Eberlein should object. The assumption that Mr. Dumble did make such examinations is altogether hypothetical, but if he did so Mr. Eberlein's fear of being embarrassed in the land office in getting patents was quite natural. He had had experience of this sort because the land office had, in 1900, kept back a large area of lands and delayed patenting them for several years because of suspicion that there was oil on them and after this long delay they finally issued the patents. If I had known that Mr. Dumble was doing anything of that kind I would have stopped it.

I do not think that the map sent Mr. Dumble by Josiah Owen with his letter of March 25, 1903, indicates that Mr. Dumble was making examinations of unpatented lands. The identical indication on this map of anticlinals running outside of the company

lands does not show that such examinations were made. I did not see this map until 1912. I have no recollection of seeing a map that represented anticlines on its before that time.

Reverting to the question of the authority of the Kern Trading & Oil Company to operate on lands of the Southern Pacific Railroad Company without the lease being signed by Mr. Eberlein, I will say that according to my understanding, this was done entirely within our legal authority and I am convinced that I had the right because nobody ever objected to our operating on the lands. Mr. Eberlein objected to signing the lease but that was all. The Southern Pacific Company owned the stock of the Southern Pacific Railroad Company and that carried the ownership of everything that the latter company owned. I have explained that I was acting under the directions of the president of both of these companies and I did not attach any importance then nor do I now, **[2536]** to the fact that Mr. Eberlein did not sign the lease.

Referring to the letter which Mr. Dumble wrote Mr. Bancroft on December 7, 1904, speaking of a conversation he had with Mr. Eberlein, I will say that in my opinion this was a perfectly proper letter and I think Mr. Dumble would have been unreasonable if he refrained from respecting Mr. Eberlein's objections. I should have said the same thing if Mr. Eberlein had told me that the lease was embarrassing him in anything that he was doing. I did not know anything about the conversation between them, referred to in this letter, although Mr. Dumble may have sent

me a copy of the letter at the time. I consider the conversation of very little importance.

If, as you say, it is testified Judge Cornish advised the keeping of the papers regarding the execution of that lease in a separate file and decided to burn or destroy his part of the correspondence, the information is interesting and curious. I know nothing about it and Mr. Eberlein never told me anything about it and I cannot conceive of any reason why Judge Cornish should have destroyed the papers or why he should have told Mr. Eberlein that he did.

The later lease of December 12, 1907, appears to have been signed by Mr. E. E. Calvin as an officer of both the Southern Pacific Railroad Company and the Kern Trading & Oil Company. In 1903 I was myself an officer of both companies and might have myself executed that lease on behalf of one company and accepted it for the other, which is apparently what Mr. Calvin did in 1907. I do not see how any question whether this would be lawful or not comes in as nobody could object except a stockholder or bondholder. There was no stockholder to object because there was only one, that is the Southern Pacific Company, and as to the bondholders, they have all been paid off.

I have repeatedly said that this lease was not kept **[2537]** secret and I don't know why it was not recorded, but my opinion is that it didn't make a particle of difference whether it was recorded or not. It was unnecessary to have any lease at all except for bookkeeping and accounting purposes and to prevent

the land department from selling lands that the company owned and which we wanted to develop for oil.

I paid a great deal of attention to the preparation of the papers in connection with this transfer to the Kern Trading & Oil Company, but this was not because I regarded the lease itself as important. I no doubt hurried the matter up, through a habit I have that whatever is on my desk unattended to I want wound up and gotten out of the way. I was anxious that the development of oil should proceed with all due diligence, but I can only repeat that I never attached any great importance to the lease, and knew, at the time, that the mere preparation of the lease, or the refusal to sign the lease, would not have any effect on our developing oil. But it is like any other matter —I have a great many matters of detail which I am anxious to have closed up because they ought to be closed although of no great importance.

When I received the Chambers' letter of October 12, 1903, I paid no attention to the lands involved and simply acted as an intermediary to use the influence of my office with our attorney in Washington to get him to comply with Mr. Eberlein's request. At that time I had no idea where the lands were or what the object of hastening the patent was, except that I knew that Mr. Eberlein had been charged in a general way with expediting the patenting of all unpatented lands. A description in this letter of lands by section and township numbers would produce no impression on my mind as to where the lands were as I cannot now tell you what township McKittrick is in and it would

be necessary for me to locate any such lands by reference to a map. [2538]

I have no doubt that when I got Mr. Eberlein's letter I sent it on to Mr. Chambers and when I got his reply of October 12, 1903, that I sent it to Mr. Eberlein. If I had ever paid any attention to this letter the information in it to the effect that the government was sending Mr. Ryan to make an examination of the land, ought to have convinced me that there was no fraud in the matter. Besides the Kern Trading and Oil Company the Southern Pacific Company was operating the Rio Bravo Oil Company in Texas, which is the oil department of the Texas companies, and the East Coast Oil Company in Mexico.

It owns a little over fifty per cent of the stock in the Associated Oil Company, operating in California. It owns stock in the Reward Oil Company, and perhaps in other small companies in the McKittrick that was bought by Mr. Treadwell. He could not get the property and he bought stock in those companies for the purpose of helping out our oil supply.

Q. Now, the Southern Pacific Company acquired its control by stock ownership in the year 1907, did it not?

A. That I don't remember.

Q. Or 1906, about, to the best of your recollection?

A. No. My recollection is that the Associated Oil stock was bought by the Southern Pacific as long back as 1903 or '04, when I was in California. I don't know

when they acquired control. That is a matter that I had nothing to do with.

Mr. Mills—Now, I would like to offer in evidence, without taking any of the time of this witness, just these pages referring to the Associated Oil Company.

The Witness—Well, we will substitute others.

Mr. Mills—I won't take this away; just have it copied into the record.

The Witness—I think we have some unbound copies of it we can give you? **[2539]**

Mr. Mills—I offer pages 6 and 7 of the manual No. 9, for 1911, in evidence. Also, page 8, with reference to the Associated pipe-line. And, from manual No. 10, of 1912, I offer pages 6, 7 and 8, all of which I will read into the record as follows.

Mr. Lewers—I desire to object to the offer, on the ground that the matter offered is irrelevant to any issue in this case, and on the further ground that it is not cross-examination.

"MANUAL NO. 9-1911 SOUTHERN PACIFIC AND AUXILIARY COMPANIES, JANUARY 1, 1911.

(page 6)

Associated Oil Company.

Incorporated, California, October 5, 1901, for 50 Years.

Annual Meeting Oil Center, Cal., first Tuesday in April.

Notice to be given ten days previously by publication **[2540]** in one or more newspapers published in

the County of Kern and in the City of San Francisco, or in writing signed by the President and delivered to each stockholder.

Regular meetings of Directors, Oil Center, first Tuesday of April and October, without notice. Special meetings, at call of President in two days' notice —usually held first Tuesday of each of the remaining months.

Fiscal year closes December 31.

Capital stock: authorized and issued, $40,000,000. Shares, $100. each.

Funded Debt.

First Mortgage Gold Bonds: authorized, $5,000,000; outstanding, $2,384,000; dated August 1, 1902; due August 1, 1922. Interest, 5 per cent., gold; payable February and August. Trustee, Union Trust Co. of San Francisco.

First Refunding Mortgage Gold Bonds: authorized $25,000,000; outstanding, $10,712,000; dated January 15, 1910; due January 15, 1930. Interest, 5 per cent., gold payable January 15 and July 15. Trustee, Union Trust Co. of San Francisco. Directors (11), elected February 28, 1910:

W. A. Sloan, Treasurer (Mar. 25, 1909) ..... "

E. T. Morris, Manager,.....San Francisco."

Thereupon the witness continued as follows: **[2547]**

I never heard that Mr. Dumble advised his associates to locate even sections adjoining the lands in this suit. I never heard that Mr. Owen advised Mr. S. P. Wible or others to locate the even sections adjoining these lands in the Elk Hills for petroleum and I could hardly believe that he did because the map, Defendants' Exhibit 157, he prepared, indicates that these lands were of no value for oil. On that map he indicates lands supposed to contain oil by yellow coloring and did not color any part of township 30-23 in this way, but he did color one section and two quarter sections in this township in another way to indicate a possibility of oil. He did not confine this coloring to patented holdings of the company as there are a number of even-numbered sections on this map that are colored yellow. I think that probably one of the objects of making this map was to show lands that should be reserved from sale and the legend bears this out. My understanding is that the map represents a study made by Mr. Owen of oil indications and geological features in that part of California and it shows some of the lands owned by the railroad company and some that it did not own.

As I remember it, this recommendation of a reservation was in continuance of the policy Mr. Treadwell had recommended and in compliance with instructions that I gave the employees in the oil department as it was called at that time, to inform me what lands owned by the company they thought should be reserved from sale. I was afraid that the land department would let these get away from them

as they had lands in the Bakersfield district which were sold at $2.50 an acre while Mr. Madden was land agent.

I cannot assume that Mr. Owen believed that the lands in township 30-23 were valuable for oil in the light of this map. He made other maps which were sent me in September, 1903, which went over the whole matter and in these he dropped from consideration the quarter sections in sections 17 and 19 and evidently **[2548]** thought they were of too little value to notice. On these maps he recommended the reservation of only one section in that township. Mr. Owen is dead; his reputation was valuable to him, no doubt is to his family. I have never had the slightest reason to doubt Mr. Owen's fidelity, honesty and reliability.

The testimony of Mr. Gorge A. Stone in this case, to which you have referred, would have very little effect on my opinion, as I understand he is very old, very infirm and a physical wreck. I think he is a pensioner of the Southern Pacific Company now, but I did not know that until it was mentioned in this suit. If he is pensioned his pension is based on a fixed percentage of his former salary.

I received a letter from Mr. Stone dated January 8, 1908, Plaintiff's Exhibit 5-N, enclosing a copy of a letter of the same date to Mr. E. E. Calvin, in which he complained of being dismissed by Mr. Eberlein and asked for an investigation and that he be transferred to some other department. I later received a letter from him dated March 23, 1908, in which he complained that Mr. Eberlein had forced him out of his

position as Assistant Land Agent, and said: "I served the company faithfully and well many years, and hoped that its interests would always be mine, but if a hearing and fair treatment are not accorded me without further delay my services will be at the disposal of the Newspaper press, the United States Attorney General and others."

Attorney for the Government thereupon introduced in evidence and read into the record, a letter dated March 23, 1908, addressed to J. Kruttschnitt by George A. Stone, which heads as follows: "Berkeley, March 23, 1908. Mr. J. Kruttschnitt, San Francisco, California. Dear Sir:—On January 8, 1908, I addressed you at Chicago enclosing copy of a letter I had that day sent to Mr. E. E. Calvin relative to action taken by Mr. Eberlein in forcing me out of my position as assistant land agent. To this [2549] letter Mr. Calvin replied briefly that he had no jurisdiction over the affairs of the land department, and could offer me no other employment.

On February 14, 1908, I addressed a letter to Mr. Eberlein (copy enclosed herewith) suggesting retirement if my services were no longer desired by the Company. To this letter no reply has been received.

I served the Company faithfully and well many years, and hoped that its interests would always be mine, but if a hearing and fair treatment are not accorded me without further delay my services will be at the disposal of the Newspaper Press, the United States Attorney General and others.

Trusting that you will be able to give this matter some attention while in San Francisco, I remain, Very respectfully yours, Geo. A. Stone 2635 A. Channing Way, Berkeley, Cal. Telephone Berkeley 1825"—which was marked "Plaintiff's Exhibit 5 L. Also, a letter dated February 14, 1908, addressed to Charles W. Eberlein by George A. Stone, which reads as follows: "Copy 2535 A. Channing Way, Berkeley, Cal. February 14, 1908. Mr. Charles W. Eberlein, Acting Land Agent S. P. R. R. Co. James Flood Building San Francisco, Cal. Dear Sir:—Will you kindly advise me whether the Company is willing in any way to show its appreciation of my faithful service of over thirty-five years. If the Company has no further use for my services, as would appear from recent correspondence with yourself and other officials, it seems to me, that as I have nearly doubled the length of service required for retirement, I may properly be placed on the shelf with disabled and superannuated veterans. Thanking you in advance for your kindly offices in my behalf, I remain, Yours truly Geo. A. Stone."—which was marked "Plaintiff's Exhibit 5 M." Also, a letter dated January 8, 1908, addressed to J. Kruttschnitt by George A. Stone, which reads as follows: **[2550]**

"Dear Sir: I enclose herewith copy of letter mailed today to Mr. Calvin asking for transfer from Land Dept. to other service. As land examiner and asst. land agent I have obtained a knowledge of the lands and records not possessed by any other official or employe of the company, but not-withstanding this,

and though I have for several years borne a large part of the burden, Eberlein has seen fit to force me out. I think the quality of my work and the confidential character of my employment in land department indicate that the best interests of the Company will be served by not turning me down after long and faithful service, Mr. John D. Isaacs has known me for many years. Yours respectfully Geo. A. Stone 169 Tenth St Oakland, California."—which was marked "Plaintiff's Exhibit 5 N." Also, a letter dated January 8, 1908, addressed to E. E. Calvin by George A. Stone, which reads as follows:

"Dear Sir:—Have received a letter from the Acting Land Agent of the Southern Pacific Railroad Co. advising me that my resignation as Asst. Land Agent was accepted, to take effect December 31, 1907. As I have not tendered my resignation, and am not aware of any good cause for dismissal, it would appear that I am to be dropped to satisfy the whim or prejudice of an erratic official, and as this is not the kind of treatment usually accorded to employes by the Southern Pacific Company, I hope that you will, in fairness to me, and for the best interests of the Company, carefully investigate the matter and arrange for a transfer to some other employment. I commenced service as a flagman with engineering party of Central Pacific R. R. Co. July, 1865, and have been in active service of the Harriman System over thirty five years, during that period serving as engineer on reconnoissance, location, construction and maintenance under Mss. Montague, Clement, Curtis and Hood, and for

the past ten years in the Southern Pacific Land Dept as land examiner under Madden and Asst. land agent under Eberlein. **[2551]**

Recent illness and death in my family have prevented me earlier submission of the matter. Yours respectfully Geo. A. Stone 169 Tenth Street Oakland, California.

Copy to Mr. Kruttschnitt

Copy to Judge Cornish"—which was marked "Plaintiff's Exhibit 5 O".

When I got these letters, I could only guess at what Mr. Stone meant as he did not refer to anything specific. As the matters he mentioned did not concern me I referred the papers to Judge Cornish. I regarded the letter as impudent and cryptic, but I did not have him peremptorily discharged because I had no jurisdiction over him or Mr. Eberlein.

Judge Cornish was Mr. Eberlein's superior and had supervision over the land department of the Southern Pacific Railroad Company. Mr. Eberlein was sent to California for the purpose of expediting the patents to which the railroad company were entitled and also to investigate the conduct of the land department. Naturally we suspected that something was wrong when we found that the company's lands in the Kern River district had all been sold at grazing land prices. Apparently everybody knew that there had been an oil discovery there before we did and the result was that these lands were sold for a mere pittance. It was part of Mr. Eberlein's duty to investigate these departments for dishonesty or graft, which I am very

glad to say he didn't find. It was stupidity—nothing worse.

As I say, Mr. Eberlein was in a different department and our relations were cooperative only. If I had known at that time that the government had withdrawn these lands from patent because they were suspected to contain petroleum, I certainly would have considered that the government's interests were amply protected when they sent Mr. Ryan there to examine these lands. He evidently reported that the lands did not contain oil and a patent **[2552]** was issued to the company. I assumed naturally, that Mr. Ryan, being an officer of the government, was competent and his opinion should be relied on. I am here today under the imputation of fraud based on the opinions of other officers of the government.

RE-DIRECT EXAMINATION
of
JULIUS KRUTTSCHNITT

When I received Mr. Stone's threatening letter I replied to him that I had no jurisdiction over the land department and that I was referring his letter to Judge Cornish. I wrote the letter saying: "Please consider the matter referred to you for such disposition as may to you seem proper." If I had been aware of any irregularity affecting Professor Dumble or my department in connection with this matter I should probably have referred these letters to Mr. Dumble and his people and asked for an explanation. The Stone letter meant absolutely nothing to me,

however, and I attached no importance to it as my action at the time shows.

I probably took the first Stone letter with me on a trip to New York because on February 13, 1908, I wired Judge Cornish, saying: "You were to advise me further in regard to George A. Stone." And again on the 19th of the same month I wired him from Chicago asking him to let me know what the trouble was with Stone. On February 24th he wired me, saying, "As near as I can judge George A. Stone was dropped in the interest of economy and because he was no longer fitted for the kind of work he preferred to do."

I cannot remember at this time any conversation with Judge Cornish about this matter and I attached no importance to it.

I had nothing to do with the pensioning of Mr. Stone. The pensioning of superannuated veterans, as he calls himself, is[2553] handled entirely by the local pension board which is located in San Francisco. If Mr. Stone was entitled to a pension, granting it was no favor to him as he was being granted rights already given him and all other employees years before by the board of directors.

Exhibit No. 158 shows that the railroad company in 1904 already owned 7½ sections in township 30-23 and had selected for patent about 9½ sections. The colors on this map indicate that only one section, that is 31, in that township, was included in lands leased to the Kern Trading & Oil Company, and 6½ sections which the company owned in that township were evidently considered not valuable enough to even put

in the lease. The Owen map of March 25, 1903 (Exhibit 157) shows only one whole section and two quarter sections that he recommended to be reserved from sale, although it appears from the map, Exhibit 158, that the company actually owned 7½ sections in that township at that time. **[2554]**

FRANK SHAY

Sixty-eighth Witness for Defendants. San Francisco. July 2nd, 1913.

Direct Examination.

I am an attorney in the Law Department of the Southern Pacific Company and have been connected with that company for thirty-eight years. I was acquainted with Jerome Madden, Land Agent of the Southern Pacific Railroad Company in his lifetime. He died several months ago. I am familiar with his signature as I have seen him write his name many times.

I identify his signature to Exhibit No. 166, a letter purporting to be dated January 19, 1903, and addressed to Mr. Charles W. Eberlein, 120 Broadway, New York.

P. G. WILLIAMS

Sixty-ninth Witness for Defendants. San Francisco.

Direct Examination.

I am an auditor of the Associated Oil Company and have been since September 1st, 1908. I have charge of the accounts of that company and have kept an account of the expenditures of the Associated Oil Company in the Elk Hills for development work there and

have prepared a statement from these original accounts showing the total amount expended there.

My company maintains a very elaborate system of accounting whereby expenses are apportioned to each piece of work that is being carried on so that we are enabled to charge to an individual well its own expense. The charges incurred in the development of the Elk Hills property were segregated absolutely from those situated elsewhere.

Up to April 30, 1913, the total amount expended by the Associated Oil Company in development in the Elk Hills was $517,613.94. No portion of this was expended for purchase of the lands. **[2555]**

(The statement referred to introduced in evidence, and marked Defendants' Exhibit No. 167, and is as follows:)

"ASSOCIATED OIL COMPANY
STATEMENT OF EXPENDITURES ACCOUNT
DEVELOPMENT IN ELK HILLS
AS OF APRIL 30, 1913.

	Labor	*Material*	*Total*
Structures and Buildings	$1,801.61	4,038.67	5,840.28
New Oil Lines	4,631.68	40,993.80	45,625.48
New Oil Wells (Statement No. 1)	79,067.10	94,239.47	173,306.57
New Oil Wells (Statement No. 2)	77,418.49	127,325.81	204,744.30

New Water Systems	6,430.87	40,649.12	47,079.99
New Telephone Systems	61.37	543.05	604.42
Miscellaneous Improvements	7,334.67	4,546.88	11,881.55
	176,745.79	312,336.80	489,082.59
Miscellaneous Expenditures accruing in period to date account of litigation			28,531.35
Grand Total All			517,613.94

Issued by Accounting Department,
San Francisco, Calif.
July 2, 1913.

Correspondence in relation to this statement should be addressed to the Auditor."

I have not prepared a segregated statement showing the individual costs of each of the wells up to April 30, 1913, but I did prepare such a statement up to December 31, 1912, from which it appears that well No. 3 in section 24 of township 30-23 cost $56,831.78. Well No. 1 in section 26 of the same township cost $57,725.33, and Well No. 1 in section 30 of township 30-24 cost $66,131.53.

I have also prepared from our records, statements of the production of the Associated Oil Company's wells in the Elk Hills. These statements were made

up from regular reports or letters of advice sent in by the superintendent in charge from **[2556]** time to time. These wells were distinct from our regularly producing wells as they were producing when they were still being drilled and we have a form for reparting production of that kind from which these statements were taken. These reports were received in the regular course of our business.

Based upon these reports, the total production of well No. 1 in section 30 of township 30-24 was as follows:

January, 1912	687 barrels
February,	560.70
March,	320
April,	130.45
May,	204
June,	73
July,	260
August,	30
Total	22,651.15

Similar reports show the production of Well No. 1 in section 26 of township 30-23 to have been as follows:

"September, 1911	680 barrels
October,	730
November,	327
December,	333
January, 1912	256.09
February,	229.98

March,	210.73
April,	224.53
May,	219.74
June,	200.
July,	360.08
August,	303
Total	4,074.15"

Similar reports show the production of well No. 3 in section 24 of township 30-23 to have been as follows:

"May, 1912	240 barrels
June,	2,965
July,	247
August,	150
Total,	3,602"

[2557]

Dear Sir:

The following is monthly production report of Elk Hills Sec. 30, well No. 1, for the month of January:

Elk Hills Sec. 30

Oil on hand Feb. 1st, in E. H. Oil Line No. 1	348.00
In Sump Hole,	150.00
Oil used for fuel,	189.00
	687.00
Oil on hand Jan. 1st, 1912	000.00
Net production	687.00

The 348 barrels referred to above were run into Elk Hills Oil Line No. 1, and did not reach the tanks on the Pioneer Midway.

The 150 barrels are on hand in the sump hole at Sec. 30, E. H.

Yours truly,

L. J. King R.

Dear Sir:

Below I give you *Elk Hills Sec. 26 Well* No. 1 Production Report for the month of October, 1911.

Elk Hills, Sec. 26, Well No. 1

Oil on hand Nov. 1st, 1911	155.00
Fuel Burned	575.00
	730.00
Oil on hand Oct. 1st, 1911	.....
Net Production	730.00

This well produced 730 net bbls. of oil during October, of this amount 575 bbls., was used for fuel, balance of 155 bbls. being pumped into the line. On the morning of the first I finished out the oil line with water, the oil being received in a tank at Pioneer Midway. The amount reaching there being 425 bbls. 155 bbls. of this amount belonging to the Elk Hills well, balance of 270 bbls. belonging to the Pioneer Midway Oil Co., Cons. they having previously pumped it into the line finishing fuel.

Yours truly,

cc-WSP-FBH-AFLB- L. J. King

[2580]

Mr. W. F. Herrin was made President of the Associated Oil Company either in 1909 or 1910. The roster of the officers in the Associated Oil Company is in my custody. I have a manual of the officers of each company. I am the auditor of other companies as well as Secretary of all proprietary and subsidiary companies—fourteen in all, I believe. The other companies that I am auditor of are the Associated Pipe Line Company, Associated Supply Company, Associated Water Company, Bakersfield Iron Works, Shreeves Oil Company, Sterling Oil & Development Company, Pioneer Midway Oil Company, Consolidated West Coast Oil Company, Amalgamated Oil Company, Salt Lake Oil Company of California, Arcturus Oil Company and the Recruit Oil Company. When I spoke of the proprietary Companies, I meant where the Associated owned all the stock and when I spoke of the subsidiaries it was where they did not

necessarily control, but owned part of the stock. The Associated Oil Company owns a control of the capital stock in all the companies I have mentioned except the Associated Pipe Line, stock in that company being owned half by the Kern Trading & Oil Company and the other by the Associated. I have official relations with the Southern Pacific Company, that [2581] is, I do business with them in connection with the Auditing department. That is, the Southern Pacific Company prescribe the method of accounting and that necessarily follows down through all the other companies. This business is done through the Auditor of the Southern Pacific, Mr. T. O. Edwards. Mr. Segar was the Auditor of the Southern Pacific at the time I first went there and Mr. Edwards has pursued the same custom with respect to the method of prescribing the method of auditing for the Southern Pacific and and its subsidiaries, that is, subsequent to the time the Southern Pacific obtained the majority stock ownership of the Associated Oil Company. I don't remember the exact date but I think it was in 1911. It was at that time that this custom of prescribing the method of auditing began. I am Secretary for the Assocaited Oil Company and of all the other subsidiary companies of which I am Auditor. (At this point Mr. Lewers read in evidence Defendants' Exhibit 171 and which is in words and figures, as follows:

'THE NEW YORK TIMES
New York, Wednesday, May 29, 1912.

SAYS RAILROAD STOLE OIL LAND FORTUNE

"Criminal Conspiracy" Among Southern Pacific Officials is Charged by Wickersham.

$15,000,000 WAS THE STAKE

Developments in Suit, Begun in 1910, Are Declared "Sensational"—

Nation May Regain Land. **[2582]**

WASHINGTON, May 28.—In a public statement today Attorney General Wickersham declared that the Government's suit against the Southern Pacific Companies for the recovery of valuable oil lands in Southern California has brought "sensational and startling disclosures."

Testimony by witnesses subpoened by the Government, he says, "presents a remarkable picture of criminal conspiracy among high officials of the Southern Pacific Company to acquire from the United States under an agricultural grant oil lands valued at $15,000.00."

The statement was issued after a conference between the Attorney General and Willis N. Mills, special assistant in charge of the case, concerning recent developments in the suit. The proceedings were begun by direction of Mr. Wickersham in December, 1910, to set aside patents and revest in the Government title to 6,000 acres of valuable oil-bearing lands in the Elk Hills country of Kern County, Cal. The

lands are within the indemnity limits of the grant of July 27, 1866, to the Southern Pacific Railroad Company, in aid of the construction of the road. The original granting act, the Attorney General's statement says, excluded all mineral lands, the intention of Congress being to grant only agricultural lands, reserving mineral lands to the United States for all time.

The Government lawyers are cofident, the statement avers, that the disclosures made by the testimony of Charles W. Eberlein "will result in the restoration to the public domain of a vast tract of the most valuable oil lands in the State of California." **[2583]**

As Acting Land Agent of the Southern Pacific Railroad Company, the statement alleges, Mr. Eberlein saved from the fire following the San Francisco earthquake all the secret correspondence and documents relating to the conspiracy to defraud the Government out of these lands.

Upon being put on the stand, the statement continues, Mr. Eberlein produced correspondence between himself and the late W. D. Cornish, Vice-President of the Southern Pacific, and C. H. Markham, General Manager of the road, "establishing previous knowledge on the part of the railroad company officials of the mineral character of the land selected, and indicating an intention to keep the fact from the Government officials until after patents should be secured"). **[2584]**

[2585]

W. E. WHITE, called on behalf of the defendants, being first duly cautioned and solemnly sworn to testify the truth, the whole truth and nothing but the truth, testified as follows:

DIRECT EXAMINATION

By Mr. Lewers:

Q. Your name is W. E. White, is it not?

A. Yes, sir.

Q. And by what company are you employed at the present time?

A. The Associated Oil Company.

Q. How long have you been employed with the Associated Oil Company?

A. By the Associated Oil and subsidiary companies, for the last ten years, practically.

Q. What position do you now hold?

A. Chief clerk to the chief engineer.

Q. And who is the chief engineer?

A. Arthur F. L. Bell.

Q. Does he hold any other title than chief engineer, or has he held?

A. He has until June 1st last.

Q. What title did he hold prior to the 1st of June of this year?

A. Field manager.

Q. And as such field manager, over what did he have jurisdiction?

A. He had entire charge of the field operating and development of all Associated Oil Company properties.

Q. And where were the records of his office kept? That is, in whose charge were they? **[2586]**

A. They were kept in his office, under his and my own charge.

Q. And what, in the ordinary course of carrying on the business of drilling and operating wells—state in a general way what records were kept of drilling operations.

A. Well, complete records of the logs, locations, maps, and so on, of production, and all records incident to the development of the field.

Q. How were reports, if any, made to your office from the field?

A. Some were written reports and others were telegraphed.

Q. And how frequently were those telegraphed in?

A. Well, we had daily reports of operations, drilling, and so on, and monthly reports of production.

Q. These daily reports that you received by wire covered what territories?

A. Covered all the different fields that we were interested in, with the exception of the Kern River field and Santa Barbara county.

Q. Were these telegraphic reports confirmed in any way?

A. They were confirmed by written reports.

Q. How often were those sent in?

A. They were supposed to be sent in daily, but it frequently happened that they would be two or three days late.

Q. After you received these reports, what was done with them in your office?

A. They were filed and put away.

Q. Well, was any other record made in your office from those reports?

A. As far as the drilling of wells was concerned we kept—wrote up logs, and also made graphic logs of those drillings.

Q. By whom were these reports made by wire to your office? **[2587]**

A. By the superintendent of the division involved.

Q. Did you have any reports in your office of drilling operations in the Elk Hills?

A. Yes; we had daily reports.

Q. By whom were those reports made?

A. By Superintendent King, of the Midway division.

Q. In his absence from the field, in case that should occur, did you receive those reports?

A. Yes.

Q. By whom would they be made then?

A. By his chief clerk.

Q. Was any distinction made, or was there any difference in the manner of sending in reports from the Elk Hills operations from that prevailing in other places where you were drilling wells in that vicinity?

A. No difference.

Q. Do you now have in yor office the telegraphic and other reports that were sent in on the drilling of these wells in the Elk Hills?

A. Yes.

Q. Have you prepared from the records that were sent in in this way of operations in the Elk Hills, any graphic log or logs of any of the wells in those hills?

A. Yes; we have prepared logs of all those wells, that is, the three deep wells involved.

Q. You are referring to the wells in Sections 24 and 26 in 30-23 and in Section 30 of 30-24?

A. Yes.

Q. Under whose directions were those graphic logs prepared?

A. They were prepared at my instance.

Q. You say they were "prepared at your instance". What do you mean by that? **[2588]**

A. As matter of office record I kept them up or had them kept up for the benefit of every one concerned.

Q. Now, I show you a blue-print and ask you what that is

A. That is a resume of the operations of well 1 on Section 30, Township 30-24.

Q. Prepared from what?

A. Prepared from the daily drilling reports and reports of production.

Q. And what period does that cover?

A. That covers the period from the beginning of drilling until they shut down; in other words, from July 30, 1910, to August 23rd, 1912.

Q. And does that graphic log faithfully or truthfully represent the reports and records of daily drilling operations and productions received in your office upon these wells?

A. It does.

Q. Upon that well?

A. Yes.

Q. And what does the last column, that is, the column—or the figures, rather—at the bottom of each of the columns represent?

A. That is to show the actual monthly net production.

Mr. Lewers—We offer this graphic log in evidence. And I will state that I have all of the telegraphic and written reports and daily well reports here upon which that is based, and I shall offer similar graphic logs of the other two wells.

Mr. Mills—You intend to introduce the telegraphic reports, don't you?

Mr. Lewers—No, I don't; because, although I would like to dot it, it would involve incumbering the record with a mass of practically non-usable stuff—there is so much of it. It is mingled with all the other reports of all the wells in that [2589] territory.

Mr. Mills—I think we should be able to check the reports.

Mr. Lewers—I have them here, and you can make such use of them in that respect as you desire, but in the interest of shortening the record I prefer not to introduce them because they would simply uselessly incumber and greatly add to the expense of the trial without being of any assistance to the court.

Mr. Mills—We of course cannot assure ourselves that this is a correct resume of those logs without examining them.

Mr. Lewers—That is very true. I have them here.

Mr. Mills—I should want to do that before cross-examining this witness.

Q. You say that this was prepared at your instance?

A. I prepared that myself.

Q. You prepared it from the logs?

A. From the logs, daily reports.

Q. That is, you made the paper from which this is a blue-print?

A. Yes.

Q. And these are your figures on here, are they?

A. No; I didn't do the drawing myself, but I did a similar one from which that was made up; in other words, I collected the data and put it in that shape.

Q. Did you personally make up the sheet from which this is a blue-print, from the logs, without any one else's work?

A. Yes sir; I collected all the data, but the actual drawing of the lines I did not do myself.

Q. Well, the data, as I understand it, was collected in your office, to start with?

A. Yes sir.

Q. By that you mean you handed it to some one else to make the figures? **[2590]**

A. To make an exact copy; yes sir.

Q. Did you pesronally take each log and report on this particular well and make up the sum total without any one else doing any work on it?

A. Yes.

Mr. Mills—May I see the data from which this is made, now? (Papers handed to counsel.)

Q. Now, is this all relating to this one well?

A. No; that covers all the wells in the district.

Mr. Mills—Will you get out the logs from which you made this document?

Mr. Lewers—You will see each telegram covers a number of wells.

Q. By Mr. Mills—Well, just point out that from which you made this statement. (Witness indicates to counsel.) Does this statement include matters from each one of the papers in these eight packages?

A. No; it was taken practically entirely from this one, and this covers the dates. This was intended to be a resume of these daily reports.

Mr. Mills—I have no formal objection to the introduction of this summary constituting the offer of Defendants' Exhibit 172, purporting to show the record of the operations on well No. 1 in Section 30, 30-24, and what I understand to be some offers you will make on wells 24 and 26 of 30-23, in view of the fact that the defendants' counsel have produced the alleged daily reports and alleged daily logs from which the summary is prepared, with the understanding, however, that the originals of the reports and the daily logs be left here for checking and examination by government's counsel.

Mr. Lewers—As far as the custody of the original data from which these graphic logs were prepared is concerned, I can say **[2591]** that I have no author-

ity to take those for any considerable length of time out of the possession of the Associated Oil Company, nor has Mr. White, as I am informed, any authority to do that, but that this arrangement can be carried out, and, as I understand it, is the usual arrangement under situations of this kind: All of these telegrams, daily reports and other data on which these graphic logs are based will be retained in the office and the custody of the Associated Oil Company and open to the inspection, as carefully as may be desired, of the counsel for the government or any representative whom he may designate, at any convenient hour that may be agreed upon, and that as full an examination and checking as counsel desires may be made of those records in the office of the Associated Oil Company in San Francisco, but I have no authority—and that is my reason for making the suggestion—to dispose of them in any other way, as they are not my records.

Mr. Mills—I understand; and I don't want to discommode you. But, in view of your statement, I will have to take time now to ascertain whether I have any objection to make to this offer.

Mr. Lewers—Well, proceed with the examination. Our time is limited. You will have ample opportunity to make your examination at a later time. I want to complete the examination of this witness, so far as my direct examination is concerned, now.

Mr. Mills—Well, I shall object to your proceeding with the examination until I have time to inspect these documents and determine whether I want to object to this offer.

Mr. Lewers—I will agree that you may heerafter make your objection, without any question being raised as to the time your objection is made.

Mr. Mills—Suppose I offer these. I do offer these papers **[2592]** now, with the understanding that the Associated Oil Company may substitute copies, if they desire. I now make the offer of all these papers which have been handed to me by defendants' counsel, including a bunch of telegrams dated from June 29th, to November 30th, 1912; December 31st, 1911, to March 2, 1911; telegrams dated from October 9, 1911, to March 11, 1912; a bundle of letters running from April 27, 1910, to November 3, 1910; daily reports running from January 1st, 1912, to June 3, 1912; a bundle of telegrams from March 12th, 1912, to June 28th, 1912; daily log reports running from July 29, 1910, to May 5th, 1911; and a bunch of daily reports running from May 6th, 1911, to April 3, 1912; and I ask them to be identified by the Examiner.

Mr. Lewers—Mr. Examiner, these are all my documents and in my custody for the time being and belonging to the Associated Oil Company. Counsel for the government has no right to take them, and I have offered, and repeat the offer, that they shall be open to the inspection of counsel for the government as extensively as he desires. If he desires to have copies of these papers and will pay for them, we will arrange to have complete copies made, but I have no authority to consent to their being taken and put in evidence, nor has Mr. White any authority, and I feel that it is an attempt, in the absence of the court, to take advan-

tage of a situation, without any necessity for it, as no opportunity to examine them has been denied or will be denied, and for that reason I decline to surrender their possession to the Examiner.

Mr. Mills—I protest against the conduct of counsel for the defendants in seizing papers already introduced in evidence before the Examiner, and cite it as prejudicial misconduct.

Mr. Lewers—Well, will you pay for the copies?

Mr. Mills—I don't ask for copies, I want to see the originals. They are in the custody of the court now. I don't **[2593]** see how you can take them out.

Mr. Lewers—They are not in the custody of the court. No order of court has been made. If there is an order of court I will comply with it, of course. Furthermore, I brought these into court myself and I am personally responsible for them, and as along as no effort is made to prevent a full and complete examination I don't think that there is any occasion for counsel endeavoring to introduce what is obviously a mass of material nine-tenths of which refers to wells that are not involved in this controversy.

Mr. Mills—I don't care to introduce any portion of the documents which do not pertain to the wells in this particular area. The papers have been introduced and I see no power on your part to take them out of the custody of the court.

Mr. Lewers—Mr. Examiner, will you mark this as Graphic Log with its appropriate exhibit number?

The graphic log last referred to and offered in evi-

dence is marked "Defendants' Exhibit 172—L. L."

Mr. Mills—I call upon the Examiner now to know whether he intends to permit counsel for defendants to remove from his custody these papers and documents.

Mr. Lewers—They have not been in the Examiner's custody yet. They have been in my custody. If you desire to have any order of court made, you can get that order; but in the meantime I have not withdrawn my suggestion.

Mr. Mills—Will you leave these papers here in the custody of the Examiner until I can get an order from the court?

Mr. Lewers—I have no authority to do that. I have authority to bring them here so that you may see what they are and to arrange for an examination of them as comlpete as you desire. [2594] My authority goes no further.

Mr. Mills—What is your ruling, Mr. Examiner? Are you going to permit these documents to be boldly and forcibly taken out of your possession?

The Examiner—As always, I, as Special Examiner, have very little effective authority in this matter. It seems to me, though, Mr. Lewers, that as you have brought these documents here and offered them for Mr. Mills' inspection, and as they are the basis of the document you have already introduced, you should afford Mr. Mills full opportunity to examine them, and I do not see any reason why you should be unwilling to leave them in my custody for that purpose.

Mr. Lewers—My authority is not the same as it would be in connection with documents belonging to myself; and, inasmuch as I am putting in testimony and the government is not, at this time, and inasmuch as the time for cross-examining has not yet arrived and these matters, or the papers that have been referred to, containing a great many matters that are not at all relevant and would unduly encumber the record if copied into it, I merely repeat that I will make any arrangement that I have authority to make, and I have the authority to make the arrangement that these will be open to the fullest inspection at any time that counsel for the government desires. I can do no more and I will do no less.

Mr. Mills—Mr. Examiner, I have made the statement that I was perfectly willing to have these documents left in your custody until Monday night, so that I may have opportunity to examine them for the purpose of checking up the accuracy of this offer of defandants' counsel, and that they be turned over promptly to Mr. Lewers or to the representative of the Associated Oil Company, as I have no desire to discommode either counsel for the defendants or the Associated Oil Company; but I do resent **[2595]** this high-handed attempt on the part of counsel to take from the custody of the Examiner these papers, which have been introduced solely because of his refusal to permit us to examine them.

Mr. Lewers—Have I refused to permit you to examine them?

Mr. Mills—You refused us the opportunity of ex-

amining them in the presence of the Examiner, refused to leave them with him here. Do you desire us to go over to the Associated Oil Company's office to make the examination, at such time as is convenient to the Associated Oil Company? I think I have been perfectly fair. I didn't want to introduce these documents at all, because I thought it might discommode you, but in view of your statement that you refused to permit me to examnie them until Monday night in the custody of the Examiner in this case I introduced them solely to protect the government in the examination of this witness.

Mr. Lewers—Well, the Examiner will not be here until Monday night. It will involve the taking of these documents to Los Angeles.

Mr. Mills—The Examiner will be here until Monday night, if the government has to pay his fees. I don't think you are right in this matter, Mr. Lewers.

Mr. Lewers—You have seemed to interpret what I said in a way in which I didn't say it. Every opportunity will be given you to examine these as fully as you please. There will be no restriction placed on it. The only restriction will be that we don't expect you to examine them at any time except during office hours.

Mr. Mills—I don't expect to take the time to examine these reports months after the opportunity for making the objection has gone by. Now is the time to examine the reports. I think on reflection you will take a different attitude. **[2596]**

Mr. Lewers—I think on reflection you will withdraw your attempt to offer something in evidence that don't belong to you. That cannot be done, as you know.

Mr. Mills—Well, they are offered in evidence, and I think the court will sustain me in my attitude.

Mr. Lewers—If you desire to make the arrangement that they shall remain in the custody of the Examiner in San Francisco and the government will pay his fees during the period of your examination, I will endeavor to arrange with the Associated Oil Company, and I have not any doubt that when this is put up to them in that way they may be put in the possession of the Examiner with full opportunity for you to make such examination as you desire.

Mr. Mills—What do you mean by that? That I shall go to the Associated Oil Company?

Mr. Lewers—No; I said I will leave them in the possession of the Examiner.

Mr. Mills—The Examiner of the court.

Mr. Lewers—If you will pay his fees for holding them over here.

Mr. Mills—And you will leave them with him?

Mr. Lewers—I will leave them with him. I will endeavor to get permission to do so and I have no doubt I will be able to.

Mr. Mills—I want them left with him without your taking them out of court.

Mr. Lewers—He will be responsible for them.

Mr. Mills—I understand the Examiner will take

possession of them and you will talk with the Associated Oil Company and endeavor to get permission to accomplish that.

Mr. Lewers—Yes. And you will pay him for his services?

Mr. Mills—Yes. And you will not take them out of the possession of the Examiner? [2597]

Mr. Lewers—No.

Mr. Mills—Also, you will recall Mr. White for further cross examination if I so desire?

Mr. Lewers—At some later time that will be done. Mr. White is busy, but some convenient time will be found later for that. That was my original suggestion. There is no desire to restrain you from examining these matters as fully as you please.

Mr. Mills—The understanding is, then, Mr. Examiner, that these are to be left with you and the government is to pay your fees.

Mr. Lewers—Yes.

Q. Mr. White, I show you a similar chart or graphic log that purports to be of a well in Section 26, of Township 30-23, in the Elk Hills. That was prepared in the same manner as the one of the well in Section 30 of 30-24?

A. Yes; it was.

Q. Under your direction?

A. Yes sir.

Q. And by whom was the material compiled?

A. By myself.

Q. By Mr. Mills—That was compiled in the same

way, was it, as the other—with your own hand and without any assistance?

A. Yes.

Q. By Mr. Lewers—With the exception of the drawing?

A. Yes.

Q. You checked it, though, as your own?

A. Yes.

Mr. Mills—I have no objection to any of this excepting such objection as we may have after the examination of the log.

Mr. Lewers—I agree you may make any objection to the three charts, or anything concerned with them, at a later time, after [2598] you have examined the charts and are advised an objection is necessary. (Marked "Defendants' Exhibit 173—L.L.")

Q. I also show you a similar graphic log of the well No. 3 in Section 24 of Township 30-23, and ask you if that was prepared in the same way, in the same manner, from data in your possession.

A. It was.

Q. And checked by yourself, was it?

A. Yes sir. (Marked "Defendants' Exhibit 174—L.L.")

Q. Now, calling your attention to this last graphic log of the well on Section 24, from what did you obtain the foot-notes that appear upon that graphic log? Were those obtained, likewise, from the daily reports?

A. Yes. I am quite sure they appear on the daily report under this date.

Q. That is, I am referring particularly to the foot-note "A", where it says it "Flowed 350 (rate) which was run in to wash out hole." Foot-note "B"., "Flowed 350 (rate) which was run into wash out hole". Foot-note "C", "Filled hole with oil from sump." Then foot-note which is starred, "All production this month pumped back into hole to hold back gas pressure." What is shown there as the net production of the well for the last month—the month of June, is it not, 1912?

A. Month of August.

Q. August, 1912?

A. It shows 150 barrels net.

Q. Have you made an estimate of the amount of oil that could be flowed back into the well of the size that that was?

A. Well, at the time they were flowing oil into the hole there was also oil coming out, and it is pretty hard to estimate the quantity that would flow in there, because part of it may go back, under pressure, into the sands from which it ori-**[2599]** ginated, again.

Q. Have you made any estimate as to the capacity of the well itself?

A. I have figured up the capacity of a hole of that size. With that sized casing it would be about one hundred and seventy-five barrels. But still it would take considerably more oil than that going into the hole, on account of part of it going back into the formation. At any rate, the hole itself would hold one hundred and seventy-five barrels, approximately.

Q. Were these wells, as far as the records of your office are concerned and show and as far as your own personal knowledge goes, handled any differently from any other wells that were being drilled in the field?

A. In what way do you mean "handled differently"?

Q. As to the effort made to obtain production.

A. No; they were handled the same as any other wells.

Q. Mr. Mills—Has this witness been qualified yet to know any such matter? I object to it because the witness has not qualified, so far, by direct testimony, to answer such a question.

Q. By Mr. Lewers—Was there any effort made to hinder or conceal the possible production of any of these wells?

Mr. Mills—That is also objected to, unless it is limited to his own knowledge.

A. No; not from my knowledge.

Q. By Mr. Lewers—Was there any effort made to the contraray?

Mr. Mills—That also is objected to.

A. I don't quite understand you now.

Q. By Mr. Lewers—To endeavor to make them produce.

A. Every effort that I know that could be made was made.

Q. What efforts were made?

A. That is, reperforating, and testing and doing

every- [2600] thing that we know of to get them into some shape to produce. Some of the wells were tested several times, and reperforated, and so on.

Q. Do you know anything about the process of putting hot oil back into the well? Do you know anything about that?

A. Yes.

Q. Was that done with any of these wells?

A. Yes.

Q. What is the purpose of that?

A. In the well in 24—three—that was done to cut down the gas pressure.

Q. By Mr. Mills—Were you present at the time that was done?

A. No.

Mr. Mills—I object to that as hearsay, and move that the answers, so far as they related to what was strictly hearsay, be stricken out.

Q. By Mr. Lewers—Upon what do you base your answer that these efforts were made?

A. Well, on the records of our office, on the instructions that emanated from the field manager's office. We were in constant touch while the well was being drilled. Our instructions went from the field manager's office here.

Q. And were you familiar with those instructions?

A. Yes.

Q. And did that office receive reports back as to what had been done?

A. Yes; reports sometimes written and sometimes telephone conversations.

Q. Does Mr. Bell's office maintain connection with the operations in the field by means of telegraph or telephone?

A. Yes. **[2601]**

Q. What connection do you have?

A. We have both telephone and telegraph connection with Fellows, which is situated in the Midway field.

Q. Did you have prepared any other forms of logs from the data in your office?

A. We had graphic logs prepared, as we call them.

Q. What do you mean by a graphic log?

A. A diagramatic log drawn to scale.

Q. Do you mean a log drawn to scale and depth?

A. Yes, sir; casings, and so on.

Q. I show you what purports to be such a log of well No. 1 in 30, of 30-24, and ask you what you know about the preparation of that particular log.

A. It was prepared at my request by a draftsman employed in our office, and afterwards checked with the daily reports.

Q. Checked by whom?

A. Checked by myself and Mr. Jeffres.

Q. Do you mean Mr. E. J. Jeffres?

A. Yes.

Q. Who is now dead?

A. Yes.

Q. And what was the result of that checking, as to

whether or not this is an accurate representation of the results of the various reports received?

A. It agreed with the reports.

Q. And were similar logs, prepared in the same way, as to the other two wells, one in Section 24 and the other in Section 26 of 30-23?

A. Yes.

Q. And are these documents I hand you the logs which were prepared in that way?

A. Yes. Those are the two. **[2602]**

Mr. Lewers—I now offer these three graphic logs of the wells referred to, in evidence, and ask that they be marked with the appropriate numbers.

The logs last referred to and offered in evidence are marked, respectively, "Defendants' Exhibits 175, 176 and 177—L. L."

Mr. Mills—With the same understanding.

Mr. Lewers—Subject to the same understanding as the prior ones.

Mr. Mills—Subject to any objection after examining the logs.

Mr. Lewers—Yes.

Q. Do you receive any daily reports of drilling operations from the Elk Hills at the present time?

A. No; we are not drilling at the present time.

Q. Is there anything at all being done in the Elk Hills by the Associated Oil Company at the present time?

A. No.

Q. In the testimony this morning given by Mr.

Williams, in his cross-examination, he was asked with reference to what is known as pipeline No. 1. Do you know anything about the construction of that pipeline or where it runs?

A. Yes. That was a four inch line that ran from Pioneer, Midway, Section 30 of 31-23, to the Elk Hills.

Q. And to what section in the Elk Hills does it run?

A. Section 35, I believe it is, of 30-23.

Q. And where is pipeline No. 2?

A. Pipeline No. 2, as I remember it, connected with that line and ran to Buena Vista Lake station, where we had a pump station. **[2603]**

Q. And what was pipeline No. 2 used for?

A. For delivering fuel oil to the pump station at the Buena Vista Lake.

Q. And what was pipeline No. 1 constructed for?

A. No. 1 was for delivering fuel from Pioneer over to the Elk Hills.

Q. For whose use?

A. For our own and other companies who purchased from us.

Q. Why was that constructed?

A. For the purpose of delivering fuel oil.

Q. Is it not possible to bring fuel in in any other way?

A. We started in there hauling in wagons but it was too expensive that way. We had tank wagons. And we found it was cheaper to put in a pipeline than to haul in wagons.

Q. And was that the reason why this pipeline No. 1 was constructed?

A. Yes.

Q. I show you what purports to be a carbon copy of a letter dated July 13, 1910, addressed to Mr. O. Scribner, and purporting to be signed by Mr. Bell. Do you know where that came from and what that is?

A. That is a report or a recommendation to Mr. Scribner, assistant general manager, regarding the installation of the fuel line to the Elk Hills in place of the teams that had been used prior to that time.

Mr. Mills—I move that that answer be stricken, as not responsive to the question, an attempt to state the contents of a letter before it is offered in evidence.

Q. By Mr. Lewers—Where did this particular piece of paper come from? Out of what files?

A. It is out of one of the files of the field manager's office. **[2604]**

Q. From any file that is in your control?

A. Yes.

Q. Or in your custody?

A. Yes.

Q. And by whom was the original of that letter signed, if you know?

A. Signed by Arthur F. L. Bell.

Q. And was the original of that letter sent, that you know, to Mr. Scribner?

A. It was.

Mr. Lewers—We offer to read this in evidence and into the record.

Mr. Mills—All right.

Q. By Mr. Lewers—Was that letter written on or about the date it purports to be sent?

A. To the best of my recollection it was.

Q. By Mr. Mills—Where is the original of that letter now? Do you know?

A. It should be in Mr. Scribner's files.

Mr. Mills—I think I shall object, at the present time, to the introduction of this alleged copy of the original until the original is produced, and for the further reason that it is a self declaratory statement.

Mr. Lewers—I didn't produce the original because I didn't think any question would be raised upon that point.

"Associated Oil Company. Carbon copy duplicate. July 13, 1910. Mr. O. Scribner, Asst Genl Manager. Dear Sir: Referring to my letter to you of July 9th in the matter of installing a 4" oil line from the Elk Hills district to the Pioneer Midway lease, Sec. 30: At present, we are using five teams at a cost of $50 per day or $1500 per month; six months being estimated time of drilling a well in that field would mean a cost of $9,000 for [2605] teams. It will therefore be seen—"

Mr. Mills—I onject to your reading into the record any letter which is not left for examination by this court.

Mr. Lewers—All right. Then I will have a copy made of it for you.

Mr. Mills—I don't want a copy. I think the paper itself should be left in evidence.

Mr. Lewers—I mean I will have a copy made for our file and leave this, if that will suit. "It will therefore be seen that it will cost more to haul the oil then the amount we would lose by installing the pipe-line. If we strike oil we then have a line for pumping the oil to the storage on the Pioneer Midway lease. Yours truly, Arthur F. L. Bell, Field Manager. cc. to Mr. Porter AFLB/Z P. S. On account of pipe delivered from Coalinga to Fellows being second-hand, we can get a special rate, which will reduce the net total loss on pipe line if installed, to $6000.00. A. F. L. B."

(Marked "Defendants' Exhibit 178—L.L.")

Q. Was that suggestion acted upon and was that pipe-line built?

A. Yes.

Q. In pursuance to it?

A. It was; yes.

Q. And do you know whether any oil was actually pumped through that pipeline from the Pioneer Midway into the Elk Hills?

A. Yes.

Q. And how large a quantity, if you know?

A. I couldn't say. We sold considerable of what we did pump, to other parties, besides our own fuel.

Q. Do you know wether any was pumped out?

A. You mean back through the line?

Q. Yes.

A. I think there was some run back. [2606]

Q. Was there as much pumped out as there was pumped in?

Mr. Mills—If you know of your own personal knowledge.

A. I don't know the figures. My belief is a great deal more went in than went out.

Mr. Mills—We object to your statement of what your belief is, Mr. White. I move that that answer be stricken out.

Mr. Lewers—I ask that it stand.

Q. When did you first become connected with the oil business in any form?

A. In, I believe, August, 1903.

Q. And where?

A. In San Francisco.

Q. With what company were you then connected?

A. With the Recruit Oil Company, a branch of the Associated.

Q. And from that time until the present have you been engaged in any other line of work?

A. No.

Q. From 1903, when you first began your connection, what were your duties for the first few years?

A. They were varied. I had no particular calling but simply "utility man," you might call it; looked after government lands and the interests of the company in that field.

Q. And in what field did you operate?

A. Well, I was, at different times, at Santa Barbara, Coalinga, Midway, Sunset and McKittrick.

Q. While you were in the field looking after lands, as you say, what would you do, what were you trying to do?

A. Mostly looking after government land.

Q. What do you mean by that?

A. Looking after open government land and taking care of locations we already had.

Q. Well, for what purpose did you desire to obtain that land? **[2607]**

A. Simply to obtain it for its oil land value, or its future.

Q. Were you at that time what is commonly called "a scout" in the field?

A. I presume you might term it that.

Q. And in your work in the Sunset, Midway and McKittrick districts, just what territory did you cover from 1903 on?

A. I covered all of that territory, at various times.

Q. Up to what years? What year was it, rather, that you quit this work?

A. I left there in 1909, I think, spring of 1909, although I have been down in the field many times since.

Q. Then prior to the time you quit the field work you were employed by the Associated Oil Company, were you?

A. Yes sir. More particularly the Recruit Oil Company.

Q. When was it that you became employed directly by the Associated Oil Company?

A. In 1909, when I came to San Francisco for headquarters.

Q. How frequently were you in the Sunset, Midway and McKittrick districts in 1903, '04 and '05?

A. Well, I was in that vicinity all the time, or practically all of the time. There were periods, though, when I would be away. I went to Santa Barbara county, San Pedro, and came to the city.

Q. Were you engaged during all of that time in looking for oil land?

A. Well, I was supposed, if I saw any, to report it, but my principal business was looking after our interests in the Carissa Valley.

Q. And where is that situated?

A. It is on the opposite side of Midway Valley.

Q. Across the range? **[2608]**

A. Across the Temblor Range, in San Luis Obispo county mostly.

Q. Were any operations for oil being carried on there at that time?

A. Nothing more than locating and doing assessment work.

Q. What companies were in there?

A. During what period did you want to know?

Q. 1903, '04 and '05 or later.

A. The Recruit Company was the only one in there during 1903 and '04, although there were other individual interests. After that the Union Oil Company and the Vishnu Oil Company came there.

Q. Well, in addition to the Associated Oil Company, what large companies were in either the Midway or Sunset or McKittrick fields in 1904, '05 and '06?

A. In addition to the Associated Oil Company?

Q. Yes.

A. Well, there was quite a number of them: The Chanslor-Canfield Midway Oil Company, that is now the Santa Fe Oil Company. They were the largest in the Midway. They were mostly small companies in the Sunset and Maricopa district. And the McKittrick had a number of companies, usually smaller companies.

Q. Well, was the Chanslor Canfield Company the only large or strong company that was in there at that time?

A. Well, they were the largest of them all, and they were graduated down from that to the smaller companies.

Q. Do you know whether the Chanslor-Canfield Company was making any effort at that time to obtain additional territory in that vicinity?

A. Yes; they were always obtaining additional territory whenever they could get hold of some other open land.

Q. And did they have the means to obtain that territory? **[2609]**

Mr. Mills—That is objected to, unless the witness can qualify to testify as to their financial condition.

Mr. Lewers—You may answer.

A. Judging by appearances, they had.

Q. And were there any other companies in there that had the means of acquiring additional lands for development purposes besides what they were already operating?

A. You mean other companies outside of the Union, the Associated and the ones I have already mentioned?

Q. Well, outside of the Chanslor-Canfield is what I was after. Was the Union one of those companies you have referred to?

A. Yes sir; the Union was in there.

Q. And was it in position financially, so far as you know, to obtain additional property?

A. I presume it was, because it was obtaining additional property.

Q. And were other companies in there obtaining additional property?

A. Usually the property was obtained by locators and then turned over to these companies, so it is pretty hard to answer the question, although the Associated, Union and Vishnu Oil Companies were getting whatever land they could.

Q. How many of those companies, to your knowledye, maintained agents or scouts to look out for the additional oil territory?

A. Well, the Union and the Associated were the only ones I know of.

Q. Were you acquainted with the general opinion prevailing throughout the oil districts from the Midway and up through McKittrick and in that

vicinity concerning the extent of the oil territory, in 1903, '04 and '05? **[2610]**

A. Yes; I have heard a good many expressions of opinion through there.

Q. What was the general opinion as to the extent of the oil territory?

Mr. Mills—That is objected to as calling for mere neighborhood gossip among people some of whom possibly were incompetent to express an opinion.

A. The general opinion prevailed that the oil belt was along the edge of the foothills in the Midway field.

Q. Along the egde of what foothills?

A, On the edge of the Temblor Range, you might call it.

Q. What was the opinion at that time as to the oil belt extending out in the Elk Hills?

Mr. Mills—That is, a general opinion, you mean, Mr. Lewers?

Mr. Lewers—Yes.

A. I never heard any one speak of the Elk Hills as being oil land.

Q. When did you first hear the Elk Hills discussed as possible oil land?

Mr. Mills—It is understood that objection goes to all this testimony?

Mr. Lewers—Yes.

A. I presume along in 1907 or '08 was the first time I had heard of it being spoken of, any more than, possibly, in the general way that people speak of any place as being possible oil land; but I never

heard of its being spoken of as possible oil land until 1907 or somewhere along in there.

Q. When did the Associated Oil Company go in there?

A. They went in there in the early part of 1910.

Q. Was there anything to prevent their going in there prior to that time?

A. No; although they had no locations in there. Still, **[2611]** they could have bought other locations for a very small amount of money.

Q. When did you yourself first go into the Elk Hills?

A. I believe it was along in 1905 or the early part of 1906.

Q. Was there anything, so far as you know, to prevent the Chanslor-Canfield people going into the Elk Hills, if they desired to?

Mr. Mills—That is objected to as irrelevant, incompetent and immaterial to any issue in this case.

A. No.

Q. By Mr. Lewers—Did they go into the Elk Hills at that time?

Mr. Mills—Same objection.

A. Not to my knowledge.

Q. By Mr. Lewers—Well, if they had done so would you have been in a position to know it?

A. Yes, if they had gone in on any extensive scale.

Mr. Mills—You might as well ask if John Smith mightn't have gone in. What difference does that make to the issues in this case? There was lots of

territory Chanslor and Canfield didn't go into that proved to be valuable.

Q. Was there not, Mr. White?

A. Yes.

Q. By Mr. Lewers—Did you make any effort to keep posted as to the general operations going on through that district?

A. Yes; we kept in touch in a fairly close way.

Q. Well, was it any part of your duty to keep in touch with development and new discoveries?

A. Yes.

Q. Or with prospective territory?

A. Yes; it was. **[2612]**

Q. What was the occasion of your going over into the Elk Hills the first time?

A. The first time I went over there we were going hunting and went down in through there the first time I went over there.

Q. And how long was it before you went in there again?

A. Oh, I should say six months, or such a matter, later.

Q. And what was the occasion of the visit at that time?

A. Well, one of the Chanslor-Canfield men wanted me to go over and see an oil sand, exposed oil sand, that he had located over there.

Q. Did you see it?

A. I saw something but I didn't know whether it was oil sand or not.

Q. And do you now know where that was situated?

A. No; I don't know what section it was on.

Q. Was it situated anywhere near any of the present wells that have been sunk by the Associated, to your knowledge?

A. I think it is in that vicinity, but I don't remember now just where it was located. I went over, a couple of years or a year or so after that and tried to find it, but could not do it.

Q. Under whose direction were you working in 1903, '04, '05 and '06?

A. Under the direction of Arthur F. L. Bell.

Q. And what position did he then hold and with what company?

A. He was manager of the Recruit Oil Company, and the chief engineer for the Associated.

Q. And in whose jurisdiction was the determination of new territory that was to be taken up for oil purposes?

A. Well, he reported on them and acted in the capacity of geologist for the Associated.

Q. When was it that people first began to go into the Carissa Valley district that you have referred to? **[2613]**

Mr. Mills—That is objected to as immaterial to any of the issues in this case, the Carissa Valley being twenty or thirty miles distant from the lands in suit and across a mountain chain.

A. The first time any of the oil companies went in, that I know of, was ourselves, in 1903.

Q. By Mr. Lewers—How is the Carissa district situated with reference to its accessibility under conditions that existed in 1903?

A. Well, it was about forty miles from the nearest town, forty or forty-five miles, and there was no water or accommodations of any kind in there.

Q. Was it more or less accessible to the existing towns and sources of supply than the Elk Hills at that time?

A. No; it was not as accessible, by any means.

Q. What, if any, indications were there then known or discovered in the Carissa district that led people to go in there looking for oil?

Mr. Mills—Same objection.

A. Well, in one case we had heard of and seen several large oil sands—at least we had heard of these oil sands and when we went in there we found them—surface indications.

Q. By Mr. Lewers—Describe the extent of those in a general way that you found in there.

A. Well, they were scattered along the base of the foothills of the Temblor Range there for a distance of probably fifteen miles at various points; not continuous.

Q. Are they oil sands?

A. Yes.

Q. Well, how do you know?

A. Because they test out under chloroform tests, and so on.

Q. And how thick were any of those oil-sands that you [2614] found in there?

A. Well, they varied a great deal. The particular one I saw when we first went in there was probably fifteen or eighteen feet thick, although it was badly broken up. On account of the dip you could not tell just how thick it was. I should judge in the neighborhood of fifteen or eighteen feet.

Q. And were there any others that were thicker than that?

A. Yes; we afterwards found some that were thicker than that still. That is, not one continuous body of oil-sands but probably two or three stratified oil sands.

Q. How many wells were sunk in the Carissa district that you know of?

A. There are three outside of the shallow pot-holes that have been put down in there. There are three standard wells, what you would call oil wells.

Q. And by what companies were they put down?

A. One was put down by the Vishnu Oil Company and one by the Union and one by the Recruit.

Q. And what results did they obtain from those?

Mr. Mills—It is understood this objection goes to all this testimony?

Mr. Lewers—Yes.

A. The Vishnu obtained a well at about fifteen hundred feet. They have never tested it out to see what production they had. They have a light grade of oil and it is estimated somewhere along about a fifteen barrel well. The Union struck some gas but never got any oil. They didn't continue down more than about eight hundred feet. The Recruit Oil

Company went down fifteen hundred feet and abandoned the well—got no oil. By the way, there has been one other well in there that I have overlooked.

Q. What is that?

A. What they call the Humauma well. **[2615]**

Q. By what company was that sunk?

A. That was sunk by the Humauma Oil Company.

Q. Did they get any oil?

A. They got a slight showing. They got down about twenty-three hundred feet and I understand their money gave out.

Q. So that up to the time you left the field, in 1909, was the Carissa district regarded as an oil district?

A. Well, it was considered to have possibilities. That is about all you could say for it. Because, there had been no development that had proven anything.

Q. From your experience in the field do you regard oil sands of the kind you found in the Carissa district as a sure indication of the presence of oil in commercial quantities?

A. No; I would not say that.

Q. Do you know of any territory that contains showings of that kind that has not developed into an oil district?

A. Oh, yes; there are a great many places that contain the sand and seepages that have not shown up anything after being developed.

Q. Can you mention some of those places?

A. Well, the Rio Grande Company, as they called

it, or Rio Grande field, in San Luis Obispo county, and what is known as the Tar Spring Company in San Luis Obispo county.

Q. What is the nature of the showings there?

A. Well, they have seepages and oil sands.

Q. Have they any wells?

A. They have a few. Not in the localities I speak of, they have no producing well.

Q. Well, have they done any prospecting in the effort to obtain producing wells there?

A. Yes; they have drilled a considerable number of wells through there. Some of them seven or eight barrel wells. Not [2616] considered a paying investment.

Mr. Lewers—You may take the witness.

Mr. Mills—I will cross-examine the witness when I look over these documents.

Mr. Lewers—You might cross-examine him on the portion of his testimony which is entirely distinct from the other.

Mr. Mills—I cannot very well separate it, because I have made up my mind, in view of these documents, to cross-examine upon these all at the same time. And I will cross-examine you on Monday at 2 o'clock, Mr. White, if you will be here.

The Witness—All right.

Whereupon the further taking of testimony herein was adjourned until Monday, July 7, 1913, at 2 o'clock P.M., at the same place.

On Monday, July 7, 1913, at 2 o'clock P.M., by agreement and consent of counsel the further taking

of testimony herein was adjourned until Tuesday, July 8, 1913, at 10 o'clock A.M., at the same place.

On Tuesday, July 8, 1913, at 10 o'clock A.M., the further taking of testimony herein was resumed pursuant to the adjournment:

W. E. WHITE,
recalled, CROSS-EXAMINATION

By Mr. Mills:

Q. Mr. White, when you referred to the daily drilling reports and telegrams and letters and other data in your custody in the Associated Oil Company, as chief clerk, which formed the basis of these summaries, Defendants' Exhibits 172, 173 and 174, you had in mind the documents which Mr. Lewers handed me in your **[2617]** direct examination?

A. Yes.

Q. Including the several packages of papers consisting of telegrams, and these envelops containing the daily drilling reports, and the letters and other data?

A. Everything except these yellow slips. I don't have charge of those. These in the envelops. Those are in our geological department.

Q. By Mr. Lewers—By "yellow slips" you mean pink slips?

A. Yes sir.

Q. By Mr. Mills—You refer to these as daily well reports, do you?

A. Daily log reports.

Q. Now, where did these come from?

A. Those are made out by the superintendent in the field.

Q. And who are they sent to?

A. They are sent to the geological department of the Associated Oil Company.

Q. Have you, since your direct examination on Thursday, conferred with Mr. Lewers?

A. Mr. Lewers and I have talked over the telephone—telling me not to come yesterday but to come this morning.

Q. Have you conferred in any other way with him?

A. No.

Q. These daily drilling reports, known as—or contained in an envelop marked "510", are for what well?

A. Well No. 1 on Section 30, 30-24.

Q. And that consists of two packages?

A. Yes sir.

Q. Do you know anything about the custom of reporting these from the field, Mr. White?

A. The custom is to have what we call a tower report, that **[2618]** is, one report for each twelve hours, which is made out by the driller. He turns those in to the office and they make up one report covering the twenty-four hours.

Q. And that is mailed in to the company's office here?

A. That is mailed in to the company's office in San Francisco.

Q. You are satisfied that these are the original

receipts of the daily drilling reports upon the well No. 1 of Section 30 of 30-24?

A. Yes.

Q. Did you get these for transfer to Mr. Lewers, among the other papers?

A. Yes.

Q. Now, if you will take that first slip, first drilling report—is that the original of the drilling report?

A. This is the original, and then there is a copy kept at the Midway office.

Q. And the name "T. E. Barnes" at the bottom —is that his signature?

A. T. E. Barnes, our superintendent of drilling in the Elk Hills at that time.

Mr. Lewers—The question is, Is that his signature?

Q. By Mr. Mills—Do you recognize his signature?

A. I think not. At least, I don't recognize it as his signature.

Q. It might have been signed by some one else?

A. Some clerk, probably.

Q. And that, for instance, appears to have an initial under this?

A. Yes sir.

Q. And is the same as the other. Who does the "O" stand for, under that name? **[2619]**

A. I couldn't say. That is some clerk.

Q. Now, to be more specific, I call your attention to the daily drilling report for the 29th of July,

1910, upon well No. 1 in Section 30 in 30-24, in the Elk Hills, signed by T. E. Barnes, which states that the formation passed through was from "zero to 20 feet of the surface, started spudding 7 p. m. 7-28-1910", and ask you if that is one of the papers which you handed to Mr. Lewers as a basis of this offer.

A. Yes; this is one of the logs that I turned over to Mr. Lewers.

Mr. Mills—Now, have you any objection to—I don't want to ask that all of the matter that is in these daily reports go into the record. I would like only so much as shows the formation passed through, that is, the depth each day, the date and the remarks.

Mr. Lewers—That is, you mean all of that portion of the log slips that is really historical and not part of the blank?

Mr. Mills—Yes.

Mr. Lewers—I was going to make a suggestion in that connection, if you expect to make use of any part of this, which will facilitate and might shorten the entire proceeding—by merely having a copy made of those portions right straight through that we agree upon.

Mr. Mills—That is satisfactory to me. I have already asked the Examiner to prepare a copy, with a view of agreeing with you to use only so much of these slips as excludes the printed matter and unfilled blank.

Mr. Lewers—That is, use only the blanks that are filled, in other words?

Mr. Mills—Well, some of those need not be reduplicated. For instance, I don't think that has to be reduplicated, or the description, in any case which refers to—**[2620]**

Mr. Lewers—That is, just sufficient to identify the well.

Mr. Mills—Yes. That first one will identify that well.

Mr. Lewers—That is the idea that I had, in order to get sufficient of it to be intelligible without unduly encumbering the record.

Mr. Mills—Yes. Well, the, I think perhaps with that understanding I might read into the record, then, the daily drilling reports of well No. 1 of Section 30 of 30-24, and let it be understoood that they are read with that limitation.

Mr. Lewers—There is no objection.

Mr. Mills—So that the Examiner may go on and copy that much of it into the record.

Mr. Lewers—Yes. In that connection, would you desire the names of the drillers to appear in all cases?

Mr. Mills—I think that ought to appear, except where they are repeated from time to time, and it might show the same driller until a change takes place. For instance, here is the name of C. E. Stephenson and J. B. Simpson on the first report. If that appears on twenty-five subsequent to that, it is not necessary to carry that through but only to carry the name until there seems to be a change.

Mr. Lewers—My recollection of my examination

of those is that there appears to be a shifting, a variation, from time to time, and I cannot see where it is material.

Mr. Mills—It is not material. If the Examiner will take a list of the drillers, it will be sufficient for me—of all the drillers that appear in this—without repeating it in the copying.

Mr. Lewers—That will shorten it very much. With the understanding these records shall be returned to Mr. White as soon as the Examiner completes copying them.

Mr. Mills—Now, the same stipulation may be made—**[2621]**

Mr. Lewers—As to all the logs of the other wells.

Mr. Mills—Yes. Then let the same proceedings appear as to well No. 1 of Section 26, Mr. Examiner, and well No. 3 of Section 24, as to the original daily drilling reports.

(The drilling reports and other documents read in to the record while this witness was on the stand, are transcribed from the original record and bound with the volumes of exhibits and sent up as an original document without being printed.) **[2622]**

Q. By Mr. Mills—Referring to "Defendants' Exhibit 173, which purports to be a tabulated statement of the operations and production on well No. 1 of Section 26, 30-23, the statement covers the time from March 10, 1911, until about August 20th, 1912. Is that correct?

A. That is correct.

Q. It is a fact, is it not, that there are no tele-

grams among those which you produced in support of this summary or tabulated statement which cover the period from March 10, 1911, to March 11, 1912?

A. That is to say, that there is no telegrams covering this period in here?

Q. There are no telegrams covering the period I mention. That is refering to well 26.

A. We must have them.

Q. Will you look? I hand you a bunch of telegrams, Mr. White, covering or purporting to cover the time from October 9, 1911, to March 11, 1912, and ask you if you can find anywhere in that bunch of telegrams any information as to the well on Section 26 included in your tabulated statement, "Defendants Exhibit 173?"

A. During the period mentioned the well was not drilling.

Q. Is that the way you state it? You say the well was flowing?

A. It was flowing; yes. But prior to that time, from the period from March 10 to September 11 there should be telegrams covering the operations on well 26, No. 1.

Q. How as to the other dates, from September 11 on?

A. From September 11 until about the middle of July, 1912, there were no telegraphic reports. I believe the telegraphic reports commenced about the middle of July, 1912, and continued until the well was shut down, in August, 1912. **[2623]**

Q. Now, then, what period of time, as to the his-

tory of well No. 1 in Section 26, 30-23, to which we have been referring, is not covered by telegrams?

A. I couldn't tell exactly unless I had the other telegrams here, but it was approximately from September, 1911, until—

Q. That is, the 1st day of September?

A. Well, approximately the 1st of September, 1911.

Q. Yes.

A. Until about the middle of July, 1912.

Q. Now, what do you mean when you say "the other telegrams"?

A. There evidently is a package of telegrams covering a period from March 10, 1911, up to about September 1st, 1911. You would have a period of from the middle of July, 1912, up to about the 20th of August, 1912.

Q. Those last telegrams, from July 17 to the middle of August, are here in court?

A. Well, then there must be still another package covering the period from March 1911, until September, 1911.

Q. Then, what you mean to say, Mr. White, is that the period up until September 1st, 1911, covering the history of well No. 1 in Section 26 as set out in your summary, was drawn from telegrams which you did not bring into court

A. It is my recollection that was taken from telegrams or the confirming daily written reports.

Mr. Lewers—Which are here in court, Mr. Mills.

Mr. Mills—Now, I object to any interruption of

the examination, Mr. Lewers.

Mr. Lewers—And have been in your possession or under your examination for four days.

Mr. Mills—That statement is untrue, as counsel well knows.

Mr. Lewers—I think your statement is very remarkable.

Q. By Mr. Mills—Now, why didn't you bring in those tele-[2624] grams, Mr. White?

A. Well, we thought we had all that was necessary.

Q. You have endorsed, though, on the Exhibit No. 173, which constitutes counsel's offer as to well 1 of Section 26, information which was contained in those telegrams, have you not?

A. Well, I couldn't state positively now whether this was taken from the telegraphic reports or the daily written reports which you have here. My recollection is, though, that there were telegrams covering that period of time.

Q. And those telegrams you have not here in court?

A. Apparently not.

Q. Mr. White, in this series of letters, signed by Mr. L. J. King, addressed to Mr. Bell, field manager, beginning at March 10, 1910, and running to September 1, 1911, are references to this particular well that we have been discussing. Do these purport to contain some of the information which was on the telegrams you refer to?

A. They contain it, only in some cases it is a little more lengthy.

Q. Which is more lengthy?

A. A little more detail in the written report.

Q. Are you positive that there are not some differences between this written report and the telegrams?

A. There is no other difference except that there may be a little more details in the log or written report,

Q. Now, isn't it true that as a matter of custom the letters—These are the confirmatory letters, are they not, which you referred to?

A. Yes.

Q. That the letters contained, in most instances, the exact statement found in the daily drilling report? **[2625]**

A. They are supposed to and should contain the same information.

Q. Now, I call your attention to a letter dated March 10, 1911, addressed to Mr. Bell, field manager, and signed by L. J. King, among the papers handed to me by Mr. Lewers on Thursday last. Do you know Mr. King's signature?

A. Yes.

Q. Do you know whether that is his signature, or was it signed by some clerk?

A. I think not. I think that was signed by his chief clerk, Williams.

Q. In this letter appears this statement: "Elk Hills—Section 26, No. 1. 3548 feet; 3168 feet of 4½

inch casing; formation 3548, blue shale. Getting ready to make test." That refers, does it not, to this well we have been talking about?

A. It refers to 26, No. 1.

Q. And the well which we have been discussing?

A. Yes.

Q. Now, is it possible that you used any of these letters from March 10, 1911, to September 1, 1911, as forming a basis of your tabulated statement known as Defendants' Exhibit 173?

A. Yes; it is very likely, because some of the telegrams are missing.

Mr. Mills—Let the same method be pursued, then, as to this, Mr. Lewers?

Mr. Lewers—That is agreeable.

Mr. Mills—In respect of introducing so much of each one of these letters into the record as bears on Section 26 well, as if read into the record?

Mr. Lewers—Yes.

Mr. Mills—And I suppose it may be further stipulated **[2626]** that the excerpts taken from these papers as read into the record will have the same force and effect as if the originals were produced and read to the court?

Mr. Lewers—That is agreed.

Q. By Mr. Mills—Again referring to Exhibit 173, which constitutes the tender of counsel for defendants on Thursday last, is there anything which was brought into court purporting to support the accuracy of this offer which covers any of the period from September 1st, 1911, until July 17, 1912, relat-

ing to the history of the operations of well No. 1 on Section 26?

Mr. Lewers—That is what you have just introduced in evidence.

Mr. Mills—No; that does not cover it, Mr. Lewers.

Mr. Lewers—It certainly covers part of the period, don't it?

Mr. Mills—No. It carries it from the last date of what I introduced to the first date of the next set of telegrams.

Mr. Lewers—Oh, you are coming at the telegrams now.

Mr. Mills—No; I am coming at a period that is not covered by anything, so far as I can discover.

A. My recollection is that during the period referred to—

Q. Just a minute. The question is whether there was anything which you brought into court in support of that document which covers that period that I mention.

A. What is that period, again?

Q. September 1, 1911, to July 17, 1912.

A. During that period I believe there was no report.

Q. That is not an answer to the question, Mr. White. It is not responsive. I ask you if you brought anything into court in the way of data, drilling reports, or telegrams or letters, which in any way covered that period that I have [2627] mentioned, from September 1, 1911, to July 17, 1912, relating to the well No. 1 on Section 26.

Mr. Lewers—If you will look at that list just introduced in evidence, Mr. Mills, I think you will find something.

Mr. Mills—I didn't introduce the list.

Mr. Lewers—You didn't call attention to that. You have a right to examine those files carefully, Mr. White, before you answer those questions. There is a lot of stuff in there after September 1st.

Mr. Mills—I will withdraw that question, Mr. Examiner, and ask this question:

Q. Mr. White, have you brought anything into court in the way of letters and telegrams or daily drilling reports or other data which you examined for the purpose of making defendants' offer 173, covering the period from October, 1911, to July 17, 1912, inclusive?

A. To the best of my knowledge, we have nothing. We have brought nothing into court covering that period, as the well was shut down.

Q. You say the well was shut down. Does not the summary or tabulated statement which you produced show, on the contrary, that the well was flowing during the entire time of the period I have mentioned?

A. It was flowing a small quantity of oil during that period.

Mr. Mills—I move that that answer be stricken, as not responsive,

Mr. Lewers—Well, I submit it is responsive.

Q. By Mr. Mills—I didn't ask you how much oil it was flowing, Mr. White. My question is, and I

ask it again, whether, on the contrary, your tabulated statement, which constitutes the defendants' offer 173, shows that well No. 1 of Section [2628] 26 flowed during the entire time of the period I have mentioned.

A. It did flow.

Q. That is not the question. Doesn't your tabulated statement show that?

A. Yes.

Q. Now, have you brought any data into court in support of the accuracy of this exhibit we have referred to, which in any way shows the production, month by month, during the period I have mentioned, from October, 1911, to July 17, 1912?

A. We have production reports.

Q. I ask you if you brought them into court. Just read the question. (Last question read by Special Examiner.)

A. We have.

Q. Where is that data? I am referring, now, to data which is offered in support of the accuracy of this exhibit which on Thursday was submitted to me for examination.

Mr. Lewers—That was already introduced in evidence, Mr. Mills, that other data. He has answered the question. It was brought into court and introduced in evidence.

A. We brought that data. I don't know whether it was submitted or not.

Q. By Mr. Mills—Well, what did it consist of?

A. Letters to the auditor.

Q. Covering well No. 1 of Section 26?

A. Yes.

Mr. Mills—Have those been introduced in evidence?

Mr. Lewers—Yes; they were introduced in Mr. Williams' testimony, Mr. Mills.

Mr. Mills—May I see them Mr. Examiner? (Letters handed to counsel for the government.) That appears to cover it, Mr. Lewers. **[2629]**

Q. Mr. White, I call your attention to a telegram dated January 23, 1912, addressed to F. B. Henderson, A.F.L.Bell, San Francisco, reporting up to midnight of January 22, 1912, and signed L. J. King, in which there is a reference to well No. 1 of Section 30. Will you read that portion of the telegram which refers to the Elk Hills?

A. "Elk Hills. Well Section 30, No. 1. Placed on pump at 2360 feet; started 9 A. M. Pumped water three hours. Turned to oil. Showed production at rate of 350 barrels for eighteen hours. Cut 9 per cent B.S. No water."

Q. Now, I notice that on defendants' offer No. 172 for that date, in your tabulated statement of production—you may read what your tabulated statement gives as to that particular date.

A. "350 rate. 9 per cent B.S."

Q. Now, when you say "rate", you mean the amount of oil that the well will produce in twenty-four hours, don't you?

A. That is it.

Q. So that the statement on the summary is erro-

neous in placing the rate at 350 barrels when in fact the well actually produced 350 barrels for eighteen hours. Is not that correct?

Mr. Lewers—I object to the question, on the ground that the question does not fairly state the report of the telegram, as the word "rate" is used in the telegram and the transcription is a fair one.

Mr. Mills—You may answer.

A. That was copied from the telegram and the word "rate" used in the same sense.

Q. Now, Mr. White, what would be the actual rate per day of twenty-four hours on a well which will produce 350 barrels in eighteen hours?

Mr. Lewers—I object, on the ground that there is no **[2630]** evidence that the well produced 350 barrels in any number of hours. It is merely the report of the telegram that it produced at the rate of 350 barrels.

Q. By Mr. Mills—It would be 466 2/3 barrels, wouldn't it?

A. Yes. But you must understand that that is estimated. It is all guesswork anyway, because they had no way of saving the oil and they simply estimated it at 350 barrels at the time it was operated.

Q. Were you there to see they had no way of saving the oil, when that well was operated on January 22nd, 1912?

A. No.

Q. That forms the basis of that telegram?

A. No; but I know the conditions at the well at the time.

Q. You knew it from hearsay only, didn't you?

A. Well, from our records and office routine.

Q. Yes, from hearsay; that is what I mean. That is correct, isn't it?

Mr. Lewers—That is not hearsay, and it is not fair to ask the witness whether it is or not. Records of an office are not hearsay, in the regular course of business.

Q. By Mr. Mills—Now, Mr. White, a fair interpretation of your tabulated statement would indicate that you intended the court to understand that under the entry for this particular date of well No. 1 of Section 30, that the well was producing each twenty-four hours 350 barrels with 9 per cent B. S.?

A. "Each twenty-four hours"? I don't get that. Because there was only eighteen hours that it did produce.

Q. Is there anything on your tabulated statement to show that it pumped only eighteen hours? You may look at the statement.

A. No, there is nothing on the statement to show that. **[2631]**

Q. You intended to have the court understand, when you made that statement, that the well was producing at the rate of 350 barrels a day, did you not?

A. I meant that the well produced during that day 350 barrels, or at the rate of 350 barrels during that day.

Q. Yes. That is at the rate of what? 350 barrels for what time?

A. That was the total production for the day.

Q. Well, now, you have, on this same sheet, put down the total production for the day at various places, have you not, without putting the word "rate" after the amount of the production?

A. Yes. This statement was supposed to eliminate some of the unimportant details.

Q. It becomes quite important, doesn't it, to inform the court, when you are trying to show the monthly production or daily production of a well, to show that it would produce at the rtae of 466 barrels, if that is the fact, rather than to indicate that it would produce only 350 barrels?

A. Well, practically there is no way of telling whether a well is doing 350 or 400 barrels a day. It is simply an estimate.

Q. When you put down "350 barrels", it was your intention to have the court understand that that well produced at the rate of 350 barrels a day, when you put the word "rate" after 350.? Now is not that true?

A. Well, it may be a little misleading, the way it is put down here; but my intention was to convey the idea that during that day we secured 350 barrels of oil from the well.

Q. What was your intention in the item opposite January 24, on the same well? Was that also to show what was actually produced? **[2632]**

Mr. Lewers—You have a right to look at the telegram.

Mr. Mills—I am referring now to the summary itself.

Mr. Lewers—But he has a right to look at the telegram upon which the summary was based.

Mr. Mills—Well, this question does not call for the examination of the telegram. I am asking him what that meant on the paper itself.

Mr. Lewers—I instruct you, Mr. White, you are not required to answer that unless counsel permits you to examine the telegram for that date upon which you have testified the entry was made.

Q. By Mr. Mills—Now, I understand you to say that it was your intention, as to the entry on January 22, where you say, "350 (rate)", to show that that well actually produced, during all the day that it was pumping or operated, 350 barrels. Is that correct?

A. Yes.

Q. Now, it was also your intention, was it not, in the item of January 26, to show the same thing as to the 400 barrels?

Mr. Lewers—There is the same question again. Will you permit Mr. White to examine that telegram? He is not testifying from his own knowledge, made on the ground, an observation of a well, but has testified that this is a chart that he has made from the telegrams and other records and the chart purports to faithfully represent, as nearly as may be, the results of those telegrams. Now, you ask

him what he meant. He has already testified that he meant to put down what the telegrams and reports showed. You will not permit him to see the telegrams, and I think the question is unfair.

Mr. Mills—I cite your constant interruptions as misconduct. **[2633]**

Mr. Lewers—I will very cheerfully plead guilty to that sort of misconduct; but I would not to yours.

Mr. Mills—Read the question, Mr. Examiner.

Mr. Lewers—I instruct you you are entitled to examine that telegram.

(Question read by Special Examiner.)

Mr. Lewers—Let the record show that counsel refuses to permit the witness to examine the telegram.

Q. By Mr. Mills—Can't you tell that without referring to the telegram? I am referring now simply to your own tabulated statement.

A. Well, in making up the statement I simply endeavored to follow the wording of the telegram and not to put down my own conclusions entirely.

Q. Well, take this question, then: When you put down so many barrels, with the word "rate" after it in one case, and so many barrels in another case without the word "rate", is there any distinction to be drawn from that by the court?

A. Well, wherever the word "rate" was mentioned in the telegrams from which I made this statement up, I included it; where it was not given I left it blank.

Q. Now, do you want the court to understand

that that is true in every instance, Mr. White? Aren't there numerous instances in these tabulated statements where you haven't followed that plan?

A. Well, in some of the reports the word "rate" itself will not be shown, but from the report itself it could be seen that the well was not operating the twenty-four hours, not pumping, for instance, or being operated, the twenty-four hours.

Q. Well, I am speaking generally, now, of the whole statement—wherever you have used the word "rate" after the num- **[2634]** ber of barrels, is there any distinction to be drawn, or did you intend any distinction to be made on the part of the court, from a case where you simply put down the number of barrels without the word "rate"?

A. Yes.

Q. What distinction did you desire the court to have in mind?

A. Well, speaking generally, in the well that would flow at 350 barrel rate, you would have produced 350 barrels.

Q. Yes; and when you say "rate" what time is covered?

A. Twenty-four hours.

Q. Twenty-four hours. So that you intended the court to understand that when you used the word "rate" in any instance, it meant that whatever length of time it pumped for that day, if pumped twenty-four hours at that rate it would produce that number of barrels in that time?

A. Yes; that is my idea.

Q. So that, in this particular instance on the 23rd of January, where, as you read in that telegram, the well produced at the rate of 350 barrels for eighteen hours, the way you have placed it upon the summary is misleading, is it not?

Mr. Lewers—I think your question is misleading. The telegram does not state that that was the fact.

Mr. Mills—I have quoted the telegram exactly.

Q. Why don't you answer, Mr. White?

A. Well, on a statement of this size you could not put all the details.

Q. I understand that; but the question is whether or not it is not misleading, the way you have it, without putting in the words "eighteen hours."

A. It may be a trifle dense, but as the estimate of pro- **[2635]** duction is simply an estimate it really does not make much difference.

Q. Well, Mr. White, the question is whether it is not misleading.

Mr. Lewers—I submit that has been answered—answered twice.

Q. By Mr. Mills—Why don't you answer?

A. It may be a little misleading.

Q. "A little bit misleading". Isn't it misleading to the extent of 116 barrels on twenty-four hours?

Mr. Lewers—That question has been answered several times.

A. Strictly speaking, I presume it would be misleading to that extent.

Q. By Mr. Mills—Now, according to your tabulated statement, Mr. White, 172, that we are now ex-

amining, what was the initial production—350 barrels or 466 barrels—of that well?

A. Well, the initial production was 350 barrels in twenty-four hours.

Q. According to the statement?

A. Yes. Speaking of initial production, however, Mr. Mills, there was a slight production prior to that; so it wouldn't be initial production.

Q. Well, this 350 barrels, then, was after the initial production had—

A. Yes.

Q. That is, it had grown up to that, you mean?

A. Yes.

Q. Now, I call your attention to a telegram dated January 25, Mr. White, addressed to the same parties as the last telegram, signed by the same sender. Will you kindly read that **[2636]** portion of it which refers to this well that we are discussing?

A. "Elk Hills—Section 30, No. 1. Pumping 400 barrels actual gauge at 2360 feet, gravity 24.5; cut 2.1 water, 6 per cent B. S."

Q. Now, is there anything on your tabulated statement to show that that well was put on the actual gauge on that date? Is there anything on your tabulated statement to show that the well ran 400 barrels actual gauge?

A. What is the date?

Mr. Lewers—January 25th.

Mr. Mills—No; up to this night of January 24th.

A. The statement shows production of 400 barrels during the twenty-four hours of that date.

Q. I read from telegram dated January 29, reporting up to midnight of January 28th, as to this well: "Elk Hills—30. Pulled tubing. Put on new pump. Lowered well to 2600 feet. On at midnight." There was a difference of 240 feet in the position of that pump from January 22nd, was there not?

A. I don't get that question, Mr. Mills.

Q. On January 22 the pump was at 2360 feet, according to the information from which you based that summary, and on January 28th, according to the telegram, up to the 29th, the pump was lowered 2600 feet, which would make a difference of 240 feet, would it not?

A. Yes.

Q. Now, what happened in the production as soon as that pump was lowered 240 feet? And I refer you to the information contained in that telegram of January 30, reporting to midnight of January 29th, 1912.

A. With reference to the telegram indicated, dated January 28, 1912, you will note that the well, the fluid level in that well, was lowered to 2600 feet, and not the pump. Under date of **[2637]** telegram of January 30, reporting up to midnight of January 29, 1912, the pump was put down to 2600 feet.

Q. And what happened to the production?

A. The production had been falling off, possibly due to the head being pumped off the well.

Mr. Mills—I move that the latter part of the answer be stricken, as mere speculation on the part of the witness, and not responsive.

Mr. Lewers—I insist that the answer stand.

Q. By Mr. Mills—Now, what production, after the pump was put on at 2600 feet, did the well give?

A. It pumped at the rate of 212 barrels.

Q. And on January 30 the production went down still further, did it not, that is, on the next day, as you have it in your statement?

A. Yes.

Q. Down to ninety barrels?

A. Yes.

Q. Is that correct?

A. That is correct.

Q. And on the following day pumped only a hundred barrels. Is that correct?

A. That is correct.

Q. What is the total production which your tabulated statement gives for January, 1912, on well 1 of Section 30?

A. 687 barrels.

Q. Now, I show you a telegram dated January 23, 1912, reporting up to midnight of January 22. What amount of oil, according to that telegram, was pumped from the well we are talking about?

A. Pumped at the rate of 350 barrels for eighteen hours.

Q. How much oil would that be? Three hundred and fifty **[2638]** barrels, wouldn't it?

A. No, it would be less than that.

Q. How much would it be?

A. It would be approximately 270 barrels, as I interpret it.

Q. Now, I refer you to telegram of January 24, 1912, reporting for the 23rd. What amount of oil, according to that telegram was produced from this well on that day?

A. It is hard to tell from that whether it is producing twenty-four hours or not. It is producing at the rate of 350 barrels in twenty-four hours. Whether it pumped twenty-four hours or not you can't tell.

Q. There is nothing to show that it didn't pump for the full twenty-four hours, is there?

A. No.

Q. And on the preceding telegram there is something to show that it pumped less than twenty-four hours?

A. Yes.

Q. So that it is a fair assumption to say that it pumped twenty-four hours, is it not?

Mr. Lewers—I submit that is purely argumentative. It is not a fair assumption, either.

A. Well, it was producing at that rate, Mr. Mills. It is guesswork.

Q. By Mr. Mills—Well, what did you put down for the 23rd?

A. I put down 350 barrel rate.

Q. Well, how did you arrive at your total monthly production?

A. That is taken from the statements sent in by the superintendent to the auditor, which has already been introduced as evidence. [2639]

Q. What statement was that?

A. The letters to the auditor.

Q. You are referring to your well on Section 26, aren't you?

A. They are all—

Mr. Lewers—They are recited with reference to each well, Mr. Mills.

Q. By Mr. Mills—Then you paid no attention to the telegrams at all?

A. Not in securing the total production, as they do not give it.

Q. Have you anything there for January 27th, in the way of production?

A. No production.

Q. Now, I call your attention to telegram of date January 29th, reporting for midnight of January 27th, "Elk Hills—30-1, pumping 400 barrels at 2300 feet, gravity 25". Have you anything to show that it was pumped on that date on your tabulated statement?

A. On the 29th?

Q. On the 27th.

A. I show here that the well had trouble on that date.

Q. Well, the question is not what you showed affirmatively, but is there anything on that tabulated statement to show that the well produced any oil on that day?

A. No. I considered the fact that the well had trouble on that day more important than the production.

Q. Then you disregarded the telegram, which stated that for that day, "Well No. 1 on Section 30

was pumping 400 barrels at 2300 feet, gravity 25"? Now, you state you regarded the "trouble" as more important that day. Is that right?

A. I will have to look at the original telegram, Mr. Mills, [2640] before I answer.

Q. Will you read the question, Mr. Examiner? (Question read by Special Examiner.) Let the record show that the witness does not answer for several minutes.

Mr. Lewers—Well, let the record show that the witness is examining the telegrams, which counsel has refrained from letting him see before.

Mr. Mills—It does not require any telegram to answer that question, whether he regarded the trouble as more important or not.

Q. Can't you answer the question without reference to the telegram, namely, whether you regarded the trouble which may have occurred on this day as more important than the production?

Mr. McCormick—I think he answered that.

Q. By Mr. Mills—Did you testify to that, Mr. White?

A. I believe I did.

Q. Now, wasn't it your purpose, in making this tabulated statement, and were there not instructions issued to you, to show the actual monthly production of these various wells?

A. Actual monthly production?

Q. Yes. Was not that the purpose?

A. I have shown the actual monthly production.

Q. Won't you answer my question? Wasn't that

the purpose? Not what you did, but what was the purpose?

A. The purpose was to show the actual monthly production.

Q. It was not to show the "trouble", was it?

A. The purpose of the entire statement was to show the history of the operations on that well.

Q. Why were you so particularly interested in showing the great trouble which occurred on a certain day, and for that reason failed to put down on that day the production of the well, [2641] when you say it was your purpose to show the production?

A. Not entirely. It was my purpose to show the history of the operations of drilling, and the work on the well, as well as the production.

Mr. McCormick—I don't think he answered your last question.

Mr. Lewers—I submit he has answered it several times.

Mr. Mills—Read the question and answer, please. (Last question and answer read by Special Examiner.)

Q. As I understand you, then, Mr. White, the figures which you call actual monthly production you didn't take from the telegraphic reports from the field but took from figures submitted to you by some one else, in a different way?

A. Took the production from the regular monthly reports submitted from the superintendent from the field.

Q. And you disregarded these telegrams entirely?

A. Disregarded the production shown on the telegrams, any more than as a matter of information.

Q. So that, in any place where the telegram shows an actual production of in excess of what you state in your total, that is, where the telegrams of that month will show more than that, that was due to the fact that you didn't consult the telegrams for the monthly production but took the monthly report? Is that correct?

A. Let me understand you. You mean by adding up the total production that is shown here daily it would amount to more than the total for the month? Is that it?

Q. No. What I mean to say is that the total which you give for each and every month, where it differs from the total as shown by the telegrams would be due to the fact you didn't consult the telegrams but consulted some other medium of information?

A. I have shown on here daily— **[2642]**

Q. Just answer that. I didn't ask you what you have shown.

Mr. Lewers—I object to the interruption of the answer as the witness starts. You have a right to answer in your own way, Mr. White, and explain your answer as you desire, without interruption from counsel, too.

(Last question read by Special Examiner.)

A. That question is a little dense to me; but I have shown on the statement—

Q. By Mr. Mills—Now, I didn't ask you what you have shown, and I will reframe the question, if you want me to.

Mr. Lewers—I object to the interruption. Permit the witness to answer the question. Every time you see an answer coming you don't like—you indulge in some interruption trying to disconcert the witness. I desire to enter a formal protest against that method of examination.

Q. By Mr. Mills—Mr. White, what I mean to say is this: Wherever the total monthly production as given on the foot of your tabulated statement would differ from the total monthly production as shown by the telegrams, that discrepancy would be due, as I understand you, to the fact that you didn't consult the telegrams to get the production, but consulted some other medium of information? Is that correct?

Mr. Lewers—We object to that, on the ground the telegrams don't show total monthly production. The question is misleading, assumes a fact in evidence which is not in evidence. There is no total monthly production shown on the telegrams.

Q. By Mr. Mills—Where it shows it day by day and the total of those days shows actual production up to a certain amount, and that should differ from the total you show, would it be due to the fact that you consulted some other medium than the telegrams in making up your totals for the month? **[2643]**

A. Yes. In securing these totals, I have taken the totals for each month from the official statement sent in by the superintendent, which are now in evidence.

Q. And you paid no attention to the telegrams in respect to the totals?

A. You could not secure the information from the telegrams, and I disregarded it.

Q. Now, will you answer the question? You paid no attention, did you, to the telegrams in putting in your totals?

Mr. Lewers—I submit he has answered it. He said he disregarded them. He could not get the information from them. If you would listen to the answer before you interrupt him with another question, you would understand it.

Q. By Mr. Mills—Now, can't you answer that question by Yes or No?

A. There was no attention paid to the telegrams in compiling or in setting down the monthly totals shown for each month.

Mr. Mills—Yes.

Whereupon the further taking of testimony herein was adjourned until Tuesday, July 8, 1913, at 2 o'clock P. M., at the same place.

On Tuesday, July 8, 1913, at 2 o'clock P. M., the further taking of testimony herein was resumed pursuant to the adjournment:

W. E. WHITE

recalled,

CROSS-EXAMINATION

resumed [2644]

By Mr. Mills:

Q. Why did you think it was necessary, Mr. White, in answer to those last questions, to look at the telegrams in order to interpret these summaries which you have brought in?

A. Well, Mr. Mills, that schedule there was made up some time back and these things are not very fresh in my memory at the present time.

Q. Did you expect the court in this case to be able to interpret this blueprint exhibit which we have been talking about without the aid of the telegrams, when you who were the constructor of it could not interpret its meaning without the aid of the telegrams?

Mr. Lewers—To which I object, on the ground that it is irrelevant what he expected the court to interpret. That is for the court to determine and not for the witness.

A. At the time I made up that schedule I didn't know that it was to be brought into court.

Q. Oh, you didn't understand that this was to be used as an exhibit in court?

A. No; not particularly.

Q. What did you think it was to be used for?

A. I made it up as a summary of the development and production of the wells.

Q. I ask you, what did you expect it to be used as or used for?

A. Well, I didn't know what purpose it would be used for.

Q. Who told you to make it up?

A. I made it up of my own accord.

Q. That is, no one suggested it to you at all? You thought it a desirable thing to make that so that you might have it for future reference, or something of that sort? Is that what you mean? **[2645]**

A. I thought it was more desirable than to introduce all our telegrams and other office records.

Q. Introduce them where?

A. In any proceedings that might take place.

Q. In any future proceedings?

A. Any future proceedings, at that time.

Q. What kind of proceedings?

A. Any court proceedings.

Q. Possibly any court proceedings affecting the title to these lands, in the United States courts, you mean?

A. No. I will explain the reason for making up the report. One of Mr. Lewers' representatives called at the office and wanted some data.

Q. What was his name?

A. Mr. E. G. Jeffress. And instead of giving him all our office records, I thought it would be advisable to give him a summary of the office records.

Q. Did Mr. Jeffress tell you at that time that there was a case in which the United States was seeking to recover certain lands in the Elk Hills, and that one of the questions involved was the mineral character of the lands?

A. Well, he did not state it in those exact words, but I knew that from other sources.

Q. Then you knew that this information was desired for the purpose of supporting the contention that certain lands adjoining the lands affected by this summary were not mineral in character?

A. Yes; I understood that.

Q. And with that in mind you constructed these three charts which are known as Defendants' Exhibits 172, 173 and 174?

A. Yes.

Q. Now, suppose it had been the contention, and you under- **[2646]** stood it to be so, of the railroad company, to show that these lands were mineral, instead of non-mineral, that is, that they were applying under a mineral law for the lands and agricultural adverse interests had interposed; would you then, in that case, have swelled the rate instead of minimizing the amount of actual production, as you did in one case on this chart?

A. I don't think I have swelled the rate.

Q. I know you haven't; but I say, would you then have swelled the rate or the production, instead of minimizing it, as you confess to have done in one chart here?

A. I have put down the facts, to the best of my ability, as I found them from our office records, neither increasing nor decreasing them.

Q. What control has Mr. Lewers over the affairs of the office over which you preside?

A. None that I know of.

Q. Did you know Mr. Lewers before Mr. Jeffress came there?

A. I knew of him.

Q. And what did you know of him? That is, what did you know about his connection with the railroad company?

A. I simply knew that he was the attorney in the case involved.

Q. You knew that he was the attorney in the case which the government had brought to recover certain lands in the Elk Hills?

A. Yes.

Q. Now, why did you think it was necessary to furnish to Mr. Jeffress this information from the private files of your company? Who authorized you to do that?

A. Mr. Jeffress told me that he had authority to secure that information, and I accepted his word for it. **[2647]**

Q. What officer of the Associated Oil Company authorized you to give up private information regarding the production and history of wells which they claimed to own in the Elk Hills?

A. Mr. F. B. Henderson, assistant general manager.

Q. And in what form did those instructions come to you?

A. I called him on the phone and asked him if it was all right to give that information, and he said yes.

Q. Did you explain to him that a representative

of the railroad company's law department was there seeking information about the wells in the Elk Hills of the Associated Oil Company?

A. I told him who desired the information, and he understood, apparently.

Q. You understood at that time, did you not, as a man abreast of the affairs in your company, that the Southern Pacific Company owned a majority of the capital stock of the Associated Oil Company?

A. I don't know as to that of my own knowledge.

Q. Well, you knew of that by rumor and by hearsay among officers of the company, did you not?

A. From hearsay evidence; yes.

Q. And, that is, you had heard it discussed by your associates in the Associated Oil Company, and knew that the Southern Pacific—

A. That was my understanding, Mr. Mills.

Q. Yes. So that, in furnishing this information, you were really doing it for the parent company of the Associated Oil Company?

A. Well, this particular schedule involved was my own idea. Instead of having them take all our records, and so on, I thought it would be a better idea to have a concise history of the development of our own wells.

Q. Now, will you read the question? (Question read by **[2648]** Special Examiner.)

Mr. Lewers—I submit that has been answered.

A. I was doing it in accordance with the routine of our own business.

Q. By Mr. Mills—That is, it would be a matter

of routine, if the Southern Pacific Company would ask for information from the Associated Oil Company—you would not regard it as strange, would you?

A. That is not the point. I was instructed by my superiors to give the information, and I did it. I don't know where the authority came from, or anything else about it.

Q. Now, at this morning's session I think we reached a telegram dated January 25, reporting up to midnight of January 24, upon well No. 1 of 30-24.

Mr. Lewers—No; you got three days later than that, Mr. Mills.

Q. By Mr. Mills—Well, now, will you refer to the telegram, please, in which this statement appears: "Elk Hills—Section 30, No. 1, pumping 400 barrels actual gauge at 2360 feet, gravity 24.5"? On that day, namely the 24th day of January, the telegram which I have referred to showed that there had been an actual production of 400 barrels, did it not?

A. Yes sir.

Q. Now, in a telegram dated the 30th day of January, reporting for the 29th to midnight, appears this statement: "Elk Hills—30-1, pumping at 2600 feet, production at rate of 212 barrels." That represents, according to your understanding, does it not, that at midnight of January 29th the superintendent reported that as to that well it had been pumping at the rate of 212 barrels during the day of January 29?

A. Yes. **[2649]**

Q. Now, then, you made an error, did you not, in

your summary or tabulation, by placing that on the 28th day of January, 1912.

A. May I see those figures? (Figures shown to witness.) It looks as though we have it just one day in advance of the actual date.

Q. It is clearly an error, isn't it, after refreshing your memory about it?

A. It is clearly an error, inadvertently made. That is, we have taken the date of the telegram instead of the date of the day of production.

Q. On the 31st day of January appears a telegram, addressed to the same parties, F. B. Henderson and A. F. L. Bell, signed by King, reporting for January 30, 1912, up to midnight, in which this sentence occurs: "Elk Hills—Section 30 No. 1, pumping 90 barrels at 2600 feet, gravity 25." You understand that to be a report of the 30th day of January, up to midnight of that day, do you not, and that the well had been pumping that day, up to midnight, and had reported at 90 barrels?

A. That was on the 29th?

Q. On the 30th; reported up to midnight of the 30th.

A. (After examining telegrams.) My record here shows a hundred barrels. It is evident that we have taken the date of the telegram instead of the date of the day that the telegram purports to report on.

Q. In other words, you have made an error in the tabulated sheet, known as Defendants' Exhibit 172, of one day, and got it on the wrong space.

A. Wrong line. It looks as though we had taken the date of the telegram instead of the date of the day it was reported on. **[2650]**

Q. Yes. Now, you may answer the question, after having explained the error in your sheet. Read the question. (Question beginning at line 13 of the preceding page read by Special Examiner.)

A. It is evident that we have taken the date of the telegram instead of the date of the day.

Q. Yes; you explained that. Eliminating that explanation, now, assuming that you have placed it on the correct space in your sheet—

A. Yes.

Q. —will you answer the question, whether you understood from that telegram that it reported the day's operations up to midnight of that day and that that well did ninety barrels?

A. I don't quite understand your question yet.

Q. Why can't you answer it?

A. I don't quite grasp the question. Do you mean to ask if I—

Q. I will ask you again, if you don't understand it, and try and put it in a different form. In the telegram to which I called your attention, did you understand that that constituted a report, in so far as it related to this particular well, of the doings of that well up to midnight of the day before, namely, January 30th?

A. Yes; I did.

Q. That is, that the well did 90 barrels?

A. Yes.

Q. And you placed it down for the 29th?

A. Instead of the 30th.

Q. Is that correct?

A. That is correct.

Q. So that the only error you see is in placing it on the 29th instead of for the 30th? **[2651]**

A. That is all.

Q. Now, in a telegram dated February 1st, and reporting up to midnight of January 31st, addressed to the same parties and signed by Mr. King, the superintendent, appears this sentence: "Elk Hills—Section 30, No. 1. Pumping 100 barrels at 2600 feet, gravity 25." Did you understand that in the same way as you did the telegram preceding, that it was a report of the well's doings up to midnight of the date previous, namely January 31st?

A. Yes.

Q. You, however, have made an error, have you not, in your tabulation, by placing the production for that date on the day preceding.

A. It is evident that I have; yes.

Mr. Lewers—Right in that connection there is some confusion, Mr. Mills. I think Mr. White stated that that was through inadvertently using the date of the telegram. That could not possibly be the explanation, because it is a day ahead instead of a day behind.

Q. By Mr. Mills—So that, Mr. White, according to the actual statements you have now made, which are supported by these telegrams, there was production for the month of January, 1912, a net production

of 1771 barrels of oil, whereas you, in your total for the same month, have only credited that well with 687 barrels? Is not that true?

A. I can't see how you figure the 1771 barrels, Mr. Mills. The statement does not show anything of that kind.

Q. Can you figure in any manner, from your own tabulation, which apparently carries this day by day, but which in fact, as you have stated this morning, does not make the total for the month of January, 1912, agree with the actual production which you yourself have placed on the tabulation, eliminating **[2652]** the word "rate" wherever it occurs?

A. There is no way of totaling up the daily production as shown for the month of January, because in a great many cases it is a "rate" of so many barrels a day.

Q. Well, I was eliminating where it says a "rate" of so many barrels a day, upon your actual tabulation; and taking those which appear to be clear, without the word "rate," can you possibly make the total of those figures, the actual total, agree with the total which you have placed there?

A. The total which I have here is the amount of oil sold.

Q. Well, can't you answer that Yes or No?

A. There is no way of adding "rates."

Q. I have eliminated the "rates" in my statement.

A. We have no data at all to show us the daily production.

Q. I ask you whether you can take the figures in the month of January, as you have placed them on there, where the word "rate" does not occur, add them up, and make the sum total agree with the total which you have placed at the foot of that column.

Mr. Lewers—I object to the question, on the ground that the witness has already testified that that is not production in all cases, but an indication of the rate while the gauge is being taken or an estimate made—just the same as if you would say a train runs 60 miles an hour it does not mean it runs an hour at all.

Mr. Mills—Read the question. (Question read by Special Examiner.)

Q. Now, can't you answer that question Yes or No?

A. I have simply taken the figures as I have found them.

Q. I have asked you another question. Can't you answer that by Yes or No?

Mr. Lewers—He is not required to answer Yes or No at **[2653]** the behest of counsel. You may answer it in your own way, Mr. White, to express your statements and not his.

Q. By Mr. Mills—Now, I ask you again, Mr. White, and I request you most respectfully, if you can do so, to answer it by Yes or No, whether you can make the fitures which you have placed in the column for January, 1912, upon this sheet, for the well on Section 30, agree in its total with the total which you have placed at the foot of that column?

A. I could not answer that by Yes or No very intelligently, Mr. Mills.

Q. Can you make it agree, do you think?

A. The production shown at the foot of the column is our official production for the month.

Q. Well, didn't you explain that this morning?

A. Explain what?

Mr. Lewers—Explained it repeatedly.

Q. By Mr. Mills—You explained what that was this morning, didn't you?

Mr. Lewers—Apparently you don't understand it.

Mr. Mills—Oh yes; I understand so much about this chart that I can give you lessons on it.

Mr. Lewers—I don't think you can.

Q. By Mr. Mills—Now, as a matter of fact, Mr. White, to be perfectly fair, as I think you try to be, you cannot make the figures agree, can you, the totals of the two columns?

A. I have simply attempted to set down things as I have found them. I have not made any attempt to reconcile figures.

Q. Assuming you did that in good faith, and I have no reason to disbelieve that, can't you answer that question so we can proceed to something else? The actual totals of the figures in that column, eliminating those figures after which the word "rate" appears, will not agree, will they, with the [2654] total which you have placed there?

A. Well, I will explain that to you.

Q. I don't care for an explanation. I ask you,

first, that question; then you may explain afterwards if you desire. Will they agree?

A. As these are an estimated daily production there would be no sense in adding them up, because that is simply an estimate.

Q. Why is it that you refuse to answer the question, Mr. White?

Mr. Lewers—I object to that as unfair.

Q. By Mr. Mills—Is it because you are an employee of the company?

A. Not at all.

Q. Under some feeling that you ought not to answer the question?

A. I have no interest one way or the other except to tell what I know.

Q. What is there about the question that you regard as a trap?

A. Well, because I see no way of adding oranges and apples and making oranges, in other words.

Q. Which are the oranges in this case?

A. "Rates"; and we have simply taken these from the telegrams and they are simply an estimated production. The evidence is the official production.

Q. I have told you to eliminate the figures where the word "rate" occurs, although you have not done it correctly even according to the figures themselves.

A. I think I have.

Q. Well, I won't quibble with you. But eliminating those figures after which the word "rate" occurs, and taking only **[2655]** those figures after which

nothing appears, add them up, and can you make them come to the same total you have placed at the bottom of that column?

A. You could not add them up, because that is simply an estimate.

Q. You can add 400 and 400 and 96.

A. But it is an estimated production.

Q. It is not necessary for you to tell what that is. The telegram speaks for itself.

A. It does not, entirely.

Q. I ask you whether you can add up and make the total of the figures in that column which you have put down as actual production total the amount you have put at the foot of the column.

Mr. Lewers—I object to that question, on the ground that it assumes that he has totaled those as actual production to appear in the column. He has repeatedly stated he has not done anything of the kind. The actual production appears at the foot of the column, as he has stated.

Q. By Mr. Mills—Well, now, after so much coaching on the part of distinguished counsel for the defendant, I will ask you this question. See if we can get at it in another way. Will the figures on the column for January, excluding all figures after which the word "rate" appears, after being totaled, foot up to the same amount as the figures which you have put down at the foot of the column?

A. No; I think not.

Q. Now, in what respect do they differ?

A. Because they are simply estimates.

Q. I didn't ask you what they were. I asked you in what respect they differ in amount.

A. They would be more than the total shown for the month. **[2656]**

Q. And how much more, according to your own sheet?

Mr. Lewers—I submit that is a matter of calculation that is apparent on the face of the exhibit.

Mr. Mills—It is a matter of calculation for the benefit of the court.

A. I should say some 200 to 250 or 300 barrels more.

Q. Yes. So that the figures you have placed there, eliminating even those after which the word "rate" appears and allowing nothing for that time or those days, would show an actual production, according to your tabulation, of at least 200 barrels more than you have given for the month of January?

A. That is, taking the daily production shown as being—instead of its being at that "rate." The daily production, however, is simply an estimate. It may be a hundred barrels either way.

Q. Well, I have no desire to argue it with you, Mr. White. Now, as a matter of fact, when you constructed this tabulation you made up a sheet which would apparently show, day by day, from 1 to 31, and month by month, from the birth to the death of the well, that is, until the time when it was closed down, and have carried at the foot of each one of those columns what apparently ought to be a total of the columns, and without analysis the court might be mis-

lead in reading this sheet as to how that sheet was made up, might he not?

A. Well, it shows very plainly—

Q. Well, is not that true?

Mr. Lewers—You will not permit Mr. White to say five words before you interrupt him.

Mr. Mills—Mr. White and I are getting along very well. He is a very intelligent witness.

A. It is marked at the bottom of the page there, actual monthly production, Mr. Mills. **[2657]**

Q. Yes; but that actual monthly production is not, upon analysis, the sum of the different days' production which you have placed on the sheet, is it?

Mr. Lewers—Oh, that has been answered a dozen times over, Mr. Mills. They don't have anything to do with each other. I object to the useless consumption of time on that.

A. It would be impossible to add up the daily production shown, because they are estimates.

Q. By Mr. Mills—As a matter of fact, although you have constructed a sheet as if to show a sum total of all the figures carried in any one column under which it is headed, by taking your information for the entries in the column itself from one source, namely, telegrams and daily drilling reports, or what not, and taking that customarily in bookkeeping or accounting would appear to be the total of those figures from an entirely different source, namely monthly reports? Is not that true?

A. That is true.

Q. Now, you have no knowledge, excepting the

monthly reports as shown by letters introduced in evidence, here, of the daily production during any one month, of this particular well, have you?

A. No; there was no such reports made up.

Q. I didn't ask you if there was any such reports made up; and I move that that answer be stricken. I asked you if you had any knowledge of it.

A. No; I have not.

Q. Please don't volunteer anything until you are asked.

Mr. Lewers—I submit the witness has not volunteered anything.

Q. By Mr. Mills—Now, Mr. White, in that respect, namely, that the totals of the various columns for the different months during which this particular well was operated, were taken from **[2658]** an entirely different source from the source from which the different items were taken, is misleading, is it not?

A. I think not, Mr. Mills.

Q. Do you think that without the aid of an analysis of all of these telegrams, numbering several hundred or a thousand and all of these daily drilling reports, numbering several thousand, that the court could understand how those sum totals were made up that you put apparently at the foot of each column as if it were the sum total of the figures in the column?

Mr. Lewers—I submit that question is unfair. He has not put it "as if it were." He put the words "actual monthly production."

A. I fail to see how you could add the production

of any one column with the percentage of water and B. S. and so on, and make any intelligent footing.

Q. By Mr. Mills—That is not the question. Is not your report misleading to that extent?

A. I think not, if it is looked at in the proper light.

Q. Is there anything on this report to show that the figures which appear as the total at the foot of the columns for the several months were taken from anything except from the figures which appear above them in the column?

A. Well, from glancing up the columns you could see at once that you could not add those different figures.

Q. That might be due to a mistake, might it not?

A. No, I think not.

Q. Haven't you made at least three or four different mistakes in that one month of January?

A. Apparently we have, yes; inadvertently.

Q. And having made those mistakes you might have made a mistake at the foot of the column, might you not?

A. No, I think not. **[2659]**

Q. You think you would be safe at the foot of the column but unsafe on the others?

A. I think these are correct, Mr. Mills.

Q. As a matter of fact, Mr. White, this chart was constructed for the purpose of showing the production which was reported by the month to you and not for the purpose of showing the daily production? Is not that true?

A. No, it is not entirely true. This chart was constructed for the purpose of showing the history of the well in a concise form.

Q. Was it constructed to show the daily production of this particular well?

A. In a measure, yes.

Q. Do you show the daily production?

A. As far as we had the records, we showed it.

Q. Now, if you had gone to these telegrams and analyzed them carefully, you would have found that for the month of January you should have credited that well with 1771 barrels, instead of which you credit it only with 687 barrels because you took your information from the totals from an entirely different source.

A. The telegrams don't show the daily production. They show an estimated daily production.

Q. When you find a telegram which says 500 barrels were pumped on a certain day, does that show the actual production, or is that an estimate?

A. That is an estimate.

Q. And does the man who reports that particular item have sufficient qualification as a superintendent of a large concern like the Associated Oil Company to make a pretty close estimate of the production of a well for one day?

A. It depends on circumstances. In this case they had a **[2660]** very rough way of estimating it. If they had a tank to run the oil into they could gauge it very closely.

Q. Didn't they gauge the oil, and wasn't it the

custom of Mr. King to gauge the oil which came from these wells?

A. They did in a rough manner.

Q. Now, do you know, from the information which you have in your possession as custodian of the files of the Associated Oil Company, that on the 24th day of January, where you have credited this well with 400 barrels of oil, that the well did not pump twenty-four hours but produced 400 barrels in less than twenty-four hours?

A. Without referring to the record I couldn't answer that question.

Q. Well, is there any record in this court-room that would enlighten you on it?

A. Well, the daily drilling reports would show that.

Q. The drilling reports would show that?

A. Yes.

Q. You say you have not examined your drilling reports?

A. I have examined the drilling reports.

Q. I thought you said this morning you had not examined the drilling reports in making up this chart.

A. I think not.

Q. The daily drilling reports.

A. I examined them as they came in every day.

Q. Did you have those in mind in making this chart?

A. Are you referring to the typewritten report here?

Q. No; I am referring to what you called the daily drilling reports.

Mr. Lewers—Log reports, is what you mean.

Q. By Mr. Mills—No; I am talking about the daily drilling reports, using your own language. [2661]

A. I certainly had access to the daily drilling reports.

Q. Well, did you have those in mind, I say, when you constructed these exhibits?

A. Yes, we used those in constructing them, partly.

Q. As a matter of fact, the well on Section 30 and other wells which were producing oil, operated by the Associated Oil Company in the Elk Hills, were using a part of their production to maintain some fifteen or eighteen other wells in fuel in the Elk Hills, were they not?

A. I think not.

Q. Didn't they ship fuel out to the other wells that they were operating, from these wells?

A. No; I think not. Not to any great extent.

Q. Do you think they shipped as high as two to three and four hundred barrels a month of this oil which they produced here, for fuel, to fifteen or eighteen other wells they were operating in the Elk Hills?

A. I think not.

Q. Do you know how much oil was shipped for fuel to the other wells?

A. No; I don't know of any that was shipped

from the production of the Elk Hills wells to other wells.

Q. Now, in the month of January, 1912, well No. 1 on Section 30 of 30-24 was operated only six days, was it not?

A. That is, you mean actually on the pump, Mr. Mills?

Q. Yes sir.

A. It would appear from this chart that it had been on the well about seven days.

Q. By Mr. Lewers—On the well or on the—

A. On the pump.

Q. By Mr. Mills—And it flowed 295 barrels, about, or nearly 300 barrels—that is, it produced 295 barrels, or **[2662]** nearly 300 barrels a day, for the month of January? Is not that true?

A. I think not.

Q. Notwithstanding that the pump was lowered 260 feet, or 240 feet.

A. It was lowered because the fluid level had lowered.

Q. I understand about the fluid level. It pumped in excess of 250 barrels a day for the time it was operated in the month of January, 1912, did it not?

A. I think not. I can't see it that way. There were intermittent days in there, you will notice, that the well was shut down—trouble.

Q. Now, Mr. White, you have taken great pains and trouble on this chart to show whenever there was any trouble, by inserting, on the day, instead of a blank for no production you would take the

pains to write in the word "trouble." In the month of January you wrote that word in five different times during a period of less than half a month, didn't you?

A. Yes.

Q. Why was it that Mr. King, as superintendent of the Associated Oil Company, when a well only pumped for eighteen hours, reported it as eighteen hours, when it pumped for ten hours he reported it as ten hours, when it pumped any aliquot part less than twenty-four hours he always reported the exact number of hours it pumped, and in all other instances he reported up to midnight of the day on which he reported?

A. Why did he do that?

Q. Yes.

A. That was to give us an estimate of the capacity of the well, I presume.

Q. And on every other day when he didn't report it for a time less than twenty-four hours, it pumped steadily right **[2663]** along for the twenty-four hours, steadily day after day, and you know it, don't you, Mr. White?

A. We took it for granted when he didn't put anything else in his advice to us, that the well had been pumping steadily.

Q. Certainly. Now, I want to ask you, in the month of February,—Now, if you took it for granted it was pumping right along steadily for twenty-four hours unless you got advice to the contrary, why was it that you gave this well no credit for the 22nd day

of January, at 350 barrels, and why was it that you gave no credit on the 23rd day of January for any production, and on the 24th day of 400 barrels, and on the 26th day of 400 barrels, and on the 28th day of 212 barrels, the 29th day of 90 barrels, the 30th day of 100 barrels?

Mr. Lewers—I submit that has all been asked and answered repeatedly.

A. We have shown that exactly that way on the schedule, Mr. Mills.

Q. By Mr. Mills—Then what you meant by that schedule was that you wanted to give the well the credit for that produceion for that day according as it appears there?

A. Well, those are simply estimates of the production for that day and we took it for granted that the telegram was an abbreviated way of reporting these things.

Q. Then, on the estimates will you estimate, please, how much production was actually made, according to your total sheet, for the month of January?

Mr. Lewers—I object to the useless consumption of time on going over something that has been repeatedly asked and answered. It is a frivolous waste of time.

Q. By Mr. Mills—Just estimate it, please, according to that.

A. Well, the estimate is shown by the figures there. I **[2664]** could not improve on that in any way.

Q. What you mean by the estimate would be the addition of those figures? Is that what you mean?

A. That is the only information I have in the matter, and I could not estimate the production to any better advantage.

Q. That is satisfactory. I won't attempt to test you out on addition. Now, let me call your attention to this telegram of February 3, reporting up to midnight of February 2, 1912. Is not that the end of it over here? That is the only way I can account for that sheet. This one here, at the end of this telegram; is not that the one that you found misplaced?

Mr. Lewers—No; the one that was misplaced is in June or July.

A. This says, "Reported January 29."

Q. By Mr. Mills—It seems to agree with your 300 barrels there, and that is the only way I can account for it.

A. Yes; evidently that is it.

Q. On February 3, in a telegram addressed to the same parties, Mr. Henderson and Mr. Bell, reporting drilling operations up to midnight of February 2nd, 1912, appears this statement: "Elk Hills —Section 30, No. 1. Placed on pump at 2600 feet at 5 P. M. Producing at rate of 300 barrels, gravity 25." On the next day, February 5, reporting for February 3, a telegram of that date, made and addressed to and by the same parties, states: "Elk Hills. Section 30, No. 1, pumping 72 barrels at 2600 feet, gravity 25." As you recollect it now, that was

the time when the pump was lowered from 2360 feet to 2600 feet, or shortly thereafter?

A. I think it was, Mr. Mills.

Q. On February 5, reporting up to midnight of February 4, telegram to and by the same parties, recites: "Elk Hills—Section 30, No. 1. Pumping 72 barrels at 2600 feet." On **[2665]** February 6, reporting up to midnight of February 5, 1912, a telegram to and by the same parties recites, "Elk Hills —Section 30, No. 1, pumped last twenty-four hours 53 barrels." On February 7, reporting up to midnight of February 6, a telegram to and by the same parties recites, "Elk Hills—Section 30, No. 1, pumping 53 barrels at 2600 feet." On February 8, reporting up to midnight of February 7, a telegram to and by the same parties recites, "Elk Hills, Section 30, No. 1, pumping 50 barrels at 2600 feet. Cut 8 per cent water, 12 per cent emulsion." Now, on February 9, reporting up to midnight of February 8, a telegram to and by the same parties recites, "Elk Hills, Section 30, No. 1, pumping 50 barrels at 2600 feet. Cut 8 per cent water, 12 per cent B. S." February 10, reporting up until February 9, a telegram to and by the same parties recites: "Elk Hills—Section 30, No. 1, pumping 50 barrels at 2600 feet. Put in bull-wheels and put on cable to swab well. Cut 8 per cent water, 12 per cent B. S." Now, on March 1, reporting up to midnight of February 29, 1912, a telegram to and by the same parties recites: "Section 30, No. 1, Elk Hills. Pumped last twenty-four hours 120 barrels of oil." Now, Mr. White,

construing those telegrams as you have construed all of these telegrams, that where no recitation to the contrary appears, and allowing for the cut of 20 per cent of water and emulsion in each of the instances, that well should have been credited with a net production of 790 barrels instead of 560, as you have stated, for the month of February? Is not that true?

A. I couldn't say it is.

Q. You can't say it is not, either, can you?

A. I would say that you could not add those daily productions and emulsions and so on and arrive at any definite results. The footing shows the amount of oil we saved, and I believe **[2666]** that to be correct.

Q. You can't swear now, on your oath, that it is not true, can you?

A. Well, I don't believe there is any way of adding those daily productions and arriving at any definite results.

Q. Assuming that the well, unless the contrary appears from the telegrams, was pumping full twenty-four hours, then you have failed to credit that well with a substantial per cent of its production for that month? Is not that true?

Mr. Lewers—I submit that has been asked and answered repeatedly. Counsel will insist on the assumption that those are true totals of the production, made in that way, and the witness has repeatedly said they are not. I don't think it is a fair proposition to ask that sort of a question.

Mr. How—Not intended to be or ever claimed to be.

Mr. Mills—That is, you now repudiate your offer of yesterday and desire to withdraw it?

Mr. Lewers—I do not. I understood it. I supposed any intelligent man would. I never accused you of lack of intelligence, so I can only attribute your constant misinterpretation of it to some other cause.

Mr. Mills—Read the question. (Question repeated by Special Examiner.)

Mr. Lewers—I add the further objection that the question is hypothetical, assuming something in evidence which is not.

A. I would simply put down the daily estimated production as I received it from our records.

Q. By Mr. Mills—The daily estimated production?

A. Wherever it was shown.

Q. Now, assuming that that is the estimated production, you have failed to credit the well with the amount of production it is entitled to, haven't you, by over a hundred barrels of oil, **[2667]** or nearly two hundred?

A. Well, the daily estimate may be in error to more than that amount, or that amount at least.

Q. 230 barrels?

A. The daily estimated production is a thing that fluctuates greatly. It may be correct, and it may be a hundred barrels either way.

Q. Now, do I understand you to say that the fig-

ures which appear opposite the daily blanks here on these sheets are the estimated production for the particular month in the column in which they appear?

A. They are supposed to be; yes.

Q. Regardless of what appears at the foot of the column?

A. Yes. The footing has nothing whatever to do with the total.

Q. So that on the entire three wells, for the full time, you find that the total estimated production is 13,103 barrels as against a credit of 6,628 barrels?

A. I have not totaled the figures, Mr. Mills.

Q. Now, assuming that I have correctly added those figures, what became of the rest of that oil?

Mr. Lewers—I object to that question on the ground that it is assuming something not in evidence.

Q. By Mr. Mills—Referring to the month of March, 1912, on well No. 1 of Section 30, 30-24, I see you have the figure opposite March 1, or under March 1, 75 barrels. Was that actual or estimated production that you intended?

A. They were all estimated daily productions.

Q. What do you mean by the statement "They were all estimated?" Were none of them actual?

A. Except where they were shown here as actual gauges, they were estimates. **[2668]**

Q. For instance, where do you show on actual gauge?

A. In the telegrams, I think one day in January.

Q. Well, this occurs as one of actual production for twenty-four hours, doesn't it, March 1st? I refer now to telegram tendered by Mr. Lewers in support of the accuracy of this chart, of the date of March 2, 1912, addressed to the same and written by the same parties, wherein it recites: "Elk Hills, Section 30, No. 1. Pumped 75 barrels last twenty-four hours." That was an actual production, wasn't it?

A. I couldn't state, Mr. Mills.

Q. Well, according to this telegram, what would you say? Would you construe that to be an actual production?

A. I would construe that as an estimate.

Q. That is, where it flatly says, "Pumped 75 barrels last twenty-four hours," you would construe that as an estimate?

A. Yes; in the absence of further information I would say that was an estimate.

Q. On March 4, 1912, a telegram addressed to Henderson and Bell by King recites as follows: "Section 30, No. 1, pumped 50 barrels last twenty-four hours." That makes 125 barrels, does it not, actual production?

A. I couldn't say whether it is actual or estimated production.

Q. And the telegram of March 4, reporting for March 3, same parties, "No. 1, pumped 50 barrels last twenty-four hours;" and telegram of the 5th, reporting for the 4th, which recites, "Pumped 50 barrels last twenty-four hours;" and a telegram of the

6th, reporting for the 5th, which recites that the well was flooded with 250 barrels of oil to place back on the pump; on the 7th of March, reporting for the 6th of March, in a telegram by the same to the same parties, which recites that this particular well pumped 200 barrels the last twenty- **[2669]** four hours—will you look at these? I hand you now the rest of the telegrams for that month, beginning with March, 1911, reporting for March, 1910, and ask you to glance through them preparatory to answering a question. (Telegrams handed to witness.) Now, do you find, Mr. White, after examining the balance of the telegrams for the month of March, 1912, relating to well No. 1 on Section 30, that your estimated production agrees with the telegram for each of the days?

A. You have reference to the totals shown at bottom of the columns?

A. No; I mean with reference to the daily entries.

A. I think the daily entries are substantially correct.

Q. That is, you find that your entry, or the entry of the daily production, for that month agrees with the telegrams as to those days?

A. I think so.

Q. Can you give us a total of the estimated production as shown by the daily estimate in that column?

Mr. Lewers—I object to that. If counsel desires

to add up on a fruitless chase of that kind, let him do it himself and not take the time of the witness.

A. It seems here—

Q. By Mr. Mills—Well, just add them up as estimates.

A. In one case they had a day where they poured oil back into the well.

Q. Well, add the 250 barrels first which the telegram shows came from the well, and then deduct it because it was poured back. That is a simple calculation, isn't it?

A. I see no way of making the totals agree.

Q. I don't ask you to have the totals agree. I ask you what the total of your estimate for daily production is.

A. I have no voice in the matter. The total estimated **[2670]** production is shown hereon.

Q Well, will you kindly foot up the figures which you put down as the daily estimated production and tell me what it is?

A I can add up these daily productions.

Q That is what I want you to do.

A But it will be of no value, I believe.

Mr Lewers — Well, add them up and see if they agree with Mr Mill's arithmetic.

A Well, adding up the daily estimated production, excluding those days on which "rate" is shown, and also excluding 200 or 225 barrels that was run back into the well to flood it, would give an estimated total for the month of 600 barrels.

Q By Mr Mills — That is fater excluding the 150 for the 18th?

A Excluding the day of the 18th when it pumped at the 150 barrel rate.

Q And the one on the 10th?

A And also one on the 10th.

Q Of 100 barrel —

A 100 barrel rate.

Q Now, what did you do with that 250 barrels?

A With the 250 barrels that was run back into the hole?

Q Yes.

A Well, that was included in the production in the first four days.

Q Yes.

A That would practically offset the first four days' production. Outside of that there would be approximately 600 barrels as an estimated production for the month.

Q Now, I show you a telegram of March 11th, reporting for March 10th, and in that portion of it which refers to the production of this well do you find anything that indicates [**2671**] the well was not pumped for twenty-four hours at a rate of 100 barrels? I am referring to this particular telegram.

A Well, not by referring to this particular telegram, but by referring to the telegram for the day previous you will find the well was shut down accumulating head.

Q Well, assuming that it was, the inference from

that telegram is that it pumped twenty-four hours? It says so.

A Yes.

Q And that it pumped at the rate of 100 barrels? Is not that true?

A That is true; but you should take into consideration the fact that it was pumping a head that had accumulated the day previous.

Q Well, supposing it had; how much oil would you say it pumped for that day?

A There is no use stating, but I would say from this telegram it had pumped 100 barrels during that day.

Q Now, I refer you to the telegram of March 19th, to the same parties, by Mr. King, reporting up to midnight of March 18th. Will you state what the reference is there to the amount of oil pumped on that day from this well?

A This telegram states that this well pumped at the rate of 150 barrels during last twelve hours.

Q Well, how much oil would that be actual production?

A That would be in the neighborhood of 75 barrels.

Q So that, by adding, then, the 100 barrels for the 10th day of March and 75 barrels for the 18th day of March to your estimated total, how much would you have for the month of March?

A Well, that would make an estimated production of 775 barrels.

Q Now, what was the production that you placed

there from the reports, monthly reports, for that month? [2672]

A The amount of oil reported to us as being actual production for the month of March was 320 barrels.

Q There is actually a difference, then, between the estimated amount by the daily production and the amount reported to you, of 455 barrels?

A Yes; taking into consideration the seepage and evaporation.

Q Or more than a hundred per cent. Is not that true?

A Yes.

Q How many days during that month of March was that well on the pump?

A Approximately twenty days.

Q And notwithstanding all of the trouble which your chart shows the well had, pulling rods for days at a stretch, and trouble of other kinds, and flooding the well, the estimated production as you have now figured it out amounts to 38-¾ barrels a day, about, of 25 gravity oil?

A That would be the estimated production of it. I have not figured it.

Q Now, Mr White, what is the difference in value between 25 gravity oil and, say, 15 gravity oil?

A There is considerable difference. It depends on the market fluctuations, you know.

Q Well, is there any general relative value between the two?

A Oh, yes.

Q How would you express it?

A Well, I should say that 25 is worth in the neighborhood of 55 cents a barrel, and 15 is worth practically 30 cents.

Q It is almost double, then, the value of oil at the gravity of 15?

A That is, if it is clean, commercial oil. [2673]

Q This well No. 1 on Section 30 of 30 - 24, taking the estimated daily production as you have given it, and as shown by the telegrams, excepting where you have made errors, would show that that well was operated actually about ninety-three days, with an average daily production of fifty-four barrels, would it not?

A No; I think the well was operated over a period of practically eight months.

Q Well, I am talking about being on the pump.

A Well, it was on the pump off and on over a period of eight months — seven months, at least.

Q Well, was it on the pump during the months of October and November, 1911?

A No.

Q Was it on the pump in August and September of that year?

A Not 1911. It was put on the pump in January, about the 19th of January it was put on the pump, and was on and off until — well, until August.

Q That is true enough, but I am asking you when it was on and not off. It would be about ninety-three days by actual count, wouldn't it, according to your own chart?

A I have not computed it. I have not added up the number of days, Mr Mills.

Q Do you think, now, that your chart, Defendants' Exhibit 172, correctly states the time when that well was on and off the pump?

A I think so. I think that statement is substantially correct.

Q You say "substantially correct". Is that as far as you will go?

A Well, it is correct, to the best of my knowledge and belief. **[2674]**

Q I call your attention to a telegram dated June 3, reporting up to midnight of June 1st, 1912, between the same parties. What is the statement there about Section 24 of the Elk Hills?

A "Elk Hills — Section 24, No. 3, pumped 40 barrels of oil, 20 barrels of M. and B. S. Most a shale. About 12 per cent water."

Q They actually pumped 40 barrels of oil and 20 barrels of M. and B.S., of about 12 per cent water. Is that correct?

A The "M and B. S., mostly shale and about 12 per cent water."

Q Yes. That refers to the mud and B.S. ?

A Yes.

Q But it was 40 barrels of oil pumped on that day, was it not?

A Well, this may be 40 barrels of sludge. It depends whether it could be separated or not.

Q What does it say.

A "40 barrels of oil and M. and B.S."

Q Is there anything there that says anything about "rate"?

A No.

Q Yet on your sheet for well No. 3 on Section 24 you estimate the production of that day at a "rate" of 40 barrels of oil.

A Which would mean the same thing.

Q It wouldn't mean the same thing if that well only pumped one hour, would it?

A No.

Q Is there anything in this telegram to show that that well pumped twenty-four hours?

A There is nothing to show the contrary.

Q Therefore you assert that it must have pumped that? [2675]

A 40 barrels in the twenty-four hours.

Q Very well. Now, we will use the same plan on all these. Pardon me a moment. I call your attention to telegram of June 3, reporting up to midnight of June 2. Will you examine it with reference to the report on the well on Section 24 and state how much oil it reports having been pumped that day?

A "Elk Hills — Section 24, No. 3. Pumped at 2500 feet 45 barrels of oil, 25 barrels bluish shale or rotary mud, 10 barrels of water."

Q Now, what does the statement which you prepared and was introduced in this case as Defendants' Exhibit 174 show for that day?

A It shows it had produced 40 barrels, some oil, mud and water.

Q Doesn't it, on the contrary, show that it produced at the rate of 40 barrels?

A It is the same thing. 40 barrels for the twenty-four hours.

Q Will you turn to the telegram dated the 5th day of June, reporting for the 4th, on Section 24?

A "Elk Hills, — Section 24, No. 3. Pumped 90 barrels of oil, 10 barrels M. and B.S. in nine hours. Still pumping and shows great improvement.

Q How much was actually pumped that day?

A 90 barrels.

Q Now, will you turn to the telegram of the 6th, relating to the 5th, as to the same well?

A "Pumped 190 barrels and 10 barrels M. and B.S. the last twenty-four hours."

Q How many barrels of oil, then, would you say were produced on that well for that day?

A Well, their estimate is 190 barrels. [2676]

Q Well, using that telegram as the basis of information, how many barrels would you say were pumped on that well on that day?

A Approximately 190 barrels.

Q Now, take the telegram of June 7, reporting for the 6th.

A "Elk Hills — 24, No. 3, pumped 125 barrels net last twenty-four hours. Only slight trace of water."

Q Will you refer to your chart and state what entry you have made for that day?

A "125 barrels (rate) for the twenty-four hours".

Q How many barrels, then, do you say were pumped from that well on June 6th?

A Well, their estimated production is 125 barrels.

Q Do they say "estimated production" in the telegram?

A No. That would be my understanding of the production for that day. They estimate it at 125.

Q In other words, if the telegram even says "125 barrels net pumped", you say it is estimated?

A Well, that was net in this case because they had no M. and B. S.

Q How many barrels, according to the telegram of the 8th of June, were pumped from that well?

A "Pumped 125 barrels. Shows some water."

Q How many barrels were pumped on the 9th from that well?

A "Pumped 174 barrels pure oil. Shows quantity of gas."

Q How many barrels were pumped on the 8th?

A "Pumped 115 barrels practically all oil and pure, gravity 21.8, cut .9 water .2 B.S."

Q What does that .9 mean?

A That would be 9/10th of 1 per cent.

Q Practically 1 per cent? [2677]

A Yes; practically.

Q That is on the 8th, is it?

A That is to midnight of June 8th.

Q So that 1 per cent of that 115 barrels of pure oil would be about one barrel and a seventh?

A Yes.

Q And on the 10th of June how many barrels were pumped from that well?

A "Pumped 120 barrels showing large quantity of gas."

Q How many barrels were pumped on the 12th of June from that well?

A "Well flowed almost continuaously while pulling tubing."

Q How many barrels?

A "This morning started flowing between casings. At present time is making 800 or 900 barrels. This may not keep up at this rate."

Q Between eight and nine hundred barrels?

A Eight and nine hundred rate.

Q Does it say "rate"?

A No; but it says here, "It is making 800 or 900 barrels. This may not keep up at this rate."

Q Yes. On the 14th how many barrels were pumped from that well, 14th of June?

A "Flowed 250 barrels through 6-¼" casing."

Q And on the 15th how many barrels did it flow?

A "Flowed 300 barrels."

Q On the 16th how many barrels were produced from that well?

A "Flowed spasmodically, putting out large quantity of oil sand; also making good clean oil. Produced 750 barrels oil yesterday."

Q That would be the 15th, wouldn't it? It is reporting [2678] up to midnight of the 16th.

A Yes.

Q On the 17th how many barrels were produced from that well?

A On the 17th there was produced 325 barrels.

Q On the 18th how many barrels were produced from that well?

A 225 barrels.

Q On the 19th how many barrels were produced from that well?

A 200 barrels.

Q On the 20th how many barrels were produced there?

A 200 barrels.

Q On the 21st?

A 175 barrels.

Q On the 22nd?

A 150 barrels

Q Was that pumped or did it flow?

A This is flowing.

Q On the 23rd?

A 150 barrels.

Q Now, how many were produced on the 24th of June from that well?

A 175 barrels.

Q On the 24th?

A On the 24th; midnight, June 24th.

Q Will you read the entry for that day, please, on the telegram?

A "Elk Hills, Section 24, No. 3".

Q What date is that telegram?

A "June 25th.", reporting up to midnight of June 24th.

Q Yes. [2679]

A "Elk Hills, Section 24, No. 3. Cleaning out at 2940. Well flowed 175 barrels. Sand comes in about as fast as taken out."

Q On the 25th of June how many barrels flowed from that well?

A About 150 barrels.

Q On the 26th how many barrels were flowing from that well?

A 125 barrels.

Q What is the entry for that day?

A "Elk Hills, Section 24, No. 3. Cleaned out to 2950 feet. Well flows continuously. Made 125 barrels."

Q On the 27th of June how many barrels were produced from that well?

A 100 barrels.

Q Will you read the entry?

A "Elk Hills, Section 24, No. 3. Cleaned out to 2990 feet. Gas blows sand out of hole as fast as tools mix it up in bottom."

Q On the 28th of June how many barrels were produced from that well?

A 100 barrels.

Q Now, on the 29th and 30th of June there was a cleaning out generally of the well, was there not, according to the telegrams?

A "Cleaning out."

Q Yes. So that, according to the actual reports from the field made daily, and not from any monthly statement, that well produced for the month of June,

working twenty-six days, 5214 barrels of oil, whereas from the report which you received from the field and from which you made up this exhibit you have stated the total to be, for that month, 2965 barrels? [2680]

A Yes.

Q Or a difference of a little over 2000 barrels of oil, one well, in the month. As a matter of fact, Mr. White, that well, for the month of June, averaged 200 barrels a day, did it not, working 26 days during that month?

A No, I think not.

Q Well, assuming that I have added the figures correctly, 5214 barrels per month divided by 26 would give you the amount per day, would it not?

A The amount of the estimated production?

Q Yes.

A Yes.

Q Which would be about 200 barrels. Is that correct?

A Yes, approximately.

Q Now, will you take the month of August, so as to expedite matters, beginning with say the 4th of August — the telegram of the 4th, reporting for the 3rd. What oil was produced?

A "Flowing at rate of 50 barrels."

Q And on the 4th of August?

A "Flowing at rate of 100 barrels."

Q The 5th?

A "Flowing 100 barrels."

Q The 10th?

A Flowing a trifle over 100 barrels a day.

Q What is the entry?

A "Elk Hills, 24, 3. Fishing for lost drilling bit. Well flowing trifle over 100 barrels per day actual measurement in tank."

Q For the 11th of August. Read the entry.

A "Fishing for drill bit, well flowing 100 barrels per twenty-four hours day. Also flowing regularly with oil, a [**2681**] quantity of 3,200,000 cubic feet gas." Does your chart show any record of the gas on that well, that is, your exhibit?

A No. I have not shown any gas on there.

Q That is, Exhibit 174. Now, for the 12th of August.

A "Flowing 100 barrels oil, 3,000,000 cubic feet gas. Fishing for drill bit."

Q The 13th?

A "Flowed 100 barrels, 3,000,000 cubic feet gas. Fishing for bit."

Q Do you understand that they were fishing for that bit while this was flowing oil?

A Yes sir. I have got it so marked.

Q What was the 14th?

A "Flowing 100 barrels oil, 3,000,000 feet gas, fishing for bit."

Q What kind of a bit is that they were fishing for? Drill bit?

A Drill bit; yes.

Q Do you know the weight of it?

A No. Let's see if that was a rotary.

Q Yes; that is a rotary.

A It was not so much the weight of it; it is the awkward part to get hold of.

Q Now, the 15th. What performance did the well make on that date?

A "Flowing same prior report. Making special fishing tool to fish for lost bit."

Q On the 16th?

A "Flowing same as yesterday. Will fish for bit today."

Q On the 17th?

A "Flowing the same. Fishing for bit."

Q On the 18th? [**2682**]

A "Flowing, and trying to get hole cleaned out down to bit. Sand running in badly."

Q On the 19th?

A "Flowing, and fishing for bit."

Q On the 20th?

A "Unable to recover drill bit. Will therefore cap well as directed."

Q Now, who had the power to direct the capping of that well?

A Mr Bell, the field manager.

Q Now, will you read the entry for the 21st of August?

A "Elk Hills, Section 24, No. 3. Closing well in tight to shut down."

Q Read the telegram of the 22nd, so far as it relates to this well.

A "Elk Hills. Section 24, No. 3. Capping and will be closed down today."

Q On the 23rd. What does the telegram say for the 23rd?

A "Elk Hills. All wells shutting down."

Q Is that all it says?

A That is all.

Q Is there a later telegram than that?

A There is one on the 24th here, same thing.

Q Well, read that one.

A "Elk Hills. All wells closed down."

Q As a matter of fact, that well was closed down by direction of somebody at a time when the drill bit could not be recovered, was it not?

A Yes.

Q Has that ever been recovered?

A Not to date.

Q During the entire month of August, then, that well was [**2683**] continually flowing, was it not, according to the reports which you have read from those telegrams?

A Up until the 21st of August.

Q Until the time it closed down?

A Yes.

Q And it flowed at the rate of 100 barrels a day during the month of August, beginning at the 4th day of August?

A Well, this report does not show that that way. It shows that on the 4th and 5th it flowed 100 barrels; and then, commencing with the —

Q You are reading from your chart now?

A Yes.

Q I am talking about the telegrams you just read.

A Well, I have not —

Q Well, go on with your chart.

A It shows that the 4th and 5th it flowed 100 barrels, then, commencing with the 10th, it flowed 100 barrels until the 21st.

Q That is, daily?

A Up until the 21st of August.

Q That is, daily?

A 100 barrels daily.

Q Now, how many barrels would that be, during the month of August? That is a simple calculation.

A That would be an estimate of 1250 barrels.

Q And how many barrels are credited, according to the plan by which you constructed the chart, for that month?

A The chart shows 150 barrels. The balance, or a great deal of the oil, being run back into the hole to keep down the gas pressure.

Q You think they ran back 1250 barrels or 1000 barrels into a hole that will hold 175 barrels? [2684]

A The hole will hold more than 175 barrels.

Q How many barrels will a hole hold?

A It will depend a great deal on the formation. The casing itself would hold 175 barrels, approximately.

Q Where did you get the information that we find on your total for the month of August, on Exhibit 174, namely, "150 barrels. All production this month pumped backed into hole to hold back gas pressure."? Where did you get that information?

A Well, at the time I made up this schedule I no-

ticed this same discrepancy; that is, adding up the daily drill production, it looked to me we ought to have more than 150 barrels within the month. So I took the matter up with Superintendent King and asked his explanation of it.

Q That is, orally?

A No. By wire.

Q Well, without stating what the wire contained, you got it, then, from some wire that Mr King sent you?

A He sent me his explanation of why the month was not more than 150 barrels, stating that —

Q Never mind. Don't state what the wire contained. You are not entitled to give that. Then you have not produced anything before the court here to show how you came to make that statement, have you, in this chart?

A No; I have not. We can do it, Mr Mills.

Q Well, it would probably be incompetent evidence at this late date. The Associated Oil Company has no title to that land, has it, Mr. White?

Mr Lewers — I object, as not cross-examination, and asking for a legal conclusion.

A I am not acquainted with the details of that, Mr Mills. I couldn't tell you.

Q By Mr Mills — Are you able to state on your oath that [2685] the oil company have anything more than a contract with some locators to drill that land?

A I couldn't say just what arrangement they have made.

Q Well, generally, don't you know that they have

a contract with certain locators in the Elk Hills to drill certain land there?

A That is simply hearsay, again, Mr Mills.

Q Yes; that is what I mean. You know that, don't you, generally?

A I know that I have heard the rumor.

Q Yes. Now, all these wells were ordered closed, including well No. 1 on Section 26 and well No. 3 on Section 24, of 30 - 23, and well No. 1 of Section 30, 30 - 24, besides all the other wells which were in operation or being drilled, dominated by the Associated Oil Company — were closed and shut down under the same order?

A Some of them had been shut down prior to that time.

Q But all that were then operating were shut down under the one order?

A Well, I would not say that exactly. Some of them had been shut down prior.

Q All that were operating at the date that this well was shut down were shut down under the same order?

A I believe that was the only one operating.

Q There were two other wells operating in the month of August at about that time, were there not?

A Yes.

Q And they were shut down under that order, which was issued from San Francisco?

A Yes.

Q Now, do you know where that order emanated from?

A It emanated from the San Francisco office. [2686]

Q And do you know from what officer the order came?

A I couldn't say. It was transmitted by Mr Bell, field manager.

Q Don't you keep custody of the files of Mr. Bell's office and have access to the order which shows?

A Well, a great many of those things are verbal and not on paper.

Q Did you ever see a written order in your files ordering those wells shut down?

A I think I have seen it.

Q You don't know whether it was accompanied by verbal instructions or not?

A Well, it may have been. I couldn't say. But I believe we have a letter on record in reference to authorizing Mr Bell to shut them down.

Q Now, from whom is that letter. Who signed that letter?

A I couldn't say whether it was Mr Porter or Mr Scribner or Mr Henderson.

Q Did Mr William F. Herrin, of the Southern Pacific Company, have anything to do with the Associated Oil Company while you were in custody of the files of the office you now hold?

A In what way?

Q In any way?

A I have never come in contact on anything with Mr Herrin.

Q Mr Herrin was an officer of the Associated Oil Company at one time, was he not?

A I believe so; yes.

Q And what office did he hold?

A I think he was a director and —

Q By Mr Lewers — He was president.

A He was an official, a president, at one time, I believe. [**2687**]

Q By Mr Mills — Were you in the employ of that company while Mr Herrin was president.

A Yes.

Q He is the same William F. Herrin who is in the law department of the Southern Pacific Company of this city, is he not?

A I don't know anything about Mr Herrin. I believe he is; yes.

Q Who keeps the minutes of the proceedings of the Board of directors of the Associated Oil Company?

Mr Lewers — I object, on the ground this is not cross-examination, and I don't think it is proper. You have already asked and ascertained from the secretary of the company who keeps them.

A The secretary of the Associated Oil Company, Mr P. G. Williams.

Whereupon the further taking of testimony herein was adjourned until Wednesday, July 9, 1913, at 10 o'clock A. M., at the same place.

On Wednesday, July 9, 1913, at 10 o'clock A. M., the further taking of testimony herein was resumed pursuant to the adjournment:

W. E. WHITE.

recalled, CROSS-EXAMINATION resumed.

By Mr Mills:

Q Who was T. E. Barnes?

A T. E. Barnes was the superintendent, or under-superintendent, drilling foreman, of the Elk Hills division.

Q And did he have authority to act in the absence of Mr [2688] King, who was the superintendent?

A Yes.

Q In all matters pertaining to the jurisdiction of Mr. King?

A Not exactly. All matters pertaining to the Elk Hills wells.

Q I mean as to the Elk Hills wells.

A Yes.

Q Now, Mr White, you have spoken of getting some information which forms the basis of these exhibits, Defendants' Exhibit 172, 173, and 174, by the medium of telephone from the field, with Mr King. Did you ever telephone to Mr Barnes?

A I think you misunderstand me. There was no information secured over the phone that was made the basis of this schedule.

Q Now, let us understand each other. Didn't you state yesterday —

Mr Lewers — Telegrams, he said.

Q By Mr Mills — Oh, by telegram?

A There was one telegram.

Q Now, did you ever have any conversation with

Mr Barnes with reference to the Elk Hills wells of the Associated Oil Company?

A I may have, but I don't recall any conversation with Mr Barnes.

Q Did you ever talk with Mr Barnes, at some time prior to the 15th day of May, 1912, with reference to the construction of this 4-inch pipeline from the Elk Hills to the Pioneer Midway on Section 30 of 31- 23?

A I don't recall any such conversation.

Q Did Mr Barnes, at any time in or about the month of May, 1912, have a discussion with you about the purpose of the [**2689**] construction of what you have termed the pipeline No. 1, which runs from these wells in the Elk Hills to the Pioneer Midway?

A I can't recall having any conversation, practically, with Mr Barnes at all.

Q In which Mr Barnes stated that that line was constructed for the purpose not of supplying oil for fuel for work upon those sections of lands, but for the purpose of sending oil from the wells to Fellows?

Mr Lewers — To which I object, on the ground that no foundation has been laid for the question, that no time or place is fixed, and that it is obvious, considering the answer of the witness, that he had no conversation with Mr Barnes about the matter at all, that counsel is now following the same procedure that was followed in the examination of the witness J. A. Taff and others, in which, under the guise of asking questions purporting to be impeaching questions, counsel attempted to testify into the record concerning statements alleged to have been made by T. E. Barnes and

others at different times and places; and I assign the repetition of this as prejudicial misconduct and as unprofessional conduct on the part of counsel. And I make the further objection that this is not cross-examination of any matter that was brought out in the direct testimony of this witness. And I desire to add the further objection that the statement of counsel purports to be taken from evidence given by T. E. Barnes at the land office hearing, in which T. E. Barnes testified, not with reference to the pipeline counsel now refers to but with reference to a branch pipeline that ran from Section 30 over to Section 26 — an entirely different matter — and not pipeline No. 1.

A I don't recall having any conversation with Mr. Barnes.

Q By Mr Mills — Did you have any conversation with a man by the name of James McKay, who is the "trouble" man for the [**2690**] Associated Oil Company?

A No; I think not.

Q With reference to the same subject.

A I don't recall any such conversation.

Q Are you familiar with the practical operation of oil wells?

A In a measure.

Q That is, have you ever operated yourself?

A No.

Q Have you ever been in charge of the operation of a well either drilling or at any time?

A No.

Q You spoke of this bit, or drill head, or drilling stem that was lost in the well on No. 3 of Section 24 in 30 - 23. Do you know what that was?

A It was what we call a fish-tail bit.

Q And what size was it? Do you know? Diameter, and so forth.

A I don't know.

Q Will you examine the documents you brought into court here and ascertain the diameter of that pipe or casing at that point where it was lost?

A It was a 6-¼ bit, or a bit run into 6-¼ pipe.

Q Do you know what the weight of a bit of that size would be?

A No, I don't

Q Well, as near as you can estimate it from those you have seen.

A Well, I should say 200 or 250 pounds.

Q What was the size of the casing?

A 6-¼ inch.

Q Now, the drill bit, or the bit, the drill stem, or [2691] whatever it was that dropped in there, was less in diameter than the casing, was it not?

A Yes.

Q How much less?

A Oh, slightly less. It makes a 6-¼ inch hole.

Q About six inches?

A Practically six inches.

Q Do you know what the elevation of Section 30 of 31- 23 is?

A 30 of 31- 23? I could not any more than give you an estimate.

Q About 1200 feet, isn't it?

A I don't believe it is quite that high. It may be.

Q Do you know what the elevation of Section 24 of 30-23 is?

A No, I do not.

Q About 1300 feet, as nearly as you recollect it, isn't it?

A I know there is a slight difference in elevation between Section 30 in 31-23 and Section 24 in 30-23. No great difference in elevation.

Q Now, in order for that pipe line to get to Section 24 of 30-23 from Section 30 of 30-23, it would necessarily cross the valley at a lower point than the Pioneer Midway, or about 875 feet, would it not, elevation?

A A line running from that well to the Pioneer Midway would cross a lower elevation than the Pioneer Midway property.

Q And, as nearly as you recollect, it would be about 875 feet elevation at the lower point where it crosses?

A I couldn't state.

Q Do you know, of your own knowledge, whether there is more than one pumping station connected with pipe line No. 1? [2692]

A There is only one pumping station I know of.

Q Do you know, as a matter of fact, that it is connected? Have you seen it?

A It was connected —

Q Have you seen it, is the question.

A Yes.

Q You saw it connected?

A I didn't look into the details of the connections, but I know that we pumped oil from that station through the line, and it must have been connected.

Q Well, how do you know that?

A Because that is where we secured our fuel oil for the drilling of the wells.

Q Well, I am asking you if you know of your own personal knowledge, from something you have seen yourself and not from something you have read or heard other people talk about?

A Well, I have not seen the oil going through the line; no.

Q And you have not actually seen the connection of that line, have you?

A No, I have not seen the details of the connection.

Mr Mills — Then I move that the answer of the witness, so far as it appears to be hearsay, be stricken.

Mr Lewers — I submit that the answers are proper and responsive to your questions.

Q By Mr Mills — Mr White, will you look at this drilling slip and give the date of it, please, and the well to which it refers?

A Well 1, Section 30, Township 30 - 24.

Q What date?

A For twenty-four hours ending 12 P. M., 1st day of June, 1911.

Q What endorsement is there on that drilling slip? [2693]

A L. J. King.

Q And what remarks appear above his signature?

A "Hauling pump and 4-inch line to take care of any oil that well may flow."

Q Is that the original daily drilling report for that day which was sent in from the field?

A Yes.

Q I hand you another drilling report. Will you state for what day that report is and what the endorsements are?

A For the twenty-four hours ending 12 P. M. the 2nd day of June, 1911.

Q And signed by whom?

A Signed by "L. J. K."

Q What is that?

A It is evidently intended for the signature of L. J. King.

Q Is that the original daily drilling report for that day on that well?

A I believe it is; yes.

Q Will you read the remarks which Mr King put or caused to be put on that report?

A "In starting to wash mud out of hole, hole was found to be over one-half full of solid oil. Water evidently having seeped away through the oil sand, and mud from rotary had settled to bottom. Well showed so much gas that it is not advisable to complete washing or drill any further until we have line installed to take care of production."

Q Now, I hand you another daily drilling report. Please state what that is.

A It covers the period of twenty-four hours ending 12 P. M. the 3rd day of June, 1911.

Q On what well? [**2694**]

A Well No. 1, Section 30, 30 - 24.

Q Signed by whom?

A Signed by L. J. King.

Q And what statements appear upon that report?

A "Generally placing things in condition to handle flow of oil."

Q Is that an original daily drilling report?

A Yes.

Q I hand you another paper. Will you state what that is?

A This covers a period of twenty-four hours ending 12 P.M. the 4th day of June, 1911.

Q On what well?

A Well No. 1, Section 30, 30 - 24.

Q And signed by the same party?

A Signed L. J. King, per G.N.

Q Is that an original daily drilling report on that well for that day?

A Yes.

Q Will you read the endorsement on that, please?

A "Generally placing things in condition to handle flow of oil."

Q I hand you another paper. Will you state what that is?

A Report for the twenty-four hours ending 12 P. M. the 5th day of June, 1911.

Q For the same well?

A Well No. 1, Section 30, Township 30 - 24.

Q And by whom signed?

A Signed by L. J. King, per G.N.

Q What is the endorsement?

A "Generally placing things in condition to handle flow of oil."

Q I hand you another paper. Will you state what that is? [**2695**]

A It covers a period of twenty-four hours ending 12 P. M. the 6th day of June, 1911, well 1, Section 30.

Q Signed by the same party?

A Signed by L. J. King, By G.N.

Q And what is the endorsement?

A "Preparing to handle expected flow of oil."

Q I hand you another paper. Please state what that is.

A This covers the period ending at 12 P. M. the 9th day of June, 1911, signed by L. J. King, per G.N.

Q Is that the original daily drilling report for that day?

A Yes.

Q On the same well?

A On the same well.

Q Signed by the same party?

A Yes.

Q What is the endorsement?

A "Preparing to handle expected flow of oil".

Q I hand you another paper. Please state what that is.

A This covers a period of twenty-four hours ending 12 P. M. the 10th day of June, 1911.

Q What is it?

A It is the original daily drilling report.

Q Upon the same well, signed by the same party?

A Yes.

Q What is the endorsement?

A "Preparing to handle expected flow of oil".

Q It appears, then, from the daily drilling report of that period that that 4-inch line was used for the purpose of taking care of any accumulation of oil or production of oil from that well? Is not that true?

Mr Lewers — To which I object, on the ground that the [**2696**] question is indefinite. It does not say which 4-inch line you are referring to. The other 4-inch line, it seems, was constructed in 1910.

A This 4-inch line they are simply hauling in there to connect the well with the fuel line already in there.

Q By Mr Mills — That is, to the line which you call pipe line No. 1?

A Yes.

Q And for the purpose of taking care of any production from that well?

A That was the idea.

Q And pumping it to the Pioneer Midway? Is that correct?

A Yes.

Q Mr White, I hand you another daily drilling report. Will you examine it and state what it is?

A This report covers the period of twenty-four hours ending 12 P. M. the 26th day of February, 1912.

Q On what well?

A On well No. 1, Section 30, 30 - 24.

Q Is that an original daily drilling report signed by Mr King?

Mr Lewers — I will concede that all of these are originals that you are referring to.

A Yes; that is the original.

Q By Mr Mills — Will you please read the endorsement on that report?

A "Swabbing out oil to get enough to flood well. Fluid stands 1800 feet from surface. Well shows up better than heretofore."

Q I hand you another paper. Will you state what that is?

A The daily drilling report covering the period of twenty-four hours ending 12 P. M. the 27th day of February, [**2697**] 1912, well No. 1, Section 30, 30 - 24.

Q Signed by Mr King?

A Signed by Mr King per some one else.

Q And what is the endorsement?

A "Swabbing well to accumulate enough oil to flood well. Fluid swabs down to 2200 feet from surface."

Q I hand you another paper. State what that is.

A The daily drilling report for the twenty-four hour period ending 12 P. M. the 28th day of February, 1912, on well 1, Section 30, 30 - 24.

Q Signed by Mr King?

A Signed by Mr King per some one else, and reads as follows: "Put on pump at 2600 feet to accumulate enough oil to flood well."

Q Those three drilling receipts cover the period

in which they were pumping oil from the well itself in order to accumulate enough to flood it, do they not?

A Yes sir.

Q And that was the usual custom on all these three wells?

A Yes; they have been pumping some of the oil out and running it back.

Q Were you ever present, Mr White, at any occasion in the Elk Hills, at any one of these three wells, when you actually saw the parties in charge pumping hot oil into the well?

A No, I was not.

Q Will you examine this sheet I show you in that bundle and state what it is?

A It is the written report of the drilling department on Elk Hills division, well 1, Section 26, 30 - 23, for March 10th and 11th, 1911.

Q Signed by whom?

A Signed by L. J. King, per W. [2698]

Q Is that one of the papers which you had custody of?

A Yes.

Q Now, will you state what the letter says about this well?

A "March 10, 3548 feet; 3168 feet of 4-½ inch casing. Formation 3548 blue shale; after washing mud out of hole and washing oil formation at 3342 feet to 3485 feet with drill pipe we pulled drill pipe out of hole. As last of pipe came out, gas blew nearly all of water out of hole and 30 feet above derrick. The hole bridged over with sand at 2640 feet, stop-

ping the flow. March 11, 3548 feet; 3168 feet of 4-½ inch casing. Formation 3548 feet, blue shale. Baling hole from top of bridge at 2640 feet: Shows a very small amount of water. Well flowed twice of its own accord."

Q Will you state what that paper is, Mr White?

A That is a report of the drilling department for March 12, 1911, on various Elk Hills wells.

Q Signed by whom?

A Signed by L. J. King, per W.

Q Will you read what it says about this well on 26 of 30 - 23?

A "Elk Hills. 26 No. 1 3548 feet; 3168 feet of 4-½ inch casing; formation 3548, blue shale. Unable to break bridge with bailer at 2640 feet. Well flowed twice of its own accord and once from agitation with bailer, probably two or three barrels of oil at each flow. Shows a very small amount of water."

Q What is that paper, Mr White?

A That is a report of the drilling department for March 20, 1911. It covers various Elk Hills wells.

Q Signed by whom?

A Signed by L. J. King per W. [**2699**]

Q Will you state what it says of this well we are discussing, on 26?

A "Elk Hills - Section 26, No. 1. 3548 feet; 3104 feet to 3548 feet 3 liner. Baling well. Commencing fluid level stood 300 feet from surface, receded to 1200 feet; now stands 700 feet and cannot lower same at present time. Shows more gas as bailing is continued."

Q Does the exhibit offered through your testimony covering this well, the record of its operation and history for the 20th day of March, have any endorsement of the gas at that point?

A No, it does not state anything in regard to the gas.

Q Now, I show you this paper, Mr White, and ask you what it is.

A That is a confirming report of the drilling department for March 25, 1911, covering various Elk Hills wells.

Q Including Section 26?

A Yes.

Q Signed by whom?

A Signed by L. J. King, per W.

Q Will you read the statement the letter contains as to 26?

A "Elk Hills, Section 26, No. 1. 3548 feet; 3104 to 3508 3 inch liner. Formation 3548, blue shale. Well pumped intermittently; some water; also flowed. Produced approximately 75 barrels oil." Will you examine Defendants' Exhibit 173 for March 25th and state what endorsement you have placed on that exhibit.

A It looks from this as though I have —

Q Just state what appears on 25, if you can read it.

A "Pumping and drilling water."

Q Is that all that is contained on March 25th?

A That is all. [2700]

Q Then you haven't correctly given the history of this well on that date, have you, on Exhibit 173?

A I have the information shown on the next day following.

Q I say, you have not, on March 25th, given the correct information concerning the history of the operation of this well on Exhibit 173, have you?

A In making up this report I could not say whether I used this or the telegram. I would have to refer to the telegram to determine.

Q Is there a telegram covering March 25th, 1911, among the papers which you brought into court?

A I would have to look into that. (Examines telegrams.)

Q The question is whether there is any telegram among those papers which you brought into court, covering the date I have given you.

A I fail to find any.

Q And you know of none that was brought in, do you?

A No.

Q Now, the other question is still unanswered. If you will read it, Mr Examiner. (The question beginning at line 5, this page, read by the Special Examiner.) Will you answer that question?

A I can't answer that by Yes or No. I would have to answer it in my own way. I have made up this schedule from our office records. I couldn't say whether they were made up from telegrams or from reports which you have here; but at any rate the information shown in the daily report which you have

there on the 25th is shown in my schedule on the 26th, and I could not say whether that is an error in report or an error of my own. At any rate it was inadvertent.

Q What telegram do you refer to when you say that you may have examined and got your information from a telegram [**2701**] rather than from this report, or this written report signed by Mr King?

A My recollection is that we were at that time receiving daily telegraphic reports which we haven't brought with us.

Q That is, covering the month of March and subsequently, on that—

A I believe at that time we were securing telegraphic reports as well as the daily written reports.

Q Now, why is it that you didn't bring into court those telegrams which gave that information?

A Well, we presumed that we had everything. It was overlooked; that was all.

Mr Lewers — That is the fact, Mr Mills. There is no effort to conceal anything. Those were brought into court by me, and I am responsible for it.

Q By Mr Mills — Now, paying no attention to the excitement of counsel for the defendants, if you will kindly inform me why you didn't bring in the telegrams covering this period, if, as you say, you might have taken this information from those telegrams.

A I didn't know that they would be required.

Q Then this chart which you call Defendants' Exhibit 173 is in part made up from information

taken from telegrams which have not been produced in court to test its accuracy?

A It is possible we have some telegrams at the office that would cover a small period shown hereon.

Q On this chart 173 for Section 30?

A I would not say that is a fact or say it is not a fact.

Q Well, did you get it from a telegram? The telegram is not in the court-room nor brought in by you in support of the accuracy of this Exhibit 173.

A No; I brought no telegram here. [2702]

Q Then the chart known as Exhibit 173 was made up from information obtained from other data not brought into court?

Mr Lewers — I submit that has been answered three times.

Q By Mr Mills — Is that true, Mr White?

A It is possible that I have secured some of this information from telegrams, although you have the confirming records here.

Q That is, from telegrams not brought into court?

A Yes. I would not state that is a fact, because I am not positive there were such telegrams.

Q Then where did you get it? If you can't state it as a fact, where did you get the information?

Mr Lewers — Get what information? I object to the question as indefinite.

Q By Mr Mills—Where did you get it, Mr White, if you didn't get it from a telegram?

A Get what?

Q Do you ask me that because counsel for the defense indicated to you some question to ask me?

A You have been interrupting so much I can't get your question.

Q You say you would not swear to it as a fact that you got it from a telegram which you didn't bring into court. If you can't swear to it as a fact that you got it from a telegram which you didn't bring into court, where did you get it?

Mr Lewers — I submit that that whole question is obviously unfair. The witness answered, if you will recollect, that he may have gotten some information portrayed on those charts from other telegrams not brought here. He was not certain that he did, and his answer was not directed to any particular piece of information.

Mr Mills — I object to your constantly coaching the witness [**2703**] under the guise of good faith objections.

Q Will you examine Exhibit 173, which is the chart you prepared for well No. 1, Section 26, and state whether the information which you have placed there under date of March 25th is correct according to the papers which you have brought into court to support its accuracy?

Mr Lewers — I submit that question has been answered three times.

A There seems to be a discrepancy of one day in the date; but the information for the 25th is shown on the 26th on this schedule.

Q By Mr Mills — Now, will you answer the question more specifically?

A I can't do that.

Q Does the date March 25th, as shown on your chart, Defendants' Exhibit 173, give the information correctly for that day according to the papers you have brought in to support the accuracy of this chart?

A It does not agree with the date on the drilling report for the 25th.

Q Now, you made some statement that it does agree with the following day, didn't you?

A I believe it does.

Q Now, is there anything on the following day by way of endorsement on Exhibit 173, which you hold in your hands, showing that the well flowed on that day?

A I show here on this statement that the well was pumped and flowed on the 26th, instead of on the 25th, I presume. There is simply an error in the date there, Mr Mills. That is the trouble with it.

Q Mr White, will you examine this paper which I show you, and state what it is? [**2704**]

A That is a confirming report of the drilling department for March 31, 1911, covering various Elk Hills wells, signed by L. J. King, per W.

Q Does it cover the well we are discussing, on 26?

A 26, No. 1; yes.

Q Will you read what endorsement there is there?

A "Elk Hills, Section 26, No. 1; 3548 feet; 3104 to 3548, 3 inch liner. Pumping by air at 3050 feet;

shows a production of twenty barrels per day. No water."

Q Now, will you examine Exhibit 173 and state whether the information concerning production for March 31 has been correctly placed on that exhibit?

A I have averaged the production for March 29th, 30th and 31st under a total of 90 barrels of oil and 9 barrels of water for that period.

Q Well, I asked you whether the 31st bears any endorsement of 20 barrels per day, according to your chart.

A It does not state specifically that there was 20 barrels production on the 31st, although there was 90 barrels produced for the three days of March 29th, 30th and 31st.

Q That is up to 7 A. M. the 31st, isn't it, according to your chart?

A Yes.

Q That is accounted for in a report previous to this, is it not, in the report of March 30th, that is, the 90 barrels that you have placed there? You may read the report for March 30th, so far as it affects Section 26.

A "Elk Hills, Section 26, No. 1. 3548 feet; 3104 to 3548 feet, 3 inch liner; formation 3548, blue shale. Stopped compressor at 3 A. M.; lowered tubing to 3050 feet. At noon put in air; started fluid with 675 pounds, dropped down to 150 pounds (run compressor until 7 A. M. March 31). Production all [2705] told, from 10 A. M. March 29 until 7 A. M. March 31, 90 barrels oil and 9 barrels water."

Q Now, that production as stated on that report for March 30th agrees with what you have put on for the 29th, 30th and 31st of March, does it not?

A I have shown the —

Q Answer the question. Does it agree, or doesn't it? (Previous question read by Special Examiner.)

A Yes.

Q You find, however, on the chart which you have prepared, no endorsement according to the report for March 31, namely, 20 barrels per day.

A From this report —

Q Just a minute. Read that question, and see if it can be answered by yes or no.

Mr Lewers — You have a right to answer in your own way, Mr White. You are making the answers; not Mr Mills.

(The question beginning at line 28, preceding page, read by Special Examiner.)

Q By Mr Mills — Can't you answer by yes or no?

A I cannot.

Q Well, will you answer this question: Do you find, about March 31st, any endorsement on Exhibit 173, under date of March 31st, of 20 barrels of oil per day?

A I do not.

Q Then it does not agree — that is, your Exhibit 173 does not agree with the report for that date, does it?

A The report for the day of March 31 does not show conclusively that the well produced 20 barrels.

Q Well, what does it say about the 20 barrels?

A It says it shows production of 20 barrels; but on the report from the — [**2706**]

Q I am not asking you about the report.

Mr Lewers — You may complete your answer.

A March 30th, it shows the compressor was shut down at 7 A. M. on March 31st, and that production I have shown included in the period of thirty days which is shown on the report for the day of March 30th, 1911.

Mr Lewers — You will find on examination that is correct.

Q By Mr Mills — Now, I ask you this question, again: Mr White, does your prepared chart which forms the basis of Defendants' Exhibit 173 agree with the report signed by Mr King under date of March 31st as to that well?

A I believe it does, in substance.

Q That is, it shows a production of 20 barrels per day, does it, on your chart?

A The report for the —

Q Now, answer that question, will you?

Mr Lewers — You may answer in your own way, Mr White.

Q By Mr Mills — Now, will you answer my question? Repeat the question, without all that subsequent talk, Mr Examiner. (Question beginning at line 5, this page, read by Special Examiner.) Why don't you answer?

A My chart shows the production for the day of March 31st.

Q The question is, does your chart, under date of March 31st, as reported in this report of Mr King, show a production of 20 barrels?

A It does not, because there was no daily report to show that the well produced 20 barrels.

Q Does not the daily report for March 31st, signed by Mr King, read as follows: "Section 26, well No. 1. Shows a production of 20 barrels per day, no water"?

Mr Lewers — Will you read the other one for March 31st?

A The report of March 30th shows that the well is shut [**2707**] down at 7 A. M. on March 31st.

Q By Mr Mills — I am asking you whether this report, dated April 2, signed by Mr King, which you have identified, does not state that for March 31st this well we are discussing shows a production of 20 barrels of oil and no water? This is what I am talking about, this specific question.

A It shows on there; yes.

Q And your chart does not show that, does it?

A My chart shows the production of the well —

Q Your chart does not show 20 barrels for March 31st, does it?

A Not specifically.

Q And what it does show is included in a report up to 7 A. M. of March 31st, as you have it, of 90 barrels of oil. Your report was dated by Mr King on March 31st and reporting for March 30th? Is not that true?

A It also reported for March 31st.

Q Will you answer that question first before you tell me what it also reported?

Mr Lewers — I submit he has answered it. What more do you want?

Mr Mills — I will tell you. I would as soon test the question out right now as to whether this witness will answer a question.

Mr Lewers — Go ahead.

Mr Mills — If you take the position that the witness shall not answer a specific question reasonably answered by yes or no, I am willing to test it right now, if that is your purpose. I supposed you wanted to facilitate this examination.

Mr Lewers — I do; but when you are attempting to create confusion by refusing to allow the witness to explain that there are two reports covering the same period and that he has [**2708**] taken the aggregate —

Mr Mills — This report — perhaps you have not read it.

Mr Lewers — I have.

Mr Mills — This report for March 30th runs to 7 A. M.

Mr Lewers — Of March 31st.

Mr Mills — Now, the report for March 31st is dated April 2nd and shows for the whole day of March 31st.

Mr Lewers — Which may have been before 7 A. M., when they took off the compressor.

Q By Mr Mills — Now, Mr White, I am going to give you an opportunity to answer this question, and

we will see whether you can answer it or not. If the question is unfair, the court will tell me so; but I will test this out with you now.

Mr Lewers — I except to the statement of counsel and to the manner of counsel, flourishing a pencil in a menacing manner in the direction of the witness and talking in a tone that indicates an attempt to intimidate, as unprofessional and prejudicial.

Q By Mr Mills — Now, Mr White, I ask you again whether your report shows, under date of March 31, a production of 20 barrels per day?

A It does not, specifically.

Q Yet you had a report before you, did you not, dated April 2, 1911, reporting for March 31, 1911, showing an actual production of 20 barrels per day?

A I had two reports.

Q I ask you if you didn't have that report before you? Did you have that report before you?

A I evidently did.

Q And yet you didn't put it down upon the date of March 31st, did you?

A Because I had two reports for March 31st. [2709]

Q I didn't ask you "because". You didn't do it, as a matter of fact, did you?

A I put it down, as I —

Q Can't you answer that question? Did you put it down, is the question, on March 31, according to this report of April 2?

A I didn't put it down specifically, but I have included the total production for the three days.

Q Now, I will read into the record at this point the report of March 31, 1911, as follows:

(Said report so incorporated in the record is reproduced and bound with the Exhibits in accordance with the stipulations and orders of court.)

[2710]

Q Now, did you get any information in regard to the 31st day of March, 1911, from any telegram which was not brought into court?

A. I think not. I don't know whether there was telegrams or not. I could not say.

Q. Now, under date of March, Mr. White, 1911, on this well, in your chart known as Exhibit 173, you have placed no total for any oil whatever, have you?

A. No.

Q. Neither have you for April?

A. No. We had no official report of production.

Q. Did I ask you whether you had any official report of production?

Mr. Lewers: I object to that question as not —

Q. By Mr. Mills: Why is it you try to throw in things, Mr. White, all the time?

Mr. Lewers: I object to that question.

A. You asked me to explain the statement, and I am trying to do it, and I don't want anybody to have any misapprehension of the facts.

Q. By Mr. Mills: Did I ask you to explain anything there? I asked you one simple question, whether you placed any production, for the month of March, at the foot of that column?

A. I think the statement shows for itself that I have not.

Q. Have you any special interest in this case yourself?

A. None whatever.

Q. Will you look at that chart, Exhibit 173, and say whether, under the date of May 9, 1911, you have any showing there, at a depth of 3140 feet, showing oil, as to this well 26?

A. I have nothing there except the fact that the well was drilling.

Q. This chart I understand you to be in part prepared, first, [2711] to show actual monthly production, and also to show the history of the well itself?

A. Yes.

Q. Now, will you examine the report dated May 10, 1911, from Mr. King, for the day of May 9, as to well 26, and state whether it contains any reference to a showing of oil?

A. It refers to a show of oil between — or at 3140 feet in blue shale.

Q Why didn't you place that on your chart, if you wanted a record of the history of the well?

A. I didn't consider it of enough importance.

Q. That is, it tended to show that the well was passing through oil formations, and you didn't consider that of any importance?

A. That had already been in oil formation and that slight showing didn't appear of any great importance.

Q. Now, under date of May 19, 1911, Mr. White,

on Exhibit 173, have you shown any oil sand formation?

A. I have not. It was not my intention to show that. The logs will show that.

Q. Will you read so much of the letter dated May 23, referring to May 19th, upon Section 26, that shows the formation which they passed through?

A. Elk Hills, 26, No. 1, 3575 feet; 3571 feet of 4-½ inch casing. Formation 3575, gumbo. Washing 4-½ inch pipe to clean rotary and from oil sand and anchoring pipe at top of hole."

Q. Was that another thing that you didn't regard as important?

A. That appears in the other exhibit that was introduced.

Q. Was it because you didn't regard it as important that you didn't put it in your graphic history of this well?

A. In making up this statement, it was not my intention to show the formations encountered, except where they were excep-[**2712**] tionally remarkable or exceptionally important. We have made up logs showing the formations and the oil sands, and so on, which were encountered in the well. Therefore I didn't include that detail in this report.

Q. Well, was it due to the fact, also, that you didn't regard it as important?

A. Well, I didn't — I simply set this down in a brief way, and for any further detail you would have to refer to the logs.

Q. You took occasion, in every instance where

there was any trouble in the well, to mark it on this chart, didn't you?

A. Yes.

Q. You didn't regard this as important, though, to put that down on the chart that they were in oil formation at that depth on that date?

A. In a chart of this size you could not put down the detail of the formations and the showings and one thing and another. I put down what I considered the most important features.

Q. Now, will you refer to May 24th, on Exhibit 173 referring to this well, and state whether you have shown under that date a showing of heavy oil?

A. No; I have not.

Q. Will you read, if you please, the report of May 28th, covering the date of May 24th, from Mr King?

A. "Elk Hills, 26, No. 1 3609 feet; 3572 feet 9 inches of 4-½ inch casing. Formation 3580 to 3593 blue shale. Shows heavy oil. 3593 to 3596, compact sand. 3596 to 3609, hard shale and gumbo. 4-½ inch casing landed at 3573 feet in sticky blue shale. Practically all of the formation shows a little oil from 3580 to 3593. Oil seemed to be heavy."

Q. What production does your exhibit show for the month of August, 1911, on this well 26?

A. There is no production shown. [2713]

Q. According to the papers there was an actual production that month, was there not, according to the reports received by your office?

A. There was some production; yes — some oil and water and emulsion.

Q. Now, will you foot up the figures for the month of August, 1912, that appear upon your chart and state what the total is?

A. 422.

Q. Now, I notice that you have endorsed there a showing about 15 per cent water.

A. Yes.

Q. As a matter of fact, the telegraphic reports on each of these days in the month of August, 1912, deduct the water when they send in the report, do they not, as, for example, on August 1st the report shows 27 barrels oil and 3 barrels of water. You might run through all the telegrams after that date there quickly and see if that is not true.

A. I inserted the notation showing about 15 per cent water to show that the oil produced was not entirely commercial oil.

Q. It was not to show, in other words, that there should be 15 per cent deducted from the figures you put down?

A. Not necessarily; no.

Q. Well, then, the amount of oil reported for that month was 422 barrels, as you make it now by the figures?

A. Adding up the daily estimated production would give me 422 barrels.

Q. That is taken from the telegraphic reports themselves?

A. Yes.

Q. And what amount have you placed there at the foot of that column showing actual production?

A. Showing actual monthly production to be 302 barrels. [2714]

Q. Or a difference of how much? About 90 barrels?

A. Difference of 120 barrels.

Q. Then the chart does not correctly give the production, actual production, as shown by the telegraphic reports from the field for the month of August, 1912?

A. The actual production is not shown by the telegraphic reports.

Q. I say, as shown by the telegrams.

A. The telegrams show an estimated production.

Q. Do you find in any one of these telegrams for the month of August the word "estimated" at any place? Just look them through, please.

A. No, I think I will not find the word estimate used.

Q. That is a word you assumed yourself, is it not?

A. It is always customary.

Q. I say, that is a word you inject into the telegrams yourself, by assumption?

A. Yes. That is customarily the case.

Q. So that the chart constituting Defendants' Exhibit 173, for the month of August does not, at the foot of the column, show the production of oil as shown by the telegraphic reports from the field?

A. It does not, and there was no intention of so showing the monthly production.

Q. Now, is there anything on any one of these charts, which are known in this case as Defendants'

Exhibit 172, 173 and 174, to show otherwise then that the column at the foot, which you call "Actual monthly production" in each case was taken from the data which appears after that in the column?

A. It is obvious by glancing up the column that it is not the total.

Q. Well, outside of that discrepancy is there anything to [**2715**] show?

A. It is marked "Actual monthly production."

Q. I have stated that in my question. Is there anything to show that that marked "Actual monthly production" in the figures at the bottom, besides the discrepancy you call my attention to, is taken from anything excepting the data which appears above in each instance?

A. No. That may have been a slight clerical fault in drawing it up; but it is obvious, by glancing over the column, that it would be impossible to add together the production each day as shown in the report.

Q. Then, unless the court took the pains to add up each column and make a mathematical calculation, he would necessarily assume that the footings were the same as the monthly production shown by the date above, would he not?

A. I would not, Mr. Mills. I would not think that ordinarily a person would do that.

Q. Is there anything there to show on these charts that what you have termed the actual monthly production was taken from an entirely different source

from the data which appears in the daily entries above those columns?

A. No; there is nothing to show it in the report.

Whereupon an adjournment was taken until 2 o'clock p.m., at the same place.

On Wednesday, July 9, 1913, at 2 o'clock p.m., the further taking of testimony herein was adjourned pursuant to the adjournment : Willis N. Mills, Special Assistant Attorney-General, and A. I. McCormick, United States Attorney, appearing on behalf of the plaintiff; and Charles R. Lewers, Esq., and Jared How, Esq., appearing on behalf of the defendants.

Mr. Mills: I now object to the offer of defendants of [**2716**] Exhibits 172, 173 and 174, upon the ground that they and each of them constitute neither correct nor accurate summaries of either the production of oil from the wells involved and covered or purported to be covered by the exhibits, nor do they constitute a correct or accurate history of the drilling and operation of the several wells therein involved, as shown by repeated and numerous admissions on the part of the witness, W. E. White, who claims to have prepared them. Moreover, they are misleading, in this, that while the charts purport to portray a daily production, the total of the several months do not agree either with the actual daily production as shown by the daily telegraphic reports from the field, not, indeed, with the erroneously so-called daily estimates as they appear in the several columns of these exhibits. Further, it now appears from the testi-

mony of the witness, W. E. White, that these charts were made up in part from information, data, telegrams and so forth in the custody of the Associated Oil Company or the Southern Pacific Company, not produced for inspection or examination by the government so as to further test their accuracy, and in many instances are admittedly inaccurate, because of alleged mistakes and inadvertencies on the part of the compiler. It further appears from the charts that the total production of the three wells involved in these exhibits was 6,628 barrels of oil, while the actual production during the same period, as shown by the telegraphic reports from the field, was 13,103 barrels of oil. The exhibits are further objected to, upon the grounds that they constitute self-serving declarations on the part of the defendants, alleged to have been made up of data and papers of various sorts always in the custody of the defendants, and many of which, in fact the bulk of which, were written and prepared after the beginning of testimony in this suit.

Q. Now, Mr. White, I will ask you whether the diagramatic logs wihch form Defendants' Exhibits 175, 176 and 177, being alleged log histories of well No. 3 on Section 24, Well No. 1 on [**2717**] Section 26, all in Township 30 South, Range 23 East, and well No. 1 of Section 30 in Township 30 South, 24 East, were ever checked by you from the daily drilling reports?

A. They were.

Q. As to their accuracy?

A. They were; yes sir.

Q. And were prepared, as I understand you to say, by some draftsman directed by you in the office, from the reports, and afterwards checked by you?

A. Yes.

Q. Do you assert that these logs are correct and true pictures of the formations passed through, as shown by the daily drilling reports of the several wells to which they were —

A. To the best of my knowledge they are correct and in accordance with the daily drilling slips.

Q. Were these prepared for the purpose of accurately showing the formations which were passed through by the drill on the several wells to which they refer, or were they prepared for some other purpose?

A. They were prepared for the purpose of showing the formations passed through in the drilling of the different wells involved.

Q. And for no other purpose?

A. Not that I know of.

Q. By Mr. Lewers: Well, it is true, is it not, that they show perforations, and so on?

A. Well, it would show the complete history of the well in graphic style.

Mr. Mills: Well, they purport to show also, Mr. Lewers, some statements as to operations.

Mr. Lewers: Yes; that is true.

Mr. Mills: But I wanted to know what the permanent purpose [2718] of their preparation was. Now, I have found some, in fact quite a number of inaccuracies, in one of the logs, or what I conceive to be in-

accuracies. I didn't have time to examine the other two alleged logs. And I will ask you now whether you prefer either to withdraw these logs upon my statement, to later introduce, if you so desire, a log which you are satisfied is correct, as I understand you to say you have not checked them yourself, or whether you desire to stand on these logs and have us test the accuracy from the daily drilling reports now, or take a recess until tomorrow at 10 o'clock, in the interest of saving time.

Mr. Lewers: I would suggest a still better method, if there is any question about those logs — of course to to any inaccuracies I am not prepared to admit that there are any — that inasmuch as all of the data from the log slips has been introduced in evidence, as soon as a transcript of that data is prepared and in the hands of counsel, that if you still believe there are inaccuracies, that you have prepared either an outline of the inaccuracies that you have reference to or a log from this, and we will then endeavor at a later time to agree upon a log that is in full accord with the well log slips that have been introduced in evidence. That strikes me as a much better method of disposing of this matter, as I have no desire to have anything represented except what is strictly in accordance with the original record that is now in evidence.

Mr. Mills: So far as the government's case goes, we think that that the daily drilling slips, or daily drilling reports, rather, and the telegraphic communications, which have been read into the record, and such other data as were introduced to test the accu-

racy of Exhibits 172, 173 and 174 are sufficient for the government's purpose to establish — or to rebut, rather, — the contention made by the defendants that these lands are non-mineral in character, and we conceive, from our viewpoint, no reason for encumbering the re-[2719]cord with diagramatic logs. But if you still insist on holding these in the record, I should like, before this witness is excused, to test out the accuracy be certain questions which I have.

Mr. Lewers: Then I take it you are not willing to accept my suggestion of attempting to frame or prepare a diagramatic log that will be agreed upon by both sides as being in accord with the well records that have been introduced — the original well records.

Mr. Mills: I should be perfectly willing to do that, upon the grounds of fairness, if I thought it was necessary, as it is a perfectly fair proposition, but I see no necessity for it.

Mr. Lewers: I say, at this time I see no necessity for withdrawing them, because I am satisfied that they are substantially if not entirely correct; and, as time is pressing, I can't consent to a continuance for that purpose, because my arrangements already made for witnesses will prevent that, I am sorry to say.

Mr. Mills: Well, I would just as soon as not examine them here while we have them in court. It will take some time to go through them, because there are so many.

Mr. Lewers: Then I take it you decline to accept my proposition? Is that correct?

Mr. Mills: Well, I decline, only and solely on the ground— not because I regard your proposition as unfair. I think it is fair enough, providing I could see the necessity for introducing any such document.

Mr. Lewers: If you fail to see the necessity, I don't see why it is necessary to take the time to ask any questions about them.

Mr. Mills: Because the logs as introduced — at least one of them I have examined — is wholly inaccurate, according to my conception, after just a casual reading of it.

W. E. WHITE, recalled. CROSS-EXAMINATION resumed.

By Mr. Mills: [2720]

Q. Mr. White, there appears to be no legend on the map showing what these colors represent, unless it may be that there are some marks inside here to show that. I am now examining Defendants' Exhibit 175. I ask you what, at 240 to 250 on this log, does the words "sandy shale" mean.

A. It means that the shale showed a small amount of sandy matter.

Q. At what depth?

A. At that depth.

Q. Now, what does the word "brown" mean at 260?

A. It meant that from 200 to approximately 310 —

Q. 310?

A. — was a brown shale formation.

Q. That is q00 to where?

A. 200 to about 230.

Q. Was brown what?

A. Brown shale.

Q. From 230 to 400, what does the color there represented mean?

A. That was a sand, presumably a blue sand. You understand these wells were drilled by a rotary, in which this is more or less approximate formation. We are unable to tell exactly from one point to another just when you go out of one formation into another.

Q. This was drilled by a rotary, you say, at this point?

A. Well, I would not say as to that depth there, but as a general proposition it was a rotary hole.

Q. You don't know, as a matter of fact, that that was drilled by a rotary, do you?

A. I don't recall now just where they started a rotary in there.

Q. Now, what does the color from 400 to 825 or 820 represent? It appears to be a brown color. [2721]

A. It is a little indistinct, but I believe it is blue shale.

Q. Now, what does the color from 820 to 830 represent?

A. Those depths that we are speaking about are approximations, because we are unable to divide the scale to an exact number of feet.

Q. What does that color mean?

A. It means they ran into the sand.

Q. Now, what does the next color going down the well, which is apparently brown, mean?

A. That means a shale.

Q. From 825 feet to 870?

A. That shows a shale.

Q. Now, what does the next color mean, from 860 to 870?

A. A streak of sand.

Q. What does the next color, from that point down to 950, mean?

A. That is a shale.

Q. What does the next color mean, from 950 to 960?

A. A sand.

Q. And the next brown color, from 960 to 1080?

A. That was reported as a mud.

Q. And what does the small dottedor crossed color mean, at 1080 to 1085, or approximately, represent?

A. That was a shell streak.

Q. We have a brown color extending from there to a depth of 1600 feet, solid. What does that represent?

A. A blue shale.

Q. Then you have, at 1600 to 1605, approximately — what is that?

A. A streak of shale and hard formation.

Q. And brown beyond that. What does that mean? [2722]

A. That would be a shale again.

Q. And then another less figure beyond that. What does that mean?

A. That would be another shell or hard formation.

Q. Then you have a streak of brown. What does that mean?

A. That represents shale.

Q. And then the same figure as before, that you called shell. What does that mean?

A. A shell or hard streak.

Q. Now, from that point, which is 1630 feet to 2080 feet, you have a solid brown color. What does that represent?

A. It represents shale.

Q. What kind of shale?

A. It does not state. It was in some instances hard and some soft.

Q. From 2080 to 2085 what does the legend mean there?

A. A streak of shell or hard formation.

Q. Then the brown color from that point to 2105. What does that mean?

A. That is shale again.

Q. And the next, from 2105 to 2110?

A streak of hard shell.

Q. Then the brown from that point to 2135?

A. That was shale; brown shale.

Q. Now, from 2135 to 2140?

A. A streak of hard sand.

Q. And from that point a solid color in brown down to 2535. What does that represent?

A. That consists of a shale formation with some show of gas.

Q. Brown shale at any point?

A. It is shale; in some instances marked brown and others just shale, hard shale and soft shale. [2723]

Q. Now, from 2535 to 2550 what does the yellow color represent?

A. A streak of hard sand.

Q. And from that point a solid color of brown to 3100 feet. What does that represent?

A. Shale; blue shale.

Q. And from 3100 to approximately 3115, what does that represent?

A. That is a sand, streak of sand.

Q. And from 3115 to 3160, what does that represent?

A. That is shale.

Q. And the next small amount?

A. About five feet of shell.

Q. Now, from that point down to 3245 feet, solid brown color, what does that represent?

A. Shale.

Q. What kind of shale?

A. It is not given.

Q. And then five feet of something else?

A. That is shell.

Q. From that point, which is 3240, a solid brown color, down to 3535, what does that mean?

A. That is blue shale, showing some sand.

Q. Now, five feet of something else represented. What is that?

A. A hard streak; shell.

Q. From that point to the alleged bottom of the well, which is 3885 feet, about, what does that represent?

A. Blue shale.

Q. Now, was it your intention, when you made this log for introduction in evidence in this case, as you have stated on direct examination, to accurately and correctly represent the forma-[**2724**]tions passed through, according to the daily drilling reports?

A. Yes.

Q. Mr. White, where it says, at 320, the word "blue", what does that mean?

A. It referred to the shale.

Q. Blue shale?

A. Yes; that the color was changing more to a blue than a brown. It is very hard to differentiate these.

Q. I understand. From what point to what point does the blue shale extend, according to this diagram?

A. Well, this is not drawn up in sufficient detail to tell you just the exact distance.

Q. Well, what would a man understand that to be? What do you intend that to be, by just examining this alone without reference to anything else?

A. Well, I would understand simply that the lower portion of this brown formation they were in was turning blue. There is no exact number of feet, but that the formation was changing and becoming more of a blue color than a brown.

Q. Now, at what point did it start to begin to

change to blue clay going down, according to this diagram?

A. Well, those things are impossible to tell.

Q. Well, it tells on the daily drilling report, doesn't it?

A. Well, that is a good deal of guesswork, anyway.

Q. Well, doesn't the daily drilling report for each crew, each driller on each tower, show the change of formation on the daily drilling report?

A. That is a good deal according to the idea of the driller.

Q. Well, doesn't it, in this particular case, on the drilling reports which have been brought into court supporting the accuracy of this log, or intended to support it?

A. No; I don't think it is drawn down that fine. [2725]

Q. Doesn't the daily drilling report show at each point where the formation changes?

Mr. Lewers: You have a right to look at the report, if you desire. (Witness examines report.)

A. They are supposed to show —

Q. By Mr. Mills: I didn't ask you what they were supposed to show. I asked you if they don't show.

A. Yes; they show the supposed changes in formation.

Q. All right. Now, you have stated that the formation from 200 to 230 was brown sandy shale. I will ask you to examine the daily drilling report for

this well for July 29th, 1910, and ask you to read the statement of formation.

A. From 200 to 290, brown sandy shale; from 290 to 310, blue sandy shale.

Q. Now, you have not shown any change there at the point where the daily report shows it, have you accurately?

A. We haven't gone into detail and shown at just what point it changed from brown to blue, so that is inconsequential.

Q. No. That is, you substituted your judgment for the report itself, and held that it was inconsequential and therefore didn't make any distinction?

A. No, Mr. Mills. I have taken practically a thousand slips here to make up one sheet, and you can see yourself it would be impractical to put all those figures and the data on a sheet of that size; it would mix it up so it would be of no value.

Q. Couldn't you show very easily, on 100 feet of formation, what it was, where it began to change, in what 10 feet it changed?

A. Practically we don't consider —

Q. I didn't ask you what you considered. I asked you if you could not, mechanitclly, do such a thing as that — show the change in every 10 feet.

A. Oh, there is nothing impossible; but it is impractical. [2726]

Q. That is, you substitute your judgment as to whether it is proper or not, for what the report shows?

A. I have tried to make a diagram that is comprehensive.

Q. Now, it is perfectly possible, mechanically, for you to have placed the changes of formation on the point they occurred, within 10 feet of that place, is it not?

A. Possibly, yes.

Q. Now, I ask you to read the formation on the daily drilling report of this well for August 2, 1910.

A. "From 290 to 330, blue sand shale; from 330 to 360, blue sand."

Q. Now, you have stated that from 230 to 244 was blue sand. Why didn't you give the correct formation there on this diagram?

A. I think it shows correctly there, if that is the case.

Q. You do think so?

A. I think this 230 to approximately 400 feet is blue sand.

Q. This is 290, this formation is; from 290 to 330, blue sandy shale.

A. Well, I have shown that as blue shale.

Q. And then the daily report shows 334 to 360, blue sand. The driller makes a distinction but you have not, have you?

A. Yes.

Q. Whereabouts?

A. From 230 on that runs on another date, but you will see I have shown during that period, "blue sand".

Q. You say from 230?

A. From 230.

Q. Now, as a matter of fact, the report of the driller shows, does it not, that from 200 to 290 it was brown sandy shale? Please examine that and see.

A. I have also shown it that way.

Q. How do you now claim that from 230 on it is blue sandy [**2727**] shale, when the report says brown sandy shale?

A. You are talking about 330.

Q. Well, I understand. But from 290 on.

A. From 290 to 310 this report states is blue sandy shale. That is noted here as blue shale.

Q. You don't make any distinction between blue shale and blue sandy shale, do you?

A. There is none.

Q. Yet the driller thought there was one. I will ask you, Mr White, to give me the formation on the daily drilling report, of August 4th, 1910, on this well, as appears from the report itself.

A. From 410 to 435, clay.

Q. You state, however, that from 400 to 820 it is blue shale. Do you make any distinction between clay and blue shale?

A. There is no distinction, in the drilling of a well, to my notion, between blue clay and blue shale. One may be a little harder than the other. That is the only difference.

Q. Yet you have had no experience in drilling wells, never had charge of drilling operations, you stated this morning, and you are willing to substitute your own judgment, in making up this log as a faith-

ful picture of the formations, for the actual drilling reports of the drillers themselves?

A. We make up hundreds of these logs in the same way all the time, and that is the general practice, to disregard the differentiating between hard and soft clays and blue clay and blue shale. There is no possible way of determining the difference in the ground.

Q. Without going further, at this point may I ask you whether this entire log disregards, in the same way, the statements made by the drillers as to the points at which the formations change?

Mr. Lewers: I submit that is not a fair question. [2728]

Mr. Mills: It is based on what the witness has already said.

Mr. Lewers: The witness has said —

Mr. Mills: I object to your coaching the witness.

Mr. Lewers: I am not. I am objecting to your attempt to impose upon the witness.

Mr. Mills: I am not imposing on the witness.

Mr. Lewers: I know you are not; but you are trying to.

Mr. Mills: I am taking the facts as shown by the drillers' reports, from which he says he made this log.

Q. And I again ask you whether you ignored, from time to time, all through the log, the changes from one formation to another? —simply to shorten this examination. If you say so, I will stop it.

A. We don't consider a change of formation a difference in color.

Q. I am not talking about the difference in color. I am talking about the statement you make on that log itself to indicate changes. Have you ignored, from time to time, all through the log, the drillers' reports upon the changes of formation?

A. Certainly not.

Q. You have not?

A. No. If I had, I could not have drawn up the log.

Q. Didn't you just state a little while ago that you had ignored certain things?

A. I stated that I hadn't gone into detail to put down the exact number of feet where these inconsequential changes took place.

Q. Are you a geologist yourself, Mr. White?

A. No.

Q. Or mineralogist?

A. No.

Q. And you are not a practical oil driller?

A. No. [2729]

Q. And have never had charge of practical operations of drilling for oil?

A. No. But I have spent ten years around oil wells.

Q. That is, you have been scouting for lands for the Crude Oil Company and the Associated Oil Company?

A. Not entirely.

Q. Now, will you take this slip, please, Mr. White, of date August 9, 1910, on this well?

A. I would like to add the statement that this log

was also drawn up under the supervision of Mr. W. A. Williams, our chief geologist — himself and myself — at my instigation.

Q. Do you know Mr. F. M. Anderson?

A. Yes.

Q. Did Mr. Anderson collaborate at all upon the construction of the log?

A. No.

Q. Or advise in any way about it?

A. He had nothing whatever to do with it, so far as I know.

Q. Mr. Williams understood what the log was intended to show, that is, the formations it passed through, and so forth?

A. Yes.

Q. And, with you, understood the purpose of making it, namely, to use it for any litigation which the company might have affecting these lands, particularly this litigation?

A. Yes.

Q. Kindly read the slip of August 9th, 1910, for this well.

A. From 490 feet to 508 feet, blue clay.

Q. Have you shown that on this log at any point?

A. I have shown it as blue shale, which is the same thing.

Q. That is, blue shale and blue clay are the same?

A. I believe they are, in the drilling of a well.

Q. Now, did you yourself have the say about showing the [**2730**] legend as to the formations passed

through, Mr. White, or was it largely controlled by Mr. Williams?

A. Well, it was made up from data which we had already prepared in Mr. Williams' office. He took that and checked it with the logs. He already had a similar log prepared, but we took that and checked it over and made a separate new tracing.

Q. That is, when Mr. Williams came in he had a log with all these colors blocked out?

A. That is it.

Q. And then you checked it and made another blueprint? Is that the idea?

A. Yes sir.

Q. So that, in fact, this was prepared by Mr. Williams before you ever saw it — that is, the tracing from which this blueprint was made?

A. Well, he had a rough log,—it was not exactly in that shape — but we made a tracing from that rough drawing.

Q. Yes, but I mean it was, as to the depths to which these colors were blocked?

A. Yes; I remember it was similar.

Q. So that, in fact, the log was prepared by Mr. Williams, in the first place, then brought over to you and checked with you, as I understand it?

A. Well, we really prepared a new log, checking with his old logs.

Q. Well, did he have more than one log to make this blueprint that I am now examining?

A. He had one office log that he keeps up, you know.

Q. Yes. So when you say "logs", you refer to —

A. These graphic logs.

Q. But you don't refer to the several logs which formed the basis of this log? [2731]

A. No.

Q. He had one log on which he blocked out the colors at the proper formations, and with the writing to the side at the depths indicated here, and from that you framed the tracing of which this is a blueprint, after checking it?

A. That was the idea.

Q. With the daily reports? Is that right?

A. As I remember it, that was about the proceeding.

Q. Now, did Mr. Williams' judgment supersede yours, on places where the drilling reports differed from the information apparently given on this log, or did your judgment prevail?

A. Well, I checked over the logs, and I don't know whether we discovered any discrepancies or not, now, or made any changes, but as a general thing our opinions coincided.

Q. Did you, for instance, where a daily report says "blue clay" for a certain depth — whose judgment was it that changed it to "blue shale", or was it already "blue shale" when you got it?

A. In making up these logs it is the general custom —

Q. Now, I don't ask for any explanation. I am asking about the fact.

A. It is the custom to classify, in the office at least, clays and shales under the one general formation.

Q. Now, I didn't ask you about the custom, did I?

A. No; but I am trying to explain myself.

Q. Well, you can answer and then explain. Nobody will bar you from an explanation. I don't think this witness is concerned in making any misrepresentations at all. If I fail in courtesy, it is not because my heart is not right.

A. I don't want to give false impressions or get anything into the record that don't convey my idea.

Q. I understand the log was practically made up by Mr. Williams, or in his office, and then was checked, and the tracing [**2732**] made and this blueprint made from that. Is that correct?

A. That is about the proceeding, as I remember.

Q. And when you say that log which he had, and which you checked, did it contain all these writings at the exact place where they now appear on this blueprint?

A. I couldn't say as to that. We made some changes which in checking it over we found some discrepancies that were corrected.

Q. But, in this particular instance, where from 520 feet to 575 feet, on August 13, where the daily drilling report gives "blue clay" and this log does not show it but calls it "blue shale" — was that on the log which Mr. Williams brought in, or was that one of the changes that was made?

A. I can't remember the detail of the thing now. It is our practice, though, to classify shales and clays

under the same coloring, in coloring a thing of that kind.

Q. You don't pretend to know, yourself, that a blue shale and blue clay is exactly the same, do you?

A. To my knowledge they are practically the same. One might be a little harder than the other. That is about the only difference.

Q. Did you make any distinction between blue shale and blue sandy shale?

A. Sometimes I have shown that they had sandy streaks in there.

Q. Now, I call your attention to the daily drilling report of this well, on August 12, 1910, and ask you to read the formation.

A. From 508 to 520, blue sandy shale; from 520 to (blank) hard shale.

Q. Now, I will ask you to examine the log and see if you have indicated that on the log.

A. I have simply shown blue shale.

Q. That is, you failed to show the change from blue and sandy shale to hard shale, as indicated in the daily drilling report?

A. I have not qualified it. I have simply put it in as blue [**2733**] shale.

Q. Well, to get it affirmatively upon the record, the daily drilling report's statement of the change from blue sandy shale to hard shale does not appear upon the log, does it?

A. No, there is no definite point shown on the log.

Q. Now, why does not that appear on the log?

A. Well, because it was considered of very little importance.

Q. By you or by Mr. Williams?

A. By myself; and he coincided in the idea, I believe.

Q. There was no clash of distinguished opinion there?

A. No.

Q. The last drilling report of August 12, 1910, as you read it, gives the formation from 520 feet to (blank) feet, hard shale. Now, will you read the report of August 13, 1910, on the formation?

A. From 520 to 575, blue clay.

Q. Now, does the log which was introduced in your evidence, on this well, show that change to blue clay?

A. It does not show it in detail.

Q. Will you examine these daily drilling reports and state where the formation changes from blue clay to something else — at what point?

A. At 590 feet.

Q. It changes to what?

A. It is shown here as blue sandy shale.

Q. Now, how far does that blue sandy shale run, according to those daily drilling reports?

A. To 650.

Q. Then it changes, according to the report, to what?

A. To blue clay.

Q. Will you examine your log known as Exhibit

175 and see if that is indicated there in any way — those changes?

A. It is classified here as blue shale without any distinction. [2734]

Q. On the log?

A. On the graphic log.

Q. Will you examine this drilling report of August 18 and give the formations there where they change?

A. It changes at 695 from blue clay to blue sandy shale.

Q. And what does the graphic log show at that point?

A. All shown under the classification of blue shale.

Q. You made no distinction, then, between blue clay, blue sandy shale, and blue shale?

A. No.

Q. Did you have these drilling reports before you when you checked it?

A. Yes.

Q. That is, these reports I am showing you now?

A. Yes.

Q. Now, I call your attention to the daily drilling report of August 21, and ask you whether there is any change shown of formation there which does not appear upon this graphic log?

A. The drilling report shows a change from blue sandy shale to blue clay at 750 feet. I have grouped that under the title of blue shale, on the graphic log.

Q. That is, you made no distinction in that case either?

A. No.

Q. Now, will you examine these three daily drilling reports I hand you, and state where the change is made from blue clay to something else?

A. One shows a change at 750 from blue sandy shale to blue clay. The next report shows blue clay to 780 feet. The next report shows from 780 to 790, blue sandy shale. 790 to 815, blue shale.

Q. Are any of those changes indicated on this log known as Defendants' Exhibit 175. [**2735**]

A. They are all included under the term "blue shale".

Q. The question is, are any of those changes shown on that log?

Mr. Lewers: I submit the answer is responsive.

Q. By Mr. Mills: Now, I show you daily drilling report of this well of August 24. Will you read the formation?

A. 815 to 825, blue shale; 825 to 830, hard sand rock; 830 to 835 blue clay.

Q. Will you examine the log for those depths and tell me whether you have indicated those changes in formation?

A. I have shown the blue shale and the 5 feet hard shell or sand rock, as it is called here, and then have shown the balance of this report under the term "shale", on the graphic log.

Q. Whereas, in the report it is known as blue shale, is it not?

A. It says blue clay

Q. Blue clay?

A. Yes.

Q. You call it shale now.

A. It is grouped under the term "shale" here.

Q. Moreover, from 825 to 830, what you call sand on the graphic log appears in the daily drilling log as hard sand rock? Is not that true?

A. Yes; but, as I said before, I could not carry these things out in any great detail on a sheet of this size.

Q. Now, why did you not indicate on the log, from 825 to 830 "hard sand rock", instead of putting down "sand", as you did?

A. Simply an abbreviation to — I believed it would convey the same meaning.

Q. That is, you call "hard sand rock", indiscriminately, "sand and rock"?

A. I call "hard sand rock" "sand", or "sand rock". [2736]

Q. You don't make any distinction between "rock" and "sand"?

A. I have not there.

Q. No. Now, you did not, also, indicate on this log a change of blue clay, did you, at 835 feet?

A. I have grouped that, again, under the term "shale."

Q. And the words "blue clay" do not appear on the log at that point, do they?

A. No.

Q. Look at this drilling report for August 25, 1910, will you, and give its formation?

A. "835 to 840, blue clay"; "840 to 850, blue sandy shale."

Q. Now, what have you on your graphic log, from 835 to 840, which on the drilling report shows "blue clay"? What do you state it on the log?

A. That has been included under the term "shale".

Q. And where, on the drilling report, from 840 to 850, it appears to be "blue sandy shale", what have you called it on the log?

A. Simply called it "shale".

Q. Now, the word "shale", as you call it, runs from what point to what other point in the depth?

A. From approximately 830 to about 870.

Q. So that you don't even on the log, show the place where the blue sandy shale stops and starts at something else, do you, within 30 feet?

A. I have included both the blue sandy shale and shale under the one term "shale" without any distinction as to just what point the change took place, if you would call it a change.

Q. That is, it didn't make much material difference to you and Mr. Williams, in making this log up, to indicate within 30 or 40 feet of where a formation changes?

A. Oh, yes, it did. It is not considered a change of forma-[2737]tion, entirely, to change from a clay to a shale. The graduation is such that there is no dividing point, no dividing line.

Q. Will you read the formation, please, on the daily drilling report for August 26th, 1910, from 875 feet to 880?

A. From 875 to 880 is a hard sand rock.

Q. Now, you have not shown that, have you, as hard sand rock, on your diagramatic log?

A. I have shown that as sand.

Q. At what point?

A. From about 875 to 880.

Q. You call it sand?

A. Sand.

Q. And the daily drilling report calls it hard sand rock? Is that correct?

A. That is correct.

Q. Now, don't you, as an oil man, make any distinction between that which is hard sand rock and that which you call sand?

A. Not for the purpose of — in making up a log of this kind.

Q. Suppose you ran into a hundred feet of oil sand, would you call it hard sand rock?

A. In that case we would call it oil sand.

Q. Do always call it oil sand in these logs?

A. We do if it contains oil, if it is an oil sand.

Q. You say you do, if it contains oil, call it oil sand?

A. Yes.

Q. Show me on this Exhibit 175 where you have designated oil sand as oil sand.

A. We haven't shown any —

Q. Have you completed your answer, Mr. White?

A. Not yet. There is no oil sand designated on the log.

Q. And yet the daily drilling reports show great depths of [2738] oil sands on this oil well, do they not?

Mr. Lewers: I object to that as not a fair statement. If you will produce the drilling reports showing any oil sand, to support your question, that is another matter; but I don't think you have a right to ask the question assuming something which is not in evidence.

Mr. Mills: I am now cross-examining the chief clerk to the chief engineer of the Associated Oil Company, and who, moreover, has confessedly admitted that he examined these daily drilling reports for the purpose of incorporating them in this diagramatic log, and which form the basis of the information, as he stated on direct examination, contained in this log, which is introduced for the benefit of the court.

Mr. Lewers: If you can find in those drilling reports anything showing oil sand, call his attention to it.

Mr. Mills: Read the question. (Previous question read by Special Examiner.)

A. I think not. Not to my knowledge.

Q. Do you now say, on your oath, that there are no oil sands shown in well No. 3 of Section 24, that we have been examining, in the daily drilling reports?

A. I have not come across any.

Q. You have not come across any?

A. I have not seen any.

Q. What do you call the formation in which the oil appears in this well?

A. You mean as to what period geologically?

A. No; I mean how would you describe it? Would you call it "shale" or "sand" or "rock"?

A. My personal opinion is that the oil is coming from the shale, possibly.

Q. Yes. [2739]

A. To some extent, at least.

Q. Now, where the drilling reports say "sand showing a little oil", do you call that an oil sand?

A. It is possibly a small streak.

Q. You would call that an oil sand, wouldn't you?

Mr. Lewers: Will you produce some such drilling report, rather than assume that it is in evidence? I think it would be an interesting thing if you did. If there are any, it is only fair to the witness you should produce them, because out of several thousand you cannot expect him to remember the details of every one of them.

(Last question read by Special Examiner.)

A. Is that related to this well?

Q. By Mr. Mills: Generally.

A. As a generality?

Q. Yes.

A. If oil was discovered as you were going through the sand, I would say that is very likely an oil sand, or a streak of oil sand.

Q. Well, "very likely". Wouldn't you term it so, in your business?

A. Yes.

Q. As a matter of terminology?

A. Yes.

Q. You would call it an oil sand, wouldn't you?

A. Yes, if it showed any quantity of oil.

Q. Well, suppose it showed a trace of oil, would you call it an oil sand?

A. It would depend on the condition of the well — whether you thought the oil was coming from that sand or from the shale above.

Q. Well, assuming that you thought it came from that sand, [**2740**] and there was a trace of oil, would you call that an oil sand?

A. That answers itself — if you assume it was an oil sand you would certainly call it an oil sand.

Q. I show you three drilling reports, dated, respectively, August 27, 28 and 29, 1910, and will ask you at what depths on these reports blue clay appears.

A. "880 to 900, blue clay; 900 to 920, blue clay; 920 to 930, blue sandy shale; 930 to 940, blue clay."

Q. Does this log indicate those changes at those points? I will withdraw that question. I will ask you to read, for those depths, what appears upon the log, Defendants' Exhibit 175.

A. They are classed under the term "shale" on the graphic log.

Q. And any distinction made as on the daily reports?

A. No.

Q. Will you read, on the log, please, what appears between the depths 960 and 1080, on Defendants' Exhibit 175?

A. 960 to 1080?

Q. Yes.

A. It is shown here as "mud".

Q. All right. Now, I hand you reports for August 31, September 1, Sepcember 2, September 3, 4, 5 and 6, which cover the depth from 960 to 1080 feet, and will ask you what formations they show.

A. In detail?

Q. Yes.

A. "960 to 975, blue clay; 975 to 990, blue mud; 990 to 995, blue mud; 995 to 1000 feet, blue clay; 1000 to 1015, blue mud; 1015 to 1020, blue clay; 1020 to 1035, blue mud; 1035 to 1065, blue clay; 1065 to 1080, blue clay."

Q. So that the distinctions made in the daily drilling reports were not carried out on the log which you prepared of this [**2741**] well between those depths?

A. Well, blue clay and blue mud are the same thing — in the drilling of a well, at least.

Q. That is, you made no distinction whatever between blue clay and blue mud, on the log?

A. No. The depths shown there, also, I would like to explain, is the amount of formation penetrated for the day. It is not always a case of distinction between one report and the other.

Q. The driller, however, notes the change from one formation to another, does he not, and reports it daily?

A. He has shown it on his daily reports both ways — clay and mud.

Q. Well, the question is whether he does not note the change on the daily reports, and the depth.

A. He has set it down in different ways, you might say.

Q. Well, does he note the change at different depths, as he goes along, on the daily reports?

A. Yes.

Q. And they are so reported to your office, or to the Associated Oil Company?

A. Yes. In explanation of that I might say there is nothing comes out of a hole but mud. It is all prepared in the form of mud.

Q. But they are able to detect the changes as they go through, as I understand it? Is that correct?

A. Oh, yes. They should be.

Q. Now, in every case, as I understand it, where blue clay, blue mud, blue shale appears on the daily drilling report, you use it indiscriminately as shale or blue shale.

A. Where a number of those minor changes occur in one group—

Q. Can't you answer that question without an explanation?

A. I couldn't say that in every case I have done that.

Q. Well, have you in any case, or in substantially most of [**2742**] the cases?

A. In many cases I have grouped the consecutive stratas of clay and shale and mud under the one term "shale."

Q. Or "blue shale?"

A. Or "blue shale"; whatever the color might be, the general color. It is impossible to go into details on a log of that character.

Q. You say "It is impossible to go into details." Couldn't a log be made showing the change every 10 feet?

A. It could be; but I made this up —

Q. Couldn't it be made, as a physical fact, every 10 feet?

A. Yes; but it wouldn't be practical.

Q. It would take a longer time, you mean, to do it?

A. It would —

Q. I am not asking for an explanation. I am asking if you could not, mechanically, do it, on this log.

Mr. Lewers: Mr. White is entitled to give his judgment and explanation.

Mr. Mills: He is not entitled to give any explanation until he answers the question.

Mr. Lewers: You are entitled to answer in your own way. You are the witness, and not Mr. Mills.

A. It could be done, of course, but it wouldn't be of any practical use, any benefit. It would serve to confuse you rather than aid you.

Mr. Mills: I move that the answer be stricken, in so far as it is a voluntary statement not responsive to the question. I am not asking your judgment upon any matter at all.

The Witness: It is not a matter of judgment at all. It is a matter of common sense.

Q. By Mr. Mills: Do you see any distinction be-

tween blue shale and blue sandy shale, in the history of a well? [2743]

A. Oh, there may be some slight difference, but in the drilling of a well it is practically impossible to differentiate the shale from sandy shale. It is simply a matter of the driller's own personal judgment in the matter.

Q. There is a distinction, however, isn't there, between blue shale and blue sandy shale?

A. Not of any great consequence.

Q. I didn't ask you about whether there was any consequence pertaining to it or not. That is a matter for the court and for argument. I ask you whether or not there is a distinction that is easily distinguishable.

A. Not in the drilling of a well, that I know of.

Q. I didn't ask you about the drilling of a well. I asked you if there was not a distinction between blue sandy shale and blue shale. You don't know anything about the drilling of a well, you say. I am askiing you if there is a distinction between blue shale and blue sandy shale.

Mr. Lewers: The witness didn't say he didn't know anything about the drilling of a well. That is a mere voluntary statement of counsel, and I ask it to be stricken, as improper.

Q. By Mr. Mills: Answer the question.

A. I don't consider that there is any difference between —or, that you can tell the difference, underground, between sandy shale and shale at that depth.

Q. That is, if the driller found a distinction and

reported it, you would overrule him because he was unable to do it, you having had no experience in drilling, and he perhaps an experieenced man — you would arbitrarily overrule it?

A. I would not consider it of any consequence.

Q. And in making up the log you would make no distinction between them, would you?

A. It would serve no purpose to make any distinction, that [**2744**] I can see.

Q I say, you would not make any distinction, would you, in making up a log?

A No; not in making up a practical working log, I would not differentiate.

Q. I didn't ask you about a practical working log. I say, in making up a log would you make any distinction between blue shale and blue sandy shale?

Mr Lewers — I assume you want something other than a practical working log, then, Mr Mills?

A In drawing up logs such as we are accustomed to drawing up, I would disregard that.

Q By Mr Mills — Notwithstanding that the driller would report the change, you would still disregard it?

A. Yes.

Q Would you make any distinction between blue shale, or what you would call blue sandy shale, and blue clay, in making up a log?

A In making up a log that was drilled with standard tools, I would.

Q Why would you?

A Because it would show a difference in the formation.

Q Well, why would that difference be shown on a log?

A There would be no practical use in doing so, but it might be just as well to show the dividing line.

Q That is, there is no reason for doing it, yet you would do it?

A I would do it because I would follow the reports.

Q Yes; but in making up a log for the purpose of evidence in a case, which ordinarily ought to be strictly according to the daily drilling reports, you would disregard it and not put it in, where it is to be submitted to the court for inspection? Is that what you mean? [2745]

A. Well, where it would occur in small streaks, as it is in this particular case, you would simply encumber the log unnecessarily to differentiate the different stratas of alternate layers of clay and shale.

Q. Well, do you call a streak of 15 feet a small streak

A. Comparatively, yes, in a well of this depth.

Q. You would call nearly 500 feet a small streak?

A. 500 feet of clay?

Q. 500 feet of formation, the same formation.

A. No; I do not.

Q. Then you would make a distinction in a case of nearly 500 feet, would you?

A. Well, I would if it was near the bottom, or near the oil formation, where it would be of more impor-

tance than the top of the well, or the surface formations, comparatively.

Q. You made no distinction, however, from a distance of 1058 to 1600 feet, or 515 feet, in this particular log, did you? Examine it and see.

A. No; I classed that as blue shale.

Q. And yet the drilling reports for that depth repeatedly change from blue clay to blue shale and blue sandy shale.

A. That is what I was explaining,—that there are so many changes that it would simply unnecessarily encumber the log.

Q. In making this log, in order to dissolve all unimportant details away, why didn't you block this out in one color and call it "Blie sandy shale" from where the surface ends to 3880 feet?

A. Because there were different characteristics in the formation, that I have noted there, that I found noted.

Q. Well but if they are so unimportant why didn't you just call it all "blue sandy shale" and be done with it, the same as you did therefor a distance of 515 feet, when the daily drilling reports show repeated changes and different formations? [2746]

A. Well, there would be no reason to differentiate between the alternate layers and small stratas and so on. In sandy shal and shale. There is no change of formation, as we consider it.

Q. But the real purpose of the log, Mr. White, as you say, was to show these changes of formation, wasn't it?

A. Well, we didn't consider that a change of formation. Going from a blue shale to a blue sandy shale — we don't consider that a change.

Q. That is, for 515 feet, where the driller reported he passed through blue clay, yoi are willing to call it "shale", "blue shale", because you don't see any importance in showing the difference in formation in this log? Is that correct?

A. No, that is not correct. I can see good reasons for showing important change in formation; but such changes as you spoke of as from blue clay to blue mud, and such foolishness, as I would call it, as that, should not be set down in a log of this character.

Q. Do you think it is "foolishness" to indicate a change, on a log, from blue sandy shale to blue clay?

A. No; the change I am speaking about is a change from blue clay to blue mud.

Q. Well, I am talking about blue mud. I am talking about blue sandy shale to blue clay. You regard that as an important change, fon't you?

A. Not necessarily.

Q. Well, you say, "not necessarily". Is it ever an important change?

A. No; I think not.

Q. Never is?

A. Not that I know of, in a wekk of this depth, or at that depth. It is simply a difference between hardness.

Q. Did you discuss that matter with Mr. Williams? You mean by "Mr. Williams", Mr. W. A. Williams? [2747]

A Yes.

Q Did you discuss the matter with him as to whether you would put down this 515 feet as blue shale or blue clay?

A No; I think not. We had in mind at the time of going into great detail in making up the log, and then decided it would be better not to encumber the log with a lot of unnecessary or small detail.

Q So that the log, as it stands here, does not faithfully show in detail the changes which the daily reports show?

A It shows the changes in a practical way; only changes of moment.

Q Does it it show in detail the changes which occurred in the daily reports?

Mr Lewers — I submit the log speaks for itself. That question has been asked in twenty different forms, and answered as many different times.

A It shows what I understand to be changes.

Q By Mr Mills — I ask you if it shows in detail the several changes which appear in the daily reports.

A It does not show in minute detail the several what you understand to be changes in the formation.

Q And what are termed changes in the formation in the daily reports?

A It does not go into detail as to — into minute detail as regards the changes from hard shale to soft shale and mud and clay, and so on.

Q As shown in the daily reports?

A In the instance in question.

Q And that is true as to all the reports for the whole depth of the well, is it not?

A No; I would not say that. I could not tell you, without checking it up with the logs themselves. [2748]

Q I say, generally.

A Generally, where alternate layers of shale formation are mixed with clay, or sandy shale, it has been termed "shale" or "blue shale", or "brown shale", as the case may be.

Q Do you regard clay and boulders as blue shale or shale? Now, can you answer that by yes or no, without a long explanation?

Mr Lewers — Mr White, you are entitled to answer that in your own way, without regard to Mr Mills' attempt to direct you to give the answer in his way.

A Clay and boulders as reported in rotary drilling — it is hard to tell just what it is.

Q By Mr Mills — Did I ask you that question, whether it was hard to tell what it was? Didn't I ask you whether you regarded clay and boulders as blue shale?

A Not necessarily.

Q Do you see any distinction between a boulder and blue shale?

A Yes.

Q You do.

Mr Lewers — What kind of a boulder are you referring to, Mr Mills?

Mr Mills — The kind of boulders they found in this

blue shale, what they call blue shale. That is what I am referring to.

Mr Lewers — That is not a boulder.

Q By Mr Mills — I call your attention to daily drilling report of April 10, 1911. I will ask you to read the formation that the driller reported passing through, in this well.

A "1560 to 1570, blue clay; 1570 to 1579, clay and boulders".

Q Will you examine this abortion, called a graphic log, [**2749**] and state whether or not you have indicated that change from 1570 to 1579 of clay and boulders?

Mr Lewers — Can't you examine the witness without using language that is offensive not only to the witness but to the court?

Q By Mr Mills — Did you make any distinction, at the depths indicated, from 1570 to 1579, where the clay and boulders were shown by the driller?

A I have not included any boulders. I have included the boulders under the general term "blue shale".

Q So that where it says "clay and boulders" you call it "blue shale", on the log?

A Yes. That, for practical working purposes, is, I think, correct.

Q Well, did it occur to you or Mr Williams that there might be some possible geological importance to that?

A We didn't consider it so, because they were

drilling with a rotary, and they didn't know what formation they were in themselves.

Q How do you know? Were you there?

A No; but it is impossible to tell, in drilling by the rotary method, just what formation they are in at any certain time.

Q Then what is the use of carrying out these formations at all — simply call it all "blue shale"?

A Unless they strike something such as an oil sand, or something of the kind.

Q Do you think a competent driller would know when he struck a boulder and passed from blue clay into a boulder?

A Yes.

Q Even with a rotary he would know that, wouldn't he?

A He might and he might not. The boulders encountered in [**2750**] many of these cases are shells instead of boulders as we understand it.

Q Now, I call your attention to a drilling report on this well, dated April 12th. I will ask you to read the formation the driller reported.

A "1582 to 1600, clay and boulders; 1600 to 1602, shell; 1602 to 1604, clay and boulders.

Q Will you examine your literary effort, there, and state whether you have noted those changes on that graphic log?.

A No; they are not noted in detail on the graphic log.

Q What are they noted as on the log

A They are included in the term "blue shale".

Q Mr White, I hand you the report for April 13th, 1911, on this well, and ask you to read the formation the driller reported.

A "1604 to 1610, clay and boulders; 1610 to 1611, shell."

Q Have you noted those changes on the log?

A I have shown a shell from 1600 to 1605.

Q And that is wholly incorrect, according to the report, is it not?

A That would be on the day's report preceding this. This report runs from 1604 to 1610, clay and boulders. That being such a small strata there is no room to insert the formation, although we have it colored on the log to represent the general shale formation. And from 1610 to 1611 is a shell, which I have shown on the log in question as a shell.

Q Have you shown the clay and boulders there, from 1604 to 1610?

A I have answered that. That is a small streak in there, for which we had no space to write in the clay and boulders, or the name of the formation, although we have shown it in the general shale coloring on the log. [2751]

Q If you had had room there you would have put it in?

A Well, we would put in whatever classification we would put it under; yes.

Q Now, you had plenty of room up here, between the depths 1085 to 1600, to write in "clay and boulders", didn't you, at least in a hundred different places?

A Yes; but this was a change.

Q But you didn't write it in, did you?

A No; in this instance it was a change from a shell to a shale.

Q Couldn't you have carried it out on the margin to show it, if it was important?

A Instead of writing it out, we have included it in our coloring or legend of colors, for a shale formation.

Q That is, "clay and boulders" is a shale formation?

A Yes, in this particular instance.

Q But there is nothing on this log at that point to show that it is anything but shale? In fact, the log itself shows, according to your own statement, that it is shale, instead of clay and boulders? Is not that true?

A It is included under the general term —

Q Well, is not that true? Is there anything unfair about that question?

Mr Lewers — I submit he has answered it.

A It is included under the same color as shale.

Q By Mr Mills — Well, what I mean to say is this, that the log, at this particular point where the clay and boulders occur, between 1604 and 1610, would indicate that it was shale?

A Yes.

Q And not show clay and boulders? Is not that true?

A That is true.

Q In that respect, it is misleading, as to the exact forma-[**2752**]tion, then?

A Possibly; but it is such a small strata that it would be impractical to go into detail in that particular case.

Q It would be perfectly easy to carry that out on the margin of this log, would it not?

A All that detail could have been put in there, Mr Mills, if it was necessary.

Whereupon the further taking of testimony herein was adjourned until Thursday, July 10, 1913, at 10 o'clock A. M., at the same place.

On Thursday, July 10, 1913, at 10 o'clock A. M., the further taking of testimony herein was resumed pursuant to the adjournment:

W. E. WHITE

recalled, CROSS-EXAMINATION resumed.

By Mr Mills:

Q Will you examine Defendants' Exhibit 175 and state what you have shown there for a depth from 1611 to 1612 feet?

A A shell.

Q Now, what have you shown from 1612 to 1613 feet?

A That 1 foot is shown as a shell here.

Q Well, which 1 foot — from what depth to what depth?

A From 1612 to 1613.

Q That is, you make no distinction between 1611 to 1612, and 1612 to 1613?

A Well, there is such a small scale here I can't make out just what the figures are.

Q Well, whatever it is there, what formation do you call it on that log? [2753]

A I have shown it as a hard streak or hard shell.

Q Now, will you read the drilling report for the date April 14, 1911, of the formation between 1611 to 1612?

A 1611 to 1612, shell.

Q Now, I show you drilling report for the 15th day of April, from 1612 to 1613. What is that?

A 1612 to 1613, rock.

Q Your log does not show that the formation passed from shell into rock at that point, does it?

A Shell and rock are the same thing.

Q I say, your log does not show that the formation passed from shell into rock at that point, does it?

Mr Lewers — I submit the answer is responsive.

A Whenever strata of that kind, in a log drawn to that scale —

Q By Mr Mills — Did I ask you anything about strata of that kind? Have you any particular interest in evading a plain question?

A I am not intending to evade anything. I am trying to explain to you.

Q Then why don't you answer a simple question? Why do you constantly evade answering a simple, direct question?

Mr Lewers — I submit the witness has not done so. If counsel is trying to put words into the witness's mouth which will not represent the actual facts, the

witness has a right to explain, as he is responsible, on his oath, for his own testimony, and not Mr Mills.

Q By Mr Mills — Now, Mr White, the question is whether your log shows that at that point the formation changed from shell to rock?

A It does not.

Q Why didn't you answer that in the first place? [2754]

A I wished to explain to you that there is no change — rock and shell are the same thing.

Q If you can answer the question first and make your explanation afterwards we can get along much faster.

Mr Lewers — Will you agree to give him the opportunity, and not interrupt him when he starts to make an explanation, as is your usual custom?

Q By Mr Mills — Now, Mr White, will you examine the drilling reports for April 16, and April 17, and state what they show in the way of formation?

A "April 16, 1613 to 1620, rock; April 17, 1620 to 1621, rock; 1621 to 1624, blue clay."

Q Now, will you look at the log, Defendants' Exhibit 175, and state whether you show, in express terms, that at 1621 the formation changed from rock to blue clay? Does your log show that?

A It does not show it specifically.

Mr Lewers — If you have any explanation to make, Mr White, under Mr Mills' promise you have a right to make it.

Q By Mr Mills — That is, do you desire to volunteer anything outside of the questions I asked you?

Mr Lewers — Oh, I see!

Q By Mr Mills — Now, Mr White, will you examine the drilling report for April 18, on this well, and state what the drillers reported as the formation they passed through?

A "1624 to 1625, blue clay; 1625 to 1628, shell; 1628 to 1640, shale and boulders."

Q Will you examine the log, bearing date with your drilling report, and state whether your log shows that the drilling operations passed through those formations at those points?

A Yes; it does show it. [2755]

Q What does it show?

A Although the blue clay is classed as shale. Then comes the shell.

Q Show me, in the first place, what shows there?

A This is the shale.

Q From where to where?

A 1624 to 1625. That was a portion of the previous day's.

Q Aren't you pointing now to 1625?

A The formation on the previous day's report is a portion of this. It is not a change; there was not one foot from 1624 to 1625.

Q Show me where you have, on your log here, from 1628 to 1640, shale and boulders.

A I class that under the hard shale.

Q I am asking you if you can show on your log the words, "Clay and boulders", at that depth, as it appears upon the daily drilling report.

A The words "shale and boulders" appear on the drilling report.

Q I mean "shale and boulders".

A I have shown it as hard shale. I have not shown any boulders.

Q Then your log fails to show the formation as reported exactly by the drilling report, doesn't it?

A In the exact wording of the drilling report, to some extent.

Q And did you take occasion, on any of these reports, to interview the drillers whose names appear upon the daily drilling reports?

A No; I did not.

Q Or confer with them in any way as to their reports? [2756]

A. No.

Q And in this case, as in the others, you substituted your own judgment for the drillers', in making up this log — that is — in your judgment and Mr Williams' judgment?

A I would not put it just that way. There is no substitution. It is simply grouping all these different small strata into one group that would be intelligible.

Q That is, you think it would be more intelligible to put down "blue shale" for a distance of 515 feet, when it shows several changes to other formations from the daily drilling reports? Is that what you mean?

A In which particular instance do you refer to?

Q In any instance, in any stretch of 500 feet on this log.

A Well, if there is one particular stretch of 500 feet between sandstone, for instance, I would put it as blue clay. Blue clay and blue shale, to my notion, are practically the same thing, in the drilling of a well with the rotary process. The only difference is a slight difference in the hardness, possibly.

Q You would group blue clay, as I understand you, blue mud, blue sandy shale, sandy shale, and clay and boulders all under the same thing? And that you have done in this log?

A Not necessarily.

Q You have done that on this log, haven't you.

A In any one group?

Q Wherever those occured you have always called it "blue shale", haven't you, down to a depth of 1600 feet?

A Yes; we group it under —

Q Yes. What have you there from 1640 to 1647, on Defendants' Exhibit 175?

A I have shown hard shale. [2757]

Q And that hard shale which you show there extends from what point to what point — for how many feet?

A From about 1630 —

Q To nearly 2100 feet?

A No; I have got soft shale in here. The bottom portion of this was softer.

Q Well, 2000 feet?

A In that neighborhood; yes.

Q Or about 360 feet.

A Well, I have not termed it hard shale after — the top of this shale, harder than the lower portions.

Q Well, how many feet would you say that you termed it hard shale?

A The hard shale was possibly from 1630 to in the neighborhood of 1750.

Q Now, will you read what the daily drilling report says, from 1640 to 1667 feet, for April 19, 1911, on this well, through formations which you call hard shale?

A "1640 to 1647, shale and boulders; 1647 to 1658, blue clay, 1658 to 1666, hard shale; 1666 to 1667, blue clay."

Q That is another instance where you failed to follow the daily drilling report as it was placed there by the drillers.

A Yes; I have simply grouped those under the one term "shale".

Q Will you read the daily drilling report for April 20, on this well?

A "1667 to 1710, blue clay".

Q What have you got for the depth on your log?

A I have shown that as a shale, hard shale.

Q You don't even show it as a blue shale, do you?

A I didn't distinguish it, no, except by the color. Our color scheme there is supposed to show the blue formation. [2758]

Q What color stands for blue on this color scheme of yours?

A That is maroon, or brown.

Q Doesn't this maroon or brown also stand for brown shale, the very first thing?

A Yes; that is true.

Q Yes. So that, if you were to follow out your color scheme, beginning at the top, all that is colored maroon would stand for brown shale, wouldn't it, excepting where you have changed it to something else?

A Evidently for shale; the maroon color stands for any kind of shale.

Q But you have started out by calling it "brown", haven't you?

A The brown is the first that appears in the well, yes; but all shale, upon the log, is shown in brown color, or maroon.

Q Wasn't it the fact that the reason the word "BROWN" was put in large capital letters at the top of this log was that it was put there for the purpose of making it appear to the court that all the shales you passed through, excepting where you expressly stated the color, were brown shales?

A No; there was no such intention.

Q And with the intention of making it appear that this well was not a good well because it passed through a shale, the brown shale, which through the Kern county is generally an indication of non-oil territory? Was not that your reason?

A No such intention at all, Mr Mills.

Q Why was it that you marked the word "BROWN" in larger capital letters than any other word on your color scheme?

A That was simply part of the draftman's doing,

as that particular body of shale changed from a brown to a blue.

Q I will ask you what formation was passed through from 1710 to 1743, as shown by your log. [2759]

A I have shown a shale formation.

Q What kind of a shale is that?

A I have not designated it. It is simply "shale".

Q Well, what would you say it was, without referring at all to any report? Just state what you would interpret it, you having made the log?

A I would simply give you it at this time as shale. My remembrance is it was probably blue or sandy shale.

Q Do you interpret it that way from memory?

A Partly; yes.

Q Can you show me, at any point on the diagramatic log, Defendants' Exhibit 175, from the depth of 2000 feet to 2500 feet, which will show where boulders occurred?

A No; I have not shown any boulders between 2000 and 2500, except that I have shown hard shales and shells.

Q Now, if it became important in this case to know whether there was a formation of boulders at some depth between 2000 and 2500 feet, it would be impossible for the court to determine from your log where they occurred, would it not, or even to show that it did occur?

A. Yes.

Q Now, I call your attention to drilling report

of April 29, 1911, which reports on the formations passed through from 2012 to 2031, and ask you to read it.

A "2012 to 2031, soft blue shale and boulders."

Q Will you look at your diagramatic log and tell me what formation you can find was passed through from 2031 to 2056 feet, without reference to the drilling report?

A They were in a shale which graduated from soft to hard.

Q At what point, from your log, did it graduate from soft to hard? [2760]

A The figures are not shown on the diagram here.

Q Well, tell us within twenty or thirty or forty feet of where it graduated.

A Well, somewhere in the vicinity of 2040 feet.

Q "Somewhere in the vicinity".

A I should judge that from this log.

Q How much latitude do you allow, now, on each side of that 2040?

A I was allowing the amount that you mentioned.

Q 50 feet, 40 feet?

A Oh, no; somewhere in that vicinity.

Q Well, about where would you say? Where could the court determine, with any degree of accuracy, where that graduation from one shale to another occurred, from your log, without reference to any other document in this case?

A Well, I would determine from this log that it was somewhere in the vicinity of 2040 feet.

Q Might it be 2022 feet?

A From this log, I would say in the vicinity of 2040.

Q 2040.

A Somewhere in that vicinity. There are no figures shown there, but it is our practice to put it in in that way, as shown.

Q As a matter of fact, it was 2031 feet, where it started, wasn't it?

A Well, that is very close, I think, in a log of that kind.

Q That is 10 feet off, isn't it?

A 9 feet.

Q According to the drilling report.

A Yes, according to my log.

Q And then it passed into a blue shale, did it not?

A This was also a blue shale. There is no change in the [**2761**] formation. It is simply a graduation from a soft shale to a little harder shale, as reported by the daily drilling slips.

Q What does the diagramatic log Defendants' Exhibit 175, show from 2110 to 2125 feet?

A It shows hard shale, brown.

Q Now, will you read so much of the daily drilling report of May 4th, 1911, as discloses the formation reported by the drillers between 2110 and 2125?

A "2110 to 2125, blue shale."

Q Now, you have made a mistake there, on your log, haven't you, and put your blue shale in the wrong place? The brown shale should have followed that.

A Well this simply shows hard shale in the lower portion, or from about the neighborhood of 2120 to

2135 is marked brown, the lower portion of the shale formation.

Q When you answered the question without reference to the report, you stated that from 2110 to 2135 was brown shale, didn't you?

A. Yes.

Q Whereas, as a matter of fact, the driller reported it as blue shale, hard blue shale?

A I was mistaken in my answer there, because from 2110 to 2135, approximately, it is shown as a hard shale, with the formation from 2120 to 2135 marked brown, showing the lower portion of that shale formation was darker in color.

Q You didn't discover your mistake until you found that the report differed from the log, did you?

A Well, I think it shows on the face of it there that it is shown the way I speak of on the log.

Q Now, doesn't your log, as a matter of fact, show between 2110 to 2135, hard brown shale, and didn't you state that, the first part of the examination, when you went through that [**2762**] log?

A Well, the amount of formation there is hard to determine. The way it is written in here seems to show that the lower portion of the shale was brown, although it is a little hard to determine just what is intended.

Q It was not very hard to determine from this report which I hand you, was it? It gave it in exact feet? Read it.

A "2110 to 2125, shale; 2125 to 2129, hard brown shale".

Q The daily report shows it clearly, doesn't it?

A Yes. In those small graduations, though, there was no attempt to go into any such detail as that on the log.

Q In other words, no attempt to be exactly accurate on the changes of formations that you passed through?

A Yes; it was intended to be accurate, but there was no intent to represent each little change in hard or soft formation where it was considered unimportant.

Q That is, considered by whom "unimportant"?

A Considered by us in compiling.

Q That is, by you as chief clerk, and who else?

A Mr Williams, W. A. Williams, chief geologist.

Q Referring again to your diagramatic log, will you state what you showed from 2132 feet to 2137 feet?

A It shows a streak of hard sand.

Q Now, what do you show from 2137 feet to 2149?

A It is indistinct on the print here, but it looks as though it was brown shale.

Q Which word is indistinct?

A The word "shale" didn't blueprint very well.

Q The word "brown" is distinct, isn't it?

A. Yes.

Q Now, I ask you to look at the daily drilling report for May 5, 1911, and state what the driller reported between the [**2763**] depths 2137 to 2149, where you call that "brown shale" on the log. What did he call it?

A This report shows blue shale.

Q Just a confusion in colors on the part of the compilers, wasn't it?

A The small graduations were not gone into in detail on the graphic log.

Q In other words, you and Mr Williams got a little color-blind, when you reached the depth of 2137?

A No; there was no color-blindness at all; it was simply our intention to get up something that would be of practical value as a log.

Q. That is, practical value in a railroad sense, or practical value in a geological sense?

A In a geological sense.

Q What does your diagramatic log show as the formation from 2149 to 2155?

A That is also grouped under the classification of brown shale.

Q As a matter of fact, the drilling report for May 6th shows that it is a blue shale, doesn't it?

A Yes.

Q What have you got from 2155 to 2157?

A That two feet is also included in the brown shale classification on the log.

Q Now, what does the drilling report for that day for those depths show it to be?

A It shows hard sand.

Q Will you tell me what your log shows in formation from 2157 to 2167?

A That is included under the term "brown shale". I would like to add, further, that the entire

group of shales and hard [**2764**] shells, between the depths of approximately 2140 feet to about 2200 feet, was grouped, instead of going into detail as to the various stratas — was grouped under the term "brown shale", "sand", "shell", and so on — one general grouping.

Q Now, you have stated, haven't you, that from 2157 to 2167 you have called it brown shale?

A It is included under that group.

Q Well, you have called it "brown shale", haven't you?

A Yes.

Q Now, in fact, the drilling report for that depth shows that it is hard blue shale, doesn't it?

A Yes. As I said before, all these shales, in that particular formation from 2140 to about 2200, were grouped together under the term "brown shale", "sand", "shells", and so on.

Q Now, why didn't you call it "blue shale", if it was hard blue shale, instead of "brown shale"?

A Well, there was too many changes from one formation to another in there, from one color to the other, that were inconsequential, or were considered so at that time.

Q But you have made distinctions in this log in several places between blue shale and brown shale, haven't you?

A Yes, when there was some considerable quantity of it — considerable thickness.

Q But for a distance of several hundred feet you

term it all "brown shale", when, in fact, it is mostly hard blue shale, for convenience?

A I think not. I don't know just what instance you refer to of several hundred feet.

Q I am referring to the depths from 2140 to 2535 feet.

A No; there are points in between there where the color is not given; it is simply hard shale, soft shale.

Q Well, for what depth have you called it "brown shale" — [**2765**] from 2140 to what depth?

A Well, into the neighborhood of 2200 feet. At that point it was changed to hard shale, no color given.

Q What does the Exhibit 175 show, from 2207 to 2228?

A It simply shows that it is in the — shows here as hard shale, or a graduation from the brown shale to a hard shale.

Q As a matter of fact, it is blue shale, isn't it, according to the drilling report?

A Well, there is no color.

Q Well, isn't it a blue shale, according to the drilling report?

A Yes; the drilling report shows blue shale. There is no color given here on the log.

Q Now, will you look at the log, Mr White, and state at what point gas is shown after you pass the 2000-foot level, that is, examining Defendants' Exhibit 175?

A The first gas shown is in the neighborhood of 2420 or 2430 feet.

Q That is the neighborhood of 2420 feet?

A 2420 feet or 2430 feet.

Q It is quite important, isn't it, to show where the first gas appears in the log of a well, exactly?

A Yes; if there is any quantity of it.

Q That is, to show it exactly, where it occurs?

A Yes; we aim to show it, if there is any quantity of gas — strong — any amount of it.

Q Well, suppose it is only a light quantity of gas, don't you aim to show it exactly where it occurs?

A Not necessarily in a log of this kind. There is gas from a few feet down, generally, in most every well.

Q Was there in this well?

A Not that I know of, particularly. But we don't aim [2766] to show it on a log, unless it was something important, some important gas.

Q Aren't the drillers instructed to report promptly any gas showing in an oil well, at the exact depth?

A Yes; if it amounts to anything.

Q Well, if it does not amount to anything they are supposed not to report it, you mean?

A They usually use their own judgment.

Q That is to say, if they strike gas at any point and in their judgment it was not much gas, they wouldn't report it?

A Unless it was some considerable quantity they wouldn't, probably, bother with it.

Q Now, suppose it was in considerable quantity, what would be the importance of it.

A They would usually report it.

Q Why would you regard it as important to report it?

A Well, it shows that you are in an oil formation, for one thing — or near one — although that is not always true.

Q What do you show from 2835 to 2843 on Defendants' Exhibit 175?

A That is shown under the general classification of blue shale.

Q Do you show, at any depth between 2800 and 2900, a discovery of gas, on that log, on June 26, 1911?

A No; there is nothing shown on here to that effect.

Q Now, read the daily report for June 26, 1911, which involves the formation that I have referred to?

A "2835 to 2843, blue shale; little gas."

Q Now, will you state, for the benefit of the court, why that information was suppressed on this log, if you know?

A Simply because it was considered unimportant. They reported it as "little gas". It was not the intention to go [**2767**] into any detail over unimportant points.

Q Then why was it that you reported every day on the log where there was some gas?

A Because that was the first gas, as I remember it, of any amount or any quantity.

Q I thought you said that was only a "little gas", that first gas.

A I don't believe I said that.

Q You had plenty of room, didn't you, on this log, between 2800 and 2900 feet, in which there appears no writing at all, to write the word "gas", or "little gas", didn't you?

A It could have been inserted; yes.

Q And there is no other writing on that log for that hundred feet, is there?

A I would like to finish my explanation, if you will allow me.

Mr Lewers — Proceed. You have a right to.

The Witness — Well, you have got two or three questions at me now.

Mr Mills — Read the record, Mr Examiner. (Record read by Special Examiner.)

A (Continuing) No; there is nothing else shown for that 100 feet. I simply wish to add that their report of "little gas" was not considered of enough importance to insert, as we were not carrying the log in any great detail.

Q Now, in this connection I call your attention to your testimony on direct examination, page 7116 of the record, in which Mr Lewers asked you this question, referring to these diagramatic logs: "Q—I show you what purports to be such a log", and so forth. "A—It was prepared at my request, by a draftsman employed in our office, and afterwards checked with the daily reports." By that you mean these reports we [**2768**] have been examining?

A Yes.

Q "Checked by whom? A—Checked by myself and Mr Jeffress." then some conversation about Jef-

fress. "Q—And what was the result of that checking, as to whether or not this is an accurate representation of the results of the various reports received? A—It agreed with ther reports." As a matter of fact, it does not agree with the reports in that respect, does it?

A It does not go into as much detail as the reports; but that was not our intention in checking it — to make it agree entirely with the details as shown in the reports — although it is substantially correct, according to our knowledge.

Q Mr White, were the Exhibits 176 and 177, which constitute the alleged diagramatic logs of the wells on Section 30, in 30 - 24, and 26, of 30- 23, made up in the same general way that you made this log from the daily reports?

A Yes. There was no attempt made to carry out the detail of small stratas.

Q And in places where this log in general has not followed in detail the daily drilling reports, the other logs may be said to do the same?

A Yes; they were made up on the same basis.

Mr Mills — Upon that statement, then, I shall object, now, to the offer by Defendants' counsel of Exhibits 175, 176 and 177, upon the ground that they are admittedly not accurate representations of the history of the formations passed through in the several wells to which they refer, as shown on the daily drilling reports, and because they in frequent places suppress information as to the formation and in other places misrepresent the formations, and are alto-

gether inaccurate and untrustworthy. That objection is based upon the examination of Defendants' [2769] Exhibit 175 and upon the witness's statement that the other logs were compiled and prepared in the same way, with no attempt to accurately in detail represent the formations passed through as shown by the reports of the drillers made daily, and because, further, the so-called logs constituting these exhibits are really the result of a substitution of the judgment of the chief clerk of the engineer's office of the Associated Oil Company, made some two or three hundred miles away from the scene of the operations, for the judgment of the drillers themselves, who were right on the spot and had opportunity and the experience to determine the exact formations passed through by the drill. That concludes my cross-examination.

REDIRECT EXAMINATION
OF
W. E. WHITE

By Mr Lewers:

Q Mr White, was there any different method in the preparation of these logs from what is followed in the preparation of all the other logs you have had occasion to use or to assist in preparing in the Associated Oil Company's offices?

Mr Mills — That is objected to because I believe it was asked and answered on direct examination.

Mr Lewers — You may answer.

A There was no difference in preparing these logs

from the manner of preparing practically all our other logs. We didn't aim to go into unimportant details that would only simply confuse the chart, or make it incomprehensible, almost.

Q Do you have many logs in your files?

A Yes; we have quite a number of them.

Q Would that number run into the hundreds?

A I have no custody of them myself at this time, but we [**2770**] have hundreds of logs of the same character.

Q And I understand you to say that in the preparation of this log you were assisted by Mr W. A. Williams, the chief geologist at that time of the Associated Oil Company?

A The logs were made up under the supervision of Mr Williams and myself.

Q Was there any effort made, or any desire, on your part or on the part of Mr Williams, as far as you know, to suppress any material or important fact in connection with those logs?

A There was not. On the contrary, we simply wanted to put down the information as we had it, as we found it on the daily drilling report.

Q Were those logs prepared under the direction of any one representing the Southern Pacific Company?

A No, they were not.

Q At whose suggestion were they prepared?

A Prepared at my own suggestion.

Q And for whose use were they prepared?

Mr Mills — I object ot that, because the witness

has already answered, I think, in the first part of cross-examination, that they were prepared by him to be used in this suit, in this litigation.

Mr Lewers — You may answer.

A They were prepared at my own suggestion for the use of Mr Jeffress, who I understood was your assistant.

Q Did you, at the time you prepared those logs, have in mind their introduction as exhibits in this case?

A No, I did not.

Q Why did you suggest that they be prepared?

Mr Mills — That is objected to as wholly immaterial.

A So that you would have, or Mr Jeffress would have, a [2771] concise and complete diagramatic log instead of the numerous drilling slips, reports.

Q By Mr Lewers — Was that true with reference to the other diagrams that have been introduced in evidence that were prepared by you?

A Yes; the same thing applies to those.

Q Were you at that time made acquainted by any one with any of the details of the controversy as to the geological formation in the Elk Hills that had been brought out in this suit?

Mr Mills — That is objected to, upon the ground that it is wholly immaterial whether he was informed of that or not.

A I had followed or read something in the papers, something of the suit, your suit, but I had no interest

in the matter or didn't take that into consideration in making up any logs at all.

Q By Mr Lewers — Well, had any suggestion come to you from any source that it was necessary or advisable to suppress any information or to misrepresent any information?

A No; certainly not.

Q Mr White, do you know whether these logs that you and Mr Williams prepared are in accordance with the general custom of preparation of logs by other companies engaged in the oil business?

Mr Mills — That is objected to as extremely suggestive and leading.

A A great many other, or some of the other, companies have different methods of preparing logs; but they practically all show the same thing. Some are more in detail than others. But our practice is not to go into any detail for stratas which are only a foot or so thick without any definite change, or change in character of hardness, and so on. At all alternate [2772] layers and stratas it is impractical and impossible to report them correctly, in the first place, by the drill, and by plotting those on the log it simply confuses instead of helps matters.

Q By Mr Lewers — Do all drillers use the same method of describing the same formation?

Mr Mills — That is objected to upon the ground that the witness is not qualified to answer the question.

A The drillers have their personal ideas in these

matters, to some extent, and two drillers may report the same formation differently.

Q By Mr Lewers — Well, have you ever heard the expression "gumbo" used by drillers in their reports?

A Yes.

Mr Mills — Objected to as immaterial.

Q By Mr Lewers — What do they mean by that?

A That is a driller's term, or a rotary driller's term, particularly, for blue clay, tough blue clay, or sticky blue clay.

Q Now, Mr Mills has paid a great deal of attention to some of the individual well reports which refer to "boulders". What is a "boulder", as referred to in that way?

A Our understanding of "boulders" in this particular well, or other wells in the Elk Hills, is that they are simply harder stratas of the same formation. They are not what is known or what you understand to be boulders such as boulders you find in a creek bottom, granite boulders, and so on; they are simply harder stratas, usually in the same formation. For instance, there may be hard sandsone struck, or sometimes they term it a "shell"; and that is our understanding of the term "boulders" — anything that is a little harder than the formation they have been in. [2773]

Q Well, could a hard patch of the shale itself, without being sand shell, be called a "boulder", or is it called a "boulder", by drillers?

A It would, in some cases, in a rotary well, be

called a boulder, if it was hard and caused them some trouble.

Q In case the clay or shale through which they were going didn't readily break up or mix with water, so as to come out in the form of mud, and balled up — would that be called a boulder?

A Well, I would not class that as a boulder, although in the blue clay there is sometimes found a nodular substance which, if there was any amount of it, might be termed "boulder" — simply a hard clay, harder than the rest of the formation.

Q Then I take it it is not an indication of a boulder such as you find in a creek bottom?

Mr Mills — I object to that as leading and suggestive, and an attempt to coach the witness into an answer that you desire.

A It is not my understanding that such is the case. I do not consider them as the ordinary boulders as we see them in the creek bottoms.

Q By Mr Lewers — Well, where a report of that kind came in, would it, in generally classifying the formation, be necessary to differentiate that from the surrounding shale?

Mr Mills — That is objected to, and all of these questions along this line, upon the ground that the witness has not qualified, so far, to answer such questions. He has stated he is not a driller, never drilled a well in his life, never had charge of a drilling crew, but has been looking up lands for the Associated and other oil companies.

Q By Mr Lewers — (Continuing) in the preparation of a log such as this?

A No; it wouldn't be an important detail. It would simply show that the formation was a trifle harder than that which pre- [2774] ceded something of that kind.

Q Do you know of any other instance were drillers are in the habit of reporting "boulders", or any other cause for their reporter "boulders", in your experience?

A Sometimes when they don't make the necessary amount of hole they report it as "boulders" or "hard formation", which is simply a subterfuge or excuse for not getting down enough hole in a day — although that is only done occasionally by certain drillers.

Q Mr Mills has asked you a great many questions with reference to the actual monthly production as compared with a total made by adding up all of the figures appearing in the columns on your diagramatic chart of the history of these three wells in the Elk Hills. Now, basing your answer upon your experience in the oil fields and in the oil business, and upon your knowledge of the way in which oil is measured and production determined, if you desired to ascertain the production of a well, where would you go to get that information — to these daily telegraphic or written reports, or to some other place?

A I would not go to the daily production shown on the telegraphic reports or written reports, as that is simply an estimate. The only correct way of get-

ting the production would be, at the end of the month, to measure it up. That is our only source of information as to monthly report.

Q Now, is that true with reference to these wells in the Elk Hills only, or is it true as to other wells?

A Well, we have a report which shows the estimated production of each well, that is, in certain fields, and that is simply an estimate received daily; but, at the end of the month, our costs of production are figured on the monthly report of production and not on the estimated daily production.

Q And what is that monthly report based on — an esti-[2775]mate or a measurement?

A That is based on a measurement, taken as accurately as possible.

Q Have you had any experience in connection with the estimation of the production of wells in the field?

A Yes; I have.

Q And what experience have you had?

A Well, I have gone through the fields at different times, on making up, or assisting in making up, reports on properties, and so on, at which times it would be necessary to obtain a fairly accurate estimate of the production of those properties involved, in the Midway and Sunset fields particularly.

Q Have you any knowledge, from your own observation, of the method or methods employed in the field by drillers or superintendents to determine the estimate of daily production?

A There are various methods used. In many

cases they simply look at the well, and estimate from their knowledge of what the well should do. In other cases they will take a small receptacle — can, or something of that kind — and measure it for a two or three minute period, five minute period, and then estimate what it would do in twenty-four hours. In some cases they will have a tank to run it into. It depends on the size of the well a great deal. But the estimated production is simply to guess the information as to how the well is getting along in a general way, and not to show the actual production of the well.

Q Now, what has your observation been as to how these estimates compared generally with the actual production at the end of the month?

A Well, in the majority of cases the daily estimates are much too high, on account of not having taken out deductions for water, and a great many other causes — water, sand, froth, [2776] and all that sort of thing.

Q Well, what do you mean by "froth"?

A Sometimes, when a well is gassy, it will throw the oil out in a sort of spray or froth, accumulation of froth on top, and if you are measuring in a small can it would help to fill up your can although you would not have solid oil.

Q That is, unless you greased the inside of the can you would get more foam than oil? Is that it?

Mr Mills — That is objected to as leading and suggestive.

A Yes sir.

Q By Mr Lewers — And then, Mr White, can any

safe, or approximately safe, determination of the actual production of a well be made from these daily estimates?

A No; it would be nothing more than a generality, and a great deal would depend on the personal element of the man reporting the well. In many cases we have a report from superintendents and after we have received the monthly production we tell them to cut down the daily estimated production so that it will better agree with the monthly report.

Q Will the experience in connection with the Elk Hills wells that have been referred to, with reference to their daily and actual production differ from what you have observed in connection with other wells as to the same comparison?

Mr Mills — That is objected to, because the witness is in no position to know what the actual production is, except by hearsay.

Q By Mr Lewers — In other words, would you find, in connection with other wells, that the actual production fell below the aggregate of the estimates?

A Yes.

Mr Mills — That is objected to as leading.

A (Continuing) That is the case as a usual thing. The [**2777**] actual production is less than the estimate.

Q By Mr Lewers — Mr White, calling your attention to Exhibit No. 173, being the chart concerning well No. 1 in Section 26, and calling your attention particularly to the month of April, 1911, Mr Mills asked you at great length with reference to a certain

20 barrels of oil that apparently he conceived hadn't been entered upon the chart, indicating a loss of total production of 20 barrels, and I will ask you what there appears for the 1st and 2nd of April on your chart.

A The 1st of April, 20 barrels; the 2nd of April, 20 barrels.

Q I call your attention to the report dated April 3, 1911, for April 2nd, 1911, on well on Section 26 that we have been referring to, and ask you to read that. Mr Mills didn't call your attention to it.

A "Elk Hills. Section 26, No. 1 3548 feet; 3104 to 3548, 3 inch liner. Pulling out 2½ inch tubing and 1½ inch pipe used for pumping by air to learn condition in bottom of well to properly proceed to deepen."

Q Is there any report there of the production that day on that well?

A Not on April 2nd.

Q Then your chart would show a production of 20 barrels on April 2nd that does not appear upon the report? Is that correct?

A That is correct. It is evident that I have taken the date of the log instead of the date for which the production was reported.

Q That is, you have gotten your production in the wrong column? Is that right?

A I have just gotten one day ahead of time.

Q But have you reported all of the oil? Assuming that [2778] you have made the error on the

proper date, have you left out any of the production as reported?

A No. That would account for the 20 barrels Mr Mills spoke of yesterday.

Q Would these charts be misleading or confusing to any man who was familiar with the oil business and who had access to the same material that Mr Mills has had access to?

A I don't think they would be misleading in any way.

Q Was there any desire on your part to prepare them in such manner that they would be misleading to anybody?

A No. It was, on the contrary, my idea to prepare them so that they would be a proper representation of the development of that particular well, in a concise manner.

Q There are numerous references in the reports that have been read into evidence to flooding the well, swabbing, perforating, and so forth. What is the purpose in doing that sort of work in a well?

Mr Mills — That is objected to as immaterial.

A That is done in an endeavor to increase the production.

Q By Mr Lewers — Mr Mills on one occasion referred to the lowering of the pump in well No. 1 in Section 30 of 30 - 24. What is the purpose of lowering the pump in a case of that kind?

A I believe when I referred to the reports at that time it showed that the fluid level had dropped to that

depth, which made it necessary to drop the tubing to reach the oil.

Q Would that diminish the production of the well?

A No; that would serve to increase it. In fact, the only way to get any production would be by putting the tubing down into the oil.

Mr Lewers — That is all. [2779]

RECROSS EXAMINATION OF W. E. WHITE

By Mr. Mills:

Q. The reason for pushing the pump down at that point, from the 2360 level to 2600 feet, was due to the fact that the perforations in that formation in which they had been pumping had become clogged? Isn't that it? No oil came in from the formation and they had to put the pump down.

A. That is not my interpretation of the thing, Mr. Mills. My idea is that the head was pumped off the well, necessitating the lowering of the tube.

Q. Can you explain, then, why they reperforated through that formation when they had already perforated, if the holes were open?

A. They frequently do that.

Q. Isn't it due to the fact that the perforations become clogged up and they have to reperforate?

A. In some cases that is true, but not in this particular case, is my understanding.

Q. In this particular case, after reperforating they got more oil, didn't they, at that formation, according to your own reports?

A. I have not the details of the perforations in my mind now but the general idea was that after we had pumped the well awhile and the production was disappointing, then we went in and reperforated and perforated at other points in an endeavor to secure a larger production.

Q. You know, as a matter of fact, that when that particular formation we have been discussing was reperforated the production from that formation increased at once, as shown by the daily reports?

A. Referring to this statement, it does not show that the perforating helped the well in the least.

Q. Referring to what statement? **[2780]**

A. This schedule.

Q. What is the number of that exhibit?

A. Exhibit No. 174.

Q. That is your chart?

A. The chart 174. It shows that the well, after first being perforated, did in the neighborhood of 50 barrels in thirty-six hours, and after the second perforation the first production noted here is 25 barrels of oil and 100 barrels of water. I don't know whether those perforations were at the same point or not, whether that was at the same point in the formtaion as the first one or not.

Q. Now, don't you know, as a matter of fact, of common knowledge of the oil business, that an oil well driller knows by the action of the tools themselves at the surface, as indicated at the surface, when he strikes boulders?

A. Yes, he does, when he strikes a hard formation.

Q. And you know, too, don't you, Mr. White, that a boulder in underground formation is the same as a boulder on surface formation, and is so generally understood by everybody?

A. That is not my understanding of a boulder in a rotary well.

Q. Let me ask you this question: Don't you know it is a common, everyday experience among drillers that when they strike a boulder formation, that a boulder often dents the pipe, rolls against it and dents the casing, and that they have to swedge?

A. That is true, in some localities.

Q. Now, that would not be some soft clay that struck that casing, would it? It would be a boulder.

A. I want to make myself plain. There are certain formations where there are boulders. We are talking about this particular well.

Q. Now when we strike a formation in which there are boulders, which we commonly understand them to be at the surface forma- **[2781]** tion, what does the driller call them—"clay" or "boulders?"

A. He would call them "boulders."

Q. Certainly.

A. But in rotary drilling we call practically all hard formation "boulders." There are two different formations that they report, and that is "gumbo" and "boulders."

Q. Now, is not shell formation a hard formation?

A. Yes.

Q. And hard sand rock a hard formation?

A. Some drillers will report hard shell or hard sandstone as a "shell." Other fellows will call it a "boulder." That is my understanding.

Q. Now, what drillers on these three deep wells of the Associated Oil Company reported "boulders" in order to show reasons for not "making hole," as you call it? What are their names?

A. I didn't accuse any one of doing that on these particular wells. That is a practice in some cases. I didn't accuse any one of doing those things on these particular wells.

Q. You have no reason to believe but that those drillers on these three wells we have been discussing reported correctly the formations, according to their own judgment, as they passed through them?

A. No; I had no reason to doubt it. I was simply speaking in generalities.

Q. And you know very well the man in charge of the operations in the Elk Hills, Mr. King, was a man of experience in the drilling of wells?

A. Yes.

Q. How much experience has he had?

A. I don't know. I presume in the neighborhood of twelve or fifteen years, from hearsay.

Q. And he is in charge of all the divisions or all the field **[2782]** operations of the Associated Oil Company?

A. He is in charge of the Midway division.

Q. And how many wells would that constitute that he has charge of?

A. You mean producing or drilling wells?

Q. Drilling and producing—all together.

A. Oh, at that time he possibly had eighteen or twenty; in that neighborhood.

Q. He had as many as eighteen wells—I mean in the Elk Hills—didn't he?

A. Yes. Well, that was practically all we had. We had some eighteen—you might say thirty-five all together.

Q. And do you regard Mr. King as a competent man to have charge of drilling operations?

A. Yes; I do.

Q. You have no reason to believe that he would deliberately mis-report the daily drilling operations on those wells, have you?

A. No.

Q. You said, on the first part of cross-examination, that at times the estimate of production will sometimes run over or less than the actual production, sometimes as much as 100 barrels where there was a great deal of oil. Is that still your opinion?

A. My opinion is that the estimated production is in many cases very unreliable.

Q. Well, it sometimes runs over the actual production, does it not?

A. I have seen but very few cases of that.

Q. You have seen some, have you?

A. No; I can't recall any particular case. My experience has been they usually over estimate.

Q. Didn't you say, in the first part of cross-examination, that the estimated production would

run 100 barrels over or less [2783] than the actual production on a 400 barrel well?

A. I said that that was possible; yes.

Q. Well, didn't you say it often did that on a 400 barrel well?

A. It would depend on the action of the well a great deal.

Q. Now, when you said that, you meant it, didn't you?

A. Certainly.

Mr. Lewers: As a matter of fact, he did not say that, Mr. Mills.

Mr. Mills: Well, the record will show what he said.

Q. Now, was the apparent suppression of the production of these wells in the Elk Hills due to the fact that the Associated Oil Company was under contract of royalty for the production, with the locators, and because they were required to pay so much a barrel for actual production, or was it due to the fact that the actual production was minimized for purposes of this case?

A. I don't believe there is any suppression in any way, Mr. Mills, that I know of, as to production or drilling operations in the Elk Hills.

Q. Your attention was called to this 20 barrels of oil on your chart, by Mr. Lewers, and you now find that you made a mistake and entered that item on the wrong day on your chart? Is that correct?

A. That is evidently correct; yes.

Q. Why was it, then, yesterday, on cross-exami-

nation, that you persisted in saying that the 90 barrels of oil of the last few days of the month preceding included that 20 barrels, and, as suggested by Mr. How, of counsel for defendants, that it must have included it because the well was shut down, when you now state that the well was running the next day and produced 20 barrels? Was it because you could not understand it?

A. I thought I had included the 20 barrels under the total [2784] of 90 for the three days.

Q. And did you assign that as a reason because the well was shut down?

A. That is what, in looking over the record at this time—In looking at the telegram yesterday it showed that the well was shut down on the 31st, and I assumed that the 20 barrels therefore was included in the 90.

Q. And as a matter of fact it was not shut down at all, was it? It was pumping the next day.

A. Well, the telegram of the 31st states it was shut down, I believe.

Q. The telegram of the 31st of March?

A. March, 1911.

Q. There is no telegram covering that date in this case, is there?

A. There is the written report of the operations of that date.

Q. Now, show me, on the written report under that date, where it states that the well was shut down.

A. It states here that they ran the compressor until 7 o'clock the morning of March 31st.

Q. Where does it say it was shut down?

A. We simply assumed it from that, in looking it over yesterday, that the well was shut down.

Q. Well, then, it was a matter of assumption and not a matter of fact, was it?

A. In going through hurriedly with you yesterday, that was my assumption.

Q. Have you prepared any diagramatic logs, for use by the Associated Oil Company or any of its subsidiaries, in any oil litigation in this state other than what appears in this proceeding?

A. No, not prepared for that special purpose. I have prepared a great many, and they may have been utilized for testimony, [2785] but not for that special purpose.

Q. But they were not prepared, as these were, for use in a case?

A. I didn't prepare these for use in a case.

Q. Didn't you state that Mr. Jeffress came over and told you he wanted these logs for the use of Mr. Lewers, who was conducting the defense in this case?

A. Yes; but what I mean is, to be introduced into court as an exhibit.

Q. Then, if you had understood it was to be introduced in court you would have been a little more careful about following the daily reports instead of substituting your judgment for that of the driller, wouldn't you?

A. No, not necessarily, unless I had consulted with some one who required them in a certain way.

Q. Were you subpoenaed to appear in this case.

A. No.

Q. Are you being paid by the Southern Pacific Company for appearance as a witness in this case?

A. No.

Q. Your time goes on with the Associated Oil Company, just the same, while occupying the witness stand, does it not?

A. Yes.

Q. And there will be no deduction made out of your salary, so far as you understand?

A. No.

Q. Now, from June 4th, 1912, until the latter part of August, or middle of August, of the same year, there are no daily reports on well No. 3 of Section 24 of 30-23. Where are those reports?

Mr. Lewers: I submit that has already been gone into at length; and it is not recross-examination.

A. I couldn't say for certain whether there were telegraphic **[2786]** reports covering that period.

Q. By Mr. Mills: I am not talking about telegraphic reports; I am talking about daily drilling reports.

A. Well, drilling had been suspended at that time.

Q. On June 4th?

A. Yes; as we understand "drilling," that well had been drilled at that time.

Q. And you then depended upon telegraphic reports from that time on?

A. Yes. There would be no further logs of the well.

Q. Where are the telegrams that are covered by these alleged confirmatory letters in 1911?

A. I couldn't say whether there were telegraphic reports during that period or not. That is quite a while back. But we aimed to bring everything we had in the line of telegraphic reports. There may have been something overlooked, but it was not our intention to do so.

REDIRECT EXAMINATION OF W. E. WHITE

By Mr. Lewers:

Q. Mr. White, suppose a rotary struck an actual boulder of the kind you find in a creek bottom, what would happen?

A. Well, it would depend on the formation they were passing through. If they were going through a soft formation at a high rate of speed it might cause them some trouble, such as twisting off the pipe, or something of that kind; but if they are going slowly and carefully, it is possible that it wouldn't do any damage.

Q. What effect would it have on the rate of progress?

A. Oh, they would slow up and go very slowly through that formation.

Q. Well, what difference would it have if the boulder would move in the formation? [2787]

A. I couldn't say as to that. It might cause trouble with the pipe.

Q. And that trouble would appear in the reports, would it?

Mr. Mills: I object to this line of questioning. This witness has not qualified as a driller; said he never drilled a well in his life.

A. Yes.

Q. By Mr. Lewers: What experience have you had around wells?

A. Well, I have been around wells practically the last ten years in the field. I never worked on wells, but I have had a good deal of looking after wells.

Q. And in conjunction with whom?

A. In conjunction with Mr. Bell, of the Associated Oil Company, and other parties.

Q. Mr. Mills asked you whether or not there was an inaccuracy in your chart where, in one case, it spoke of 350 barrel rate for eighteen hours and whether or not that would not indicate that the twenty-four hour production was 465 barrels. What is the fact with reference to that?

Mr. Mills: I object to the question, on the ground that it is not proper redirect.

A. Upon referring back to the telegram a second time a few days ago, when Mr. Mills handed it to me, I found that it read, "350 barrel (rate)" for eighteen hours, which, to my mind, would mean approximately 270 barrels for the day. It stated that

it flowed "350 barrels rate," but it only flowed for eighteen hours; therefore the actual production for that day I would interpret as being two-thirds of the 350, or 270.

Mr. Lewers: That is all.

Mr. Mills: That is all. **[2788]**

WILLIAM HOOD

Seventy-first Witness for Defendants. San Francisco. July 10, 1913.

Direct Examination.

I am chief engineer of the Southern Pacific Company and have been engaged in railroad work since May 3, 1867. I began in the Sacremento office of the Central Pacific Engineering Department and since that time have been connected with the Central Pacific, California and Oregon Railroad, Southern Pacific Railroad of California, Arizona and New Mexico, Galveston, Harrisburg and San Antonio Railroad, and all branch lines connected with these roads. I have been chief engineer of the Southern Pacific Company since some time in 1884, or practically since its organization, and was chief engineer of the Central Pacific for perhaps a year before that. I have been exclusively in charge of the construction work of the Southern Pacific Company since its organization and of a great deal of the construction work of other associated companies.

I am familiar with the line of road that runs from Bakersfield to McKittrick. This was constructed from Bakersfield to Lokern in the spring and sum-

mer of 1892 and was continued from Lokern to Asphalto, now known as McKittrick, and completed I think about February, 1893. The construction from Lokern to Asphalto was an after-thought, this extension being built on account of the asphaltum business expected there. The road was constructed primarily from Bakersfield to Lokern to develop the agricultural business of that country and in particular the holdings of Miller & Lux. I planned this branch and know the purpose for which it was constructed. The branch over to Asphalto was constructed because it was represented that there would be a promising business in asphaltum. It was built with steep grades and sharp curves as we expected that the tonnage would be downhill from the asphaltum **[2789]** beds to the valley and built it as cheaply as we could on account of the uncertainty of the duration of any form of mining business.

This branch to Asphalto was not constructed wtih the idea of developing oil. At that time there was no oil development in that entire country to my knowledge.

I was acquainted with J. R. Scupham in past years. I first met him in 1868. At that time I was Assistant Engineer on the Central Pacific Railroad, Mr. S. S. Montague being the Chief Engineer. When I met Mr. Scupham he was a draftsman in the office of the resident engineer of construction at Winnemucca, Nevada. The next I knew of him he was engaged as a topographer in a preliminary survey for me on the Sacramento River. I did not know of his

whereabouts after that until early in 1872 at which time I took charge of locating and constructing the railroad line from Fresno to Bakersfield. At that time Mr. Scupham was a transit man in my party. He continued in this work until some time in the summer of 1872 when he resigned and I never knew him to be connected with the engineering department afterwards.

If Mr. Scupham had been connected with the Engineering Department after that time, I think I would have been in a position to know, although I cannot say that positively; but I didn't sign the Engineering Department rolls. Mr. Montague did that. I never knew of his being engaged as an engineer after that time.

I did not sign the engineering department payrolls myself until after 1883, but since that time Mr. Scupham's name has never appeared upon our roll.

Mr. Scupham was considered a bright, agreeable, well-educated man, who had a tendency to wish to appear to be well informed upon every subject on which he might be questioned or which came up. His tendency in this respect was so well known that it might be described as notorious. As an instance, when he was at work for me in 1872, a bet was made between two members of the party **[2790]** that within a certain length of time, perhaps forty-eight hours—a short time—he could be asked five hundred questions on sundry subjects, including meaning of words, general subjects, of all descriptions, and that in no one instance would he say that he did not

know. And the bet was won. His opinions were regarded by his associates in the manner that would be indicated by the statement I have just made. Although I don't think he was a person who would maliciously misrepresent things, in order to continuously talk, facts as to the subject made very little difference to him. It was said jestingly to him, by some one who either originated the remark or had seen it applied somewhere—not maliciously, but as a jest—that the partition between his memory and his imagination was obliterated. That was his general reputation amongst his associates. Not that he was malicious in it, but that he was voluble. I mean that he could not help talking freely on any subject that was presented, regardless of whether he knew anything about it or not, coupled with a general desire to show that he knew a great deal whenever a question was asked.

I understand that Mr. Scupham had some experience after leaving the railroad company's employ, in gold mining and the like. I never heard of his having experience in any other line of geological investigation or effort than gold mining. His opinions were not generally taken seriously by his associates.

CROSS-EXAMINATION

When the road was built to Lokern from Bakersfield in 1892 I couldn't say what individual ordered it to be built. It might have been Charles F. Crocker; it might possibly have been C. P. Huntington.

When the original owners of Central Pacific Railroad and allied roads were alive, sometimes one and sometimes another would give an order and those of us who took orders under them took the orders from anyone of them who gave the order without inquiring further. If one of the actual officers of the road—which were as I might mention, during their life time, Charles **[2791]** Crocker, Charles F. Crocker, Mark Hopkins, Leland Stanford for a short time and D. D. Colton and C. P. Huntington, and afterwards for a short time Timothy Hopkins, and afterwards for a short time H. E. Huntington — if any one of these men who were then alive had given an order to me to do some work on that particular branch of the road I should have gone on and built the road without inquiring whether they gave it as an officer of the Central Pacific or as an officer of the Southern Pacific Company of California, assuming as a matter of course, that they would give it as an officer of the corporation that was building the road. In 1892 all of the roads which I called the allied roads such as the Central Pacific and the Southern Pacific Company of California, etc., were then part of the Southern Pacific Company. **[2792]** Whenever we received an order from an executive officer of the Southern Pacific Company, who was also actually an officer of a subsidiary company it was their affairs and not ours and it frequently happened that orders were given and carried out so long as they came from an executive officer of the parent company, the

Southern Pacific Company. We made no inquiry about the Southern Pacific Company having the stock ownership control of the subsidiary companies. We were under orders from these people and we obeyed them. I knew A. N. Towne very well. He was General Manager when I knew him of the Southern Pacific of California. Mr. Charles Crocker during his life time was an officer or director, in my opinion, of the Southern Pacific Company. The agricultural interests of Miller & Lux in the vicinity of Lokern were not purely grazing. In 1890 to 1892, over to the east of Lokern for a distance of several miles, perhaps four or five miles along the line of this railroad towards Bakersfield and a considerable extent North and South thereof Miller and Lux had thrown up dikes and levees and generally were starting a very large cultivated area to such an extent that we put out warehouse tracks for them and they built warehouses along side of our railroad stations, these stations being established where they specified. We built these warehouses at the time of the construction of the road. We finished the road in February, 1893, to Asphalto, building nearly continuously with a slight stop at Lokern while it was being decided whether or not to build to Asphalto. We may have stopped at Lokern a **[2793]** week. I could not say precisely, as our records have been burned. It was the asphalt mining that induced us to build a road from Lokern to Asphalto. There were very large asphalt beds at Asphalto, part of which were in good order and part of which had

been burned at some time. I volunteered to Mr. Lewers my opinion of Mr. Scupham and what I know about him. Mr. Scupham, if he were asked his opinion of me, I don't think would reply that I was somewhat of a poser and I think if he is asked about my reputation as a man of volubility upon questions of which I know nothing, that he would give me a very good character. I have no idea what he would say if he were asked whether the partition between my imagination and my knowledge was completely obliterated but I think he would say it was still quite intact. I think I am taken quite seriously at all times. If a bet were made that in a given length of time if I were asked five hundred questions that I would profess knowledge upon each and every question, the bet would not be won unless they were very simple questions on which I was well informed. I have appeared in court proceedings but it is not my custom, whenever an ex-railroad man testifies in a proceeding adverse to the railroad which has formerly employed him, to go upon the stand and attack his character. I am happy to say that the occasion rarely occurs for the truthful statement of the character that I have been obliged to make no matter how painful they were to me. It is a very disagreeable duty. I very much regret having been obliged to make them. I was asked to come here. I was not served **[2794]** with a subpoena. Previous to being Chief Engineer of the Southern Pacific Company, my title was that of Assistant Engineer. **[2795]**

ROBERT H. RUSSELL, a witness called and sworn on behalf of the defendants, testified as follows:

DIRECT EXAMINATION

I live in Los Angeles, and have lived there since the 13th of June, last; I was born in Orange, Texas, and lived in Beaumont part of 1902 and all of 1903; I was a partner in the Gladys City Power Company for a little over a year, and am now connected with the Layne & Bowler Company, of Los Angeles, California; this company is engaged in drilling wells and manufacturing pumps for pumping; I have been night foreman of the shop since the 15th of July, last year. I was 43 years of age last June.

I was acquainted with Thomas J. Griffin, and met him in Beaumont, or rather around Spindletop in the latter part of 1902, while I was connected with the Gladys City Power Company; at that time I understood that Griffin was manager of the Spindletop Power Company and had the management of all their affairs in the oil fields; left Spindletop about the middle of 1903; he was still connected with the Spindletop Power Company; I went from there to Galveston, and since that time I have not met him. The photograph which you now show me is the Thomas J. Griffin whom I knew.

(Said photograph introduced in evidence, and marked Defendants' Exhibit No. 179.)

I was acquainted with the general reputation of Thomas J. Griffin in the community of Beaumont for truth and veracity; it was rather bad; I knew

of him through his business dealings around with everybody on Spindletop; he was not to be relief upon as to what he said.

I have no interest whatever, on one side or the other, with this case, and there is no personal difference between Griffin and myself.

CROSS-EXAMINATION
OF
ROBERT H. RUSSELL

The reason I left Texas was that I was offered a position **[2796]** at Bakersfield as foreman of the shop of the Bakersfield Iron Works, by Mr. W. T. Jones, a friend of mine; I first knew Mr. Jones at Beaumont, Texas, and he was superintendent of the Texas Company in Sour Lake, and had charge of their affairs; as far as I know the Texas Company was not controlled by the Southern Pacific Company or its subsidiaries; I remained in Beaumont continuously until 1900, and then went to Galveston, Texas. I worked for O. B. Greeves, who owned the machine shops, the Orange Iron Works, and remained there from 1886 to 1890, when I went to Beaumont, where I remained off and on until 1900. When I was off I was working for different companies. After I quit work for Mr. Greeve in 1900 I went to work for Charles Clark & Company in Galveston and remained with them about two years and after I left them I went to Spindletop to operate the Gladys City Power Company. I was a partner in that company. I remained with them a little over a year

when they bought my interest out; then I went to Galveston where I became interested in a pumping proposition that I was working on, a hydraulic pump. It was owned by myself **[2797]** and two others. It was patented. My partners' names were Arnold and Sheldon. I don't know where Arnold is now and Sheldon is an accountant for the Santa Fe Railroad. I remained in that business about one year when Mr. Arnold went broke and we just quit. I was furnishing the invention against their money. I next went to Alexandria, Louisiana, and took charge of a shop over there as Superintendent for the Enterprise Iron Works. I remained there a year and two or three months, then I and another gentleman went into the second hand machinery business in that town. We were buying and selling second hand machinery. We stayed in that business five months. It was not very successful. After our failure we went back to Beaumont, Texas, and took charge of the shop for the Texas Iron Works. I was superintendent of the shop for a time for them. I remained with them about two years and it went busted. From the time I first went into business I was broke every once in awhile. Occasionally got on my uppers. Then I went to work for the Southern Well Works in Beaumont. They were manufacturing oil well supplies. I remained with them about eighteen months. I quit because the manager and I had a falling out. Some other fellow was around telling lies. The other fellow was Mr. J. A. Wiggs. He thought that I was using my

energies in other business when it really belonged to him. He made me quit. Then I went into the strainer business, the manufacture of well strainers for both oil and water wells and manufactured those for about four months. I put up my experience **[2798]** against my partners' capital the same as I did in my other ventures. Then we went broke again and I then went to work for Mr. Greeve in Beaumont and I remained there until the 29th of May of last year when I came here to Bakersfield. It was during the time that I was living in Bakersfield that I became acquainted with Mr. Griffin. At that time he was in charge of the Spindletop Power Company. They were operating an air plant on top of the Spindletop for drilling oil wells by air pressure and they were furnishing compressed air for different wells. At the time I was there there were about six hundred holes on the hill and every hole represented a Company. I don't know that the Southern Pacific had any wells at Spindletop. I do not know Mr. J. B. Treadwell. I don't believe I ever saw him about any oil wells in Spindletop. I never had any occasion to meet the gentleman. I never had any occasion to fix up any machinery for him there. I never sold him any second hand machinery. I just knew Mr. Griffin while I was at Spindletop, that was all, while I was associated with the Gladys City Power Company. The Gladys City Power Company had no business whatever with the Spindletop Power Company and I had no business relations with Mr. Griffin. The Spindletop Power Company seemed to

have all the business they could attend to. I don't know how many people they were employing. I did not become intimately acquainted with Mr. Griffin. I don't know if Mr. Griffin would recognize me if he saw me. I just had a speaking, passing acquaintance with him. When you ask me if Mr. Griffin ever did me any injury my answer is, "None whatever," and as to rancor or feeling against him, I have none whatever. I am **[2799]** sensible of no prejudice whatever against him. He was doing a very large business in Spindletop and was sure to make bad friends in a large business of that kind. Everybody does that and I do not hold it up against Mr. Griffin that he did have some people there that were not particularly friendly to him. As a general rule he was not well thought of in the community. I do not know anything personal against him myself. All I know is his reputation amongst the people who were operating and doing business in the Spindletop. I was employed day and night in the Gladys Power Company's iron works. I had charge of the property all the time. I would pass Mr. Griffin on the Spindletop at different times. We would be around different places on the hills. He was superintendent of the Spindletop Power Company and I occupied the same position with our company. I know of the occasion when Mr. Treadwell was operating some wells in his own name there. I do not know that he was operating any in his own name there that belonged to the Spindletop Company. I do not know of any compressed air fur-

nished by Mr. Griffin to these wells of Mr. Treadwell. I do not know of the occasion when Mr. E. H. Harriman, President of the Southern Pacific Company, came out and visited the fields in Spindletop while Mr. Treadwell was in charge of some wells there. The only time I ever worked for any company that I even heard had anything to do with the Spindletop, is the Bakersfield Iron Works. I couldn't say whether or not the Texas Company that I worked for while I was there had large contracts with the Southern Pacific for oil wells. The Texas Company was an oil company. While I was there I don't know whether or not **[2800]** they delivered oil to the Southern Pacific Company. The first time I heard about this case was when I read it in the paper. I think that was just before I came out here. The first time that I learned that I was wanted as a witness was when Mr. Gray asked me. It was about three or four months ago. He came to the shop about 8:30 one night and he asked me if I knew Mr. Griffin. I told him I had met him at Spindletop. He did not ask me if I knew anything against Mr. Griffin. He asked me if I knew Griffin while I was at Spindletop and he asked me in the meantime if I had ever been in Beaumont. That was all the conversation I had with Mr. Gray. Then he asked me to come up here and testify. I did not discuss with him what I would testify to at any time. The next talk I had with Mr. Gray was in the King Edward's Hotel on Fifth Street in Los Angeles. That was last Saturday, a week ago in King Edward's

Hotel. I was with him about ten minutes. At that time he asked me if I would come up here to your office at any time that they would let me know and then we talked along on a friendly line, and I bid the time of day and left. I mean to say that Mr. Gray didn't know at that time what I was going to testify to; Oh No. I shouldn't imagine he would. He had no reason to. I did not tell him at any time. I didn't tell Mr. Gray at any time, either at that conversation at King Edward's Hotel, or at my first meeting with him in the power company's office, what I was going to testify to except that I knew Mr. Griffin. That is absolutely correct and I never told anybody, not even Mr. Lewers, what I was **[2801]** going to testify to until I came here this afternoon. When I am asked that if this last statement is as true as everything else I have testified to I can only reply that I have tried to make it all as straight as I can. That is as true as the rest of it. I do not know whether Mr. Griffin would recognize me if he saw me. I was not subpoenaed to come over here. It was not friendliness to Mr. Gray that caused me to come. I never met him but twice in my life. Mr. Lewers phoned me that he would like to have me come up here at this time. He phoned me this morning. I am living with Mr. George Allerdice at his residence, 2902 Brighton Avenue. His home phone is 72,698, and the only reason I knew that Mr. Lewers knew where to phone was that I gave Mr. Gray that phone number. That is all I told Mr. Gray. The reason that I came up

to testify was that Mr. Gray asked me if I would come up here and tell what I know. I am not being paid one cent for coming up here. At least I hope not, anyway. I certainly would not accept it if it were offered me, because I am not built that way. If it was expert testimony then I would expect to be paid for it. I do not regard this as expert testimony that I am giving. I am not an expert on reputation of people nor am I an expert on truth and veracity. I am not supposed to be. I am not a minister. I volunteered to come up here. I didn't come up here to slander Mr. Griffin. I came up here for the benefit of both parties. I know Mr. James Shaw. I knew him when I was in Spindletop. He used to have charge of some of the works on Spindletop for the Rio Bravo Oil Company. I don't know what his reputation was there. I never had any dealings with **[2802]** him. I have seen him there. He never did me any injury. I never heard anything about him. I never had any business dealings with Mr. Griffin. He never loaned me any money and I never loaned him any. He was doing a very large business there at the time I knew him; he was the man of the Spindletop Power Company and a man of some large affairs during the time I knew him. I cannot give you the names of the persons in Beaumont who told me that Mr. Griffin could not be believed nor can I give you their addresses because I do not remember. It was just the general opinion. I cannot give you the name of one man who told me that Mr. Griffin could not be be-

lieved. I cannot give you the name of one man in Beaumont, Texas, or any place that I have been in in Texas that said Mr. Griffin's reputation for integrity and honesty was not good nor can I give you the address of any such man. I don't remember now who I talked with at all. It is not a fact that the first thing that I ever heard against Mr. Griffin, or knew anything about him, was when Mr. Gray came to me and told me he wanted to get somebody to come up and slander Mr. Griffin and it is not a fact that never in my life have I heard of anything derogatory to Mr. Griffin until Mr. Gray suggested it. Mr. Gray did not tell me that he wanted to do something to injure Mr. Griffin's reputation because he had testified against the Southern Pacific Company in this case and he did not tell me that he was trying to dig up something for the purpose of injuring Mr. Griffin before the court and when you ask me if I never thought of Mr. Griffin until Mr. Gray spoke about him, my answer is, "I saw all this in the paper." I had no idea **[2803]** then of coming into court to testify. I was perfectly willing to come up here and testify against a man whose reputation I have always known and it is a fact, at the same time, that the man against whom I was to testify was a man of large affairs in business during the time I knew him and a man whose business affairs were such that I did not even know him personally, never had any business relations with him of any kind. When I am asked if I ever thought of him at all in any way until I happened to see

something in the papers, or until this man Gray came up and talked to me about him, my answer is, "I first thought of him when I saw it in the papers." Excepting for the two circumstances of seeing about this case in the paper and seeing Mr. Gray, I would never have thought of Mr. Gray in any connection. I was perfectly willing to come and tell what I knew without any recompense whatever, absolutely nothing. Mr. Gray did not caution me that I might be asked the question whether or not I was going to get some reward for my testimony. I don't want any job, I have got one and I have got two or three more that don't belong to the Southern Pacific if I want them. I don't know how Mr. Gray and Mr. Lewers knew what my testimony was going to be. As a rule in all these cases they have a set line of questions to ask and I suppose they ask them the same as anybody else does. I do not imagine that they divined what I might testify about but I say most of these cases all have a set line of questions to ask. I suppose that is the best answer I can make as to how Mr. Lewers knew what I was going to testify to. I never told [2804] Mr. Gray and Mr. Lewers what I thought about Mr. Griffin or anything about it. So far as I know they might have thought that I thought Mr. Griffin was a very fine man. I talked with Mr. Lewers last Monday in the Pacific Electric Building. It was 2 o'clock in the afternoon, I believe. I was up there fifteen or twenty minutes and he didn't ask me at that time what I thought of Mr. Griffin and I didn't tell him. I didn't

tell him what I was going to say or anything about Mr. Griffin. He asked me if I would meet here, where ever you were going to have this meeting, and tell what, exactly what I had heard Mr. Griffin's reputation was on the Spindletop and I didn't tell him at that time what I thought about Mr. Griffin and I didn't tell him what I was going to say or what I thought about him and I didn't tell him at any other time. I never saw Mr. Lewers before. At no time did I tell the detective, Mr. Gray, what I was going to say about what I thought of Mr. Griffin. They didn't know anything about what I was going to say at all and so far as I know, until I appeared here this afternnon, they were in utter darkness of what I thought of Mr. Griffin because I didn't tell them or intimate to them what I thought of Mr. Griffin.

RE-DIRECT EXAMINATION.

There was not any suggestion made to me by Mr. Lewers or Mr. Gray, or anybody else, that I was to come here and testify to something that I didn't know or anything that they wanted me to testify to, or anything that was other than I knew to be a fact. There was no suggestion made to me by **[2805]** Mr. Lewers or anybody else as to some of the circumstances of the testimony that I was to give here. I was not asked at any time to testify to anything except the truth. I knew Mr. Griffin all the time on Spindletop and had met him several times, quite often. My acquaintance was not intimate. In a business way I knew him.

RE-CROSS EXAMINATION OF ROBERT H. RUSSELL

When I say I knew him in a business way I had no business transactions, personally, with him but the fact that he had a large amount of business around there. That is what I mean. I had no business relations with him whatever. **[2806]**

J. B. TREADWELL

Recalled as a Witness for Defendants.

Mr. Bass took me out several times to the Spindletop Power Company, and I met Mr. Griffin there. I do not remember how many times I met him. I would not know him today if I saw him on the street. My meeting with him had entirely escaped my memory. I did not recall having met Griffin in Los Angeles or having spoken to him on the street. I would not know him if I saw him today.

You ask whether I remember the following incident, to which Mr. Griffin testified: That in 1902 he first learned that I was not operating for myself but really for the Southern Pacific Company; that I then went to him one morning and stated that Mr. Harriman and his party from New York, on a tour of inspection would arrive at Beaumont that day, and was coming out to Gladys, and wanted to see the Southern Pacific wells flow; that he asked me to what wells I referred, and that I said: "These wells over here in the Hogswain Tract, or Southern Pacific wells; they belong to the company; I am only here operating and paying the bills, as there is

a law prohibiting the Southern Pacific Company from doing this kind of business in the State of Texas;" that he met Mr. Harriman at that time through my introduction.

I remember Mr. Harriman making a visit to Texas while I was there; Mr. Kruttschnitt telegraphed me about two or three hours before he arrived at Beaumont that if possible they wanted to go out to Spindletop. When the train came in we went out to see the wells. There were two wells that I had bought in my name for the company. We started one of the flowing. We had not at that time connected them up to distribute oil from them. There was no air connection on them; it wasn't necessary; it wasn't until the well ceased flowing. [2807]

Mr. Griffin had nothing at all to do with the operation of those wells that Mr. Harriman observed; Mr. Griffin wasn't present. That I know of. And another thing. I never introduced Mr. Griffin to Mr. Harriman. There was only one man that I did introduce to Mr. Harriman, and that was the man that I purchased the wells from. That was the only man that I introduced, and that was at the request of Mr. Harriman. I never had any such conversation with Mr. Griffin as he has related.

You read from the record that Mr. Griffin testified that I had taken several meals at his house. I don't think I ever took any meals at his house, because I don't know where his house was. I think once or twice Mr. Bass invited me to stay for lunch at the company boarding house, when I went out

with Mr. Mills to see the Spindletop Power Air Plant, if we happened to be there about noon. I don't know who ran it, whether the company or who ran it. It was on the company property and was run as a company boarding house, and the employees ate there.

Mr. Griffin testified that he had talked with me on several occasions about the lands in the Elk Hills, —what is known now locally as the Elk Hills; that the first conversation with me in regard to the California Oil fields was at my office at Gladys, and that I told him that I had just returned from the Kern River fields, and had been up on the West Side looking over lands, and had been out with a party of geologists, and had made a successful examination, and found oil sands and indications of oil from Sunset field to Coalinga, including the Elk Hills, or what was known at that time as the Buena Vista Hills. I do not recollect any such conversation. If there was a conversation, the statement is false in this as regards a geologist. I never went out with any geologist; I never employed any geologist or geologists while I was with the company. I did all the geological work myself and there is no record anywhere in the company of any geologist **[2808]** going with me at any time.

As far as the Elk Hills are concerned, I never had any conversation with him in regard to them, and as far as referring to the West Side, I don't think I had anything to say in regard to that. He has evi-

dently got things badly mixed, if we had any conversation at all.

I had never made any examination of the West Side or of the Elk Hills, or of any portion of that territory in company with any geologist, whether I was employed by the Southern Pacific or anybody else.

There was never any conversation with Mr. Griffin, or with anyone, at any time, respecting his going to California; I never asked him whether he would like to ship a rig, or said that I had several in California, or suggested that he put in test wells or do the necessary assessment work on some of the West Side vacant lands. I would not advise anybody to come out here. I never asked Griffin to go out to California, or to ship a rig to California, or to locate any lands, or to drill any lands.

No conversation ever took place respecting his going into an investment with me in the acquisition of any of the even-numbered sections of land in the West Side field of California; there was no conversation between Mr. Griffin and myself outside of the office on a little porch, wherein I said that the California oil fields had not yet started, and that our geologists had gone over it carefully; and I did not say that the proper thing for him to do was to get a rig, ship it out there at once, and that I would go in with him and put in the same amount of money that he and his partner Mr. Bass did, or that I would put up as much money as both of them, and for him to go there and take up the even sections, and that

I would attend to the legal part of it, and that they should do the work and we would divide equally.

There was no such conversation. In the first place, I **[2809]** would not make such a proposition for the very reason I could got plenty of propositions out there where people would put up all the money if I would give my time and attention to the development of it; so why should I go to work and volunteer to pay half? Then, again, as far as the geologists are concerned, we had no geologists I know of. Mr. Dumble was the geologist of the company; but I had no connection with him, no consultation with him at all.

You further say that Mr. Griffin testified that I had a large map at that time, which he presumed was two by three feet, showing the lands, starting about one township below Old Sunset, and going to Coalinga, running northwest and southeast, including the Buena Vista Hills and Lake Tulare,—a portion of Tulare—and Miller & Lux's Lake;—by Buena Vista Hills meaning what is now known as the Elk Hills, and the Buena Vista Hills,—the two groups of hills; that at that time there were unsurveyed lands shown on that map, located on the Elk Hills, about two or three townships, he did not remember just how many, but that there was quite a lot that had not been surveyed over, and which was not platted on the map; that I told him at that time that these were lands that I and geologists of the Southern Pacific Railroad had gone over, and that that was where I wanted him to go; that the

lands would be surveyed soon, when the Southern Pacific Railroad would make application for patent for the odd sections, and that I wanted him to take up the even sections.

I never had a map showing the territory from Coalinga to Sunset, a continuous map, and as I have said before, I never had any geologists with me on any of my trips. No such conversation ever took place.

Mr. Griffin did not ask me to let him have such a map; I had no such map prepared by a geologist, and did not tell Mr. Griffin that it was the railroad's property, and that I could not let it out. I had no map with a geologist's name on it, and I did **[2810]** not tell Mr. Griffin that I wanted him to go out on the land in the Elk Hills, or in that vicinity, as soon as it was surveyed.

I had nothing to do with the survey of that land, and do not recollect furnishing Mr. Griffin with a copy of any map; I did not have any such map, and never had; I never had a map showing the country continuous from Coalinga to Sunset; I myself prepared all the maps that I used. The map that I used was a map of the Kern River and also of McKittrick, which was lithographed, and I had colored part of it; I also had a map which was called the Miller & Lux's map of Kern County; the Coalinga maps were taken from the land department, which were blueprints, consisting of each township by itself,—not in one map.

In 1900 I also had two maps of McKittrick, published by a mining company and given away, and

they were scattered around, there were any number of them around the country, and I had put on several shadings showing the outcrops and the possibility of getting oil, and the general strike of the anticline.

(Said two maps introduced in evidence, and marked defendants' Exhibits numbers 180 and 181, respectively.)

I never had a map about two-thirds the size of the railroad map, with the townships, sections, and ranges marked, showing the Buena Vista Lake and Lake Tulare, the Buena Vista Hills and foothills of the mountains on the West Side, and showing anticlines; I did not have any such map, as testified by Mr. Griffin, or a map showing the name of a geologist, and bearing references to the anticlines or probable depths in different places in figures where oil would be struck.

There was no conversation in which I asked him to come to California and drill vacant government land adjacent to the Southern Pacific lands or lands they were going to acquire, near Coalinga, or near McKittrick; I did not point out any such lands to him on a map in section 30-23; I would not have pointed out **[2811]** such land, because I had no confidence in any of that country down there. If I was going to advise anyone to come out here to operate, there is many places that is more accessible and sure of getting oil than to go wildcatting off to one side, as the Elk Hills is so situated. It is off the trend altogether.

I made no locations for my own benefit in any part of the territory which I held. I made no location in the McKittrick district in 1900, from which I afterwards received royalties, and which was called the Last Chance; I subsequently sold out my interest. Subsequent to 1900, in 1902 or 1903, I did not think there was any other vacant land in the vicinity of McKittrick that offered a prospect of getting oil.

I did not invite Mr. Bass or anybody else in Texas to come to California and drill wells or locate lands in the oil fields, or in any other part of that field; I would not have advised anybody that came to California to go into the Elk Hills at that time. Thomas J. Griffin did not that I know of do any construction work for me under specifications for the Southern Pacific Company; he made no trip out of Texas to Louisiana or to any States north of that for me, or on transportation procured by me.

CROSS-EXAMINATION OF J. B. TREADWELL

I do not remember the year when I placed the buff color and the other colors on the map, Defendants' Exhibit 180; it was at the time when I was working up the McKittrick district, determining the strike of the anticlinal, and the oil deposits on the outcrop; it might have been in 1900 or 1901; I quit the employ of the Southern Pacific Company as field man and geologist in 1903; those colors were placed on the map before I was superseded by Mr. Dumble,

in 1903; I could not say when the pencil line described in my direct examination was placed on Defendants' Exhibit 181; it was not placed there after I testified in this case; the Southern Pacific Company, I guess had the originals of those maps; **[2812]** they ought to have; it was not my custom to make duplicates of maps and give the originals to the company; I made these maps, and I think I delivered them to Mr. Dumble, copies from maps that I had; I just **[2813]** colored them over for his benefit; the maps constituting Exhibits 180 and 181 have been in my possession since they were made; I had them at San Francisco, and shipped them to Los Angeles, I think just before the fire, in 1906; they were in the same condition as at present; as stated before I do not remember when I put on the mark indicating the anticlinal on Exhibit 181; the buff color was placed on Exhibit 180 with a brush; I always had colorings, but I think they were left in the field; when I testified before in this case that I prepared maps showing the development of oil in various places in the territory of McKittrick, and that the duplicate maps were destroyed in my residence in San Francisco during the earthquake and fire of 1906, together with field notes running back a great many years, I testified the truth; I remember being in your office when you asked if I had any of those old maps, and I may have stated that I would make a diligent search but that I knew that everything had been destroyed in the fire of 1906, and that I went to my house and searched, but re-

ported that I found nothing; I did not to my knowledge have them in my possession at that time; I have no blank maps like that, gotten out by the company whose name appears on the margin,—Virginia Oil Company.

On Exhibit 180, describing the lands indicated on the map in buff color where I say there is oil, starting at the northwest corner, it runs diagonally northwest and southeast through Section 11, about 40 to 50 chains wide; continuing in a southeasterly direction, averaging about the same width, in section 12, 13 and portion of Section 10, Section 24; no, here is 10 over here; it would be 30-21 and 30-22; that was my opinion in 1901 and '02 where the oil was exposed and showed at that time, when I first went out there; I do not know whether the original of that map went to the Southern Pacific Company or not; I made a series of those maps showing a section like that,—the course of the strike in this township; I sent Mr. Kruttschnitt a copy like that [2814] map; it was my custom to give the originals to the company and keep the duplicates for myself.

On Defendants' Exhibit 116 I have placed the apex of the anticlinal commencing at the northerly portion of Section 11 in 30 South, 21 East; it begins in the northern portion of Section 11, a little east of the quartersection corner, on the north boundary, and runs then in a southeasterly direction, passing through Sections 12 and 13 of said township; then into Section 10, and through 20, 28 and 34, in township 30 South, 22 East, and into Section

2 of 31 South, 22 East, reaching the southeast corner of Section 2 of that section,—township; this map was made about 1901 or 1902; the legend is in my handwriting, and shows the information as I knew it then, as to oil.

This Exhibit 180 shows information that I obtained at that time; it was not made from memory, or made after 1904 because I have not been there since 1904; Mr. Dumble ought to have a map similar to this.

The legend on Exhibit 115 reads: "All shaded tracts reserved from sale because in or near oil territory. Tracts shaded **green** leased for oil development. Tracts shaded **blue** leased for oil storage. Tract shaded **yellow** operated for oil by S. P. Co." That is not in my handwriting.

The portions shaded in 30-23 are sections 3, 5, 7, 9, 13, 14, 17, the northwest quarter of 19, and all of 31.

The portions shaded in 30-24, are 1, 7, 19, 21, 23, 24, 26 and 35.

The portions shaded in 31-23 are sections 5, 9, east half of 17, 15, south half of 13, 21, 23, 25, 27, 29, 33, and 35.

The portions shaded in 31-24 are the southwest quarter of 7, 17, 15, 13, 14, 19, 20, 27, 31, 33 and 36.

As to whether on Defendants' Exhibit 115, Section 7 in 30-24 is shaded, defendants object, on the ground that it is not **[2815]** cross-examination as to any matters brought out in direct examination.

Not all of it is shaded; it is three-quarters of it,

in the north half and the south half; all the odd sections that appear to be surveyed in 30-23 are shaded with the exception of section 1, three-quarters of 17, and one-quarter of 19.

The map prepared by Mr. Luke indicates in itself that sections 7, 17, 19, 21, 23, 25, 27, and 35 of 30-24, appear to be in the Elk Hills; this is Defendants' Exhibit 16; in this exhibit nearly all of township 30-23 is in the Elk Hills, with the exception of the southwest half of Section 1; the northeasterly part is outside, and about half of the southwest portion of section 31.

On the map, Exhibit 115, it is indicated that there are in 30-24 at least eight sections shaded in the Elk Hills as tracts reserved from sale because in or near oil territory; it also shows that all the portions of 30-23 which are in the Elk Hills were shaded as reserved from sale because in or near oil territory, except what appear to be unsurveyed by this exhibit. In my former testimony I stated that I got the data or information upon which I made reports respecting withdrawal, leasing or sale of railroad lands in Kern County from personal examination; that is correct, and in addition to that, in making these reservations I made them in a blanket form away beyond where I ever expected to get any oil; I think I made the original colorings on the map; it looks like my work; I made the shadings from reports which I sent in from the field, not minutely, but taking a general trend; and went east because we could not tell at what depth we would get oil; the

THE UNITED STATES OF AMERICA, APPELLANT,

vs.

THE SOUTHERN PACIFIC COMPANY ET AL.

FILED AUGUST 2, 1918.

(26671)

anticlinal might rise or it might dip under beyond the reach of any drilling; by personal investigation I do not mean that I went out over the land in every instance; I went over some of the land in the Elk Hills; I think that report was **[2816]** put in before I went over them; it was put in about the time that I asked for the withdrawals; about 1900.

I know a man by the name of John Jean, and one by the name of L. G. Sarnow; they worked under me for the Southern Pacific Company, as oil well drillers; I do not remember Mr. Jean coming to me, as you say, with a sample of oil sand in 1899; he may have, but I do not remember any particular instance of it; I do not remember making a trip by train in company with Mr. Jean and Mr. Sarnow to Buttonwillow, from Bakersfield, in December, 1899; I do not remember going out that way, because it would be a good deal handier to go from my camp right over there; I may have made the trip as you state, but I have no recollection of it; I did not state to anyone that those lands in section 33, of 30-24 had been surveyed by the Government but had not been officially accepted or approved, because I don't think I knew anything about it; I did not explain to them that because I wanted to justify the location with reference to petroleum lands which would fall within indemnity limits of the grant of the Southern Pacific Company; I would not say such a thing as that; that is not true; I may have made out those notices myself in December, 1899, I don't know; the notices will show for themselves; I will not say under oath

that I did not put up monuments there, but I have no recollection of it; it would not be necessary; if the notices so show, it is true that I placed on them the names of J. B. Treadwell, May Treadwell, E. D. Treadwell, C. C. Boynton, F. Boynton, W. L. Hardison, Guy Hardison and R. S. Aston, who were all, except Aston, related to me in some way.

When Mr. Lewers asked me how my name came to be on these location notices, I stated that several drillers had been over and had an idea it was oil land and suggested that I join with them in making the locations; that I said "All right; go ahead"; that they made the locations and then I went over afterwards to see, and my conclusion was that I did not want it; I be- **[2817]** lieved that to be the facts of the case; that those notices were written out by me and posted by them, and not only that, but others; the map showed at that time that the lands were unsurveyed; I believed that the map correctly showed the state of those lands; they might have been officially surveyed, but not approved; section 33 is an odd section; I knew that if it was not mineral land and no one had filed on it, the railroad company would have a right to select it, provided it fell within none of the exceptions contained in the grant; I may have explained that to Jean and Sarnow, I don't know; I made a location for petroleum on Section 33, in December, 1899, upon an odd numbered section, which, if it fell within none of the exceptions, might be selected by the railroad company as agricultural land; I do not remember any-

thing about finding that N. C. Farnham, H. A. Blodget, T. J. Packard, Wagy, Roper and others had put up location notices on that section December 14th, as you ask; I did not know that Mr. Farnham had filed his location notice December 15th on that section; I did not antedate my location; Mr. Farnham did not say that I did so; I did not have any conversation with others about it.

The location notice just mentioned, and found in the county records of Kern County, California, reads as follows: "Notice of location of the northwest 33 placer mining claim, embracing the northwest quarter of said Section 33. Location December 13, 1899, by J. B. Treadwell, May Treadwell, E. D. Treadwell, C. C. Boynton, F. Boynton, W. L. Hardison, Guy Hardison, and R. S. Aston. Recorded December 19, 1899, in Book 18 of Mining Records, at page 402, Records of Kern County, California."

That location having been made in the month of December, 1899, I was entitled to expect that to hold good for one year, providing the proper assessment labor was performed upon it; at that time I evidently believed that it was mineral land; I have often been disappointed in locations; I afterwards advised Mr. **[2818]** Sarnow and Mr. Jean not to do any further assessment work on that land, that I did not consider it good mineral land; I did not do so because it was railroad land; I do not know that I had an argument with Mr. Jean, who thought as I did when the location was made, that that land was surveyed but not officially accepted, and there-

fore that those locations would take priority of the selection by the railroad company; I may have said that; I don't know as I did; I did not advise the railroad company to select that land under an agricultural grant; I did not locate for the purpose of keeping other locators off so that the railroad could get it; I would not take that land as a gift, today; not to drill a well on it.

Referring to a "notice of location on the southwest quarter of 36 placer mining claim, embracing the southwest quarter of said section 33, located December 13, 1899, by L. G. Sarnow, F. J. Sarnow, J. E. Wible, D. Burkhalter, Barbara Sarnow and Grant Dewlaney, recorded December 19, 1899, in Book 18 of Mining Records, at page 402, Records of Kern County, California", as you read it, I suppose that was made at the same time that we made it upon the northwest quarter.

Reading notice of location of the southeast of 36 placer mining claim, embracing the southeast quarter of said Section 33, reading as follows: "Located December 13, 1899, by C. H. Quincy, Samuel Sweitzer, D. Burkhalter, John Jean, L. G. Sarnow, F. J. Sarnow, May Sarnow and Barbara Sarnow, recorded December 19, 1899, in Book 18 of Mining Records, at page 402, Records of Kern County, California," I think very likely that location was made at that time; I have no recollection of the thing.

You call my attention to another "notice of location, of the northeast 36 placer mining claim, embracing the northeast quarter of said Section 33,

located December 13, 1899, by Grant Dewlaney, J. B. Treadwell, W. L. Hardison, Guy L. Hardison, E. D. **[2819]** Treadwell, D. Burkhalter, C. C. Boynton, and L. G. Sarnow, recorded December 19, 1899, in Book 18 of Mining Records, at page 403, Records of Kern County, California"; I suppose that was made on the date of the location; I expect it was made at the same time.

I do not know who J. E. Wible is; there are several Wibles in Bakersfield; one is president of the bank, and there are two brothers who had a laundry there; J. Burkhalter is superintendent of the Southern Pacific, with headquarters at Bakersfield; he was known to me at that time, but was not associated with me in business with the Southern Pacific Company; we were employees of the Southern Pacific at the same time, however; Samuel Sweitzer was a friend of L. G. Sarnow; I do not know who C. H. Quincy was; I do not know whether he was a friend of either Jean or Sarnow; Mr. Dewlaney was a man working in Summerland, a friend of mine, a friend of Sarnow's, and all; I do not know by whom his name was suggested; my wife's name, my son-in-law's name, my nephew, and son-in-law's brother were all suggested by me.

Mr. Mills: Mr. Lewers, I am going to offer, at this point in the cross-examination, a certified copy, exemplified under the seal of the General Land Office, of List No. 86, of lands selected by the Southern Pacific Railroad Company within the indemnity limits, filed October 29, 1900, at the Visalia Land

Office, and I will ask that the same be incorporated into the record.

The Certified copy of List No. 86, Lands selected by the Southern Pacific Railroad Company, last referred to and offered in evidence is marked "Plaintiff's Exhibit 5Y-L.L.", and is as follows:

"4-207

LIST OF LANDS
IN THE
Visalia Land District, California,
SELECTED BY THE
SOUTHERN PACIFIC RAILROAD COMPANY,
OF CALIFORNIA.

THE UNDERSIGNED, the duly authorized Land Agent of the Southern Pacific Railroad Company, of California, under and by virtue of the Act of Congress, approved July 27, 1866, entitled, "An Act granting lands to aid in the construction of a Railroad and Telegraph line from the States of Missouri

and Arkansas to the Pacific Coast," and the further Act approved July 25, 1868, entitled, "An Act to extend the time for the construction of the Southern Pacific Railroad in the State of California," and the joint Resolution of Congress, approved June 28, 1870, concerning the Southern Pacific Railroad of California," and under and in pursuance of the rules and regulations prescribed by the Commissioner of the General Land Office, hereby makes and files the following list of selections of public lands claimed by the said Company as inuring to it, and to which it is entitled under and by virtue of the grants and provisions of the said Acts of Congress, and the location of the line of route of the Railroad and Telegraph of said Company; being in part for the Sixth (6th) section (Twenty (20) miles) of the same, commencing at **[2823]** Lerdo ——— and ending at Summer ——— which said section of road and telegraph has been duly accepted by the President of the United States, as provided in the aforesaid Acts and Joint Resolution of Congress. The selections being particularly described as follows:———

Jerome Madden,
Land Agent of the Southern Pacific
Railroad Company.

Meridian UNITED STATES LAND OFFICE,)
)
Visalia, Cal., Oct. 29, 1900.)

We hereby certify that we have carefully and critically examined the foregoing list of lands claimed by the Southern Pacific Railroad Company, under the grant to the said Southern Pacific Railroad Company, by Acts of Congress, approved July 27, 1866, July 25, 1868, and June 28, 1870, above mentioned, and selected by JEROME MADDEN, **[2826]** the duly authorized agent; and we have tested the accuracy of said list by the plats and records of this office, and that we find the same to be correct; and we further certify that the filing of said list is allowed and approved, and that the whole of said lands are surveyed public lands of the United States, and within the limit of the exterior ten (10) miles, Indemnity Belt, on each side, and that the same are not, nor is any part thereof, returned and denominated as mineral land or lands, nor claimed

as swamp lands; nor is there any homestead, preemption, State or other valid claim to any portion of said lands on file or record in this office.

We further certify that the foregoing list shows as assessment of the fees payable to us allowed by the Act of Congress, approved July 1, 1854, and contemplated by the circular of instructions dated January 24, 1867, addressed by the Commissioner of the General Land Office, to Registers and Receivers of the United States Land Offices; and that the said Company have paid to the undersigned, the Receiver, the full sum of Twenty-six ($26.00) Dollars, in full payment and discharge of said fees.

May 22, 1902.

WHEREAS, by the Act of Congress approved July 27, 1866, and Joint Resolution of June 28, 1870,

'to aid in the construction of a Railroad and Telegraph Line from the States of Missouri and Arkansas to the Pacific Coast", and to secure to the Government the use of the same for Postal, Military, and to other purposes, authority is given to the Southern Pacific Railroad Company of California, a corporation existing under the laws of said state. to construct a Railroad and Telegraph Line under certain conditions and stipulations as expressed in said Act, from the City of San **[2831]** Francisco, to a point of connection with the Atlantic and Pacific Railroad near the boundary line of said State, and provision is made for granting to the said Company, 'every alternate section of public land, not mineral, designated by odd numbers, to the amount of ten alternate sections per mile on each side of said Railroad, on the line thereof, and within the limits of twenty miles on each side of said road, not sold, reserved, granted or otherwise appropriated by the United States, and free from pre-emption or other claims or rights at the time the line of said road is definitely fixed,', and ——————————

WHEREAS, it is further provided by said Act, that 'whenever prior to said time any of said sections or parts of sections shall have been granted, sold, reserved, occupied by homestead settlers, or pre-empted, or otherwise disposed of, other lands shall be selected by said Company in lieu thereof, under the direction of the Secretary of the Interior, in alternate sections and designated by odd numbers, not more than ten miles beyond the limits of

said alternate sections, and not included in the reserved numbers, and ———————————

WHEREAS, official statements from the Secretary of the Interior have been filed in the General Land Office, showing that the Commissioners appointed by the President under the provisions of the fourth section of the said Act of July 27, 1866, have reported to him that the line of said railroad and telegraph from San Jose to Tres Pinos and from Alcalde to Mojave, together comprising two hundred **[2832]** and fifty-two miles and four hundred and seventy-nine thousandths of a mile, has been constructed and fully completed and equipped in the manner prescribed by said Act of July 27, 1866, and accepted by the President, and ———————————

WHEREAS, it is shown by certain papers filed in the office of the Commissioner of the General Land Office by the duly authorized attorney of the Southern Pacific Railroad Company with his letter of April 30, 1902, that the said Southern Pacific Railroad Company is the successor by consolidation of the Southern Pacific Railroad Company of California, and ———————————

WHEREAS, the following tracts have been selected under the Acts aforesaid, by the duly authorized land agent of the said Southern Pacific Railroad Company of California, or its successor, as shown by his original lists of selections approved by the local officers, and now on file in the General Land Office, and ———————————

WHEREAS, the said tracts of land lie coterminous to the constructed line of said road, and are particularly described as follows, to wit: ————

General Land Office
Railroad Division, December 2, 1901.

We hereby certify that we have examined the foregoing list in connection with the plats and records of this office and have found the tracts described therein to be free from adverse claims and lying within the indemnity limits of the grant to the Southern Pacific Railroad, while the tracts designated as bases for said selections were found to have been actually lost to said grant and not used heretofore as [2834] bases for any approved selections.

We, therefore, certify that so far as shown by this examination the selected tracts are subject to approval and patent to said Company.

F. C. Lord,
F. I. Wood,
Examiners.

S. S. Marr,
Chief of Division.

Mineral Division, December 23, 1901.

This certifies that the tracts selected herein are not in conflict with, but are within six miles of mining claims of record in this office.

NOW, THEREFORE, as it has been found on a careful examination in connection with the authenticated map on file in the General Land Office, of the survey of the Southern Pacific Railroad route, that the foregoing lands fall within the thirty miles lateral limits of said route, **[2836]** and that the said lands, so far as the records of the General Land Office show, are free from conflict, it is hereby recommended that the tracts described, covering two thousand and five acres and thirty seven hundredths of an acre, be approved and carried into patent, as lands falling within the grant by the Acts aforesaid, to the said **Southern Pacific Railroad Company,** as successor in interest to the Southern Pacific Railroad Company of California, excluding, however, from the approval and from the transfer in the patent that may issue, **'All Mineral Lands,'** should any such be found

in the tracts aforesaid, but this exclusion, according to the terms of the Statute, 'shall not be held to include iron or coal.'

Binger Hermann,
Commissioner. S. S. M.

To the Honorable
Secretary of the Interior.

J. I. P. Department of the Interior,
Washington, D. C.
May 23, 1902.

Approved: covering two thousand and five acres and thirty seven hundredths of an acre

E. A. Hitchcock,
Secretary of the Interior."

Mr. Mills—At this time I shall offer a certified copy, duly exemplified and authenticated, under the seal of the General Land Office, of patent No. 111, from the United States of America to the Southern Pacific Railroad, covering the lands embraced in the two selection lists—that is, in **[2837]** Selection List 86 and Supplemental List 89—namely, Section 29, 31 and 33, of Township 30 South, Range 24 East, with reference to the Mount Diablo Meridian and its base line; these being lands with reference to which the witness J. B. Treadwell has testified on cross-examination, in part. I may say that the certified copy of the patent shows a transfer of lands other than those specifically mentioned, but includes those which I have described. This is offered for the purpose of supplying any deficiency with reference to which counsel for defendants claim that there is no

evidence that these lands were ever selected or patented by or to the Southern Pacific Railroad Company, defendant in this case.

The certified copy of patent 111 last referred to and offered in evidence is marked "Plaintiff's Exhibit 6A—L. L.", and is as follows:

"4-207

B. DEPARTMENT OF THE INTERIOR
GENERAL LAND OFFICE,
Washington, D. C., September 30, 1912.

I hereby certify that the annexed copy of patent is a true and literal exemplification from the record of patents in this office.

IN TESTIMONY WHEREOF, I have hereunto subscribed my name and caused the seal of this office to be affixed, at the city of Washington, on the day and year above written.

S. V. Proudfit,
Acting Commissioner of the General Land Office.

Ex'd C. W. B. A. M. S. 41

Patent No. 111

Southern Pacific Railroad **Lands.**
Indemnity **Limits.**
Visalia Land **District California**

The United States of America

To all to whom these presents shall come, Greeting:

WHEREAS, by the Act of Congress approved July 27, 1866, and Joint Resolution of June 28, 1870, 'to aid in the construction of a Railroad and Telegraph Line from the States of Missouri and Arkansas to the Pacific Coast,' and to secure to the Government the use of the same for Postal, Military and other purposes, authority is given to the Southern Pacific Railroad Company of California, a corporation existing under the laws of said State, to construct a Railroad and Telegraph line under certain conditions and stipulations, as expressed in said Act from the City of San Francisco to a point of connection with the Atlantic and Pacific Railroad, near the boundary line of said State, and provision is made for granting to the said Company, 'every alternate section of public land not mineral, designated by odd numbers, to the amount of ten alternate sections per mile on each side of said Railroad, on the line thereof, and within the limits of twenty miles on each side of said road, not sold, reserved, granted, or otherwise appropriated by the United States, and free from pre-emption or other claims or rights at the time the line of said road is definitely fixed,' and————————[2839]

F-1- **Whereas,** it is further provided by said Act, that 'whenever prior to said time any of said sections or parts of sections shall have been granted, sold, reserved, occupied by homestead settlers, or pre-empted, or otherwise disposed of, other lands shall be selected by said company in lieu thereof, under the direction of the Secretary of the Interior, in alter-

nate sections, and designated by off numbers, not more than ten miles (111-415) beyond the limits of said alternate sections, and not included in the reserved numbers, and ———————————

Whereas, official statements from the Secretary of the Interior have been filed in the General Land Office showing that the Commissioners appointed by the President, under the provisions of the fourth section of the said Act of July 27, 1866, have reported to him that the line of said railroad and telegraph from San Jose to Tres Pinos, and from Alcalde to Mojave, together comprising two hundred and fifty-two miles and four hundred and seventy-nine thousandths of a mile has been constructed and fully completed and equipped in the manner prescribed by said Act of July 27, 1866, and accepted by the President, and ———————————

Whereas, it is shown by certain papers filed in the office of the Commissoner of the General Land Office, by the duly authorized attorney of the Southern Pacific Railroad Company, with his letter of April 30, 1902, that the said Southern Pacific Railroad Company is the successor by consolidation of the Southern Pacific Railroad Compa.. of California, and——

[2840]

Whereas, the following tracts have been selected under the Acts aforesaid by the duly authorized land agent of the said Southern Pacific Railroad Company of California, or its successor, as shown by his original lists of selections,

approved by the local officers, and now on file in the General Land Office, and ——————

F-2 **Whereas,** the said tracts of land lie coterminous to the constructed line of said road, and are particularly described as follows, to wit: —

South of base line and **East** of

111-416 **Mount Diablo Meridian State of California**

Township Thirty Range Twenty-four

All of section twenty-nine containing six hundred and forty acres. All of section thirty-one containing six hundred and forty-five acres and thirty-seven hundredths of an acre. All of section thirty-three containing six hundred and forty acres. ——————

Township Twenty-five, Range Twenty-nine.

The South half of the South West quarter of section thirty-five containing eighty acres.

The said tracts of land as described in foregoing make the aggregate area of two thousand and five acres and thirty-seven hundredths of an acre (2,005.37).

Now Know Ye that the United States of America, in consideration of the premises, and pursuant to the said Acts of Congress,

[2841]

Have Given and **Granted** and by these presents **Do Give** and **Grant** unto the said **SOUTHERN PACIFIC RAILroad Com-**

pany, successor in interest to the Southern Pacific Railroad Company of California, and to its successors and assigns, the tracts of land selected as aforesaid, and described in the foregoing; Yet excluding and excepting 'All Mineral Lands,' should any such be found to exist in the tracts aforesaid, but this exclusion and excepting according to the terms of the Statute, 'shall not be construed to include coal and iron lands.' ———————————

To Have and **to Hold** the same, together
F-3 with all rights, privileges, immunities and appurtenances of whatever nature thereunto belonging, unto the said Southern Pacific Railroad Company, and to its suc-
111-417 cessors and assigns forever. ———————
418

In testimony whereof I Theodore Roosevelt, President of the **United States of America,** have caused these letters to be made patent and the Seal of the General Land Office to be hereunto affixed.

(Seal) **Given under** my hand at the City of Washington, this the twenty-eighth day of May, in the year of our Lord one thousand nine hundred and two, and

of the Independence of the
United States, the one hundred
and twenty-sixth **[2842]**

By the President: **T. Roosevelt.**

C. H. Brush.

F-4 Recorder of the General Land Office.
Conveying fees paid May 31, 1902, M. L. 128374
Patent to D. A. Chambers June 2, 1902
Receipt acknowledged June 2, 1902—93166."

111-418

In 1906, I had an office on the sixth floor of the Chamber of Commerce Building, at Los Angeles, I do not remember the number of the room; I rented that office in 1905 or 1906; the maps, Exhibits 180 and 181, must have been among some other papers that I shipped to my Los Angeles office before the fire; my reason for saying that I shipped them to Los Angeles was because I found them here; they must have got in with some other papers, without any intention of sending any of that matter to Los Angeles; that is the only way I can account for them being here, because everything else was destroyed and they could not come afterwards; sending these two maps to Los Angeles was a mere accident; I did not find them until some time after I had testified here, possibly a month, two months, or three months; I did not tell you when I found them because it was not much of any importance; Mr. Lewers asked me and told me about certain maps, and I told him I **[2843]** had found them; I showed them to him, these

two, and at his request I brought them; I think that anticlinal was placed on there years ago, but cannot state what year it was; I think it was before 1904, because I have no use for the maps, or anything, since I left the service of the company; I would have introduced it before at this trial if I had had it; I searched more than three days for the maps, through most all the papers I had.

At the time I made the recommendation for withdrawal of certain lands in Kern County, on the west side, in which I testified that certain sections were shaded on Exhibit 115, the map apparently showed the lands in suit and some in the adjoining township of 30-24 as unsurveyed; I believed them to be unsurveyed; I shaded them somewhere along in 1900, 1901, or 1902; and I think that I shaded a great many sections in the Elk Hills at that time; whether I shaded all those that are on that map or not I couldn't say; but it was a similar map that I returned to the office with the shadings on it; as I previously testified, I was not positive whether I made the shadings on that map; it looks like my work; whether it took in all those or not I am not satisfied; I would not say that that is the identical map that I took into the field with me; it was a lithographic map simliar to that, which was very common, and you could get a number of them around the Kern Land Company's office; I did not make it a practice to shade lands as oil lands which had not been surveyed and which the railroad company would not be entitled to until they were surveyed, because they had no interest in it;

they could not withdraw something they did not have; so that, after I made a circle around all the unsurveyed lands, shaded the piece of land which had been surveyed, it is true that I did not shade the oil lands which were not surveyed, because they were unsurveyed.

I do not know that the railroad company afterwards acquired the location which I made in Section 33 of 30-24 for **[2844]** petroleum purposes, under patent as agricultural land; that was after my time; reading from Exhibit 6A, the first description of land: "South of base line and east of Mount Diablo Meridian, State of California. Township 30, Range 24, all of Sections 29, containing six hundred forty acres, all of Secton 3, containing six hundred forty-five acres and thirty-seven hundredths, all of Section 33, containing six hundred forty acres." This patent to the Southern Pacific Railroad Company, embraces the land which John Jean, L. G. Sarnow and I located for petroleum on Section 33 in December, 1899; and also contains the lands which were located by Mr. Burkhalter and the other persons named in the location notices which you have read; my recollection, and honest belief is, that I never posted those notices.

Thomas Stribling's name is familiar, but I cannot place it just now; I am under the impression that I met him at two wells I bought in Beaumont, Texas; I do not know whether the name was Stribling or not; some such name as that; at the time I met Thomas J. Griffin in Texas, I was a stockholder in the

Spindletop Power company; I had only just a few shares, it might have been three or four hundred shares, something like that; I bought the stock through the recommendation of Mr. Bass, with the understanding that I should have the first privilege of air; I was in that way interested in what the company was doing; I do not know Mr. Bass's initials; there were two of them there; one was president of this company, and the other was an oil man; I refer to the president of the company; Mr. Griffin might have been vice-president and general manager of the Spindletop Power company at that time; Mr. Bass I looked to as doing most of the business; I don't know what Griffin was doing outside, merely the engineering; he was a mechanical engineer; how much he had to do with the field work I have no recollection of; Mr. Griffin was not over at my properties, or the properties which I was handling, the pipe- [2845] line, and so forth, while I was there.

I cannot place the Texas-Mississippi property on the Spindletop exactly; I think I was interested in that property, just east of the National Oil Company property; I had an interest in two wells there, but there was no pumping; mine was individual property, which I sold; I do not remember how much I sold it for; I had the two wells equipped up to test them, but they were only pumped a few days; I guess the equipment was done under Mr. Griffin's directions; I suppose I paid the Spindletop Power Company for the equipment of pipelines and putting in the air compression on those wells; I am not pre-

pared to swear whether I did or not; I generally pay my bills; I was not there when the work was done; I think the man that attended to that was Mr. Hansen, W. L. Hansen, I think it is; the money for development of those wells was not furnished me by the Southern Pacific Company, or one of its subsidiaries; I never used any of the moneys of the company for my private work; the only trouble there ever was over that work was when Mr. Hays came out to California and met me there; he said he didn't like the idea of employees speculating for themselves, that it demoralized the balance of the other employees; I was speculating for myself; I was under no contract that the land I bought belonged to the company, although I gave them the first privilege of taking it; I did not have any trouble with Mr. Hays or anyone else in respect to this particular property, I am certain of that; at the time I sold these two wells a man by the name of Hansen made the trade; I did not know that they were water wells; my transactions are all straightforward; the contract was made several months before they took them over, and I do not know who the purchaser was; the records will show; I have nothing to cover up or hide in my connection with the Southern Pacific, and every one connected with it will tell you the same.

I do not remember Mr. Griffin coming to my office in **[2846]** the Chamber of Commerce Building, to read the Beaumont Enterprise; I did not take the Beaumont Enterprise; it was sent on by Mr. Kennear to me; I do not remember Mr. Thomas J. Griffin

coming up to my office to read it repeatedly, and I don't think he did come.

There is a cemetery near Forest Lawn, near my home; I do not know of Mr. Griffin coming out to visit Mrs. Treadwell and myself at that cemetery and finding us there, or anything of the kind; he was not there with me and my wife; we did not spend two hours there taking him over the cemetery; I will swear that we did not meet him there; my wife would not accompany me through a cemetery with any one that way; we are not in the habit of doing it; my wife doesn't usually go in the cemetery.

I cannot place Thomas J. Griffin, other than the testimoney that I have given; I would not know him if I met him on the street today; I don't know Mrs. Thomas J. Griffin; I took my meals at the boarding room at Spindletop; I did not take meals at the house of Mr. and Mrs. Griffin; I don't know where it is.

I did not introduce Thomas J. Griffin, in my office, in the Chamber of Commerce Building, to my son-in-law who was in the bank in Los Angeles; I had no son-in-law in the bank in the city of Los Angeles, or a nephew in a bank in Los Angeles; I did not introduce him to anyone whom I claimed as a relative, by the name of Boynton, or any man; I do not know a man by that name in any bank here.

I did not at that time enter into a contract, on behalf of the Texas & New Orleans Railroad Company, Louisiana Western Railroad, and Galveston, Houston & San Antonio Railroad, for the delivery of about 300,000 barrels of oil, at 15 cents a barrel coming

from the Texas, New Orleans Railroad Company, in which Mr. Griffin attended to the transaction; I know Mr. Bass was interested, and he attended to that himself, and went aboard the car and made the arrangements with Mr. Kruttschnitt, who was there in [2847] Beaumont at the time; I do not think I was there at the time, I think my clerk attended to that; I did not go out in the field with Mr. Griffin; I don't know who organized the Spindletop Power Company; I always understood Mr. Bass was the leading spirit in it and put most of the money in it; I knew that Mr. Bass had the control of it, that is what they always told me; he was all I knew; he was president and the moving spirit in it; my dealings were with him; when I had dealings with the Spindletop Power Company and wanted air to operate my wells I may have stated to Mr. Griffin that the wells belonged to me, and I may not; I don't know; the gas had left the wells and they wouldn't flow, and by added air we could start them flowing again; but those wells, I don't think were put on air until after I had left; about the time they were making arrangements for it, I left; I did not ask the Spindletop Power Company, through Mr. Griffin, to flow some wells near what is known as the Haywood Oil Company, on Spindletop Avenue; those are the two wells that belonged to the Southern Pacific Company; they did not have the air on them before I gave them up; I do not remember A. D. Griffin, the son of Thomas J. Griffin; I did not have any conversation with Thomas Griffin's son in regard to having air put on the

lines to go to the Southern Pacific Company's wells; at that time those wells had not been put on the line; when Mr. Harriman came there there was no necessity for any air to be brought to them, and there was no air to put on them; I had an eight inch line to those wells, but do not know as at that time; I don't think it was finished; I did not tell young Griffin that I was looking for Thomas J. Griffin, or that I was expecting Mr. Harriman and a party and wanted those wells flowed; I did not tell them anything of the kind; Mr. Kruttschnitt telegraphed me a few hours before Mr. Harriman came that they wanted to go out in the field to see the well flow, if they had time; we went out there; Mr. Swain, partner of ex-Governor Hog, [2848] of Texas, who was acquainted with Mr. Harriman, came on the train and came out there; I only introduced him to one man, and that was the man I bought the wells from, at Mr. Harriman's request; I would not volunteer to introduce Mr. Harriman to anybody unless he requested it; I did not ask Mr. Harriman if he was ready to have the wells flowed; I did not introduce him to Thomas J. Griffin, or say that I was buying oil from him and the Spindletop Power Company; I was not buying oil from them at that time, or from any other company; Mr. Griffin did not then commence to flow those wells or explain to him the method of handling oil; the man who flowed those wells was the man I bought the wells from; the wells flowed naturally, with natural gas; I did not put them on compressed air, and they did not need it for six weeks after-

wards; they flowed many thousand barrels before they played out; and all the wells in there had flowed; those wells were capped, and the minute you opened them, all you had to do was to turn the valve, and they flowed right off with the pressure of the gas and oil.

I never dined with Mr. and Mrs. Griffin, and I don't remember ever riding out with him; I had my own horse and buggy; and I did not have any conversation with Mr. Griffin about going out to California, that I was in a position to place him upon some valuable oil lands, or explain that the Southern Pacific Railroad Company had a great deal of oil land in Kern County situated in the Sunset field; no such conversation; I did not attempt to induce any other persons to go out and select lands on the even sections in what is now known as the Elk Hills for petroleum purposes; I did not say in any conversation that I had been over the lands in person on the West Side field in Kern County, or that in my opinion the Buena Vista Hills or Elk Hills would be the best place to drill; I did not tell Mr. Griffin that the Southern Pacific Company owned under an act of Congress all the odd sections along the right of way but that the even sections had not been **[2849]** taken up, or that I could ascertain what they were and that by simply filing on them and doing the necessary amount of assessment work in order to secure patents that patents would be acquired; I did not make that statement or any part of it to any person in Texas while I was there operating;

I do not know what condition the Spindletop Power Company was in at that time; I suppose they were in good condition financially; when I bought stock in it they were intending to go to work and fix up their plant for the purpose of furnishing air; how much they sold I don't know; I think I sold my stock soon after they commenced supplying air; I never got any dividend out of it; my recollection is I did not get any more for my stock than I paid for it; I do not know what it went to; I don't remember;

I do not remember having any maps in regard to California when I was in Texas; I may have had this Kern County Map, or one similar to it; I do not remember showing Mr. Griffin any map, and I did not advise him to go to California; if I had that map there it would have the unsurveyed lands shown on it the same as it does now; and if I showed Mr. Griffin a map it would be a cross-section of the wells, as a map like Defendants' Exhibit 116 would be a blank to him, or to anyone unless they had gone out and were familiar with the lands; I did not point out to him the unsurveyed lands in the Elk Hills; I would not have pointed out the even sections that could be taken up for oil, because I had no confidence in that section; I selected some of those lands, and abandoned them because I considered them worthless; before the year was up they were selected by the Southern Pacific Railroad Company; I did not abandon them and after in common parlance "double cross" my associates and have the lands

taken up by selection by the Southern Pacific Railroad Company under the Agricultural grant. From the evidence here it appears that they were selected before the year was up, after my location; I do not remember at any conversation I had with **[2850]** him showing Thomas J. Griffin a pocket map which was identical with Exhibit 115, showing the condition of the oil development in the West Side Field; the map that I had like this did not have any lines showing the anticlinals, subdivisions or wells, or where they had been drilled; it simply showed the lands; the maps I had were in rectangular forms,—townships and ranges **[2851]** and sections; the Texas forms were altogether different.

I was in Beaumont, Texas, in 1902, but I do not remember the particular months; I never furnished Mr. Griffin with any map—or anyone else; I never had any conversation or letter in which I told Mr. Griffin or Mr. Bass that I wanted a definite answer as to whether they would go with drilling rigs to the Elk Hills, nor did Mr. Griffin say he would take the matter up on Mr. Bass' return; I did not say that I would not give up that map for the reason that it was railroad company property; I don't remember showing him any map, or talking with him about any; and I don't remember saying anything about it being but a short time before a pipeline would be built into the McKittrick fields; I may have said that, but I don't think I did, because I did not believe at that time the oil was light enough to go through a pipeline; it must be a light oil, and most

of our oil is pretty heavy; 14 gravity I call a heavy oil; a light oil is anywhere, 18, 20, 22 to 26; any oil in excess of 25 to 28 would be regarded as light oil; the pipe line they built from Kern River, the first one, the Standard, proved a failure until they got light oil; light oil is worth more than heavy oil; I don't know what it is in the market now, but it will bring a difference of anywhere from 40 to 50 cents per barrel; I do not know when the lands in the Elk Hills forming the basis of this suit and also those appearing on Exhibit 115 were surveyed, only from the records here; I did not know in 1903 that they had been officially surveyed and approved; I did not point out to Mr. Griffin anything about unsurveyed lands in the Elk Hills, or lands appearing on this 115; I do not remember anything of the kind; I don't know why I should; After my visit to the Elk Hills I had no desire to own or develop any part of it; it may be that the Associated Oil Company spent considerable money locating there; you will find people locating everywhere; naturally when a man had a location he would be glad **[2852]** to see someone come in on land nearby and drill, in order to prove his claim without expense to himself, but I had no such idea regarding the property in the Elk Hills.

REDIRECT EXAMINATION
OF J. B. TREADWELL

My best recollection is that I prepared those notices for location, Jean and Sarnow took them out

with them, having been on the ground before, and posted the notices themselves; that I subsequently went upon the ground and looked it over—whether with one or both of them I don't remember—and said at that time that I didn't consider them worth holding or doing any work upon.

I don't remember the year when the Kern River excitement began, but it was in the summer, and I think in 1890,—no, I mean 1899 or 1900; I was operating at McKittrick; the effect of that excitement was that everybody went and located the odd sections, and went in and applied to the Southern Pacific and got options for purchasing of the railroad lands; they located all around the Kern River field on land that was not good for anything; for miles around, clear up to Posey Creek, away out on the flats; located, I suppose, two or three townships of land; there was a condition of excitement in that country; when I colored, upon the map, a section belonging to the company, the maps for withdrawal of lands from sale were sectionally selected, and that as near as I could determine from general observation, that carried oil. I also extended on the dip of the formation away beyond where it was possible, as I thought at that time, to get any oil. In other words, you might say a blanket; and those questions arose between Mr. Madden and myself, on the ground that I was taking land that I could not identify as mineral lands; which afterwards come up between Mr. Huntington and Mr. Madden and myself; when Mr. Madden set forth his claim, Mr. C.

P. Huntington asked what I had to say; I told him I could not determine where it would go; that people were buying this **[2853]** land up, paying twenty per cent down, had a number of years to pay it in, and the result was the company didn't get but a small amount out of it, and probably they wouldn't take it unless there was oil in it; and he said that under those circumstances the company could just as well speculate in it as anybody outside, and ordered Mr. Madden to reserve any lands I suggested be withdrawn from sale.

I don't think I had anything to do with the selection of the lands in 30-24 that were patented in 1902; I did not know that a patent application was pending; the selection was not made in any way on my recommendation; the location of the claims in Section 23 of 30-24 was not made at my suggestion for the purpose of getting that land for the railroad company, and no effort was made by me to retain that land under those locations; I did not do anything with it; I simply abandoned it.

RE-CROSS EXAMINATION OF J. B. TREADWELL

It was not a part of my duty as field agent of the Southern Pacific Company to know what lands the company were applying for for patent; it was part of my duty to ascertain what oil lands there were in that field; I always reported everything that I thought—where they had any reservation, where they owned the land—made a reservation—if I

thought there was any indication, and even beyond that, so as to be sure to get it all. I regarded it as a part of my duty when in my judgment I thought the land contained oil to report it to the railroad company and whenever I found any land that I believed to be oil land I did so report it to the railroad company and this was during all the time that I was in their employ. I didn't stop to inquire of Mr. Madden if he was making an application for patent or not on any land when I made those reports as I had plats of the patented land that the company had. I did not make **[2854]** this inquiry because it was outside of my jurisdiction. I had nothing to do with it. I simply reported on what I thought was oil land and let it go at that. Beyond the patented land, if it was within the indemnity limits, I would not make any report on it. I did, however, in fact, trace out anticlines over the lands that they didn't own on sections that showed possibilities of oil, and I certainly reported those things to the company. I reported only where they were interested and not outside of where they were interested. I thought it was part of my duty to report to them that certain lands where they were interested were not patented, although they contained oil. When I was tracing an anticline, I would report on those lands within the indemnity limits which might be taken and selected and which contained oil, the same as if these lands were patented. I made no distinction. **[2855]**

I traced no anticlines in the Elk Hills, and reported

on no unselected lands for the purpose of having them selected with that idea in mind.

Recross-Examination:

I remember being in Mr. Mills' office, 406 Post-Office Building, I think it was about February, 1912, about the 18th; I do not remember saying to you that the railroad company took Professor Dumble's opinion as to land values; I did not say that they valued the opinion of Mr. Owen more than Mr. Dumble; if I did it was all wrong, because Mr. Dumble was Mr. Owen's superior, and Mr. Owen would not report only to Mr. Dumble; I would not make any such statement as that; it must be a misstatement; it was not taken down correctly if it is that way; You have got it jumbled up; I did say that Mr. Dumble never said much about what he thought, that he kept very quiet; that he was not very familiar with the oil business, and made some mistakes,—we all make mistakes; I remember referring to a map similar to Exhibit 115, by saying that I made a map before I left, listing all the land, and colored all of it that I thought contained oil and ought to be reserved; I said that I had colored all that contained oil possibilities, and beyond that point; I remember that you asked me if I regarded in 1902 and 1901 the Elk Hills and Buena Vista Hills as oil territory; but I did not reply that one could not say it was not, that it looked all right, or that we found an oil seepage on Section 32; your stenographer has got things mixed up; Mr. Mills, you know that is not so; if I had said anything like that

you or Mr. McCormick would have examined me on it on direct. I did say that the land had no agricultural value at all except for grazing, just in the spring of the year; and when you asked me if Mr. Dumble made any reports to the company, I replied that all of his reports were written; he was great for that; he itemized everything. **[2856]**

PAUL D. BOWLER, a witness called and sworn on behalf of the defendants, testified as follows:

DIRECT EXAMINATION

I have lived in Los Angeles three years, and am connected with the Layne & Bowler Company, a corporation, as president and general manager; they employ about 250 men. This company operates in California, New Mexico, Arizona, Texas, Arkansas and Louisiana, and has branch establishments at Houston, Texas; Stuttgart, Arkansas; Welsh, Louisiana, and Turkistan, Asia; they are engaged in the manufacture of oil and water-well screens for separating liquids from sands, and also the manufacture of centrifugal pumping machinery and the installation of it.

I lived in Texas about seven years, and left there about three years ago; in Texas I was connected with the Peden Iron & Steel Company, of Houston, Texas, and was manager of the machinery department and had charge of the credits in that line for the company; it was my duty to pass upon the risk of credits in the oil fields at Spindletop, Sour Lake, and other places, and I made efforts as such credit man to keep in touch with the standing of the gen-

eral credit of men engaged in business in that field.

While so engaged I was acquainted with Thomas J. Griffin; Defendants' Exhibit No. 179, which you have shown me, is a picture of the Thomas J. Griffin that I knew in Texas; I was acquainted with him since I came to California; I knew his general reputation for truth and veracity in the community in which he lived in Texas; I consider it bad; I knew his reputation there for honesty and integrity at that time, and did not consider it good; I know Griffin's reputation in the community where he now lives in Los Angeles for truth and veracity; it is not good. I would not take Griffin's word in a business dealing myself. There has been no trouble between Mr. Griffin and myself. I have no interest in this controversy whatsoever. [2857]

CROSS-EXAMINATION OF PAUL D. BOWLER

Our company manufacture in Los Angeles, Houston, Texas, and Stuttgart, Arkansas. Griffin never worked for us in California, except as a subcontractor. The Texas company is not connected with the Southern Pacific Company, as far as I know. I do not remember the amount that the Spindletop Power Company was indebted to the Peden Iron & Steel Company when the Spindletop went to the wall. I don't know whether the fact that I was largely interested in the Spindletop Power Company, which went into the hands of a receiver, has any bearing —though it may have—on my general opinion. Per-

haps it does have some weight **[2858]** among other things. Up to that time my business relations with that company were pleasant. Well, of course, as manager, I suppose I must have considered that Griffin had something to do with its bad management, although that was not really the foundation of my complaint against Mr. Griffin as I have no complaint against him and I could not say that that is the basis of my feeling towards Mr. Griffin. I could not say that I held that up as a grudge against him. I have no grudge against him at all. I don't think Mr. Griffin was a man of large affairs at Spindletop at that period. I never heard of his owing the T. & N. O. Railroad Company as high as $90,000 and when I am asked if it was because of the unfortunate business concern in which Mr. Griffin was a partner or a large owner and through which I suffered financial loss, I am willing to come here and testify that Mr. Griffin's reputation for truth and veracity and for honesty and integrity, was bad, I say, "No, not that alone, by any means. That might have had a small bearing on my idea regarding the matter." And when I am asked how it comes that when he came out here afterwards to Los Angeles I entered into a contract with him my answer is, "I didn't know his connection at the time I made the contract with the company of which he had been appointed manager." I have never had any trouble at all with Mr. Griffin. The persons in Texas who have told me that Mr. Griffin's reputation for truth and veracity and honesty and integrity, is bad, are

W. T. Jones, who is now with the Union Oil Company, I believe. W. B. Sharp, but he is dead, and J. W. Sullivan of the Peden Iron and Steel Company, with which I was connected as manager [2859] of the machinery department. I am trying to think about someone that is not connected with some company that was a creditor of the Spindletop Power Company. It is pretty hard to know what my reputation is in Texas for truth and veracity. I really don't know how people consider myself. I was always pretty conceited about my reputation. I always bought all the goods my company wanted but I don't think that because I got quite a line of credit that that is the summum bonum of a man's reputation for truth and veracity. I have never been arrested or ever been in court and never been in anyway brought to time about my truthfulness. I have never heard it questioned in any way that I know of. I failed in business in the panic of 1893. I owed a great deal more than I could pay but I worked it out and paid it all. When a man fails in business and his business goes into the hands of a receiver and leaves a large indebtedness, exceeding a hundred thousand dollars, at the time the assets are insufficient to pay more than about twenty per cent of it, he gets a reputation for bad credit when in reality the man may be good hearted and want to pay. That is so. If I should fail in business and owe a great deal of money which I was unable to pay, although willing to do so, I would not want someone to testify against my character, perhaps, but

I would want them to testify against my business ability as being a bad manager. Mr. Griffin has done me no injury whatever outside of the injury which was occasioned by the failure of the Spindletop Power Company and I am sensible of no feeling one way or the other against him. I would not say Mr. Griffin is not a perfectly decent, lawabiding, honest **[2860]** citizen. I have no prejudice against him whatever. I first learned that I would be wanted to come here to assail the character of Mr. Griffin about six months ago. At that time Miles Bowler, Chief of the detective force of the Southern Pacific, spoke to me on the train in Arizona. Two months after that Mr. Gray came to my office to see me and asked me about Mr. Griffin. I told him I didn't want to get mixed up in anything of this kind. The first time I talked with Mr. Lewers about this case was this morning between eleven and twelve o'clock. I talked with him about five minutes. Previous to that, about a month ago it was, I had the conversation with Mr. Gray. In that conversation I told Mr. Gray just what I knew about Mr. Griffin and Mr. Gray seemed very well pleased with what I told him. He did not tell me that Mr. Griffin had testified in this case. I knew that before I saw him. He told me that Griffin was a star witness, that is, either Mr. Gray or Mr. Bowler told me that Mr. Griffin was the star witness for the government against the Southern Pacific. He didn't tell me what he had testified to and he told me he wanted me to come up and testify to what I knew about

Griffin. I knew he was looking for the record of Mr. Griffin. He took a memorandum book and took down a number of items of people I told him about. I gave him the names of a number of people in Texas. I gave the name of Mr. W. B. Sharp, who is dead, and I gave him the name of E. E. Peden of the Peden Iron and Steel Company, and J. W. Sullivan, and I told him to go and see the different supply houses there and also the banks. I gave him the name **[2861]** of W. T. Jones. I did not give him the name of M. B. Bass. It didn't occur to me to give him his name. I was picking out the names only of those whom I knew to be enemies of Mr. Griffin. I didn't know any of Mr. Griffin's friends. He might have had friends. I couldn't say he didn't have. I didn't think only of people who had been injured by the Spindletop Power Company, like myself and Jones and the credit men. I gave them the names of people who had transactions with him, that knew him. I had no trouble whatever with Mr. Griffin. I shook hands with him yesterday in the hotel in Santa Maria. He said "Hello, Paul, what are you doing up here?" I told him and I asked him what he was doing up there, and so forth, and a few words passed between us. Mr. Lewers did not tell me anything he wanted me to testify to at all. He did not go over what I have testified to here on the stand with me. He showed me the picture and asked me if I recognized that man and I told him I did. At that time he did not tell me what I was going to testify to here. I asked him if he had been to see

certain people in California and he said he had not. We had a little conversation regarding the matter and I told him I didn't know anything, only in a general way. I indicated to him that I didn't have a good opinion of Mr. Griffin's reputation but I did not go over the whole thing with Mr. Lewers. I told him that I could not give any dates and I meant to say that I had no discussion with Mr. Lewers about what I was going to testify to on the stand here and I did not tell Mr. Lewers everything that I have testified to here about what I thought **[2862]** of Mr. Griffin's character. I am not in any business relations with the Southern Pacific Company. I sold the K. T. & O. Oil Company some screens about six months ago. I don't remember whether that was just the time or not when Mr. Gray, the Southern Pacific detective, called on me. It was approximately the same time. I think I sold the Kern Trading and Oil Company in the last three years about $7,000 worth of stuff. I make sales of our manufactured products to the Associated Oil Company. In doing business with the Associated Oil Company I do it through the purchasing agent of the Associated Supply Company, which is the same as the Associated Oil Company. Their purchasing agent is Mr. Wilson, I believe. He is their manager here. I have sold them during the last five years, a couple of thousand dollars worth of stuff. I wish to correct my statement in regard to the Southern Pacific. I drilled two wells for them in New Mexico about eighteen months ago at Gage. The work was direct-

ed from Mr. Platt's office, who is the chief engineer. I don't know the subsidiary companies of the Southern Pacific, therefore that is all I can remember at present. I had some dealings with the Rio Bravo Oil Company in Texas. I sold them oil screens. Mr. E. T. Dumble was at the head of the company at that time. I have not been there in three years. I have had some business relations with them but I don't know who it was with. During my time of doing business with the Rio Bravo Oil Company in Texas I guess I did as high as $7,000 worth of business with them. The total contract price of the wells we drilled, I think, was about $2500. That business has been closed and I have been paid my money. I have not done any other **[2863]** business with the Southern Pacific since. I have bid on work but did not get it. My company in Texas has had some small business with the Texas and New Orleans Railroad Company. When I speak of the Southern Pacific I mean the Atlantic division. The T. & N. O., the G. H. & S. A. and other companies under the Atlantic system. I have done business with the G. H. & S. A. We drilled some wells for them a number of years ago in Texas. We drilled about half a dozen wells. The contract price was about eighteen or twenty thousand dollars. We furnished them screens. They were included in the contract price. I know the Morgan, Louisiana & Texas railroad. It is part of the Southern Pacific system. We drilled some wells for them in Louisiana. I think we drilled two or three wells. The contract price was eight

or ten thousand dollars. We furnished that company with screens for those wells. We have also done business with the Houston & Texas Central Railroad which is a part of the Southern Pacific system. We drilled one well for them at McNeil. The contract price was so much a gallon for water, but we didn't get any. I furnished them with a screen some eight years ago. The cost was about a hundred dollars. That is all the business that I recollect having done with the Houston & Texas Central. We drilled a well for the Houston and East and West Texas Railroad, which I believe is a part of the Southern Pacific system. The contract price of that well was two thousand dollars and included screens that we furnished. My business dealings at Gage, New Mexico, were done with the Los Angeles office of the Southern Pacific. It is not possible that **[2864]** the vast amount of business which I and my company have done with the Southern Pacific Company, defendant, and its subsidiary companies, has had a tendency to influence my testimony in regard to Mr. Griffin, whom I say has never done an injury to me excepting that his company owed me some money when it went into the hands of a receiver.

RE-DIRECT EXAMINATION OF PAUL D. BOWLER

My impression of Mr. Griffin was not based upon the failure of the Spindletop Power Company to pay its debts. It is based on a number of transactions, such as the setting of some compressors once in Bat-

son, and the way he conducted himself when he was acting as subcontractor here in California, and what he said to me and told me at different times. The failure of the Spindletop Power Company did not create any feelings on my part, nor did it leave any desire with me to get even with Griffin. It perhaps had a little bearing, in the decision, in my opinion, in the summing up of my opinion of the man. The various transactions referred to with different railroad companies formed a very small portion of our entire business; the business transactions over the territory in which our company operates will amount to a million and a half dollars a year.

RE-CROSS EXAMINATION
OF PAUL D. BOWLER

The total percent of our business done with railroads owned and controlled by the Southern Pacific Company might be one percent; the amount that I have mentioned covered a period of seven years.

[2865]

W. T. JONES, a witness called and sworn on behalf of the defendants, testified as follows:

DIRECT EXAMINATION

I live in Bakersfield, California; I am employed by the Union Oil Company, about twelve miles from Orcutt, in Santa Barbara County, and am at present engaged in erecting a large gas refining plant; have been in California since the 20th of November, of last year. I was born at Richmond, Virginia, and

subsequently moved to Texas, where I lived near Beaumont for about ten years; I was engaged in Texas with the Rand Drilling Company of New York, and assisted in the development of a patent for flowing of wells, under Mr. Titus, and afterwards was engaged in the erection of machinery for air compressure for a while, and then went into the employ of the Texas Company in the production branch as chief engineer.

I was acquainted with Mr. Griffin in Texas, and first met him in Spindletop early in 1902, but do not recollect the month. Griffin was connected at that time with the Spindletop Power Company as foreman of the air plant; the Spindletop Power Company moved to Sour Lake in 1903 or 1904, and they went into the hands of a receiver in 1903 or 1904; after they went into the hands of a receiver, I saw Griffin at Sour Lake; his son was employed by me while at Sour Lake, and he told me that his father was engaged in the Rio Bravo Oil Company, either constructing or tearing down oil tanks; Thomas J. Griffin stood ten or twenty feet away during this conversation.

I am acquainted with Griffin's general reputation in the community in which he lived in Texas during the years 1902, 1903, and 1904, for truth and veracity; that is, I was for a month or two during the spring, when Mr. Griffin was in Beaumont; it was bad—not good; I was introduced to Mr. Griffin three or four times but I never had but very little conversation with him; my first experience with him was not

very good; he is not a man that I would care [2866] to cultivate an acquaintance with; I do not base my answer as to his reputation upon any feeling that I have personally against Mr. Griffin; I couldn't say how generally his reputation for truth and veracity was discussed in the community; I saw him frequently in the fields, and heard his reputation for truth and veracity discussed quite frequently among oil men, especially among machine men and operators on the field, and it was not good; I have not seen Mr. Griffin since 1904, the time I have just mentioned when he was with his son; I would not like to believe a statement in a business or ordinary matter made by Mr. Griffin to me, knowing his reputation as I do.

CROSS EXAMINATION OF W. T. JONES

I worked for the Texas Company in Texas. They were engaged in the production and refining of oil. They operated in every field in Texas and Oklahoma but their headquarters were originally in Beaumont and are now in Houston. The Texas Company is not controlled by the Southern Pacific. My father was a farmer engaged in the railroad business in Illinois. He worked personally for the Illinois Central Railroad. He was engaged in the transportation department of that railroad. He was Assistant freight agent or division freight agent or something of that kind in Chicago. In 1881 or 1882 I left there and went to work in the Burnside shops for the Illinois

Central as an apprentice. **[2867]** I was then about twenty four years old. During the next two or three years I had several other positions and I then went back to Chicago as a machinist and worked two or three years for the Illinois Central railroad. I then went to work for the Iron Mountain Railroad. That was about 1893. I then went to Spokane. I didn't do any work there. I then went to Buffalo, New York. I wasn't doing anything. It was not because I couldn't get a job. I didn't care to work. Work was pretty dull at that time and I was looking for an investment. I had some money. It was while I was in Beaumont that I went to work for the Texas Company. That was about 1902. It was either in September or October, as near as I can remember. I remained with them until 1911. We were not in Beaumont all the time I worked for the company. I would be in all the fields. I met with Griffin in 1901 or 1902 at Spindletop. There was only one field in Texas at that time and that was at Beaumont. I presume that that field would cover a hundred acres. Mr. Griffin never did me any injury, none whatever. He never loaned me any money and I never loaned him any. I didn't know that he was Vice President and General Manager of the Spindletop Power Company. I was not well acquainted with Mr. Griffin. I think I would know him if I saw him. I might not. The first introduction I had to Mr. Griffin was when he came to the plant on which I was engaged in work and

wanted to borrow some tools or some fittings and someone introduced me to him and the other occasions were at different times during that and the following year. These **[2868]** introductions were very brief and I had no business dealings with him of any kind, or his associates. I had no occasion particularly, to remember him at that time any more than any other man. I don't think that it was out of the ordinary. So far as I was individually concerned he minded his own business as far as I knew him. I have no complaint to make now, none whatever, about the way he treated me. I first learned that I was to be a witness here about a year ago while I was on a pullman car en route to Tucson. Some gentleman, I don't know what his name was but I believe it was Miles Bowler, met me on the pullman. I was going into the wash room just before getting into Tucson and Mr. P. B. Bowler of Bowler and Layne, and Miles Bowler, had a paper between them and Mr. P. B. Bowler held up the paper and says: "Jones, do you know that fellow?" and I looked a minute and I said: "Yes, that looks like Tom Griffin." Mr. Bowler of the Southern Pacific asked me about Griffin's reputation. At that time I was acquainted with Mr. Bowler of Layne and Bowler. I knew him in Texas. I began to work for him about a year ago. I know a man working for Layne & Bowler by the name of Russell. He is a kind of night watchman or foreman down there. I don't know if there are any more of the people from the Layne and Bowler works that are coming up here

to testify against the character of Mr. Griffin. I was employed by Layne and Bowler as an erecting engineer. I met a man by the name of Mr. Gray, detective for the Southern Pacific. He did not tell me that at one time he was connected with the government but he told me a good many other smart gentlemen were. I did not have a talk with [2869] Mr. Bowler of Layne and Bowler before I came here. The only time I talked with him was on the particular occasion I mentioned in the pullman car. I did not talk with Mr. Russell at any time about Mr. Griffin. The reason I knew I was wanted up here to day was some gentleman telephoned to me that I was wanted. His name is Luke or Lute, something of that kind. I was not subpoenaed to come here. I presume I am being paid for coming up here. I think my services are worth what I am getting, five dollars a day and expenses. I am not with Bowler and Layne any more. I left there the first of July of this year. I am at present engaged in erecting a large gas plant for the Union Oil Company about twelve miles from Orcutt. I am an erecting engineer. Mr. Quinn is in charge of the work. If Mr. Griffin was asked the question whether he regarded my reputation for truth and veracity in so far as he knew about me in Beaumont, as to its being good or bad, I couldn't say what he would say about it. As to my reputation in Beaumont, my word was always considered good. I don't know anything bad about myself. When I was working for the Texas Company they were furnishing oil to the Southern Paci-

fic or the allied railroads at Spindletop. They had a very large contract at one time with the Southern Pacific. I was told it was a million barrels. [2870]

W. H. DAVIDSON

Witness for Defendants. Los Angeles, Cal, July 21, 1913.

Direct Examination.

I live at Beaumont, Jefferson County, Texas, and have lived there five years; I am judge of the Fifty-eighth Judicial District, which is the highest trial court in the State; the District court in Texas has exclusive jurisdiction in all contested elections, and land cases, and in all cases where the amount in controversy exceeds a thousand dollars; the next highest court is known as the Court of Civil Appeals, which handles civil matters; in criminal matters it is the Court of Criminal Appeals; it is the court of last resort. I was born in Texas. My father is a judge of the Court of Criminal Appeals and has been serving since 1891; prior to his going on the bench, I was engaged in the practice of law at Beaumont, since July 1, 1908, and five years previous to that I was at Sour Lake, Hardin County, Texas; while practicing law at Sour Lake I knew Mr. Griffin casually.

I knew that Mr. Griffin was connected with the Spindletop Power Company, but my acquaintance with him was more by reputation than personal; I did not know him personally, but knew him by sight. I knew his general reputation in the community for

truth and veracity, and was acquainted with his general reputation at that place during the latter half of 1902 and 1903, and probably the latter part of 1904; Griffin did not stay there a great while, approximately a year from the time that I went there in July, 1903; his reputation for truth and veracity was bad; he bore the reputation first, of being a man who talked a very great deal; he was given to bragging, and in fact he talked so much that his reputation was that he talked so much that he was not considered reliable and truthful; a great many of the people there at Sour Lake called him "B. S." Griffin on that account. **[2871]**

I have absolutely no personal feeling against Mr. Griffin. I don't know that I would know the man even if I should see him now. I knew him at that time when I met him on the street. He has never done me, or anyone in whom I am interested, any injury whatever.

CROSS-EXAMINATION OF W. H. DAVIDSON

I was not subpoenaed to come into this case. I came here at the request of the Southern Pacific, I suppose. Mr. W. E. Orgain was the immediate cause of my coming and Mr. Gray was the first party that came out there. Mr. Orgain, I presume, represents the branches of the Southern Pacific, I don't know. It is the Texas and New Orleans railroad in the district in which Beaumont is headquarters. Mr. Gray first talked to me in May or June of this year

at Beaumont. I still retain my position in the judiciary. I arrived in Los Angeles Saturday morning. My business in coming to Los Angeles was to testify in this case. I am not paid a cent for coming here. The company pays our transportation. I presume it was a pass that I got. Mr. Orgain paid me —turned me over some funds and I have a pass from the state from Rio Grande here and back to that place. From Beaumont to Rio Grande I bought tickets. Mr. Orgain gave me **[2872]** $190 I think, to come out here. My wife came with me. I brought some additional money with me. I don't think what Mr. Orgain furnished me with was sufficient to pay the expenses of myself and wife. My wife has a pass from the Rio Grande to Los Angeles and return furnished by Mr. Orgain. The pass is for myself and wife. The $190 was over and above the transportation from Rio Grande to Los Angeles and return. It is correct to assume from my testimony that I have a pass from Rio Grande to Los Angeles and return for myself and wife. Rio Grande is on the state line between Mexico and Texas. When I am asked what the tickets cost for myself and wife from Beaumont, Texas, to the point at which the pass was good, the answer is, "It is only a mile or two from El Paso to this state line, and the railroad paid no attention to that as I came over that; I didn't buy any additional tickets but the Clouderoft tickets, I believe, cost seventy odd dollars. I don't remember if those tickets were paid for out of the $190 which was furnished me. I had some money

besides that and it may be possible that Mr. Orgain bought those tickets and gave me the $190 in addition. I won't be positive about that. It may be that the tickets were purchased, possibly, from Cloudcroft and return for myself and wife and the passes issued from there to Los Angeles and return to that point for myself and wife and $190 in addition to that and when you ask me in my best recollection if that is not probably the fact, I will say that I am afraid to say; I will say that it may be the fact, I don't remember. I brought some money with me and got some more this morning. I don't remember now. **[2873]** They offered to pay my expenses and pay me whatever I would demand or thought my time was worth on the trip. Mr. Gray seemed to think that my salary would be stopped while I was not serving. And I told him that I would not expect anything in the way of compensation at all. All I wanted was expenses and if there was was anything left they would get it back and if there was anything over they would have to refund it. I regarded the pass for myself and wife as part of the necessary expenses of the trip. When you ask me if I received any other money besides the $190, so far, from Mr. Orgain of the Southern Pacific Company I answer, "Well, I have received—I borrowed some from him not very long ago; I think it was $100; $125, something like that; it had nothing to do with this, however. Oh, that was before I went on the Bench, Yes." When you ask me if I have been employed by the Southern Pacific Company in my

private practice as a lawyer, my answer is, "Until I was appointed on the bench I was with the firm of Orgain & Butler. On the first of January, 1912, Judge Hightower resigned from the District bench and went into that firm and I continued with the firm under the name of Hightower and Butler until my appointment this year. During 1912 and until my appointment I was—I think they called me "local attorney" for the Texas and New Orleans Railroad at Beaumont, which, I understand is a branch or subsidiary of the Southern Pacific Company. I think it was on the 10th of July, 1911, when I became a member of the firm of Orgain & Butler. This Mr. Orgain is the same gentleman who furnished this money. He is the District Attorney of the Texas and New Orleans Railroad, **[2874]** a subsidiary of the Southern Pacific. He also represents the Kansas City Southern in that district. I was in Sour Lake in private practice for five years. My brother in law, George W. Graves, of Houston, was connected with the firm for awhile. The first real practice I did was at Sour Lake and from there I went to Beaumont. The firm of Hightower, Orgain & Butler is still acting for the Southern Pacific. I remember the occasion of the explosion of some of the lines of the Spindletop Power Company when Mrs. Neidbell was killed. I was employed to represent her next of kin in litigation against the Spindletop Power Company. I brought a suit against them. I brought suit for probably twenty five or thirty thousand dollars. I did not have a bit of trouble

with the Spindletop Power Company or Mr. Griffin. I never got where I could have for the Spindletop Power Company went into the hands of a receiver shortly after that and the case was never tried. I understand that my salary as Judge goes on during the time I am absent from the state.

RE-DIRECT EXAMINATION

I think it must have been early in 1904 that the Spindletop Power Company went into the hands of a receiver. It was not long after this explosion which was in the fall of 1903. I was still located at Sour Lake at the time the company went into the hands of a receiver. I do not know of my own knowledge whether or not the property was afterwards sold at a receiver's sale. As to the arrangements that were made for my trip here, Mr. Gray wanted to **[2875]** know how much I would want for making the trip and I told him that I would not take a cent as remuneration. It was merely a matter of expense on the trip. That was all.

GEORGE W. ARMSTRONG, a witness called and sworn on behalf of the defendants, testified as follows:

DIRECT EXAMINATION

I live in Fort Worth, Texas, and have lived there about twenty-four years. I am president of the Texas Rolling Mill Company, and president of the Fort Worth Gas Company, and am a member of the firm of Hubbell, Black & Co., of that city, president of the Denison Mill & Grain Co., of Denison, and

owner of the Horseshoe ranch, and am largely interested in a number of oil producing companies, and a couple of oil mills manufacturing cotton seed oil.

I was originally president of the First National Bank of Sour Lake and had private banks at Batson and Saratoga. I practiced law from the time I was twenty years of ago until about 1895, and at that time was elected county judge of Tarrant County, Fort Worth. I was president of the First National Bank of Sour Lake from 1902 to 1904.

I was acquainted with Thomas J. Griffin. I knew him first at Spindletop, and first met him in the spring of 1902. I knew him in the Batson field for a period of about two years, and as president of the bank I had business dealings with him; I loaned him $1500 on property which he claimed to own; this loan was secured by a mortgage and a note was given for the mortgage; I handled the matter for the bank. The certified copy of complaint now shown me, in an action brought by the First National Bank of Sour Lake against Thomas J. Griffin, Defendants' Exhibit No. 182, describes the note that I have just discussed, and the note was dated April 26, 1904; Griffin had delivered the note to me at the bank at Sour Lake, and a few days prior to concluding the loan I met him on the train. **[2876]** At the time when this note was given Mr. Griffin was engaged in drilling an edge well; he had been drilling this well as long as thirty days prior to the time when he borrowed the money, and continued fifteen to thirty days after that.

The deed of trust under the power of sale which Griffin gave me was foreclosed by me, and I sold the land amongst other things in the deed of trust, and bought it in for $50; I subsequently sold it for $200; Griffin offered as security for the loan from fifteen to twenty thousand barrels of oil in storage, his drilling rig and boiler, two wooden tanks, and the pipe, and the land on which the well was situated; I made two demands on Griffin for the payment of the money, and after the second demand was made he left for old Mexico, and I have not seen him since. I am acquainted with the general reputation of Thomas J. Griffin for truth and veracity in the community where I lived and where I knew him; his reputation for truth and veracity was bad; I became acquainted with that reputation after he left; a number of oil men came to me to discuss the matter with me, knowing that Griffin had left the country, and the circumstances under which he left, and they seemed surprised that I did not know the character of the man; all of them seemed to know that he was both a thief and a liar.

CROSS- EXAMINATION OF GEORGE W. ARMSTRONG

I never had any connection with the Southern Pacific, or Texas & New Orleans Company, or any other railroad in my life, of any sort or character. I was asked to come here to testify by Jesse Andrews and the firm of Baker, Botts, Parker & Garwood, who [2877] are the local attorneys for the Southern Paci-

fic Company. I was willing to come and was a little more willing to come on this occasion because Griffin happened to be a witness and when you ask me if I came because I lost some money on a note while I was running a Bank in Sour Lake, well, it is not the loss of the money. I can lose money with as good grace as anybody but I don't like for a man to swindle me out of it and I don't feel kindly, if that is what you are trying to get at, to a man that does swindle me. I am so sensible to the matter and so full of rancor and bitterness towards Griffin that I tried to have him indicted and he stayed out of the country on account of that. I don't know that he stayed out of the country, all I know is that I couldn't find him and he was quoted as being in Mexico. I don't know that he went to Mexico through the advice of E. T. Dumble, who, at that time, was at the head of the Rio Bravo Oil Company. I know I gave him a certain number of hours to get the money, and during that time he left the country. I am sensible of a strong feeling against Mr. Griffin and it grew out of the fact that he swindled me. He represented he had property and he didn't have. I gave him a mortgage on property he didn't have. I was a banker and I had sufficient confidence in him to loan him fifteen hundred dollars on what I thought was twenty thousand dollars of security and after I loaned him the money and it was not paid I was willing to go on the stand at any time to testify about his character; and I would go out of my way to some extent to do it. I would go three hundred

miles out of my way." **[2878]** When I am asked if I ever had a pass from any of the railroads controlled by the Southern Pacific Company my reply is: "Well, now, when I was Judge I may have had a trip pass over the Central; I am not certain—but it was not at that time controlled by the Southern Pacific, no sir. It has been about seventeen years ago. I did travel on trip passes. I have never had any before or since. And we had no anti-pass law then and it was a customary thing for officials to take trip passes. I am sure I have had annual passes but not over any of the Southern Pacific roads. I remember to have had an annual pass over the Fort Worth and Denver and I think I had one over the Santa Fe. I know I had one over the Katy. The Southern Pacific doesn't reach my town. Well, at that time I was an official and was recognized only from the fact I was an official. I was a poor man at that time. At the time I loaned Mr. Griffin the money in 1904 I had a good enough opinion of Mr. Griffin to lend him the money. I knew he was windy and a blarney and so forth, but I didn't think he would take the risk of mortgaging property that didn't belong to him and while I didn't have an excellent opinion of Mr. Griffin I had a fair opinion of him. I thought I would get the money back or I would not have loaned it. My opinion of him was good enough at that time for me to lend him fifteen hundred dollars on the security that he offered. When you ask me where the mortgage is that I have talked so much about and have'nt produced I will say that I made

a search for it in my papers **[2879]** but it has been a long time and I failed to find it. At the time I loaned that money, as a matter of fact, I thought every dollar was fully covered by the security given me and many times over. I was willing as a banker to bid in that land that I held as security in the absence of Mr. Griffin at fifty dollars knowing it was worth much more than that and to sell it at a profit of one hundred and fifty dollars. When I sold it for one hundred and fifty dollars it was during an excitement and I was willing to take a chance on the excitement at that time and profit by it. I should have given Mr. Griffin credit for what I bid the property in for but I never did. When you ask me I confess that I never gave him any credit and sued him for the full amount and interest, although I sold his property, I answer I did'nt draw up the petition and it never proceeded to judgment because I could'nt get service on Mr. Griffin. I don't know what became of the deed of trust which Mr. Griffin gave me. I have a world of papers in connection with different banks and I have destroyed a lot of them and a lot of them are down in the old vault. There are some things I can recollect clearly and some things are a little hazy and some perhaps I have forgotten altogether. I have some recollection on the point of the security he gave me and while it is not as clear as I would like to have it, my best recollection is and it is reasonably clear that it embraced fifteen to twenty thousand barrels of oil. I can not give you the names and addresses of the persons who called on

me at the bank and told me Mr. Griffin had swindled me. It would be utterly impossible. I cannot give the names **[2880]** of any one of them. I told you that several persons came to my bank after Mr. Griffin left and told me the character of the man he was and I now say I cannot tell you who they were and all my testimony is to be believed along the same line as you would take that statement. I have not brought in any deed to show that that property I mentioned was actually mortgaged and there is nothing to show that my statement is correct at all. I know Mr. Bass. He is a man to be believed. He is not a liar and a thief and as far as I know he is a truthful, good man. I have not seen Mr. Bass for four or five years. Mr. Griffin was associated with Mr. Bass. As best I remember I inquired of Mr. Bass within a short time after Mr. Griffin left where he was, then I got busy with other matters and didn't think about it after a little while so I did not pursue the matter for a number of years, forgot all about it. I could not find Mr. Griffin's address when I inquired which was a few months after he left. I have not had my recollection refreshed about how many acres of land Mr. Griffin put up as security for the note because I have not seen the original of any instrument but to the best of my recollection it was one acre. I am quite sure that if he mortgaged five acres that it turned out to be only one acre because I sold one acre afterwards and made title to one acre. He possibly may have mortgaged more and the mortgage itself may have called for five acres. This land

that was mortgaged to me was what you call edge land, which is prospective oil land not yet proven. If it turns out, upon proof **[2881]** by the drill, to be valueless for its petroleum, it would not be worth anything. On the other hand if it turned out to be oil producing in commercial quantities it would have an enhanced value of anything from five to ten thousand dollars an acre, depending on the character of the oil. I did not go out and investigate to find out whether the security Mr. Griffin was giving me was good although, as I said before, bankers don't loan on any gamble but they must know what they are lending on. I took Mr. Griffin's written statement for that. This money was loaned to Mr. Griffin to finish his well with. He had some trouble with his pipe and he had incurred some indebtedness because of this trouble and he needed this money for the purpose of completing the well and when I am asked as a man acquainted with oil affairs and as an active business man in and around the oil fields and must have known positively that Mr. Griffin could not have had fifteen thousand barrels of oil as the well was not finished, I say: "Well, the well came in a flowing well and the reports are usually exaggerated, and I had some information about the well and that it produced quite a great deal of oil; and Mr. Griffin made the statement to me when he mortgaged the property and I accepted his statement as true. I knew the well was not finished and that the money was to be procured to finish the well, and yet I say under oath that he represented to me that he had produced

from that well fifteen thousand barrels of oil. Besides the land which Griffin mortgaged to me there was included in the mortgage one thousand barrel wooden tank, a pump, some steam heads, twelve hundred feet of casing, **[2882]** a derrick, the camp and equipment and some strings of pipe. I don't know whether or not there was twenty seven hundred feet of pipe but it included all the pipe he had there. It also included a rotary worth five hundred dollars and a boiler worth five hundred dollars but he did'nt own either one of them and I also took a blanket security, in that instrument, on certain extras about the place consisting of pipe, tools, tongues, wrenches, couplings. I do not say that this personalty had a value of five hundred dollars; the mortgage may have stated the value. I will say that the value of the personalty, including the rigs and tanks as junk, and that was the only way to value it, would be anywhere from fifteen hundred and twenty five hundred dollars. I would probably get about fifteen hundred dollars out of it as junk. The land has a fluctuating, speculative value. It may be valuable this month and to morrow not worth a cent. If it has a value it has it for oil; if it has not any oil it has no value. Its value would depend, if it was like the balance of the field, I mean like the heart of the field—it would be worth from five to ten thousand dollars an acre and if there had been only one acre and it appeared to be valuable oil land I would have been amply secured on my fifteen hundred dollar note. The cost of that twenty-seven hundred feet of pipe would depend

upon the size of the pipe and the character of it. If it was six or eight inch pipe it would have been worth in excess of two thousand dollars but I think this pipe was three or four inch pipe and was worth from fifteen to thirty five or forty cents a foot. [2883] I knew that Mr. Griffin had trouble with that well after I made this loan to him. The well had flowed a good deal and he pumped it with the steam heads on and he produced quite a lot of oil, I understood. I don't know what the character of the trouble was. I know he had trouble. I don't deny that is true; I just say I know he had trouble but I don't know its character. I think this was right after the failure of the Spindletop Power Company. This note was a sixty day note dated April 26, 1904, and the note was due June 26, 1904. I do not remember receiving a letter from Mr. Griffin in the latter part of May, 1904, in which he told me that he had become completely discouraged with the property upon which I had a mortgage and that he would be unable to pay that note. I didn't get any such letter. I didn't have any conversation with Mrs. Griffin about what her husband intended to do about the note. I don't recollect ever having seen Mrs. Griffin. I did not make a statement to Mrs. Griffin in which I said: "I don't want to take that over that property. It is junk to me. I would like Mr. Griffin to go back there and operate that property, and if he needs money, further help, I will give it to him." I didn't know Griffin was married until after he had left there and I received letters from his wife and I didn't say to Mrs. Griffin in any

conversation when she told me that Mr. Griffin wouldn't go back there, that I would take some steps against him and I did not become very angry. When you ask me whether or not I will affirm on my oath, that the trust mortgage which I refer to stated that a certain quantity [2884] of oil was included in that mortgage I will say that to the best of my recollection I believe it was. The chances are that the mortgage covered oil thereafter to be produced from the well as oil already produced. After the maturity of the note I had an opportunity, for how long I could not state, when Mr. Griffin was right in my neighborhood constantly, to bring a suit on this note and reduce it to a judgment but I never did it. This time might possibly have been two months but I don't think it was. I have no desire, on direct examination, to have the court understand that Mr. Griffin had fled from my wrath and the jurisdiction of the court and I don't think that would be a fair inference from my testimony.

RE-DIRECT EXAMINATION.

I have no independent recollection as to whether or not this mortgage transaction was covered by one instrument or more than one. The regular way to do it would be to have two but often you embrace it in one instrument and first record it as a deed of trust and then file it later and leave it in the Clerk's office as a chattel mortgage. Whether in this instrument there were one or two I am unable to remember because it could have been either way. Well, a deed of

trust you send to the clerk and he transcribes it on his records and that deed of trust is sent back to you. A chattel mortgage is filed with the clerk. It costs you the regular recording fee to record a deed of trust; only twenty-five cents to file a chattel mortgage. He has files [2885] under which he numbers the original instruments, and he retains that on this file. When you take it out your mortgage is gone. Now, the regular way would be to have two instruments, one to leave with the clerk, or the chattel mortgage, and the other to retain, the certified—I mean the original of your deed of trust, which is filed,—just depending on whether a man had time to write two instruments. If I was busy I would have made it in one, and if I had plenty of time I would have written it in two, and I don't remember whether I made two instruments or one. Mr. Griffin did own the derrick and the land and that was all that he did own. I visited the land at an early date after the giving of this mortgage and note and I found an earthen reservoir there. I found water in it with a thing scum. The tank was big enough to hold fifteen to twenty thousand barrels of oil. When I say tank I mean a sump hole. I cannot give you the name of the man who owned any of the property. I cannot give you the name of the people who owned the steam heads worth five hundred dollars or the twelve hundred feet of casing worth five hundred dollars. I did find out that Mr. Griffin owned the derrick. I do not know the name of the man whom I found on my investigation owned the three strings of pipe, of

twenty seven hundred feet. I do not know the name of the man whom, in my investigation, I found owned the two pumps worth twenty five hundred dollars. I will answer it all by saying I don't remember the name of any man who owned any of the property. I think the Parkersburg Tank Company owned the tank. That is my best recollection. That is all I can remember. [2886] I know I didn't give Mr. Griffin credit for the two hundred dollars that I realized from selling some of the property because he was only entitled to credit for what the property brought in a sale under the deed of trust.

Mr Lewers—I offer in evidence at this time, in connection with the testimony of the witness George W. Armstrong, a certified copy of the deed of trust referred to by him in his evidence, dated April 27, 1904, certified by the clerk of the county court of Hardin county, Texas, under date of July 26, 1913, and read the same into the record as follows:

"THE STATE OF TEXAS,
COUNTY OF HARDIN, KNOW ALL MEN BY THESE PRESENTS: That I, T. J. Griffin of the County of Jefferson, and state of Texas, being justly indebted to the First National Bank of Sour Lake, Texas, in the sum of fifteen hundred ($1500.00) dollars as evidenced by promissory note of even date in words and figures substantially as follows: Sour Lake, Texas, April 26" 1904.

Sixty days after date I promise to pay to the order of the First Natl. Bank of Sour Lake, at the First National Bank, Sour Lake, fifteen hundred no/100

dollars ($1500.00) for value received with interest at the rate of eight per cent per annum from maturity until paid, this note is secured by pledge of the securities, mentioned on the reverse hereof with the right to call for additional security should the same decline and on failure to respond, this obligation [**2887**] shall be deemed to be due and payable on demand, with full power and authority to sell and assign and deliver the whole of the said property or any part thereof or any substitute therefor or any addition thereto at public or private sale at the option of the said first National Bank of Sour Lake, on the non-performance of this premises and without further notice, applying the net proceeds first to the payment of this note and the balance at the option of the First Natl. Bank of Sour Lake to any other liability to said First Natl. Bank of Sour Lake, now existing or which may hereafter accrue and accounting to me for the surplus if any and hereby agree to pay attorneys fees of 10 per cent in case of suit. It is further agreed that the pledges shall have the right to buy in the said securities at market rate at said private or public sale. T. J. Griffin. The payment of which note according to its tenor and effect I desire to assure and secure the said First National Bank of Sour Lake or its assigns in consideration thereof and for the purposes and trusts hereinafter set forth and declared and also in consideration of ten dollars to me in hand paid the receipt whereof is hereby acknowledged, have granted, bargained and sold and by these presents do grant, bargain, sell and convey unto C. L. Edwards trustee of

the County of Hardin, in the State of Texas, the following described property, One acre of land, to wit: acre number three (3) of the John D. Jackson subdivision of the H. G. King original survey of forty two (42) acres patent number two hundred and twenty five (225) situated in Hardin County, Texas, in [2888] what is known as the Batson Oil field, same being in strip B. of said Jackson subdivision. Also an oil well now producing and in operation on the acre of land above described, same being locally known as the T. J. Griffin well No. 1, number one, together with all and singular the rights and appurtenances to the same belonging or in anywise incident and appertaining. And I do by these presents bind myself, my heirs, executors and administrators to warrant and forever defend all and singular the said property unto the said C. L. Edwards Trustee his heirs or assigns against the claim or claims of any and all persons whomsover lawfully claiming or to claim the same or any part thereof. This conveyance however is intended as a trust and is made for and upon the following trusts terms and conditions, to-wit: In the event I, T. J. Griffin shall well and truly pay the said note and interest due thereon to the legal holder thereof when the same shall become due and then this deed and all herein contained to be null and void, but in case of default on my part or on the part of my assigns to pay the said note according to its tenor and effect, it shall thereupon or at any time thereafter the same remaining, unpaid, be the duty of the said C. L. Edwards trustee and of his success-

ors as hereinafter provided at the request of the said First National Bank of Sour Lake or the legal holders of said notes which request is hereby presumed to enforce this trust to sell said hereinbefore described property at the court house door of said Hardin County, to the highest bidder for cash on the first Tuesday of same month between the hours of 10 o'clock A. M. and 4 o'clock P. M. [**2889**] at public first giving at least twenty one days notice of the time, place and terms of sale by causing a notice thereof to be published in some newspaper published in the County of Hardin, once a week for three successive weeks next before the day of sale and also by posting written or printed notices of the time place and terms of such sale at three different public places in said county, one of which shall be the court house door of said county for not less than twenty one successive days next before the day of sale and to make due conveyance to the purchaser or purchasers with general warranty and the title to such purchaser or purchasers when so made by said trustee shall bind myself, my heirs, executors and administrators to warrant and forever defend, with the proceeds arising from such sale the said trustee shall first pay all the expenses of advertising, sale and conveyance including a commission of ten per cent principal and interest due and unpaid on said note to the said First National Bank of Sour Lake, or other holder of said note and the remaining balance if any, shall pay over to the said T. J. Griffin his heirs or assigns. In case of the death inability, refusal or failure from any

cause the said trustee shall fail or be unable to act then R. H. Halland of the County of Hardin, in the State of Texas, is hereby constituted and appointed alternate trustee who shall thereupon hold, possess and execute all the titles, rights, powers and duties herein conferred on said trustee and whose conveyance to the purchaser shall be equally valid and effective. And in the event the said trustee and alternate [**2890**] trustee should die or from any cause shall fail or be unable to act in carrying out the provision of this deed then the legal holder of said note shall without other formality than an appointment and designation in writing name, constitute and appoint a successor and substitute who shall thereupon hold, possess and execute all the rights, title, powers and duties, herein conferred on said trustee named and whose conveyance to the purchaser shall be full evidence of the matters therein stated, and no other proof shall be requisite of request by the holder of said indebtedness to the trustee to enforce this trust or of the advertisement or sale or any particulars thereof and all prerequisites to said sale shall be presumed to have been performed, and the sale made under the powers herein granted shall forever be a perpetual bar against the maker of this trust his heirs and assigns. The legal owner of said indebtedness shall have equal right to become the purchaser at such sale, being the highest bidder.

Witness my hand at Sour Lake, Texas, this 27 day of April, 1904.

T. J. Griffin.

"THE STATE OF TEXAS,
COUNTY OF HARDIN. Before me, J. A. Hoover, a Notary Public in and for Hardin County, Texas, on this day personally appeared T. J. Griffin, known to me to be the person whose name is subscribed to the foregoing instrument, and acknowledged to me that he executed the same for the purposes and consideration therein expressed. [2891]

Given under my hand and seal of office at Sour Lake, this 27 day of April, A. D. 1904.

J. A. Hoover, Notary Public,
(Seal) Hardin County, Texas.

THE STATE OF TEXAS,
COUNTY OF HARDIN. I, R. M. COLLINS Clerk of the County Court in an and for said County do certify that the foregoing deed of trust dated the 27 day of April 1904, with the certificates of authentication was filed for record in my office the 29 day of April 1904 at 8 o'clock A. M. and duly recorded the 3 day of May 1904 at 10 o'clock A. M. in D. T. record of said County in Vol. 3, pages 459 to 462.

Witness my hand and the seal of the County Court of said County at office in Kountze, the day and year last above written. R. M. COLLINS Clerk County Court,

Hardin County, Texas.
(Seal) By J. D. Lowrey Deputy.

THE STATE OF TEXAS,
COUNTY OF HARDIN. I, J. J. Bevil Clerk of the County Court in and for Hardin County, Texas, do hereby certify that the above and foregoing is a true and correct copy of the record as the same appears of record in D. T. record Vo. 3, page 459 et seq.

Given under my hand and seal of office this the 26th day of July, A. D. 1913. J. J. Bevil Clerk County Court,
Hardin County, Texas.
By M. L. Chance Deputy."

(SEAL: County Court of
Hardin, Texas.) [**2892**]

MR MILLS—No objection.

The certified copy of deed of trust last referred to and offered in evidence and read into the record is marked "Defendants' Exhibit 183—L.L."

Mr Lewers: I also offer in evidence, in the same connection, certified copy of registry entry of chattel mortgage, dated April 27, 1904, for $1500, given to C. L. Edwards, trustee, by T. J. Griffin, certified under the seal of the county clerk of Hardin county, Texas, and read the same into the record as follows:

Date of Reception:	*Name of Mortgagor*:	
Apl. 29, 04-8 A.M.	T. J. Griffin	
	Name of Mortgagee:	
	C. L. Edwards, trustee	
Date of Instrument:	*Amount secured*:	*When due*:
Apl. 27, 04	1500.00	June. 26, 04.

Property Mortgaged:

1 Rotary Rig complete on acres No. 3 of J. D. Jack-

son's subdiv. of H. G. King sur. also ½ of the production of an oil well now flowing on the T. J. Griffin well No. one.

The State of Texas)
County of Hardin) I, J. J. Bevil, Clerk of the County Court in and for Hardin County, Texas, do hereby certify that the above and foregoing is a true and correct copy of the Chattel Mortgage from T. J. Griffin to C. L. Edwards, trustee, dated Apl. 27, 04, as the same now appears of record in my office in Chattel Mortgage Register, No. 1. [**2893**] on page 56.

Given under my hand and seal of office at Kountze, Texas, this 26th day of July, A. D. 1913.

J. J. Bevil, County Clerk
Hardin County Texas.

(Seal: COUNTY COURT
OF HARDIN COUNTY, TEXAS)"

I. N. BETTISON, a witness called and sworn on behalf of the defendants, testified as follows:

DIRECT EXAMINATION

I live at San Antonio, and have lived there two and one-half years, and have been engaged in the business of oil drilling and contracting for about twenty years, at Beaumont, Sour Lake, Batson, Saratoga, Jennings, Louisiana, Mobile, Alabama, and in Oklahoma; I own some oil land at Sour Lake and Batson. I was at Sour Lake in 1903; I was acquainted with Thomas J. Griffin, and knew him well in a general

way and worked right along with him at Spindletop in the boom days, and from there to Sour Lake. I was acquainted with his general reputation in the community for truth and veracity; I heard it discussed in the community by everybody in the field; it was considered very bad.

CROSS-EXAMINATION
OF I. N. BETTISON

If Mr. Griffin was asked what he thought of my reputation for truth and veracity, if he told the truth he would say that my reputation was good. I am quite well satisfied with my reputation. My credit will show that my reputation is alright and I am willing to have it investigated from the cradle up. I have nothing in the world against Mr. Griffin. I have had absolutely no trouble with him. I never had a word with him in my life and I never had any business dealings with him. When you ask me to give the names and [**2894**] addresses of the persons in Sour Lake who told me that his reputation is bad, it is just as I told you in a general way, it is generally known all over the field and when you ask me the names of the men who told me in Sour Lake, and to give their present addresses, well, I didn't give it to you. I told you I knew, in a general way. I cannot now give you the name of any person there or the present address of any person who told me that Mr. Griffin's reputation was bad. I know it in a general way. I didn't give anybody's name.

Mr. Osceola Archer, at Sour Lake and at Spindle-

top in 1902, told me that Griffin's reputation for truth and veracity and integrity was bad. I don't remember who else told me. I paid no attention to it. I knew his general reputation — stood right on my derrick and told me that he was making more money than any man on the whole field, when I knew he could not pay his debts. I mention that to show you that I knew what his reputation was. I have nothing against Griffin; if I met him today I would treat him as I always treated him. He and I never had a word in our lives. I drilled a well for the Rio Bravo Oil Company at Saratoga. I think it was in 1905. It was under the direction of Prof. E. T. Dumble. The price was about $5600. I just finished one well for the San Antonio, Uvalde & Gulf Railroad. The contract price, I think, was $5000. I have had no business of any kind with the Southern Pacific Company or any of its subsidiaries except washing a well for them after I drilled this one for them at Saratoga. They had a well that was sanded up and I washed it for them. The company that I washed it for was the Rio Bravo. That was in 1905, right after I finished this other well. I have done drilling for the Texas Company. I drilled two wells for them, I believe it was, at Batson, and then — not the Texas Company, either; the Producers Company; that is practically the same thing; that is the producing end of the Texas Company. Then I had charge of drilling [2895] some out west in Reeves County for several months. I should say that I have done $8000 worth of work for the Texas Company.

JUDGE OCEOLA ARCHER, a witness called and sworn on behalf of the defendants, testified as follows:

DIRECT EXAMINATION

I lived at San Antonio for four years and was engaged in the fire insurance and oil business; my insurance business yields me five or six thousand dollars a year; I was drilling two wells at Somerset, Texas, but went out of the oil business when I lost my eyesight, and went into the insurance business, but during the last few months I have taken some leases at Somerset; have about 1720 acres; I am a member of the San Antonio Rotary Club, the San Antonio Automobile Club, and also of the Chamber of Commerce. I lived at Sour Lake, I think, in the first part of 1903, or it might have been in 1902; I was superintendent for F. S. Henry, drilling wells, and remained at Sour Lake until the Batson field opened up.

I was acquainted there with Thomas J. Griffin, and knew that he was connected with the Spindletop Power Company; his nickname was "Spindletop" Griffin; I was acquainted with his general reputation for truth and veracity in that community; it was very bad; I have no personal feelings against Mr. Griffin whatsoever.

ROBERT LEE BLAFFER, a witness called and sworn on behalf of the defendants, testified as follows:

DIRECT EXAMINATION

I have lived about five years at Houston; I was in

the business of producing oil, mostly at Humble, and have oil interests in some of the large companies; have been engaged in that business from 1892 to 1902. I first became interested in the oil business at Beaumont and Spindletop, and have two or three companies at Beau- [2896] mont that are not incorporated, but are operating at the present time; my personal operating expenses run to about six or seven thousand dollars a month.

I was acquainted with Thomas J. Griffin and first met him at Spindletop, in the Spring or summer of 1902, and knew him for about a couple of years after that, but never did any direct business with him; I saw Griffin going through the fields every day while I was on Spindletop, and knew he was connected with the Spindletop Power Company; during the time he was with that company I knew him at Sour Lake, principally.

To a certain extent I was acquainted with his reputation in that community for truth and veracity. When I say to a certain extent I mean that I have heard him discussed by several people. I never had any business with him directly that I could ascertain his general reputation for — but I think I did know his general reputation aside from my own individual knowledge. I don't think it was very good. I can't say how generally he was talked about in that respect. In that community he was generally called Tom Griffin. I don't know of his going by any other name. I am well acquainted with a man by the name of J. B. Treadwell. I first met him in New Orleans five or

six months before I came to Beaumont. I have been in his employ. He sent me a telegram to New Orleans either in March or April, 1902, asking me to come to Beaumont. He gave me a position with him. I was acting in a sort of confidential capacity with Mr. Treadwell until he left to go back to California, I think the first of October of the same year, and I stayed with the interests which he represented about a month or six weeks afterwards, up to the first of November or the first of December, 1902. I was not employed by him after that [**2897**] time. He turned his interest over to somebody else and I was employed by this other party. I think Mr. Treadwell left in September, 1902. While I was employed by him I was in a position to keep track of the correspondence, or all the files in his office. I was a sort of private secretary or scout, private scout, for Mr. Treadwell, and he would keep me informed as to everything that was going on in connection with the business. Then I ciphered lots of code messages that he got. It was of a sort of confidential nature. I would have access to any papers that he had, I think. He never kept anything from me that I know of in connection with the oil business. I never saw in his possession, or any other place, any maps of the oil fields in California showing territory in the lower part of Kern County up into the Coalinga district and Fresno County, nor did I ever see in his possession any map that showed the geological formations and had the name of a geologist upon it covering that territory. I never saw a map of that kind, of that description. I never saw

in his possession any map that showed the unsurveyed lands in what is known as the McKittrick district or what is known as the Elk Hills in Kern County, California. I saw all the maps he had there in connection with this coast country field here—Spindletop. That is the only map I ever saw—Sour Lake. They were maps though, that could be purchased on the street, you know. He had no California maps here. I never saw any. I do not know of his making a copy of any California map at any time while he was here and I do not know of his ever giving Thomas J. [2898] Griffin a copy of any map that he had. Mr. Treadwell never informed me that he had shown any map of the California oil fields to Mr. Griffin or to anybody else in Texas. He never showed me anything in connection with California at all. He never told me that he had shown Mr. M. B. Bass any copy of a map or any map of the oil fields of California. I do not know of his asking Mr. Thomas J. Griffin or M. B. Bass to go out to California and locate on any oil lands out there or prospective oil lands. I have no recollection of hearing of anything of that kind. I never received a communication from Mr. Treadwell after he had gone to California asking me to go out there. I went out there and visited Mr. Treadwell. I think that was in the month of December, 1902. I went out there and I met him in Bakersfield, just paid him a visit there, and we went on to San Francisco together. He communicated with me in 1903 in regard to going to Alaska. He was getting up an expedition to go to Alaska and he asked

me if I wanted to go out there with him to Alaska and I told him no, I didn't want to go. He never asked me to go out to California and locate upon any oil lands or to obtain any interest in the oil lands there.

CROSS EXAMINATION.

The Spindletop Power Company, when I knew it, was furnishing compressed air to wells around Spindletop field. They had two or three inch lines from the Power Company to the wells and they would blow the wells for a certain percentage of the oil. When I came to Beaumont in the spring [**2899**] of 1902 I don't think the Spindletop Power Company was organized and doing business. It was organized that summer. It was another company called the Palestine & Beaumont Company that Mr. Griffin was connected with in some capacity. They had air machinery and were blowing these wells. Everything Mr. Treadwell had up there in the way of wells he rented in his own name. I was working for Mr. Treadwell and I didn't recognize anybody but Mr. Treadwell. There were two wells called the Treadwell wells that he was operating. They were at that time, I remember, flowing naturally. There were two big wells that he had purchased. I do not remember when they were connected up with compressed air by the Spindletop Power Company. Mr. Treadwell shipped the oil out in his own name. He paid all the bills and everything was charged to J. B. Treadwell. I took it for granted that he was operating property for the Southern Pacific. I think he was represent-

ing the Southern Pacific Railroad. I know I had railroad passes issued to me from the railroad company at that time. The wells that he was operating, the only wells that I know, were wells that were known as the Treadwell wells. These were the two wells I spoke of awhile ago. I presume the wells I mentioned were the ones he was operating for the Southern Pacific Company. I know Mr. Harriman came to the oil fields during the time I was acting in the capacity of amanuensis. I was not there that day. I heard he had been there. I was busy. Mr. Treadwell sent me somewhere out in the country. That visit of Mr. Harriman's was sometime in the spring or summer of 1902. I think it was 1902. [**2900**] I don't know how long Mr. Harriman stayed. I was not there that day and I didn't see him. I have nothing personally against Mr. Griffin. Mr. Griffin was a hard working man out in that field, a decent, law-abiding citizen; he seemed to be a busy man. I never had any personal business with Mr. Griffin. I just met him in a general way in the field. I had no occasion to have any business with Mr. Griffin. Speaking of the occasion of 1902 when I was there I naturally would be prejudiced from what conversation I heard against the man. I never investigated him. I never had enough interest in it to do so. I had no reason to believe that Mr. Griffin was not a man worthy of belief until after I heard this gossip, just this conversation about him. I never paid any attention to it. That would naturally prejudice me. I have not seen Mr. Griffin for a long time. I have

not anything against him personally at all, and when you ask me if in 1902 I would have believed Mr. Griffin and thought well of him then I answer, "I had no occasion to believe otherwise when I first met him". It was not until I heard this conversation, until after he had come up to Sour Lake in connection with the Spindletop Power Company. I think Mr. Treadwell knew Mr. Griffin at that time. I think he knew him pretty well. I don't know how well he knew him. I take it for granted he knew him as well as I did. I would not consider I knew him very well because I did not have occasion to do business with him. I was acquainted with Mr. E. T. Dumble. I met him the last month that Mr. Treadwell was in Beaumont or probably a few days [**2901**] before Mr. Treadwell left there and I have known him ever since. When I am asked if I ever heard the statement that Mr. Dumble was drawing $15,000 a year from the company because he advised the company to hold onto a bunch of land in California which is oil land, well, I will tell you how that conversation that I had with Mr. Flocker came out. Mr. Flocker and I were speaking in a general way about conditions; about this law suit. I think it was last winter or early spring. I told Mr. Flocker that I was one day talking to a man by the name of Ben Andrews in just a casual sort of way at a club and we were speaking about the relative merits of several oil men at the head of large corporations. I asked Mr. Andrews, "where is it that Mr. Dumble gets his great influence with the Southern Pacific and is at the head of the big company that he is?" Mr.

Andrews said he thought that the reason it was so was that the Southern Pacific were going to sell some land out in California and that Mr. Dumble advised them not to do it. That was just idle gossip as we were sitting at the club there talking, and we spoke of that in a general way. At the time of that conversation I had an office in the Carter Building in this city. I had an interview with Mr. Flocker sometime that winter of 1912-1913. I told Mr. Flocker in that conversation that I had come out to the Kern River field in the fall of 1902 to visit Mr. Treadwell and that Mr. Treadwell took me over the oil field. I don't know whether we drove over the West side, East side or the North side. Mr. Treadwell at that time told me that he thought well of the wells they were pumping there. I [**2902**] asked him how long lived they were. Mr. Treadwell told me that he thought well of the property right in there; that he was operating for the Southern Pacific Railroad. When I am asked if I told Mr. Flocker in that conversation with him that Mr. Treadwell held land at Beaumont for the Southern Pacific Company in his own name and people didn't find it out for a long time I answer, "Well, I don't know whether people found it out for a long time." I was working for Mr. Treadwell and I take it for granted that Mr. Treadwell was working for the Southern Pacific Railroad. If anybody would have taken the time, they could have found out Mr. Treadwell was connected with the Southern Pacific—I would suppose so. I told Mr. Flocker that Mr. Treadwell held property in Beaumont "but I don't

remember telling him that people didn't know anything about it for a long while". I did not say to Mr. Flocker in that conversation that I thought well of Mr. Griffin. I said I thought I might believe him at that time. I don't remember telling Mr. Flocker on that occasion that Mr. Griffin had never been in any trouble in Texas to my knowledge but I don't remember of having any occasion of knowing of Mr. Griffin's ever being in any trouble before. I recollect that Mr. Flocker asked me whether Mr. Treadwell knew Mr. Griffin and I told him I thought Mr. Treadwell did know Mr. Griffin. I think Mr. Treadwell would be mistaken. It is my impression that Mr. Treadwell did know Mr. Griffin. My attention being called to Defendant's Exhibit 115, which is a map of Kern County and which Mr. Treadwell on the stand testified he may have had with him in Texas, this is the first time [**2903**] I ever saw this map. I never saw any map in connection with California at all. Mr. Treadwell might have had that map in Texas and I not know it.

RE-DIRECT EXAMINATION.

I came pretty near seeing all of Mr. Treadwell's papers and he seemed to have a lot of confidence in me and he never with held anything from me that I know of. I remained on friendly relations with him after I left here. The time I went out to California I went to Los Angeles and I think I had a wire from Mr. Treadwell to come to Bakersfield and I met him in Bakersfield and he went to the train to meet me

and I went over there and spent a night and the next day went to San Francisco. The place where we went was to a house at Kern River, I think. We did not drive away from that field, not to any extent, just went to those wells. I was interested because they were being operated so differently from ours. Nothing went on there except through interest he had in making my trip pleasant and interesting to me, I suppose. When I first went to Bakersfield I had no reasons to doubt Mr. Griffin's word. I had just met him. It was later I had reasons to question his reputation as to truth and veracity from the gossip that went around about Mr. Griffin. I roomed with a man who was employed by his company and I discussed Mr. Griffin with that gentleman in a general way and with others too. [2904]

Personally I have nothing against Mr. Griffin.

M. B. BASS, a witness called and sworn on behalf of the defendants, testified as follows:

DIRECT EXAMINATION

I live at San Antonio, Texas, and prior to going there I was living at Palestine; I lived at Beaumont from some time in the spring of 1901 to the spring of 1904; I organized the Spindletop Power Company in 1902. I knew Thomas J. Griffin, who was connected with the Spindletop Power Company in the capacity of vice president and general manager. The company continued to operate at Beaumont for about a year and then moved to Sour Lake, some time in 1903, and continued to operate there until it went into

the hands of a receiver. Mr. Griffin was continuously in the employ of the Spindletop Power Company until it went into the hands of a receiver, and was engaged in his duties as vice president and general manager during that period, and I was active in the affairs of the company up to that time; I did not know of Griffin making a trip to California while he was connected with the Spindletop Power Company; that time would include clear up to the time the company went into the hands of the receiver; Mr. Griffin sometimes went away and was gone a few days. Of course, I don't know where he was when he was gone but he didn't tell me at any time that he was going to California. Of course I didn't see him every day as I stayed at Beaumont and he stayed at Sour Lake and sometimes I wouldn't go over there for a week.

I am acquainted with J. B. Treadwell and knew him at Spindletop and Beaumont, somewhere around January, 1902, but never had any conversation with him in reference to going to California to locate oil lands, and do not remember him ever showing me any map of the California oil fields. I do not remember Mr. Treadwell suggesting that he and Griffin and I should go to California and [**2905**] locate certain even numbered sections, interspersed with lands that the railroad owned. I do not remember Treadwell showing me a map purporting to represent the territory from Sunset, Kern County, California, up to Coalinga, which contained geological information, or of Thomas Griffin ever telling me that Mr. Treadwell had asked him to go to California; I have no recollec-

tion of Mr. Treadwell or Griffin making the proposition that we should go together into the oil fields in California; if such a request had been made of me at that time, well, I don't know but that I would have forgotten it. I have forgotten a whole lot of things that happened down there.

I remember having an interview with Mr. Ira M. Flocker about five months ago, and I signed a statement written by him. I made an objection to one of the statements written by Mr. Flocker regarding Treadwell's showing me a map of the California oil fields, and told Flocker that I could not sign that because I did not remember the map; Flocker thereupon took that out and made it read that I had seen maps in Treadwell's office. I saw some maps in Treadwell's office; they might have been of Spindletop, but I do not remember what they were, really.

CROSS EXAMINATION OF M. B. BASS

I am sixty years old. I had a sickness in the fall of 1903 between the first of October and first of January, 1904. My impression is that I was sick from Christmas, 1903, and I was under the weather for quite awhile, say six or eight months. I was sick while the company went into the hands of a receiver and it continued right through that time. My malady was kidney trouble. I was put on a very strict diet and it kept me very weak all the time. We had litigation with a company known as the Texas Company. They [**2906**] were operating in Texas in the

oil business. Our plant was on the southern side of their tract of land. They had a good big tract of land there. And we wanted to reach the wells on the northern portion of this tract, and we undertook to go across there with our pipeline. And we had condemnation proceedings, and the court allowed us to go across, and before we got across they enjoined us, and we fought around there for a few days, and they finally brought us up to the Superior Court; and in that manner we had to go several miles out of our way, run a small pipeline several miles around this tract to get to the wells, and in that way our power was reduced to a mere minimum. We could not utilize the plant. This litigation with the Texas Company, I think, was the paramount reason for the failure of the Spindletop Power Company. At least it was one of the primary causes. It had been the custom in the field there, prior to that trouble that we had with the Texas Company for different oil companies to permit the crossing of lines over their property promiscuously when it didn't interfere with the operation of their business; all the oil companies up to that time, I think, had had the privilege of crossing and laying their pipe lines in such a way that it didn't interfere. The Spindletop Power Company had given formal permission to other companies to cross its lands with pipe lines free of charge. The first company to put compressed air on a well in the Spindletop field was the Palestine and Beaumont Oil Company. I was President of that company. The man who actually did the mechanical work of placing

the air on the first well in that field was Mr. Thomas J. Griffin. [2907] From my knowledge of Mr. Griffin I regard him as a practical, competent man in and about the operation of an oil well. I consider him a very valuable man along those lines and regard him as an expert mechanic. In the operation of machinery in oil work on the field there was always knotty questions coming up about something that requires a pretty good head to overcome and Mr. Griffin seemed adapted to that line of work. I have known him to go into an iron factory and show them how to make a pattern of certain things that we wanted about the machinery, or in a break or something like that, you know. What I have reference to is his resourcefulness and mechanical skill. He seemed to be able to take up those things and carry them to a successful termination. Mr. Griffin, I think, did most of my work and when it is asked of me if I know of any better man in the Spindletop field in a mechanical way, or a more competent man in and about the oil field than Mr. Griffin, I will say, "Well there may have been some there but I don't know that I had any connection with them". Whenever any of the wells in the Spindletop would go wild or blow up, or get into trouble Mr. Griffin was called into consultation to assist. He was called on several times and brought into requisition, and I think, closed one or two wells—either Sour Lake or Spindletop; I have forgotten which. I know of one pretty bad one that was closed at Sour Lake; the well was going wild. He had to go in and shut it off someway and he did it. In going

into a new field to begin the operation of a well I would regard Mr. Griffin as a thoroughly [**2908**] competent man to take charge of drilling operations. Mr. Griffin was at Spindletop in the years 1902 and '03 at the time that I stated that I knew Mr. Treadwell quite well. During that time Mr. Griffin had an opportunity to know Mr. Treadwell and I know that he did know Mr. Treadwell and that Mr. Treadwell knew him. In the Spindletop field an oil man in the discharge of his duties there, was first in one part of the field and then in another, backwards and forwards—and some days they might meet several times during the day and then it might be a week. I don't know how often Mr. Griffin and Mr. Treadwell did meet but I suppose they undoubtedly came together a great many times. The Spindletop field at that time covered about one hundred acres of land and the Red Book stated that forty or fifty million barrels of oil was taken from that field as it was very productive for such a small area. There were from seventy five to one hundred and fifty wells on this land. I think Mr. Treadwell had a couple of wells there which I think was known as the Yellow Pine, but it might have been some other name. I do not know which company, the Palestine-Beaumont Oil Company or the Spindletop Power Company—had air connections with Mr. Treadwell's wells there but I am pretty sure it was one of them. The Palestine-Beaumont Company put in some machinery there some little time before we got our Spindletop Power Company operating and we equipped quite a number of wells

on that plant. I know that it was one or the other of these companies that had made the air connection with Mr. Treadwell's wells. Mr. Griffin was in charge [2909] of the Palestine-Beaumont Company as manager there on the hills in its early stages and I think he was connected with us up to the time that we organized the Spindletop Power Company. That is my impression now and when the Spindletop Power Company got in operation—and maybe a few months before, just a little while, we changed the management. We put another man in his place and he went to the Spindletop Power Company. Mr. Griffin had charge of connecting up the wells for either of these companies or both when he was in charge and he also had charge of the field operations for the Spindletop Power Company. Mr. Griffin was connected with the Palestine-Beaumont in its early days and he quit to go to the Spindletop Power Company a little while before we got to going but I could not tell you within a month or two of the time. At the time the air was used for the first time in order to make the well flow, the people in the oil business in the Spindletop believed generally that it would be successful and the oil men there generally asked for connections with our company. I think we equipped seventy five or one hundred wells. You see, this line, originally, was not to pump wells, but to agitate them and start them going and they would flow themselves after once agitated. That is the reason we could equip so many wells—after they ceased to flow, of course, we could not take on so many. If Mr. J. B. Tread-

well testified in this case and would say that he didn't know Mr. Griffin, of course, I would say that he made an error in his statement and when it is asked of me whether or not he was telling the truth when he said he didn't know Mr. Griffin, well, I would not want to put it that way, but then I know [**2910**] that Mr. Treadwell knew Mr. Griffin. If Mr. Griffin testified under oath that Mr. J. B. Treadwell solicited him to go out to California to drill some well I think I would believe Mr. Griffin's statement. If Mr. Treadwell solicited Mr. Griffin to go to California I would not necessarily know it. When I stated on direct examination that Mr. Treadwell did'nt solicit me so far as I can recollect, and that Mr. Griffin did'nt solicit me so far as I can recollect, to go to California under arrangements with Mr. Treadwell, I cannot state positively that Mr. Griffin did'nt talk with me about going to California; I don't remember if he did; of course, he might have done it. I have not the least idea of it. I don't think I ever heard Mr. Griffin called "Spindletop Griffin". It might have been used out there on the hill but not amongst the officers around town where I was.

Q It is in evidence here that Mr. Griffin had a business transaction with a man by the name of Armstrong, or his bank, in which Mr. Griffin is alleged to have given a trust deed of some property to secure the repayment of a loan of $1500. It has also been claimed, although not proven, that Mr. Griffin mortgaged property that did'nt belong to him. Now, I will ask you, Mr. Bass, whether you know, as a mat-

ter of fact, that Mr. Griffin did go into business for himself and drill some wells, or attempt to drill some wells, after the failure of the Spindletop Power Company?

A Yes sir; he went into business for himself. [2911]

I know where his property was located. I have been out there and have seen it. He had a drilling rig on it. He had some tanks there. I don't remember how big they were, also an earthern tank. I couldn't tell what the capacity of these tanks was. I should judge that they were tanks which would hold a thousand barrels. From my estimate of Mr. Griffin and my long familiarity with him in business I don't think he is the sort of man who would mortgage property that he did'nt own to secure the payment of a note of a thousand or fifteen hundred dollars. I don't think he is that sort of a man from my estimate of him as a business man. I was in business with him about three years and he shared the fortunes, both good and bad, of the Spindletop Power Company during its existence and went down with me in the final failure. During all that time when I had good days and bad days, I have never known of a single instance in which Mr. Griffin ever tried to deceive me. He has always treated me fair and square. In the summer of 1903 Mr. Griffin laid the pipe line for the Rio Bravo Oil Company and I think that during the years 1902 and '03 he had issued to him annual passes by the Southern Pacific Company. If Mr. Griffin had been out of the State of Texas for from five to

fifteen days I would have known something about it; I would know he was away. He might have been gone from five to fifteen days at any time during those two years; he was gone a few times. He was absent a few times during the time he was with us. Of course some of those times I knew exactly where he was and others [**2912**] I did'nt. I have talked with Mr. Treadwell about the California oil fields in a general way while Mr. Treadwell was in San Francisco. When I am asked from my estimate of Mr. Griffin's ability in a mechanical way and his general efficiency and utility in the oil drilling business, whether or not Mr. Treadwell could have picked out any better man to go to California, I would say: "Well, of course, as I said before, I considered Mr. Griffin a very efficient man. Of course, there are other people who are efficient so far as that goes. At that time I did'nt know them on Spindletop. I know of no other man around Spindletop whom Mr. Treadwell could have picked out who would have been more valuable to go out to California oil fields at that time than Thomas J. Griffin. If Mr. Griffin would make the statement to me that Mr. Treadwell asked him to go out there at that time I would believe him. I have absolutely no interest in this case one way or the other and I have been approached for interviews for both sides of this case. [**2913**]

REDIRECT EXAMINATION
OF M. B. BASS.

I do not remember Mr. Treadwell making a proposition to go to California.

Mr. Griffin's services with me in the Spindletop Power Company were practically continuous; he went away a few times, once or twice, to Cincinnati, but I have no recollection of Mr. Griffin having made a trip to California during any of that period.

Immediately after the Spindletop Power Company went into the hands of a receiver, Griffin went over to Batson and began his independent drilling. I went to Batson and saw him there drilling and operating on a piece of land. I did not know of him making any trip to California during the period when he was operating the well at Batson, but would not know if he was absent.

Mr. Griffin laid a pipeline in the summer of 1903 for the Rio Bravo Oil Company. He had not obtained a leave of absence from the Spindletop Power Company for that purpose but it was done right there on the field, and he was there every day as far as I know; I did not know of him making a trip to California during that time. But I haven't the least idea about it. His salary with the Spindletop Power Company continued during the time of this work for the Rio Bravo Oil Company. I don't remember whether or not he had any interest in that contract. I don't remember whether he did that work for the Spindletop Power Company or whether he did it on his own account.

You show me a document, Defendants' Exhibit No. 187, being a bill to J. S. Wynn, dated Sour Lake, January 7, 31 1904, and signed at the bottom. The signature at the bottom looks like Mr. Griffin's handwrit-

ing; the "Griffin" part looks like it; it is sort of blurred there—the "O.K."; the "T.J." is blurred with the "O.K." The handwriting following, showing the date, looks like Mr. Griffin's handwriting. [2914]

I think Mr. Griffin had a railroad pass in 1903; I myself had a pass for the year 1903.

The letter marked Defendants' Exhibit No. 188 which you now show me is signed by me, and the pass attached to the letter is the pass that I held during the year 1903, of the Sunset Route, between all stations, on account of oil contract.

(Said letter introduced in evidence, marked Defendants' Exhibit 188, and is as follows:)

"SPINDLE TOP POWER COMPANY, Incorporated, Capital Stock, $100,000 AIR AND STEAM POWER.

Officers. P. O. Box 382
M. B. Bass, President
T. J. Griffin, V-Prest.& Gen'l Mgr.
B. R. Norvell, Treasurer.
Geo. A. Hill, Secretary.
M. J. Bass, Asst. Treasurer.

Directors.
M. B. Bass T. J. Griffin
Geo. A. Hill, B. R. Norvell
M. J. Bass

Offices: Beaumont, Sour Lake.

Beaumont, Texas, Dec. 30th, 1903.

C. H. Markham, Prest.,
Rio Bravo Oil Co.,
Houston, Texas.

Dear Sir:

I shall not ask to have my pass renewed for the moment, and I am desirous that you do not renew the passes of T. J. Griffin, Vice President and Geo. A. Hill, Sec'y of this company for good and sufficient reasons, of which I will inform you when I am in Houston again.

Yours truly, M.B.Bass."

(Pass attached:)

"1903 SUNSET ROUTE GOOD OVER ROADS NAMED ON BACK

Pass Mr. M.B.Bass SUBJECT TO CONDITIONS ON BACK

BETWEEN All Stations Account xx Oil contract xxxxx Until Dec. 31st, 1903 UNLESS OTHERWISE ORDERED. [2915]

No. T5235 W. G. Van Vleck, Manager."

(On back) THIS TICKET IS GOOD BETWEEN POINTS NAMED ON FACE OVER THE FOLLOWING LINES:

GALVESTON, HARRISBURG & SAN ANTONIO R'Y
TEXAS & NEW ORLEANS R'Y
NEW YORK, TEXAS & MEXICAN R'Y
GULF, WESTERN TEXAS & PACIFIC R'Y
GALVESTON, HOUSTON & NORTHERN R'Y

"Is not Transferable, and the person receiving and using it assumes all risk of accident, and especially agrees that the above companies shall not be liable, under any circumstances, whether by negligence of their agents or otherwise, for any personal injury, or for any loss or injury to his property, and in using this ticket, he will not hold any of the above companies liable as common carriers.

Revocable at pleasure, and not good for passage unless signed in ink by person whose name appears on face. If presented by any other, conductor must take up and collect fare.

(SIGNED HERE) M. B. Bass."

One of the primary causes of the failure of the Spindletop Power Company was the litigation with the Texas Company. It added largely to it. After we failed to go around to the Texas Company we had an accident at the plant and were sued for twenty-five or thirty thousand dollars and although the case did not come to trial this suit accelerated the matter and there was a complication of troubles that brought on the receivership.

REDIRECT EXAMINATION
M. B. BASS

I have no remembrance of being consulted about any scheme to go to California and take up oil lands. I have no impression of it at all. I just don't remember it. I don't know whether my memory is a bad one in general; some people think it is. The [**2916**] relations between myself and Mr. Treadwell are perfect-

ly friendly and I have no reasons to do Mr. Treadwell any injury. If Mr. Griffin told me that in 1903 he had suggested the Treadwell conversation between himself and Mr. Treadwell, to me, and talked about going out to California and he would tell me something he had said to me and I had forgotten it I don't know how I would feel about it and as to believing it, well, in a manner I would say that he is honest in his statement; that he believed it at least.

RE-CROSS EXAMINATION OF M. B. BASS

I do not think it was due to any trouble with Mr. Griffin that I wrote the letter, Defendants' Exhibit No. 188; I stated to counsel for the defendants that when I knew of this letter I rummaged my head to find out what I really wanted, or what I intended to mean by the letter; but I can't recall now what I wanted to accomplish by that letter. There must have been something about the business I wanted to correct and I can't recall that I ever talked to Mr. Markham about it afterwards. It might have been due to the relations between Mr. Hill, the Secretary, and myself. When Mr. Hill came into the company we bought a large quantity of tankage, earthern tankage, from him after which we issued him a good big block of stock and it might have been there was something in regard to Mr. Hill in the premises that I didn't like or something like that. I don't remember, though, exactly. I can't conceive it now; I don't remember what it was for. I don't remember that there was

any difference between Mr. Griffin and Mr. Hill so far as that goes, but Mr. Hill once or twice tried to dominate the affairs of the company in some way and I didn't know but that it might be him and the reason I asked them to refuse the request of the issuance of a pass to Mr. Griffin would be that I might have wanted to explain the situation to Mr. Markham and let him go over it. Of course at this late day it is largely guess-work and I can't remember exactly what I intended when I wrote that letter. [**2917**]

F. I. NEVILL, a witness called and sworn on behalf of the defendants, testified as follows:

DIRECT EXAMINATION

I live at Houston Heights, Texas, and have lived in Texas for about thirteen or fourteen years. From the 14th day of May, 1910, until the 21st day of June, 1913, I was engaged in drilling oil wells and producing oil in California, in the Midway district, around Taft, Maricopa and Fellows. I first engaged in the oil business in Texas about the year 1900. I operated in the Spindletop field in 1901 and 1902, and at Sour Lake, Batson, Humble and Markham, and was at that time acquainted with Thomas J. Griffin, and also knew Mr. Bass.

The first time that I met Griffin was the time the Palestine & Beaumont well got away from them, I think in 1902. I had business relations with the Spindletop Power Company in the fall of 1903, and Griffin was in the company at that time. I am familiar with Mr. Griffin's signature. I drew a check payable to

Thomas Griffin on the First National Bank of Sour Lake and delivered it to him on the 28th day of August, 1903, at Sour Lake.

(Said check introduced in evidence, marked Defendants' Exhibit No. 189, and is dated as follows:)

"Sour Lake, Texas, 8 - 28 1903"

(Endorsed) "Paid Aug. 28, 1903, T. J. Griffin."

I had seen Griffin immediately prior to the 28th of August when this check was given him.

The check which you now show me, marked Defendants' [**2918**] Exhibit No. 190, dated, "Sour Lake, Texas, 11-9, 1903" and signed F. I. Nevill, and endorsed, "Paid Nov. 9, 1903, T.J.Griffin A.H. Liff," I gave to Mr. Griffin while I was drilling wells at Sour Lake on the Rogers' property, for the J. M. Guffey Petroleum Company; I gave it personally to him, and delivered it on its date.

About the first of November, 1903, I opened negotiations with Mr. Griffin for the purchase of some property, and those negotiations continued from the first to the tenth of November. The deal was with the Spindletop Power Company, through Mr. Griffin. He agreed to complete a well on the property on a contract basis and went to work on it and continued to work on it until about Christmas 1903. While working on the well, Griffin was around the job off and on, sometimes once a day, sometimes twice, and was very much interested in the property and gave it very close attention. He completed the work on the well about Christmas, 1903.

The paper now shown me, consisting of two type-

written pages, is a notice that I received about the 14th of February, 1904, notifying me of the appointment of a receiver for the Spindletop Power Company. It is dated at Beaumont, Sour Lake, Beaumont, Texas, February 13th, 1904, and addressed to me, and is signed "S. N. Pickens, Receiver."

(Said document introduced in evidence, and marked Defendants' Exhibit No. 191.)

After receiving this letter I saw Mr. Griffin at Sour Lake, Beaumont and different places; he was around Sour Lake and made several trips over to Batson; from the time when the work was completed at Christmas up to the time when I received this written notice of the receivership, Mr. Griffin was around Sour Lake, Batson, and the community generally, and I saw him on and off all the time, sometimes as often as three times a day.

I signed a complaint in intervention dated the 27th day of January, 1905, now shown me, and entitled Beaumont National Bank [**2919**] versus Spindletop Power Company, setting out that the defendant executed and delivered to intervenor its two promissory notes, dated February 2nd, 1904, each for the sum of $700.

(The original of said complaint introduced in evidence, and marked Defendants' Exhibit No. 192.)

After the giving of the notice referred to in the complaint in intervention on February 2, 1904, up to the time when I received the notice of receivership, I saw Griffin at Sour Lake, Beaumont and Batson frequently, sometimes every day; I kept right after

him, because I was in hopes that he was going to be successful in liquidating his company; Mr. Griffin was making every possible effort that he could, and I believe Mr. Bass too, was doing everything that they could to raise the money with which to liquidate the Spindletop Power Company and have the Receiver discharged and Mr. Griffin kept me posted, I think, pretty thoroughly, as to the progress he was making in the matter. He did not hesitate to discuss his business matters with me very thoroughly. He acknowledged the obligation to me and was always frank in answering any questions and in explaining the situation. I continued to see him probably for a month or six weeks after the appointment of the receiver; during the period of the negotiations Griffin was at Batson.

From the time of the contract of November 10, 1903, until the date of the receivership, February 13th, 1904, Griffin made no trip to California, to my knowledge; he could have done so, but not very well; it was possible, but not probable. I do not think he was gone as much as ten or twelve days at a time, and I never heard from any other source of his making a trip to California; I did not know of his making a trip to California during the time when I saw him subsequent to the receivership.

I was acquainted with the general reputation of Griffin at that time for truth and veracity, in that community. Oil men always [2920] discussed each other among themselves, and all the business men, as to a man's credit, and his truth and veracity, or to

what extent his statements would be credited and his promises be met; all those things were frequently discussed in the fraternity. During all the time that I knew Griffin. Of course, Mr. Griffin like all the rest of us, had his enemies — men that spoke disparagingly of him. Lots of men spoke very disparagingly of Mr. Griffin, in fact, almost universally men spoke disparagingly of him, and in my own dealings with Mr. Griffin my relations with him were very unsatisfactory. When you ask as to his general reputation, well, I guess you would call it bad. He was a fellow that was known to exaggerate his statements, and such as that.

CROSS-EXAMINATION OF F. I. NEVILL

I first entered into the employ of the Southern Pacific Company on the 22nd day of March, 1913. My compensation was to be a per diem agreement and expense account. That agreement is in writing but I don't think I have it with me. The agreement was that I was to make a trip to Texas at my earliest convenience and procure such documentary evidence as I had in connection with the suit that I had against the Spindletop Power Company and all other papers, etc., that is, everywhere I could find any papers. I wrote them that I had these papers in my safety deposit vault, but I only had a part of them. I agreed with the Southern Pacific Company, defendant, for a per diem arrangement and expense account, to come here and get those papers for their use in this case and

hunt for any other evidence that might be found which would possibly [2921] tend to show Mr. Griffin hadn't taken a trip to California. That was my employment or something to that effect. My per diem was to be five dollars a day. There was nothing said about expenses. My expenses consisted of hotel and living expenses and I traveled on a pass on that occasion. It was a special trip pass from Los Angeles to Houston and return. I have used a pass since that occasion. I used the first pass I got about the 26th day of March. My original deal with Mr. Lewers was made probably two or three weeks before that and I told him that I didn't know that I was going to be able to make the trip to Texas at all or not; that I was busy in California but the first time I could spare the time I would make this trip. The first time I used this pass was on the 26th of March of this year and on that occasion I went to Texas and returned. I remained in Houston until the first of May, sometime during the first of May. I made some side trips from Houston and went to Beaumont and Saratoga and Galveston. I went to Beaumont, I think, on the 23rd of April and I visited a good many different people. I visited people that I used to live with there, the Ellis family. That was a social visit. The people that I visited in a purely business way was the Oil Well Supply Company. They have stores all over the world and they have one in Beaumont. I talked with Mr. J. B. Lemmex there. I saw their records. I asked to see the records of the Oil Well Supply Company. I wanted to see whether the account of the

Spindletop Power Company was alive or not as that was in pursuance of my general plan and instructions to ascertain whether Mr. Griffin had any [**2922**] business with that company during those periods. I did not find any damning evidence against Mr. Griffin. I found nothing at all. Then I went to the National Supply Company at Beaumont. I talked with Mr. Byrne there who was the general manager. I was still in pursuit of the account of the Spindletop Power Company as that was part of my general plan and instructions from Mr. Lewers. I was looking to find whether or not the account of the Spindletop Power Company was alive and active during the fall of 1903 and the spring of 1904; to find whether or not Mr. Griffin had signed any papers, or documents or bills. I found nothing to damn Mr. Griffin there but I found that his credit was not good there. It had been good there as they had furnished goods to the Spindletop Power Company on previous occasions. I understand that the Spindletop Power Company had no credit after they failed but they did have credit up to a certain time before they failed. I next visited the E. L. Wilson Hardware Company in Beaumont still trying to find if they had an active account with that company. I did not find anything there that would satisfy Mr. Lewers in searching after evidence against Mr. Griffin. I just left word there that I wanted a copy of the account and I did'nt hear from them any more afterwards. I next went to the County Court House. I found papers there that showed where Mr. Griffin was. I think those are the papers which

I introduced here. I found all the papers in the case of the Beaumont National Bank against the Spindletop Power Company. The Beaumont National Bank threw the Spindletop [**2923**] Power Company into the hands of a receiver. I collected data there. I next went to see Judge J. S. Whelos, who acted as master in chancery in the case of the Beaumont National Bank against the Spindletop Power Company and I got data from him. I next visited the attorneys that represented the receiver in the case. These attorneys were Smith, Crawford & Sonefield of Beaumont. I believe I talked with Mr. Crawford but he did'nt give me any papers and did not give me any information as to the movements of Mr. Griffin. I think that is all I did there in Beaumont. I think I spent a week there. I then went to Houston. I think I called on the Pierce, Fordyce Oil Company. I did not find any papers there that damned Mr. Griffin as that was the wrong place. The next day I went to Galveston and there I visited several of the old boys that I knew at the old field. The first fellow was a man by the name of Harrington. I never mentioned this case or Mr. Griffin to him. I was with him probably five minutes. I next met Slim Johnston and had a conversation with him but I did'nt talk to him about the movements of Mr. Griffin. I was with him probably ten minutes. I next went to the depot to go back to Houston and then I went home. I lived at Houston Heights. I never lived in California. I was just out there temporarily. I was in California three years drilling and producing oil. My family was not with me in

California. I lived at the Buena Vista Hotel at Taft. I was also at Fellows. Mr. Lewers of the Southern Pacific found me at Los Angeles. I met him by appointment at the [2924] Alexandria Hotel. Mr. Gray made the arrangements. Mr. Gray was present at that interview. Mr. Gray did not offer me inducements to take employment as a detective for the Southern Pacific Company at that time. He just took me over to meet Mr. Lewers. He said he wanted to see me in connection with this case. At that time I was working on a well at Fullerton and I was receiving ten dollars a day and a bonus of several hundred dollars for certain results and the reason I left this lucrative employment was I had to wait for material to come from the East and my pay did'nt go on while I was waiting and so while I was waiting I notified Mr. Lewers that I had not been home for ten months and I would make the trip for him. I remained at Houston Heights about one week. I visited nobody there on official business connected with the Spindletop Power Company and my relations with the Southern Pacific Company, my pay, was going on all the time at five dollars a day. My last payment was about a month ago. I was paid by a check which included my expenses and per diem. My last check was about one hundred dollars and included some expenses. I have had three or four checks altogether from the Southern Pacific Company, all of them less than one hundred dollars. I just charged them for the time I put in. I supposed I was to come and testify and tell what I knew within the terms of

my contract. The last time I went to Texas I went on my own business and traveled on a pass on that occasion. The pass took me to Houston and was issued to me by the railroad company. It came to me by mail from the San Francisco office. I got it in [**2925**] Los Angeles. I was to do certain things for them when I got to Houston but when I got there I did'nt have the time. My own business consumed all my time. I have not yet returned to California. Since I have been here I have visited Mr. Lewers and discussed the case with him in his room. I was there once last night, that is the only time. When I went to Sour Lake I had probably a couple of thousand dollars. I never gauged any oil at Sour Lake or Spindletop. I went to Sour Lake about the first of June, 1903. I was in Houston on April 16th, 1913. I met Mr. Griffin at that time in company with Mr. Flocker and at that time Mr. Griffin charged me with stealing oil from him while I was gauging. He said to me, "supposing you had the money representing the oil you stole on Spindletop, you would have lots of money now". I remember his saying that to me but I never answered, "Yes, I got my part of it". He never said to me, "You never stole less than fifty to a hundred thousand barrels from me on Spindletop", and I did not reply, "I did'nt get it in person, but I don't say what my gaugers did." I deny that I had ever stolen oil while I was a gauger. I called Griffin's attention to the fact that I never gauged any of his oil and I did deny that I had stolen thousands of barrels of oil from other people. I never stole from Mr. Griffin

and Mr. Bass, either personally or by others, as much as 50,000 barrels of oil during the time I was gauging there. I never stole any oil from either of these men or from the Spindletop Power Company. I had some trouble with my partner, Mr. Armstrong when I was there. We got into a controversy over loss by fire in Batson. We both sued each other. We both [**2926**] got judgment against each other. We settled the matter. I had a little trouble with my partner, H. H. Cherry. We had a misunderstanding but never went to court about it. I testified that I saw Mr. Griffin frequently subsequent to February 14, 1904. I don't know where I saw him on February 15th or 17th or 16th. I don't know as I saw him on those particular days. I think I saw him both at Sour Lake and Batson but I will not try to say the date. I would not swear positively that I saw him on the 18th of February at Sour Lake or Batson, or on the 19th of February, or on the 20th day of February, or the 21st, or 22nd, or 23rd, or 24th, or the 25th. I saw Mr. Griffin several times and I believe I saw him at Beaumont after that because I know I was very anxious in communicating with him as to what the outcome might be of the receivership case. I am almost sure that I saw him at Beaumont two or three days subsequent to the appointment of a receiver. I can't give you the positive time and date but I know I was in communication with him constantly after the appointment of a receiver. I do not know whether Mr. Griffin was gone from Texas into the State of Ohio for a period of from twelve to fifteen days. I don't think he could

have gone and I not know it, that is, within the next fifteen days succeeding the appointment of the receiver. He might have been gone sometime during the years 1903 and '04. I did not make it my business to follow around and see where Griffin was during the years 1903 and '04. I had other things to do. I had other business besides business with the Spindletop Power Company. I cannot swear as to any specific date when [**2927**] I saw Mr. Griffin at any place in Texas in 1903 or '04 except the occasion when I gave him the check. I know I was with him in 1903 for nearly every day from the first of November until the 10th and I was with him on the 19th. We were negotiating this deal for this exchange and I saw him most every day. I am not positive, however; I know I saw him on the 10th of November and on the 11th and I saw him on Christmas and on the 24th of December, 1903. I can't fix the exact dates on which I saw him between the 10th of November and the 25th of December. I can only fix those dates which are fixed by some particular circumstance. I saw him on the 11th of November, the day he took possession of the property, and on the 24th day of December, the day the pipe-pulling arrangement was made. I know where Mr. Griffin was some of the time during the spring of 1904 but I cannot give any precise dates and places except on occasions that I had business with him. I saw him on the first and second of February, 1904. I call February the spring of 1904. February is generally called the spring in Texas. I next saw him about the 13th of February at Beaumont. I cannot

positively fix any other dates. During the months of June, July and August of 1904 I was most of the time at Batson. I did not see Mr. Griffin there. He was not around there that I recollect. I was very busy with my own work; he may have been there but I don't recollect seeing him at that time. I followed him for awhile after the receivership while he was trying to raise the money to liquidate his company and when I despaired of his being able to raise it I didn't pay any more attention to him. As to my [2928] reputation for truth and veracity at Sour Lake and Spindletop, I expect, like everybody else, I have my enemies that speak disparagingly of me and my friends speak otherwise. A man generally judges of his reputation by the credit he has; if his credit is good he has a good reputation. If he loses his reputation his credit becomes bad. A man can't lose his credit if he keeps up his reputation. The Spindletop Power Company didn't have any credit after it went into the hands of a receiver, only through the receiver. I have not a general reputation in the Spindletop field among those who know me, as of stealing oil as a gauger. If a man's partner speaks well of him I think that is a pretty fair test. If a man has business dealings with you that is a better test than what other people say.

RE-DIRECT EXAMINATION.

I had unlimited credit in Sour Lake and Beaumont. Mr. Griffin was in Sour Lake on August 28, 1903, according to this Exhibit 189. I saw him on

that date and gave him that check myself. I don't recollect any special occasion that I saw him after that until we opened negotiations on the first of November, 1903, for the sale of this property. The negotiations between Mr. Griffin and myself, were before the giving of these notes on the 2nd of February, 1904, I was after him hard all the time for my money and I kept in constant communication with him at Sour Lake and Beaumont. He was not absent at any time between the completion of the well and the 2nd of February, 1904, to my knowledge. I [**2929**] don't think he was for any length of time because I was right behind him all the time punching him up for my money.

E. A. STERLING, a witness called and sworn on behalf of the defendants, testified as follows:

DIRECT EXAMINATION

I am fifty-seven years old, and live in Houston, and have lived there off and on for fifteen years; I went to Beaumont in 1901 and remained there until 1905; I am engaged in buying and selling oil, and operate quite extensively; at the present time I have oil lands at Saratoga, and in Oklahoma, and in different parts of the State. At the time I lived at Beaumont and Spindletop I was acquainted with Thomas J. Griffin, and knew him all the time he was there; I knew of his general reputation in the community for truth and veracity; it was not good. I have had no difficulties of any kind with Mr. Griffin, and have no feelings in this matter at all.

CROSS EXAMINATION OF E. A. STERLING

Before I went to Bakersfield in 1901 I lived at Temple, Texas, and was a railroad agent for the Santa Fe. I was there ten or twelve years I guess, altogether. I left there and went back — shifting around. Before I went to Temple, Texas, I was in Belton, Morgan, Crawford; different points. When I was at Belton I was in the railroad business with the Santa Fe Railroad. Before that I was an operator in the Western Union here. The Morgan line is a line of steamboats. I was a cashier and operator at Clinton, on the bayou. Before that I was a telegraph operator in Houston. I remember the Buffalo Oil Company for which I was a sales-agent, employed Mr. Griffin and he blew some wells for them but I don't know how many. That was strictly a field proposition. I believe that Mr. Griffin blew a well over there while I was sales agent [**2930**] of the Buffalo Company. I don't think their plant could handle it and he coupled on to them and when you ask me if, as a matter of fact, if I did not get Mr. Griffin to flow an oil well for that company over there which was really a mud hole and which I was trying to unload on another party as an oil well, my answer is, "No sir, I had nothing to do with the bunco side of that business", and when you ask me if Mr. Griffin had communicated to the party I was trying to sell the well to, the fact that it was a [**2931**] mud hole and the party didn't take the well, didn't I get extremely angry

with Mr. Griffin, my answer is, "No, sir." That was not the beginning of my trouble with Mr. Griffin. I never had any trouble with Mr. Griffin. Mr. Griffin did not refuse to have any business dealings with me after that time in the field. He never had any chance to do any business with me. Mr. Griffin did not require me to have my business go through the office. I never had any talk with M. B. Bass about the transaction I referred to in regard to the well. I know the Moore & Skinner syndicate. They were in the business, principally, of selling stock. I did not at one time attempt to take some cars of theirs loaded with oil, get the bills of lading and reissue them in order to defraud the company of the oil, and sell it myself. I never had any trouble with Jim E. Moore of the Moore-Skinner syndicate, at all. I did not make such an attempt and sale nor did I attempt to re-route some cars loaded with oil under the guise of its being my own oil. You understand, in my capacity I had nothing to do with field work. The bills of lading came into the office. I did not attempt to take oil that didn't belong to me from the Moore-Skinner syndicate. I didn't have anything to do until the bill of lading reached my desk. I had an adopted daughter who married a street car conductor. She had some domestic troubles with her husband in which she left and I would not let her come back to my family. I don't know whether she went to live with Mrs. Griffin. I don't know who she went to. Mr. Griffin's wife did not, out of sympathy, [**2932**] take the girl in and Mr. Griffin did not go over and accuse me of being very

hard-hearted to the child. He never opened his mouth to me about it. The girl went bad on her own account while she was living with this conductor and because of that I certainly did refuse to take her back to my house. She afterwards went to live in a house of prostitution. She "turned out" of her own accord. It was not due to lack of humane feelings towards my adopted daughter, not on your life. It was born in her. It was not because Mr. Griffin and his family befriended this child and his accusing me of lack of humane feelings in respect to that—the real cause why I am here to day. Not on your life. This is the first time I ever heard that Mr. Griffin ever had anything to do with it. I never heard that Mrs. Griffin took that child in and befriended her. She married and left my roof; I had raised her; that was her own doing and I certainly refused to have her come back to the house. We took her away from her—my wife's folks turned her over to us, and we raised her from her mother, who was a prostitute. Mr. Griffin did not tell me that my treatment was inhumane. He never opened his mouth to me about it. He did not tell me that I ought to take this girl back and try to redeem her. Mr. Griffin never mentioned that girl to me in his life, nor did his wife. [**2933**]

I never had any trouble with Mr. Griffin.

RE-DIRECT EXAMINATION OF E. A. STERLING

I never had a pass on the Southern Pacific; I have

a pass on the Santa Fe, and that is the only one I ever carried. [2934]

A. C. DENNEE, a witness called and sworn on behalf of the defendants, testified as follows:

DIRECT EXAMINATION.

I am a traveling man, and reside in New Orleans; about the middle of November, 1901, I was in the employ of the Sunset lines in Texas and then went over to the H. & T. C., which is a subsidiary line of the Southern Pacific, and remained in their employ until 1907 or 1908. During 1904 I acted in the capacity of clerk of W. G. Van Vleck, and was then second vice president and manager of the G. H. & S. A. Railroad and the T. & N. O. Railroad, — what is known as the Sunset route.

As clerk I handled the annual pass records. By that I mean that all of the requests that were sent in for annual passes from foreign lines or company officials, after they had been o.k'd by the proper officials, were passed up to me and I issued the passes. I kept a record of the passes issued by other people, and these were reported to my office by letter, that is, in most cases. I would not undertake to swear that all passes, that is, blank passes that were turned out to other officials of the company were turned in to me for report. Of course all of those issued by me, I presume, were of record. My office issued blank passes only to the Vice President's office on request, that is, they may have sent in a letter and asked for fifty or a hundred

passes. They were sent in blank. As to the serial numbers, I merely kept a record of the serial number as the passes were issued by the vice-president's office and when those returns came in I entered them in the register, so the records of passes issued would be absolutely complete, that is, so far as I know.

The book which you show me is the indexes to the annual passes issued by the Texas line, the Sunset Route, during the year 1904, and all the entries are in my handwriting; some of the passes were divided into classes, which were called foreign [**2935**] exchange passes. The foreign exchange passes represented cards printed to interchange with other lines of railroad; also at that time miscellaneous, issued "complimentary" to so-and-so. This record also represents passes issued to employees of the company; I have made an examination of the record of miscellaneous passes in that book; they are arranged alphabetically; I find there a pass issued to Thomas J. Griffin account of the Rio Bravo Oil Company on page 245, under the letter "G", and the pass shows that it was bulletined; I can determine what the original number of the pass entry was, and have looked at it with a glass; it states that the number represented there is 3850, and the entry is in my handwriting, made at the time the pass was issued during the year 1904; I have also examined the record of miscellaneous passes to determine whether or not the name of T. J. Griffin appears in relation to this, but failed to find any entry although I went over it very slowly, sheet by sheet.

Reading the entire record, as appearing on page 245, referring to the pass issued to T. J .Griffin, the number of the pass is T-3858, under the "date sent", my entry shows Mr. Fay's letter June 9th, 1904—6/9/04; Name, T. J. Griffin, G-r-i-f-f-i-n; Account, Rio Bravo Oil Company; Expires, December 31, 1904—12/31/04; Good between, all stations; Requested by, T. F. The "T. F." was placed there because the letter requested the pass and was signed by Mr. Fay. On the line of the entry something is written in red ink; I made the entry, and it reads, Bulletined, November 10th, 1904—11/10/04. The expression "Bulletined" means, in my understanding, that the pass was outlawed, and in case it was presented for transportation it should be taken up by the conductor; When we bulletined a pass, that is, when I was in the employ of the company, it is my understanding that we wrote to all superintendents—in fact I wrote the letter myself on the machine—bulletining the pass; the same procedure goes through in the case [**2936**] of other passes. I identify the signature of a letter addressed to Mr. Fay, General Manager, Houston, Texas, as being the signature of W. L. Lane, Mr. Van Vleck's chief clerk, and am familiar with his handwriting.

On the letter now shown me attached to the same file, I have seen the signature before,—E. T. Dumble; my attention being called to two carbons attached between two letters or papers, and upon my attention being called to the initials appearing on those letters, so far as the initials "G.R." would stand for any per-

son,—the point that I wish to make is that "G.R." is Gaspar Rodeski", at that time Mr. Fay's chief clerk. Mr. Fay was vice president and general manager of the Sunset lines, and he became general manager along about April, 1903.

(Said letters introduced in evidence, and marked Defendants' Exhibits 193.) Said letters are as follows:

"Form 101

THE GALVESTON, HARRISBURG & SAN ANTONIO RAILWAY CO.
SOUTHERN PACIFIC
SUNSET ROUTE

HOUSTON, TEXAS, November 10th, 1904.
(In blue pencil: 967)

W. G. Van Vleck,
Second Vice-President
and Manager.

Mr. T. Fay,
General Manager,
Houston, Texas.

Dear Sir:

Replying to your letter of November 9th, file No. 967, beg to advise you that necessary instructions have been issued regarding Sunset Route annual pass No. T.3858, issued to T. J. Griffin. Yours truly, W. G. Van Vleck. M. [2937]

Houston, Texas, November 9, 1904.

Transportation T. J. Griffin. (Stamped: In your reply please refer to our file No. 967)

Mr. E. B. Cushing,
Gen. Supt., New Orleans.

Dear Sir:—

Mr. T. J. Griffin is no longer in the employ of the Rio Bravo Oil Company. He has failed to turn in his annual, No. 1604, good over Louisiana lines. Please bulletin and have taken up if presented for passage. Yours truly,
GR:

"Houston, Texas, November 9th, 1904.

Stamped: In your reply, please refer to our File No. 967.)

Transportation T. J. Griffin,

Mr. W. G. Van Vlerk,
Manager, Building.

Dear Sir:

Mr. T. J. Griffin is no longer in the employ of the Rio Bravo Oil Company. He has failed to turn in his annual, T 3858, good over lines in Texas. Please bulletin and have taken up if presented for passage. Yours truly,
GR:

Form 1.

THORNWELL FAY, PRESIDENT.
E. T. Dumble, Vice President
C. B. SEGER, Secretary
B. C. Cushman, Treasurer.

RIO BRAVO OIL COMPANY, (In ink:967)
General Office
HOUSTON, TEXAS.

Houston, Texas, Nov. 8th, 1904. [2938]

Transportation:

Mr. T. Fay,
President, City.

Dear Sir:—

Mr. T. J. Griffin, who holds transportation over our lines in Louisiana and Texas, is no longer in the employ of the Company. He has failed to turn in his transportation and I would suggest that it be taken up when presented. No. T-3835 Lines in Texas. 1604 Over Louisiana Lines.

Yours truly, E. T. Dumble."

I have gone over the miscellaneous portions of the pass record, and went through the exchange portion with relation to the pass 3500, and looked through for a pass for Mr. Griffin, but I failed to find the name T. J. Griffin in the Southern Pacific Exchange book. This book does not contain all of the trip passes that were issued. It does not contain any of the trip passes. It may contain in the book the numbers of some of the trip passes sent out but I don't know whether it does or not. There may be hundreds

of those trip passes issued in that year that would not be in this book at all. Examining this entry which constitutes the offer of defendants' counsel on page 245 of the index of passes, upon which I have used a magnifying glass, it appears that the number 3858 has been superimposed over a number different and other than that. It also appears where the name "Mr. Fay's letter" occurs in the entry, under "date sent", that there evidently was a date under that and it does appear under that particular writing that there was some other writing and then, under the "date 6/9/04", in the same column it appears some [2939] writing has been eradicated and another writing has been superimposed. It also appears under the name "T. J. Griffin" that there has been some other writing eradicated and the name of "T. J. Griffin" superimposed. I have no record or any means of stating and I know nothing of it, whether or not any trip pass was issued to Mr. T. J. Griffin on a trip to California with Mr. E. T. Dumble at any time during the year 1903 or 1904 and from the records to which my attention has been directed, I don't know whether or not such a pass was ever issued to Mr. Griffin and it is possible that it might have issued and I not know it. I don't recall any annual pass being issued to T. J. Griffin prior to June 9, 1904. I am unable to find any record of any. If it was issued in Mr. Van Vleck's office I certainly would have a record. Of course if it was issued by anybody else naturally the record would go to Mr. Van Vleck's office if it was an annual pass. That was the general man-

ner of handling those passes. If any came to our office prior to that date I didn't see it. I kept a first class account of every annual pass that was ever issued by me or reported to me.

The record shows that the passes in which the serial number 3858 occurred were sent to Mr. Markham's office, and reads:

"Mr. Markham's office. Serial numbers 3800. Sunset Route, annual passes, numbers T-3800 to 3899, inclusive, to Mr. C. H. Markham, for his use, January 6, 1904. No. 3858 comes in that series.

I have examined Form 110 referring to employees, and there is no record of any pass being issued to T. J. Griffin in the year 1904 in that record.

On December 16, 1903, we sent a hundred blank Sunset route annual passes, numbered T-2100 to T-2199, inclusive, to C. H. Markham for use of Mr. J. Kruttschnitt. Those were 1904 annual passes. On December 18th, 1903, we sent to C. H. Markham [**2940**] fifty blank passes, numbered T-2047 to T-2096 inclusive, for his use and on January 6, 1904, we sent to C .H. Markham one hundred blank annual passes numbered T-3800 to T-3899 inclusive, for his use and on January 17, 1904, we sent to C. H. Markham fifty blank annual passes, numbered T-4000-to T 4049 inclusive, for the use of Alex Miller, who, I understand, was the Secretary or Assistant Secretary of the Southern Pacific or Sunset Route. Mr. Markham did sent us reports from time to time showing the passes he had issued. He would also send us the reports from time to time showing the passes Mr. Kruttsch-

nitt issued, in other words, issued from the New York office. Of course, what those passes are I am not in a position to state now because I have forgotten. The reports made to the Railroad Commission were made by me and the records of the reports were obtained from the record here. At the end of each month all the reports to the Railroad Commission were taken right from the originals.

CROSS-EXAMINATION
of
A. C. DENNEE.

I did not testify that no annual pass was issued to Mr. Griffin for the year 1903, but I said it was 1904; I have no record of any being issued and have not brought in the record of 1903 at all. As to these passes which have been issued and as to which I had no advice, I am unable to state whether they were outstanding at the time or not.

I couldn't say if all the blank passes we sent out have come back and been listed in this book. Some of them have and some of them may not and when we send out blank passes, fifty to a hundred at a time to the account of Mr. Markham or Mr. Kruttschnitt or some other official we have only the record which we have been advised were issued and as to those passes which may [**2941**] have been issued and as to which no advice was sent us I am unable to state whether they were outstanding at that time. I don't know whether there is any record of whether they were issued or not. In other words, I mean to say that

on a certain day in 1904 there were passes issued, we will say, from 3800 to 3899 to C. H. Markham for his use and I don't know and am unable to state on my oath whether any or all of those passes have been issued and are on this record and that is true as to every blank pass sent out. The blank passes were handled in the following manner: Mr. Markham wrote to Mr. Van Vleck, "Send me a hundred passes", or sent his chief clerk in there, and I would be instructed by Mr. Lane, or Mr. Van Vleck, or whoever was in authority, to give them a hundred passes, and Mr. Markham, or whoever the passes were sent to, was supposed to advise us when the passes were issued. It is my understanding that we were supposed to get a report on every pass that was issued by Mr. Markham, or anybody else.

I was merely acting in the capacity of clerk. I was not a man in authority or anything of that kind and I had to do as I was told. There appears upon this page that you call my attention to for the year 1904, three hundred blank annual passes issued for the use of C. H. Markham and Mr. J. Kruttschnitt and the only ones that I can see that were issued were those we find the record on. Whether there have been any of those serial numbers issued without a report made I am unable to say. I am unable to say that such a thing is possible, that some annual passes may have been issued by those persons to whom they were sent in blank and I may have no record whatever of them. I am unable to specifically state that a pass

was not issued to Mr. Griffin by one of those gentlemen to whom blank passes were issued.

REDIRECT EXAMINATION
of
A. C. DENNEE.

When the blank pass was sent out, we would merely keep [2942] a record of it at that time. When Mr. Markham, or whoever the passes were issued to,—when we got our instructions from Mr. Markham, we would naturally get a report on the passes from him. As he gave us the reports we entered them in the register, the same way after Mr. Fay became Vice-President—June 9th, or whatever it was, if they issued the passes and failed to report them, I would not get any record, that is, I never learned of any instance in which that was done. They usually reported very promptly on the passes issued; if they issued any passes and did not report them, they being superior officers, I was not in a position to raise any complaint, but I knew of no instance when they issued passes that they did not report. [2943]

DAN M. JACKSON

Called in behalf of Plaintiff in Rebuttal of Defendants' evidence for impeachment of Thomas J. Griffin.

Houston, Texas, August 1, 1913.

Direct Examination.

I was born at West Falls, Texas. I am judge of the Thirty-fourth Judicial District, in Texas, comprising the counties of El Paso and Culberson. It is

a court of general jurisdiction in criminal matters, and tries all felony cases; and in civil matters, all matters where the matter in controversy is over $500. I was elected judge of that district, and have held two appointive offices there. In 1906 I was appointed assistant city attorney of El Paso, to prosecute in the police court, and subsequently was appointed assistant district attorney under Judge Estes, in the district attorney's office there; I was elected city attorney of Marlin, Falls County, Texas, just after leaving the university, probably in 1899 or 1900. I was a claim agent of the Texas & New Orleans railroad, and Houston was my headquarters; I was connected with that company for about two years, in 1901 to 1903, or from 1902 to 1904, I cannot recollect.

I knew Thomas J. Griffin, and have known him all my life; I first became acquainted with him in Falls County, near Mooresville, Texas; I knew his sister very well, Mrs. W. D. Thomas, and boarded with the family in Marlin all the time I was there; Griffin went to Galveston along about 1900, probably in 1899; subsequently, while working for the Southern Pacific Railroad Company, I saw Griffin in Spindletop and Sour Lake; he was a man of some prominence in Spindletop; I was acquainted with his general reputation in the communities in which I knew him, for truth, veracity, honesty and integrity, and it was good; I was better acquainted with his reputation at Marlin than anywhere else, because I knew more about him, and saw him, and had better opportuni-[2944]ties to observe him there than in Beaumont;

at Beaumont and Sour Lake I would only see Mr. Griffin probably a few hours at a time; I was very much better acquainted with his reputation at Marlin or Falls County; if he had had a reputation other than that which was good I would have known it.

CROSS EXAMINATION OF DAN M. JACKSON

After I was admitted to the bar, I began practising law at Marlin, and remained there until 1901 or 1902; Mr. Griffin was not a client of mine at the time; he was living at Galveston, which is 250 miles from Marlin; the relationship between his family and myself was quite friendly, but I have not seen Thomas J. Griffin but once in nine years; I never lived at Beaumont,, or at Spindletop, or at Sour Lake, or Batson; I have not seen him since I left Houston, nine years ago; I left Houston either in 1903 or 1904, but cannot fix the date definitely; I cannot recall whether it was in the spring of 1904 or 1903 that I went to El Paso.

Prior to the time I left the service of the Texas & New Orleans to go to El Paso, I cannot recall how often I went to Beaumont or Spindletop, but was there very often, and had a great deal of litigation there; I was not at Sour Lake as often as at Spindletop; was at Sour Lake probably once or twice a month; as well as I recollect. I think I saw Griffin on all of the trips I made to Beaumont.

Griffin was a free talker, a rapid talker, and talked a great deal; I think he talked more than the average

man; he was what I would call a free talker, by which I mean that he was a rapid talker and talked a great deal.

During the time I knew Griffin at Beaumont, Spindletop, or Sour Lake, I did not know of his taking a trip to California; he never told me he took a trip to California. I know that he lives there; he told me so last April. I didn't know he lived there until last April. [2945]

REDIRECT EXAMINATION

The fact that Mr. Griffin was a free talker does not at all have any influence on my estimate of his credibility and his honesty and integrity, nor would it have any influence of any kind in the matter of my belief as to his word, nor does it, in my opinion, from what I know of him and his general reputation, in any way affect that general reputation for truth and veracity. I never had any business dealings with Mr. Griffin in my life.

J. R. PARKS, a witness called and sworn on behalf of the plaintiff, in rebuttal testified as follows:

DIRECT EXAMINATION

I reside at 3515 Main street, Houston, Texas, and at present in real estate and life insurance business at Houston, having lived there eight and one-half years; I am also engaged in the home building business; president of it and still own it, but not actively engaged in building at present. The business of the company is building homes; and am associated with

the Great Southern Life Insurance company as agency director and solicitor. My age is 51 years.

When the boom was on at Spindletop I went to Beaumont and organized a company, and went into the oil production business there: I know practically all the oil men in the various places, and know the Spindletop Power Company; I know that Thomas J. Griffin was the general manager of the company; he was one of the first men I met at Spindletop; I knew Griffin very well, and saw him every day; I do not remember having heard his character for veracity discussed pro and con at that time, whether it was good or bad; if he was a bad man I did not know it, as I never heard anyone say so; from my acquaintance, as far as I know, his reputation for truth and veracity was good in Spindletop, Sour Lake and Batson; I never heard anything to the contrary. It stands to reason, being sufficiently identified with my interests there and intimately [**2946**] acquainted with the business affairs of those communities to the extent that if his reputation had been bad, I would have known it.

CROSS-EXAMINATION OF J. R. PARKS

I have not seen Griffin this year at any time except within the last day or two, and when I met him yesterday I did not know him; he is not connected or in any way employed with any of the properties with which I am connected. I was speculating in oil lands.

After the wells ceased to produce in 1903, I went

to Sour Lake and took another whirl at the oil business, but was not successful; I then moved to Batson, where I insured Griffin's life, when he was operating at Sour Lake.

I met Mr. Griffin in 1901 at Beaumont and Spindletop, but was never associated with him in business; I was with him more or less three days out of a week, going to and from the fields, riding either in a hack or on the railroad, with him and others, not especially Griffin; I lived at Beaumont, and he lived there also, at the time; I was frequently with him at that time; up to the time Mr. Griffin left Texas, I was frequently with him, but was never quite intimate enough to collect a little bill that he owed me; he owed me some money on life insurance; he has not paid me yet, but I believe though today that he will pay me when he can; that has been a good many years ago and I don't remember whether or not I ever made a demand upon him for the payment; I expect I did; I collected the most of it. I hope to get the balance. I don't say that under those circumstances I would be very glad to do any favor to Mr. Griffin in order to get that money because it is insignificant; it don't amount to a great deal. He paid the most of it. The little amount he owed me would not change my opinion one way or the other on Mr. Griffin.

When I met Mr. Griffin the other day I said to him, "Don't you owe me a little balance on that last insurance?" He replied, "Maybe [2947] I do; it has been a good while since I saw you, and my mind is not clear

on it. Maybe I do." I said, "I am not altogether clear, but I think you do owe me a little balance", and he said he would pay it. He said nothing in that conversation about my testifying as to his character. The first to ask about my testifying as to Mr. Griffin's character was Mr. Flocker, the brown-eyed gentleman, and that was yesterday, and I think I saw Mr. Flocker afterwards.

I saw Mr. Griffin in the Chronicle Building yesterday, in the forenoon, and Mr. Flocker was there in the forenoon; Mr. Flocker was there first, and Griffin followed within an hour; I think that I told Mr. Flocker that Griffin owed me a small amount of money.

I never heard Griffin's reputation discussed excepting during the last few hours; I regard him as rather a windy fellow; he is a free talker; when I am asked if he was rather windy, I would say yes sir; I would put it that way - that is, entertainingly. I don't know that he would maliciously — I never heard him accused of making any exaggerated statements; but when Mr. Griffin had success, he blowed a good deal about it and he put up a pretty good front and I should say he did talk a good deal about what he was doing. He was not a pessimist, but he was an optimistical fellow. We generally talked when we were together. He never bored me to death; but he was a good talker — a good entertainer. I could not say that he had a general reputation for being windy; that was my impression.

J. R. CHEEK, a witness called and sworn on behalf of the plaintiff, in rebuttal testified as follows:

DIRECT EXAMINATION

I live at Houston, and have lived there about four and a half years; am engaged in the subdivision business, handling Magnolia and Central Park real estate; my corporation, known as the Magnolia Tract Land Company, has one thousand acres between Houston and the [**2948**] head of navigation along the Harrisburg road. We cut it up into blocks and are retailing it out. We have sold something over two million dollars worth of property from this so far. I am president of the company and own practically half of the capital stock, amounting to $300,000.00. I am president also of the Manchester Corporation, which owns four hundred and fifty acres of land adjoining Harrisburg and known as "Manchester". Its capital stock is $200,000.00 and I practically own that company. It is not doing any active business in the sale of real estate. It is just a holding company at present. We value that land at $750.00 an acre, which is the present market price. I am also Secretary of the Viaduct Land Company, which is a real estate business and a holding concern. The amount of capital stock of that company is $100,000.00 and I own one-third of the stock. It owns two hundred and sixty acres of land north of the Fifth Ward and the land is worth from $400.00 to $500.00 an acre. I was engaged in the oil business at Spindletop, Sour Lake, Batson and Humble, beginning at Spindletop, in 1901, and up to 1908 at Humble.

I was operating there for myself in all of those

places. I had several wells at Spindletop. I drilled several wells there and they were producing. I never produced very much oil at Spindletop as there was no outlet for the oil. I produced oil at Sour Lake, Batson and Humble. I had half a dozen wells at Sour Lake and they were all producing. The highest production I had there was about nine hundred barrels per day from all these wells. I operated those wells four or five years. They were on my own property. We had eight wells at Batson that I was interested in with others. I would estimate that we had a production of six or seven hundred barrels per day there for a while. We operated there for about a year. I have also operated wells at Humble. I was interested in [**2949**] three or four producing wells there and I own some property there now. The highest production we ever got from the Humble wells was three hundred barrels a day, but we had a good gas production there for a while. I knew a man at Spindletop by the name of Thomas J. Griffin. I knew him at Galveston before he went to Spindletop, but I became intimately acquainted with him at Spindletop. He was connected with the Palestine Power Company. I don't know whether it was called the Palestine-Beaumont Power Company or not. I know that Mr. Bass was associated with Mr. Griffin and there was also a man named Bird. I knew Mr. Griffin well during those years. I knew him quite well at Spindletop. He had an office there on Spindletop Avenue and we used to get him to do some work for us. He

pulled pipe out of the wells and furnished compressed air and power. He was an active man in the field when I knew him. He was right on the job there all the time. I think he was the manager, as he was the man that I had the most to do with when I went there — he and Bird. I found when I had business relations with him that he was a man whose word could be relied upon in the matter of business. I was well acquainted with a good many business men in those several towns in which I was operating during that period. There were a great number at Spindletop that I didn't know, but I knew some of them, and when you ask me if I knew the general reputation of Thomas J. Griffin for veracity and honesty and integrity and truth in that community of Spindletop while I was operating there, I will say I never heard anybody say anything against him at all. I was [2950] in a position to know what his general reputation was there. I think I do. I knew a good many people there of his acquaintance and they all spoke well of him. Mr. Griffin's reputation for truth and veracity, honesty and integrity was good in every community in which I knew him. I have never heard his reputation for evil discussed in any way.

CROSS-EXAMINATION OF J. R. CHEEK

When I say that Mr. Griffin's reputation was good in every community in which I knew him, I refer to Galveston, Beaumont, and Sour Lake. I knew him at Galveston prior to 1900 only to talk to. I never

had any business with him until I got to Spindletop. When he was at Galveston, he was connected with some transportation concern there and I was living in Galveston. I heard Fred Chase discuss him in Galveston. There was quite a Galveston bunch that went up to Spindletop and Beaumont and various ones were dealing with Griffin and I think if he had had a bad reputation, I probably would have heard it. I don't know whether Griffin went to Beaumont before or after me. I knew him at Beaumont during the period of one or two years and then he went to Sour [**2951**] Lake. I had dealings with Mr. Griffin and Mr. Bird at Spindletop. He used to test out wells there with air. We often were on the road and our men would go up there and get him to test out a certain well. I think at that time Mr. Griffin was living at Beaumont and I was living at Beaumont; that is, I was living at Galveston, but staying at Beaumont. I spent 80% of my time in 1901 and 1902 at Beaumont, Sour Lake and Spindletop; practically lived there. After I went up to the oil fields, I became intimately acquainted with Mr. Griffin; he worked for us. When I say that we were intimately acquainted I mean exactly as you would be with a man who was furnishing air to flow your wells. I would go and make arrangements with him to flow a well and he would tell me when he could do it and he would be there to see if it was done. Our acquaintance, of course, was only in a business way; not a social way. I was a man that went around town to various places

where drillers would congregate and I have met Mr. Griffin at various places. I met him at the Cosby House, where I stopped part of the time. I don't remember ever hearing any special discussion about Mr. Griffin further than that I have heard people speak of having done business with him or with the company that he was connected with. He always kept his word with me. He was not unusually a talkative man, but he never hesitated to answer any question I ever asked him. He never did any boasting to me about what he had accomplished. I never heard that he had a reputation in the field of being windy and I never considered him windy and he never evidenced any traits of that [**2952**] character in his conversation with me. My dealings with him were principally business dealings in connection with wells that I was operating. We did not have an intimate social acquaintance; I didn't run with him. All the people there that spoke of him spoke well of him. I never heard anyone speak ill of him. I heard D. R. Beatty there speak of him. He said that Mr. Griffin was doing his work. I know Mr. Beatty boasted about the work that Griffin did at Sour Lake in shutting off his well, as it was considered in the field quite a nervy thing to do, and Mr. Griffin was commended by many people for doing that particular thing. I heard a man there by the name of Birmingham that Griffin did business for at Spindletop speak of him. I never heard him say anything against him. I heard Frank Yost at Beaumont speak of him. He had busi-

ness with him and he never said anything against him. I have heard him speak of the work done by Mr. Griffin and he had no complaint about that work. I know he would have impressed me if he had ever complained of Griffin's work. When I was at Beaumont, Spindletop and Sour Lake, I don't know of Mr. Griffin making any trips to California, but I think in the latter part of 1903 or the early part of 1904 he came into my office at Sour Lake and said that he was going West. I don't know where he went; I think he went away and left that part of the country along about that time. I don't think that was as late as August, 1904. The first time I ever heard of this case was this morning. At that time Mr. Mills spoke to me about it and he asked me to come down here. When I saw Mr. Griffin last April he did not tell me [**2953**] what he was doing in California. I only spoke to him about two minutes. I think from the description I have given of Mr. Griffin that I am in a position to know what his reputation amongst those with whom he associated generally in Spindletop and Sour Lake was. Mr. Griffin never made a statement to me that he didn't make good. I never knew him to make statements that were overdrawn and in that respect his reputation amongst those with whom he commonly associated was good. I know that to be a fact. I never heard anyone discuss his propensity to brag. The Mr. Birmingham that I mentioned was an operator over there.

NOAH ALLEN, a witness called and sworn on behalf of the plaintiff in rebuttal, testified as follows:

DIRECT EXAMINATION

I reside at San Antonio, Texas, and am fifty-eight years old last February; I am an attorney at law, and have practiced thirty-seven years, having been admitted to the bar in Missouri in 1876; I practiced at Wichita, Kansas; Denver, Colorado; and in Galveston, Houston and Brownsville, Texas; I was assistant attorney general of Kansas under the Llewellyn administration; I was the Populist candidate for congress in 1896, and was judge of the Corporation Court of the City of Galveston for approximately two years, and resigned that position and went to the Beaumont oil fields in the oil excitement there; in 1892 I was a presidential elector on the Populist ticket; for the past five years and up to August of last year I held the position of Assistant United States District Attorney for the Southern District of Texas. For one or two years I was attorney for the Gulf and Interstate Railway Company. I was one of the directors and vice president of the Zenith Oil Company. I was also a director and I think I was vice president and general manager of the Gold Standard Oil Company and the Texla Oil and Refining Company. Associated with me in the Gold Standard Oil [**2954**] Company was Mr. Tom Dunn, Cashier of one of the large local banks here in Houston, Texas; Mr. Lovejoy, a prominent attorney both here and in Galveston; Mr.

Alex Sampson; and Mr. James Butte, a prominent merchant.

I know Thomas J. Griffin; I first knew him at Galveston in 1894; I went to Galveston in 1894, and it was possibly a year and a half or two years after that I first met Griffin; I knew him some time before the Galveston storm; I knew him at Beaumont, and knew about when he went to Beaumont, but cannot fix the exact date.

I am quite well acquainted in Galveston, and am intimately acquainted with the reputation of Griffin in that community for truth, veracity, honesty and integrity; it was quite good.

I am also well acquainted in Beaumont; I go back and forth and am acquainted with the people, especially in the oil fields, and also at Spindletop, and know Griffin's reputation for truth and veracity, honesty and integrity in both of those places; it is good. If Mr. Griffin had any reputation but a good reputation in any of the communities in which I knew him, I think I would have known it.

I remember talking with him about going to California. I should judge probably a year and a half or two years before I moved from Houston, but I do not know the time; it is my recollection that it was some time after I withdrew from the Beaumont field that I talked with him about that, but as to just when it was, the time of year, or what year, I could not say. I think it was as late as the winter of 1903 and 1904.

CROSS EXAMINATION OF NOAH ALLEN

On Thursday or Friday I received a letter from Mr. Mills, addressed to me at Brownsville, and forwarded to San Antonio, asking me if I would come and testify in this case.

I was acquainted with Mr. Griffin at the time I was corporation [**2955**] judge in Galveston; my recollection is that I knew him before the election of Mayor Jones; I think Griffin took part in that election, and my recollection is that he supported Jones. I cannot tell just what his specific employment was at that time, but I think when I first got to know him he was engaged in business as an engineer; I am not certain where he lived; I never visited his home, and was no more intimate with him than with people in different parts of the city; I think Griffin assisted in the Jones campaign from there. I do not think I ever had any personal dealings with him; I cannot say whether it was at Beaumont, or at Houston that I last saw him.

I cannot remember the conversation about Griffin going to California, but simply remember seeing him and talking with him about California—either that he was going or had been there, but think he said he was going to California, he did not say what part; I do not remember the conversation, but just barely the circumstance of his mentioning the fact that he was going to California, or something of that kind; I do not know whether he went or not; he did not say whom he was going with, and I do not remember what

he said about it, if he did; I cannot remember the year he made this statement, and would not attempt to fix the year, because I had no occasion to remember, nothing particular to remember it by, other than simply it was possibly among the last times I was at Beaumont.

I never had any business dealings with Mr. Griffin of any kind, and do not know from personal experience what sort of a man he is in business dealings.

BEN S. DAVIDSON, a witness called and sworn on behalf of the plaintiff, in rebuttal testified as follows:

DIRECT EXAMINATION

I am chief of police of Houston, which has a population of one [**2956**] hundred and twenty or one hundred and twenty-five thousand; I have lived in Texas forty-three years, and have lived in Galveston fifteen years; I was chief deputy sheriff in Galveston about six years prior to going to Houston, and also city clerk of Galveston one term.

Since I have been in Houston I have been associated with W. S. Hipp, in contracting, paving, grading and railroad construction work. During my residence in Galveston I became acquainted with Thomas J. Griffin; he was living there at the time I knew him; I knew him for two or three years; I am myself very well acquainted in Galveston; I did not know Griffin anywhere else excepting at Galveston, and lived in no other community with him; I think I was in a posi-

tion to know his reputation generally for truth and veracity, honesty and integrity, in Galveston; it was good as far as I know; I have heard nothing bad about him at any time. [**2957**]

Cross-Examination:

While I was in Galveston I knew Mr. Griffin mighty well; I was an associate of his in a political way; several people who were friends of Griffin and myself took it upon ourselves to elect a certain man there to a certain office, and during that election he and I had occasion to be very familiar; I was in almost daily contact with him during that campaign,—the Fly and Jones campaign for mayor; we were supporting Jones. The others associated with Griffin in the fight were Marcene Johnson, George McCracken, a lawyer, and several others, and there was a man by the name of Noah Allen; I was in the same crowd; we formed a sort of campaign committee; I do not know what part Griffin took in the fight but we made the rounds nightly, as was customary in those times, making ward speeches and campaigning generally on behalf of the candidate; this was in 1908, as far as I can remember.

I cannot say where Griffin lived in Galveston; I did not live in the same neighborhood with him; my chief knowledge of him came from my association with him in that campaign; I did not know him after he went into the oil fields, or know anything about his reputation; I have not seen him since, until twenty minutes ago.

Griffin was a free talker, good off-hand, pretty good single-handed talker; he could hold his own in a crowd telling his experiences; he told a pretty good story about what he had done, and would top the other fellow if he could.

Redirect Examination.

My chief knowledge of Mr. Griffin was gained in that campaign; outside of that I did not know very much about him.

Recross-Examination.

I have never heard Griffin's character discussed by anybody. [**2958**]

GEORGE Q. McCRACKEN, a witness called and sworn on behalf of the plaintiff in rebuttal, testified as follows:

DIRECT EXAMINATION

I live in Galveston, Texas, and have lived in Texas since 1877; about thirty years in Galveston; I practiced law at Galveston for eleven years, and was city clerk of that city from 1899 to 1901; I was also clerk of the police department from 1895 to 1899; during that period I knew Thomas J. Griffin; as well as I can recollect he was an engineer; I first knew him in Galveston along in 1898 or 1899; I considered his reputation for truth and veracity, honesty and integrity as good. My estimate of Mr. Griffin, basing my answer upon my acquaintance with him and the reputation which he bore in that community, is that he is a man whose statement you would take as the truth. I have never heard anything against Mr. Griffin.

CROSS-EXAMINATION OF GEORGE Q. McCRACKEN

Mayor Fly appointed me clerk of the police department, and I held that position until 1899; I was appointed city clerk of Galveston by Mayor Jones; Mayor Jones was elected in 1899, and I worked during the campaign for his election; he was a candidate against Fly; I was associated slightly with Noah Allen in that election, and with Mr. Davidson; we were all interested in seeing Jones elected, and took an active part in the campaign work; I think Griffin was interested in the campaign, and he was quite active in trying to have Mr. Jones elected Mayor.

To the best of my recollection, I became acquainted with Griffin about a year before the campaign, or it might be two years, but I cannot say definitely; I thought that he was an engineer of some kind, but I kept no track of him, as I had no occasion to do so; I may have known him as I did a number of other citizens of Galveston that I might come in contact with, and Griffin was among [**2959**] that number; that is my best recollection; I think he lived in Galveston in 1901; I had no occasion to keep track of his movements at that time, and do not recollect where he lived in Galveston; I was not socially acquainted with his neighbors.

During the campaign I saw Griffin two or three times a week; the campaign lasted six or eight weeks, and after the election I saw him probably two or three times a week; I had no business relations with

him outside of the campaign; he was not a client of mine, nor were any of his associates; my acquaintance with Griffin centered largely around the campaign, and after that I had no occasion to keep track of him at all; I had no business dealings with him of any kind, and he had no occasion to come to my office, and I had no occasion to look him up; my acquaintance with Griffin was no different than with others engaged in the campaign; I had no knowledge of his reputation after he went to Beaumont, and after he left Galveston I made no inquiries concerning him; in fact, I have not seen Griffin since he left Galveston.

I never heard anything derogatory said against Mr. Griffin while he lived in Galveston. The fact of the matter is I always considered Mr. Griffin a man of truth and veracity. I have never heard anything said derogatory to his character as to truth, honesty, veracity and integrity at any time. My observation of Mr. Griffin was that he was very loyal to his friends.

ALBERT ADAM SNELL, a witness called and sworn on behalf of the plaintff in rebuttal, testified as follows:

DIRECT EXAMINATION

I reside in Bryan, Texas, and am engaged in drilling wild-cat oil wells at Spindletop; I am acquainted with certain oil operators there; I operated in Sour Lake, Batson and Saratoga, and also in the Louisiana field.

I knew Griffin quite well there, but do not know

just how [2960] long; I knew him at Sour Lake, possibly two years; my first acquaintance with Griffin was at Spindletop when he was running a big air plant there; I had no business dealings with him at Batson, but drilled him some water wells at Sour Lake for an air plant at Spindletop, and also at Sour Lake for an air plant that he operated there; Griffin was well known among the oil people, oil operators, at Spindletop and Sour Lake, and from my association with him in the Spindletop and Sour Lake and with other operators there, I was acquainted with his reputation for truth and veracity, and it was good; I never heard anything detrimental to it.

CROSS EXAMINATION OF ALBERT ADAM SNELL

I had dealings with Mr. Griffin. I drilled some water wells for him at Spindletop and Sour Lake. He was the man that made the contract with me and paid me. There never was any contract drawn up. If Mr. Griffin wanted a water well he came over and said: "Have you got a rig that you can come over and drill me a water well?" I said, "Yes", and he would say, "What can you do it for?" and I would say, "So much a foot." I went over and drilled a well and when I got through I presented my bill and got my money. Sometimes, if I wanted a hundred or two hundred dollars, I said: "Griffin, I need a couple of hundred dollars." Sometimes he had the money in his pocket and he would hand it to me. Sometimes he would give me a check. I drilled wells for the Spin-

dletop company under Mr. Griffin's instructions. I had no dealings with any other person connected with the Spindletop Power Company, although I knew Mr. Bass when I met him, but I never had any business dealings with him.

I knew Mr. Griffin for two years at Sour Lake, but do not remember what years they were, I cannot fix the time; I had no wells at Spindletop, and did not purchase any air from the Spindletop Power Company; I was in the water well business several years in [**2961**] the coast country; I drilled wells from Maragorda County up to Louisiana; at one time I had seven drilling rigs running; I had charge of the drills and went from one place to another; I did not spend all of my time at any one place; I did not know that Mr. Griffin was living at Sour Lake when I was operating there; I did not know any of his associates over there, or at Spindletop; I did not travel with the same crowd.

I had no business dealings with Griffin at Batson; I do not know of my own knowledge, nor have I ever heard that he was employed by the Rio Bravo Oil Company; I do not know that I ever heard anybody discuss Griffin's reputation, and was not interested in finding out about it; we were friendly in a social way, and still are; he was always a free talkative fellow, full of fun, that is, with me. He is a hail fellow, well met; by golly, he is a good fellow to all his friends, and was very liberal. I cannot say that he did any more talking than other people I have come

in contact with. I have seen fellows that talked a good deal more than he did. He is not what you would call windy. I think he is a conservative business man. He was conservative in his statements to me. I have never heard anything detrimental to his character. I always addressed him as Mr. Griffin. I never heard him [**2962**] called by any nickname. I never heard him called "Spindletop Griffin". I don't know what his associates called him.

REDIRECT EXAMINATION

From what I know of Mr. Griffin, and basing my statement on my general acquaintance with conditions in the oil fields, he was a man of prominence and large affairs in the communities of Sour Lake and Spindletop.

RECROSS EXAMINATION

I know that he was operating at that time a very large air plant, which I presume, from the experience that I have had in the air proposition myself, was worth at least fifty or seventy-five thousand dollars. I don't know what interest Mr. Griffin had in the plant. I only considered that Mr. Griffin had the authority to give me a contract and he paid me for what work I did. I never gave the thought that he owned the entire plant any consideration. I formed the conclusion that he was a man of large affairs from the fact that when Mr. Griffin wanted any work he came to me and said that he wanted me to do it and I did it and I got my money. I didn't know whether Mr. Griffin owned the plant or who owned it. I pre-

sumed that from the fact that I was asked to do the work and got my money, that I concluded that he was a man of large affairs, and I don't know as I have any other reasons for so stating. [2963]

REDIRECT EXAMINATION

Mr. Griffin was operating the Spindletop Power Company and it was a very busy concern. It was busy operating flowing wells for the different operators in the field. I knew that he was operating continuously and that it was essential that he have sufficient water to run his plant. I know that it was urgent, when he called on me to drill those water wells for him, to make those wells and do it quick, and I based my opinion that he was a man of large affairs from the fact that he did operate and flow wells for other people, and not alone from the fact that he employed me to make wells and paid me for it.

RECROSS EXAMINATION

I base my conclusions upon dealings with Mr. Griffin, as I found all those dealings came out all right, and I therefore concluded that he was all right. I never had any business dealings with Mr. Griffin after the Spindletop Power Company went into the hands of a receiver. [2964]

P. G. WILLIAMS

Witness called in behalf of Plaintiff in

REBUTTAL.

November 28, 1913. San Francisco, Cal.

Direct Examination.

I am the same P. G. Williams who testified in this case for the defendants; I am secretary, also auditor, of the Associated Oil Company; I succeeded G. Sheridan as secretary about the 18th day of August, 1912; the duties of secretary and auditor of that company are entirely separate and distinct; as secretary my duties are to attend the meetings of the board of directors, and stockholders' meetings; to record the minutes of those meetings, and to have the custody of contracts and leases; I have general custody of the records of the corporation, as secretary, including the minutes of different meetings of the directors, the executive committee, and stockholders; I have here copies of annual statements issued by the Associated Oil Company from the date of its origin to the year 1912; it was organized in October, 1901; the last statement is dated December 31, 1912; there is an annual statement for each year, with the exception of 1909, at which time the same statement as issued to the stock exchange of New York was issued to the stockholders in lieu of the regular annual statement; these statements, taken generally, contain the names of the officers and directors of the corporation, with three exceptions wherein I have amended them so as to show the names as now presented; I now produce the annual statements for the years 1902, 1903, 1904, 1905, 1906, 1907, 1908, 1910, 1911 and 1912.

The Associated Oil Company is capitalized at forty million dollars; 400,000 shares of the par value of

$100 each, all of which has been issued; I have examined the books and records of this corporation for the purpose of determining the number of its shares held by the Southern Pacific Company during the time [2965] intervening between its organization and the present; the Southern Pacific Company first acquired stock of the Associated Oil Company January 1st, 1904, amounting to 40,299 shares; all the stock of that corporation belonging to the Southern Pacific Company has been issued in its name; none has been issued to any other party to be held in trust for the Southern Pacific; this stock was all disposed of during the year 1904; giving the figures as of the first of January, of each year, the next year that the Southern Pacific Company held any stock of the Associated Oil Company was 1909, 206,971 shares; 1910, 200,690 shares; 1911, 200,690 shares; 1912, 200,685 shares, and January 1st, 1913, 200,685 shares. In 1905 there were 54,898 1/100 shares of the Associated Oil Company standing in the name of W. F. Herrin, Trustee; it stood in Mr. Herrin's name for several years, and during the year 1908 it was transferred to the name of the Southern Pacific Company, and so appears upon its books; to the best of my knowledge no other stock was ever held in trust and afterwards transferred to the Southern Pacific Company; I have not examined the books and records to ascertain from whom Mr. Herrin acquired his stock, I do not know; on January 1st, 1909, the Southern Pacific Company held a few more shares, practically only 703 shares,

besides that stock acquired from W. F. Herrin; during all the time from January 1, 1909 to January 1, 1913, the Southern Pacific Company held a majority ownership of the capital stock of the Associated Oil Company; as of January 1, 1908, there appears in the name of W. F. Herrin, Trustee, 206,268 shares, and that was transferred to the Southern Pacific Company during 1908; that includes the 54,000.

The names of the officers and directors of the Associated Oil Company appear on the title page of the official first annual statement of the company issued to its stockholders; I did not prepare this statement, and have not compared it with the records of the Associated Oil Company. [**2966**]

That portion of said first annual report showing the title page and names of the officers and directors of the Associated Oil Company was introduced in evidence, and extended into the record, as follows:

"First Annual Statement Associated Oil Company. Year 1902. Statement made Stockholders at Annual Meeting Held February 24, 1903. San Francisco, Cal., February 24, 1903.

OFFICERS

J. A. Chanslor	President
Wm. G. Kerckhoff	1st Vice-President
W. A. Jacobs	2nd Vice-President
W. S. Porter	General Manager
O. Scribner	Secretary

DIRECTORS

C. A. Canfield	Wm. G. Kerckhoff
W. F. Chandler	Burton E. Green
W. A. Jacobs	W. S. Porter
B. F. Brooks	John A. Bunting
O. Scribner	Frank H. Buck

J. A. Chanslor

The first annual statement does not show the names of the executive committee; there was no executive committee as of that date, nor was there an executive committee at the time of the annual statement of 1903.

The annual statement of 1903 originally contained the names of the officers only, and I have typed in from the records the names of the directors.

The extract from the Second Annual Statement of the Associated Oil Company last referred to was introduced in evidence, and is as follows:

"Second Annual Statement Associated Oil Company. Year 1903. [**2967**] Statement Made Stockholders at Annual Meeting Held February 29, 1904.

OFFICERS

J. A. Chanslor	President
W. S. Porter	1st Vice-President and General Manager
W. F. Chandler	2nd Vice-President
B. E. Green	Treasurer
O. Scribner	Secretary

(In typewriting) DIRECTORS

B. F. Brooks
W. S. Porter
W. G. Kerckhoff
J. A. Chanslor
Burton E. Green
Frank H. Buck
W. F. Chandler
W. A. Jacobs
John A. Bunting
O. Scribner
C. A. Canfield

The official statement for the year 1904 originally bore the names of the officers, and I have typewritten the names of the directors from the records of the corporation. There was no executive committee during that year.

The portion of the third annual statement of the Associated Oil Company last referred to was introduced in evidence, as follows:

"Third Annual Statement Associated Oil Company. Year 1904. Statement Made Stockholders at Annual Meeting Held February 27, 1905. San Francisco, Cal., February 27, 1905.

OFFICERS

J. A. Chanslor	President
W. S. Porter	1st Vice-President and General Manager.
W. F. Chandler	2nd Vice-President

B. E. Green	Treasurer
O. Scribner	Asst. Gen. Manager and Secretary
W. A. Sloan	Assistant Secretary

(In typewriting) DIRECTORS 1904

O. Scribner
John A. Bunting
W. F. Chandler
C. A. Canfield
Burton E. Green
Frank H. Buck
W. S. Porter
J. A. Chanslor
M. H. Whittier
Henry Ach
C. B. Lillie

I have prepared a list or roster of the officers and directors of the Associated Oil Company for the year 1905, and the same is typewritten and attached to the financial statement for that year, which I now produce.

The portion of said financial statement bearing the names of the officers and directors of said corporation was introduced in evidence, and as introduced, follows:

"Financial Statement of Associated Oil Company for year ending December 31, 1905. Submitted to Stockholders at their annual meeting, held February 26, 1906.

(In typewriting, attached to statement):

DIRECTORS

1905

J. A. Chanslor	M. H. Whittier
W. S. Porter	W. F. Chandler

E. T. Dumble

OFFICERS:

J. A. Chanslor	Pres.
O. Scribner	Sec'y.
W. A. Sloan	Asst. Sec'y.
W. S. Porter	1st Vice P.
W. F. Chandler	2nd " "
Burton E. Green	Treasurer
W. S. Porter	Gen'l Mgr.
O. Scribner	Asst. Gen. Mgr.

EXECUTIVE COM: W. S. Porter, Burton E. Green and J. A. Chanslor. [**2969**]

The document now shown me is the official statement of the corporation for the year 1906, and bears the names of the officers and directors for that year. There was no executive committee in 1906.

That portion of said statement bearing the names of the officers and directors was introduced in evidence, and is as follows:

"Fifth Annual Statement, Associated Oil Com-

pany. Year 1906 San Francisco, Cal., February, 1907.

ASSOCIATED OIL COMPANY
OFFICERS

J. A. Chanslor	President
W. S. Porter	1st Vice-Pres. and General Manager
W. F. Chandler	2nd Vice-President
B. E. Green	Treasurer
O. Scribner	Asst. Gen. Manager and Secretary
W. A. Sloan	Asst. Secretary.

ASSOCIATED OIL COMPANY
DIRECTORS

F. H. Buck	Burton E. Green
C. A. Canfield	W. F. Herrin
W. F. Chandler	Wm. G. Kerckhoff
J. A. Chanslor	W. S. Porter
E. T. Dumble	O. Scribner

M. H. Whittier."

The next paper represents the sixth annual statement of the Associated Oil Company, for the year ending December 31, 1907. It is the official statement for that year, and contains the names of the officers and directors. There was no executive committee in 1907.

The extract from said statement showing names of of- [2970] ficers and directors was intriduced in evidence, and is as follows:

"Sixth Annual Statement, Associated Oil Com-

pany. Year 1907. San Francisco, Cal., February, 1908.

DIRECTORS

F. H. Buck	C. A. Canfield
W. F. Chandler	J. A. Chanslor
E. T. Dumble	Burton E. Green
W. F. Herrin	Wm. G. Kerckhoff
W. S. Porter	O. Scribner

M. H. Whittier

OFFICERS

J. A. Chanslor	President
W. S. Porter	1st Vice-Pres. and General Manager
W. F. Chandler	2nd Vice-President
B. E. Green	Treasurer
O. Scribner	Asst. Gen. Manager and Secretary
W. A. Sloan	Asst. Secretary."

The next is the Annual Report of the Associated Oil Company for the year ending December 31, 1908. It is the official statement of the corporation, and so far as I know it is correct, and contains on the names of the officers and directors in print; I think the notations in pencil are changes in directors for the following year, and that this copy was used in preparing the report for 1909; the printed names are correct, and no attention should be paid to the pencil memoranda.

So much of said document as appeared on the second page, following the title page, showing the di-

rectors and officers and executive committee, was introduced in evidence, as follows:

"Annual Report, Associated Oil Company, 1908. December 31, 1908.

DIRECTORS

F. H. Buck	W. S. Porter	Burton E. Green [2971]
W. F. Chandler	C. E. Canfield	Wm. G. Kerckhoff
(In pencil: Shoup)	In pencil: Kirkpatrick)	(In pencil: Herrold)
E. T. Dumble	J. A. Chanslor	O. Scribner
W. F. Herrin		M. H. Whittier

EXECUTIVE COMMITTEE

F. H. Buck W. S. Porter, Chairman J. A. Chanslor
Wm. F. Herrin Burton E. Green

GENERAL OFFICERS

J. A. Chanslor	President
W. S. Porter	1st Vice-Pres. and General Manager
W. F. Chandler	2nd Vice-President
O. Scribner	Secretary and Asst. Gen. Manager
W. A. Sloan	Treasurer and Asst. Secretary."

On the page next preceding the last in the foregoing document appear the names of affiliated proprietary companies in which the Associated Oil Company owned stock at the date of the annual report, as follows: West Coast Oil Company, Recruit Oil Company, Commercial Petroleum Company, Buell

Rancho Oil Company, Shreeves Oil Company, Los Alimos Oil and Development Company, Bakersfield Iron Works, and Associated Supply Company. In 1908 The Associated Oil Company owned a majority of the capital stock in West Coast Oil Company, Recruit Oil Company, Buell Rancho Oil Company, Shreeves Oil Company, Baksersfield Ion Works, and Associated Supply Company.

The paper now shown me is an application to the New York Stock Exchange to list our stock in that exchange, dated April 19, 1910; the data contained therein is principally as of February 28, 1910, and contains the names of the directors and officers as of that date; it is signed by W. S. Porter, Vice-President; He was vice-president at that time; I have not prepared a list of the executive committee for that year; this is the report [**2972**] which I have testified was submitted, considered and distributed to the stockholders in lieu of the annual statement for 1909; to the best of my knowledge it contains the names of the officers and directors of the Associated Oil Company who were such during 1909; on pages 4 and 5 of this statement appear the names of companies other than the Associated Oil Company, of which it held the a majority of the capital stock in The Associated Transportation Company, West Coast Oil Company, Amalgamated Oil Company, Sterling Oil and Development Company, Associated Supply Company, Bakersfield Iron Works, and Buell Rancho Oil Company, Shreeves Oil Company, and Recruit Oil Company.

The last two paragraphs of said application were introduced in evidence as showing the names of the directors and officers of the Associated Oil Company as of February 28, 1910, and is as follows:

"The Directors of the Company are: W. F. Herrin, W. S. Porter, J. A. Chanslor, R. P. Schwerin, Burton E. Green, Paul Shoup, F. H. Buck, J. C. Kirkpatrick, E. T. Dumble, O. Scribner and Rudolph Herold.

The officers of the Company are: W. F. Herrin, President; W. S. Porter, J. A. Chanslor, Paul Shoup, R. H. Giles, Vice-Presidents; O. Scribner, Secretary; and W. A. Sloan, Treasurer."

To the best of my recollection, the 1909 executive committee continued the same at the date of this statement; I do not now know their names, but will procure the information and produce it later.

The document which you now hand me is the Annual Report of the Associated Oil Company as of December 31, 1910, and contains the names of the general officers, executive committee and directors as of that date; it is official.

The second page of said report, showing the names of [2973] such persons was introduced in evidence, as follows:

1910

ASSOCIATED OIL COMPANY

DIRECTORS

O. Scribner	W .S. Porter	Wm. F. Herrin
F. H. Buck	Burton E. Green	J. A. Chanslor

R. P. Schwerin Guy Shoup John C. Kirkpatrick
E. T. Dumble Rudolph Herold, Jr.

EXECUTIVE COMMITTEE

W. S. Porter John C. Kirkpatrick
F. H. Buck R. P. Schwerin
Wm. F. Herrin, Chairman

GENERAL OFFICERS

Wm. F. Herrin	President
W. S. Porter	1st Vice-Pres. and General Manager
O. Scribner	Vice-Pres. and Asst. Gen. Manager.
J. A. Chanslor	Vice President
G. Sheridan	Secretary
W. A. Sloan	Treasurer

Reading the first part of the second page, under "Elk Hills District", and which appears over the signature of W. S. Porter, Vice-President and General Manager of the company, is the following statement:

"We acquired by lease of mineral locations 3,200 acres of land in what is known as the Elk Hills District, North Midway, on which we are now drilling 13 wells, the deepest of which has penetrated oil formation. These wells are being drilled for the purpose of acquiring title to the land. Under the terms of our leases we have the option to purchase this land at a reasonable price."

This statement does not disclose all the companies

in which the Associated Oil Company owned or controlled a majority of stock ownership during that year; of those which are named here, [2974] it owned or controlled a majority of the stock of Pioneer Midway Oil Company Consolidated, Sterling Oil & Development Company, West Coast Oil Company, Amalgamated Oil Company. It also owned and controlled the Bakersfield Iron Works by ownership of majority of its stock in 1910, 1911 and 1912, and it does today.

The paper now handed me is the annual report of the Associated Oil Company as of December 31, 1911; it is the official statement of the Associated Oil Company, and contains the names of the general officers, executive committee and directors for 1911.

That portion of said report bearing the names of such persons was introduced in evidence, as follows:

"1911. Annual Report of the Associated Oil Company and Proprietary & Affiliated Companies. December 31, 1911.

DIRECTORS

Wm. Sproule W. S. Porter Wm. F. Herrin
F. H. Buck Frank G. Drum J. A. Chanslor
R. P. Schwerin A. D. McDonald John C. Kirkpatrick
M. H. Whittier Rudolph Herold, Jr.

GENERAL OFFICERS

Wm. F. Herrin	President
W. S. Porter	1st Vice-Pres. and General Manager
D. B. Henderson	Ass't. Gen'l Manager
G. Sheridan	Secretary
W. A. Sloan	Treasurer

The said report is made to the stockholders through the Vice-President, and is signed by W. S. Porter, Vice-President and General Manager,—that is, a portion of it; reading from the top [**2975**] of page 2 which you mark in pencil:

"The work done by us in the Buena Vista Hills, on what are known as the McMurtry lands, demonstrates these lands to be of great value and capable of producing both oil and gas in large quantities."

And the last paragraph which is over the name of W. S. Porter:

"Notwithstanding the reduced selling price of oil, the net earnings of the company were approximately the same as during the preceeding year, and were used largely in paying for 4,261,144 barrels of oil purchased and stored during the year, and for the purpose of building additional storage to the extent of 1,500,000 barrels. The depreciation reserve amounting to $645,650.00 was used for the retirement of outstanding bonds, thus reducing our bonded indebtedness to that extent."

The defendants moved that both of the foregoing statements be stricken out, on the ground that they

are irrelevant to any of the issues in this case, immaterial, not rebuttal of any testimony introduced on behalf of defendants; incompetent, because relating to transactions of other than the defendants, and without any showing that the acts or statements made were authorized by parties to this action, or that the parties making them were authorized to represent the defendants.

The Southern Pacific Company did not own any of those bonds that were retired; there was a bond issue in 1902, an authorized issue of five million dollars, par value, but they were never all issued, or, rather, they were never all outstanding at one time; undoubtedly the records of the Associated Oil Company will show to whom the bonds were originally sold, but after they are disposed of they have no record of what was done with them; some of them were at one time held by the Southern Pacific or some of the subsidiary companies, but how many or [2976] what percent of the bonds were held by them I do not know; I can tell from the records how many bonds they acquired as of a certain date, but beyond that I cannot say; they are a gradually diminishing quantity, because outstanding bonds at five per cent are redeemed every year; our records do not show to whom interest was paid.

I now have a copy of the original official annual report of the Associated Oil Company for the year 1912, as issued and distributed to its stockholders, and containing the names of the officers and directors

and executive committee at that time, signed by William Sproule, President.

So much of said document as shows the names of the officers, directors and executive committee, and the two pages thereof signed by said president, introduced in evidence as follows:

R. A. Page	Asst. Secy. in New York

ASSOCIATED OIL COMPANY

"To the Stockholders of the Associated Oil Company: [2977]

The Board of Directors submits herewith combined annual statement of the Associated Oil Company and its proprietary companies (Associated Supply Company and Bakersfield Iron Works) for the year ended December 31st, 1912.

Business earings after deducting all operating expenses, maintenance, transportation, etc., were		$3,992,128.16
Fixed charges		
Taxes	$157,892.33	
Interest on Bonds	775,265.12	933,157.45
BALANCE		$3,058,970.71
Depreciation reserve reinvested in the business		1,828,526.58
BALANCE TO PROFIT AND LOSS		$1,230,444.13

In 1912 has not been a satisfactory year in the fuel oil business. Over-production, which was a feature of 1911, reached a point in 1912 at which it became advisable to reduce our development work. Active drilling in the face of general over-production did not commend itself to the Management of this Company. It was deemed the conservative course to reduce drilling and draw from our supply of oil purchased.

OIL STORAGE:

During the year we increased our oil in storage

1,523,000 barrels; on December 31st, 1912, we had on hand 8,106,616 barrels.

TRANSPORTATION DEPARTMENT:

The Associated Transportation Company, which had operated our pipe lines and vessels as a separate corporation, was dissolved in 1912, surrendering to the Associated Oil Company all its assets, and that portion of the business is now handled as a department of this Company. The change reduced administration and other expenses.

MARINE DEPARTMENT:

During the forepart of 1912 our SS. "Rosencrans" met with two serious accidents, resulting in an expenditure of $150,000 for repairs. At the time of these accidents our fleet was not insured. [**2978**] Later in the year, all vessels and their cargoes were covered by insurance. During January 1913, the SS. "Rosencrans" (21,000 barrels capacity) was totally wrecked at the mouth of the Columbia River. We received from the Underwriters $250,000, being amount of the policy carried on that ship.

Plans have been completed for a new steamer, with capacity of 62,000 barrels. Contract for construction will be let at an early date for delivery about the middle of 1914.

REFINERY:

Since January 1st, 1913, construction has been commenced of a new refinery at Avon, on San Francisco Bay, with capacity for handling 10,000 barrels

crude oil per day. It will manufacture gasoline and engine distillate. The plans of the refinery are arranged so that extensions to the plant can be readily made for the manufacture of other products, should we determine hereafter to engage in such manufacture. It is expected that this plant will be ready for operation before the close of the year.

Both of our pipe lines from the San Joaquin Valley oilfields pass through our refinery site and will serve the refinery. The main lines of the Southern Pacific and Santa Fe Companies cross the property which has also deep water frontage for a wharf, construction and cost of which is included in the plan for handling our business. Supply of refining oil for the operation of this refinery is provided for by our oil purchase contracts and from the production of our own properties.

PRODUCTION AND NEW DEVELOPMENT:

During 1912, we completed the drilling of wells as follows: Kern River 4; Lost Hills 3; McKittrick 1; Midway 2. During 1913, active drilling has been resumed on our properties and it is expected that our production will show considerable increase for the the year. It has already increased. During March 1913, we produced 33,000 barrels over corresponding month of 1912. [2979]

No wells were drilled during the year on property we own in the Lost Hills, but 3 wells were completed on property which we have under lease there. One gas well and one oil well were drilled and completed

on our McMurtry properties in the Buena Vista Hills. Since January 1, 1913, two other wells have been finished on the McMurtry properties.

FINANCES:

Since January 1, 1913, the Board of Directors declared a dividend of 1½%, payable April 15, 1913, to stockholders of record April 10, 1913, with the suggestion that it be the policy of the company to pay semi-annually or at such intervals as the judgment of the Board may determine such dividends as the net earnings of the Company and cash available for that purpose may justify.

The cost of Avon Refinery and of the new steel tank steamer will aggregate about $1,750,000, and provision has already been made for these payments without borrowing or selling bonds.

It is believed that the Company will not need any new financing in 1913. Our affairs are in a promising condition. We look for increased earnings and the completion of the new refinery will establish the Company on a basis desirable to the stockholders.

AMORTIZATION:

The Company has adopted the policy of writing off a liberal amount annually for depreciation in order that the book value of the property at the end of any period may be on a trustworthy and conservative basis. Our sinking fund retires our entire bond issue within the limit of 20 years from date of authorization.

REORGANIZATION:

The Administrative and Field Departments of the Company have been reorganized during the year, effecting a reduction in our pay rolls at the rate of over $100,000 per year, with increase of [2980] efficieney.

We wish to make acknowledgement of the loyalty and zeal of officials and staff at headquarters and in the field.

WM. SPROULE,

April 1st, 1913. President."

Not all of the companies controlled by a majority of stock ownership are contained in this report, but reading from a list of all the companies, the following were so controlled by the Associated Oil Company during the years 1910, 1911, 1912, and 1913: The Amalgamated Oil Company, Associated Transportation Company — which has since been dissolved — Bakersfield Iron Works, Sterling Oil & Development Company, Associated Supply Company, West Coast Oil Company, Buell Rancho Oil Company — that is, up to to the time we disposed of our holdings — Shreeves Oil Company, the Recruit Oil Company. That is the complete list.

The 1912 report is the last one issued to date by the Associated Oil Company.

I now have the original record book of minutes of the executive committee, which is in my custody and control as secretary of the company; it purports to contain a record of the proceedings had at the several meetings of that committee for the periods therein

mentioned; page 192, and on page 193 through the second paragraph of volume 1 of said minutes reads as follows: "Minutes of Regular Meeting of Executive Committee of Board of Directors of Associated Oil Company.

San Francisco Cal., March 22, 1910.

Regular meeting of Executive Committee of Board of Directors of Associated Oil Company, held at San Francisco, California, on Tuesday, March 22, 1910.

The meeting was called to order at 11 o'clock a. m. by Mr. W. F. Herrin in the Chair. [**2981**]

Mr. O. Scribner acted as secretary of the meeting.

The Chairman directed the Secretary to call the roll, which disclosed the following:

Present: Messrs W. F. Herrin, J. C. Kirkpatrick and Paul Shoup.

Absent: Messrs. W. S. Porter and F. H. Buck.

The Assistant General Manager stated to the Committee that he had twenty year leases from March 12, 1910, at royalties ranging from one-eighth to one-tenth on the following described lands in the Elk Hills District, to wit:

Township 30 South, Range 23 East, M. D. B. & M.

Of Section 22: Northwest quarter;
Northeast quarter;
Southwest quarter;
Southeast quarter;

Of Section 24: Northwest quarter;
Northeast quarter;
Southwest quarter;
Southeast quarter;

Of Section 26: Northwest quarter;
Northeast quarter;
Southwest quarter;
Southeast quarter;

Township 31 South, Range 24 East, M. D. B. & M.

Of Section 5: Northwest quarter;
Northeast quarter;
Southwest quarter;
Southeast quarter;

that these lands required the drilling of one well on on quarter of each section to maintain possession of each section; that under the leases there was the right to abandon at any time and remove all personal property and improvements from the premises placed thereon by the Lessee; that it was necessary to take immediate possession of the property and build houses thereon which would require an expenditure of from $15,000 to $20,000.

On motion to that end duly made and seconded and unanimously carried, the Assistant General Manager was authorized on behalf of the Associated Oil Company to go into possession of [**2982**] the premises described in said leases, and to perform such acts as may be necessary to maintain possession thereof, and to spend as little money as possible pending the termination of the question whether or not the Associated Oil Company would drill on said premises.

* * * * * * * * *

O. Scribner
Secretary."

The first seven lines of page 199, volume 1, and the last line of the same page, introduced in evidence, is as follows:

"Minutes of Regular Meeting of Executive Committee of Board of Directors of Associated Oil Company.

San Francisco, Cal., April 26, 1910.

Regular Meeting of the Executive Committee of Board of Directors of Associated Oil Company held at San Francisco, California, on Tuesday, April 26, 1910.

The meeting convened at 11 o'clock a. m.

Mr. W. F. Herrin in the chair.

Mr. O. Scribner acted as Secretary of the meeting.

Present: Messrs. W. F. Herrin, Paul Shoup and J. C. Kirkpatrick.

Absent: Messrs W. S. Porter and F. H. Buck.

* * * * * * * * *

O. Scribner,
Secretary."

Also, reading from page 201, of the same volume, all but the last two paragraphs:

"Minutes of Regular Meeting of Executive Committee of Board of Directors of Associated Oil Company.

San Francisco, Cal., May 3, 1910.

Regular meeting of Executive Committee of Board of Directors of Associated Oil Company, held at San Francisco, California, [**2983**] on May 3, 1910.

The Committee convened at 12:15 o'clock p. m.

Mr. W. F. Herrin in the Chair.

G. Sheridan acted as Secretary of the meeting.

Present: Messrs. W. F. Herrin, J. C. Kirkpatrick, F. H. Buck and R. P. Schwerin.

Absent: Mr. W. S. Porter.

The Assistant General Manager recommended to the Committee that a Standard rig be erected on each quarter section of the lands covered by the Elk Hills leases, and a hole drilled to 500 or 700 feet on each quarter, one of the wells on such section to be drilled according to the terms of the lease.

The Committee directed that only sufficient work be done to comply with the terms of the leases as they exist.

* * * * * * * * *

G. Sheridan
Secretary pro tem."

Also, reading that part of page 202 appearing in the first seven lines, and on page 203, the second paragraph:

"Minutes of Regular Meeting of Executive Committee of Board of Directors of Associated Oil Company.

San Francisco, Cal., May 10, 1910.

"Regular meeting of Executive Committee of Board of Directors of Associated Oil Company, held at San Francisco, California, on May 10, 1910.

The Committee convened at 11:30 o'clock a. m.

Mr. F. F. Herrin in the Chair.

Mr. O. Scribner acted as Secretary of the meeting.

Present: Messrs W. F. Herrin and J. C. Kirkpatrick.

Absent: Messrs W. S. Porter, F. H. Buck and R. P. Schwerin.

* * * * * * * * *

The Assistant General Manager was authorized to erect a [**2984**] Standard rig upon each quarter section of the four sections of land now held under lease in the Elk Hills District, as well as on Section 30, 30 - 24, above referred to, and to drill one well on each section and start a well on each of the remaining three quarters of each section, drilling the same to a depth of from 500 to 700 feet.

* * * * * * * * *

O. Scribner,

Secretary."

And, further, from page 212, of the same volume, the first seven lines, and the last paragraph; and the first two words on page 213:

"Minutes of Special Meeting of Executive Committee of Board of Directors of Associated Oil Company.

San Francisco, Cal., June 3, 1910.

Special meeting of Executive Committee of Board of Directors of Associated Oil Company, held at San Francisco, California, on June 3, 1910.

The meeting convened at 11 o'clock a. m.

Mr. W. F. Herrin in the Chair.

Mr. O. Scribner acted as Secretary of the meeting.

Present: Messrs. W. F. Herrin, J. C. Kirkpatrick and F. H. Buck.

Absent: Messrs. W. S. Porter and R. P. Schwerin.

* * * * * * * * *

The Committee authorized the Assistant General Manager to pay W. B. Leland, et al. $1500. for their possessory rights in and to Section 30, 30-24, and to enter into an agreement with other and prior locators who held claims to said Section 30, 30-24, prior to the withdrawal of these lands from mineral entry, upon the basis of spending Five Hundred Dollars for each quarter section for making application for patent, one-half of each of said [**2985**] quarter section to go to the Associated Oil Company, and an option in the Associated Oil Company to buy the remaining half interest of the locators of said lands at Five Hundred Dollars per acre if purchased in one year, and Seven Hundred and Fifty Dollars per acre if purchased within two years.

* * * * * * * * *

O. Scribner
Secretary."

Also, on page 214, of the same volume, the first eleven lines:

"Minutes of Regular Meeting of Executive Committee of Board of Directors of Associated Oil Company.

San Francisco, Cal., June 7, 1910.

Minutes of Regular meeting of Executive Committee of Board of Directors of Associated Oil Company, held at San Francisco, California, on Tuesday, June 7, 1910:

The meeting convened at 11:30 o'clock a. m.

Mr. W. F. Herrin in the Chair.

G. Sheridan acted as Secretary of the meeting.

Present: Messrs W. F. Herrin, F. H. Buck and J. C. Kirkpatrick.

Absent: Messrs W. S. Porter and R. P. Schwerin.

The Assistant General Manager reported progress of work on lands in the Elk Hills District, based upon report of Mr. L. J. King, Superintendent, which report is dated June 4, 1910.

* * * * * * * * *

G. Sheridan
Secretary pro tem."

Also, that portion of page 287 containing down through the name R. P. Schwerin, absent; and on page 288, the fourth paragraph from the bottom:

"Minutes of Regular Meeting of Executive Committee of Board [**2986**] of Directors of Associated Oil Company.

San Francisco, Cal., November 29, 1910.

"Regular meeting of Executive Committee of Board of Directors of Associated Oil Company, held at San Francisco, California, on Tuesday, November 29, 1910.

The meeting convened at eleven o'clock a. m.

Mr. W. F. Herrin, President, in the Chair.

G. Sheridan acted as Secretary of the meeting.

Present: Messrs W. F. Herrin, W. S. Porter, Frank H. Buck and J. C. Kirkpatrick.

Absent: Mr. R. P. Schwerin.

* * * * * * * * *

The General Manager reported that the well of the Associated Oil Company on Section 26, Township 30 South, Range 23 East, Elk Hills, had been drilled to a depth of 3140 feet, and that the field manager advises that he looks for a gusher in this well.

* * * * * * * * *

G. Sheridan,
Secretary."

Reading from page 291, down to the words "Absent; None"; also, at page 292, the last two paragraphs; and on page 293 ending with the word "Secretary.":

"Minutes of Regular Meeting of Executive Committee of Board of Directors of Associated Oil Company.

San Francisco, Cal., December 6, 1910.

"Regular meeting of Executive Committee of Board of Directors of Associated Oil Company, held at San Francisco, California, on Tuesday, December 6, 1910.

The meeting convened at 11:15 o'clock a. m.

Mr. W. F. Herrin, President, in the Chair.

G. Sheridan acted as Secretary of the meeting.

[2987]

Present: Messrs. W. F. Herrin, W. S. Porter, F. H. Buck, J. C. Kirkpatrick and R. P. Schwerin.

Absent: None.

* * * * * * * * *

"The General Manager reported that the Associated Oil Company's well in Elk Hills is 3140 feet deep,

and that it has been lying idle for a week; that well in LostHills is 919 feet deep in blue shale.

The General Manager stated that he had reports from the Field Department that the Southeast quarter of Section 22, Township 30 South, Range 23 East, M. D. B. & M., Elk Hills has been jumped.

On motion to that end duly made and seconded and unanimously carried, the General Manager was authorized to commence drilling on each quarter section of all of our lands held under lease in Elk Hills, and described as follows, to wit:

Section	*Township*	*Range*
22	30 S	23 E
24	"	"
26	"	"
30	"	24 E
5	31 S	"

* * * * * * * * *

G. Sheridan
Secretary.

At page 297, to the words "Absent: None"; page 300, paragraph beginning, "The General Manager reported", and ending with "to the Committee", and page 301, the last paragraph, also page 302, the first three lines, appears the following:

"Minutes of Regular Meeting of Executive Committee of Board of Directors of Associated Oil Company.

San Francisco, Cal., December 20, 1910.

Regular meeting of Executive Committee of

Board of Directors of Associated Oil Company, held at the office of the company, Wells Fargo Building, San Francisco, California, on Tuesday, [2988] December 20, 1910.

The Committee convened at eleven o'clock a. m.

Mr. W. F. Herrin, President, in the Chair.

G. Sheridan acted as Secretary of the meeting.

Present: Messrs. W. F. Herrin, W. S. Porter, F. H. Buck, J. C. Kirkpatrick and R. P. Schwerin.

Absent: None.

* * * * * * * * *

The General Manager reported that there was no change in the Elk Hills well since the date of the last report to the Committee.

* * * * * * * * *

The Assistant General Manager reported to the Committee that at the time we took leases on lands in Elk Hills he was advised that there was but one set of locators, who made their location on January 1, 1910, and who were in possession of the property; that subsequently, on securing abstracts of title to the properties (which were delayed because of pressure of work in the office of the Abstract Company), and after the Oil Company had erected derricks and was in possession, he ascertained there were prior locators claiming to have made discovery of Fuller's Earth on the properties; that our leases on these lands carried an option to purchase, if exercised within one year, at $500 per acre, and at $750 per acre if exercised within two years from the date of

the lease; that for and on behalf of the Associated Oil Company he had entered into supplemental agreement with the Lessors extending the time of the option and reducing the purchase price to $250 and $375 per acre; also had a verbal understanding with the prior locators to receive three forty acre pieces of each quarter section for drilling a well on each quarter and also lease on the remaining forty in each quarter with option to purchase the same at One Thousand Dol- [2989] lars per acre.

* * * * * * * * *

Reading the first part of page 340 to the words "Absent: R. P. Schwerin.", a portion of page 341, commencing with the second paragraph, to the end of the third paragraph on page 342; and the paragraph immediately under Mr. Porter's signature, on the same page, is the following:

"Minutes of Regular Meeting of Executive Committee of Board of Directors of Associated Oil Company.

San Francisco, Cal., March 21, 1911.

"Regular meeting of Executive Committee of Board of Directors of Associated Oil Company, held at the office of the company, Wells Fargo Bldg., San Francisco, California, on Tuesday, March 21, 1911.

The Committee convened at eleven o'clock a. m.

Mr. W. F. Herrin, President, in the Chair.

G. Sheridan acted as Secretary of the meeting.

Present: Messrs. W. F. Herrin, W. S. Porter, F. H. Buck, and John C. Kirkpatrick.

Absent: Mr. R. P. Schwerin.

* * * * * * * * *

The General Manager presented the following report in reference to title to Elk Hills and McMurtry lands:

San Francisco, March 20, 1911.

To the Executive Committee:—

In examining into the titles to our Elk Hills Property, the present development of which indicates it to be oil producing land, I find that the mineral filings on which we base our title to this property were made subsequent to September 27, 1909.

Mineral filings were made on these lands prior to September 27, 1909, and are now held by Messrs McKittrick, Jastro, Tevis, [**2990**] et al, of Bakersfield. These parties have, however, done no active work looking to the discovery of oil, but have made slight excavations and uncovered a deposit, which they call "Fuller's Earth". Samples of this earth submitted to Smith, Emery & Company are stated by latter not to be Fullers Earth at all, nor capable of being used commercially for any purpose for which Fullers Earth is used. On the other hand Thomas Price & Son report that the sample furnished them will answer the same purposes commercially as Fullers Earth. Letters from both of the above chemists are enclosed herewith. We have forwarded samples to Stabler & Company at Los Angeles, for their report.

The claimants under these mineral filings have asked for a patent on Section 24, 30-23 and Section

30, 30-24 by reason of their discovery of Fullers Earth. I understand that generally the department is opposed to granting patents to lands on the discovery of minerals of this nature, especially where the lands are more valuable for oil.

I recommend the acquisition of these conflicting titles for the reason that they were made prior to September 27, 1909, and the work we have done, if applied against these filings would insure the issuance of a patent to us, providing we discover oil on each quarter section, which I think probable. In fact, we have made sufficient discovery on section 26 to enable us to obtain a patent at this time had the filings owned by us been made prior to the date of withdrawal.

We are under agreement to pay to the original holders of mineral filings, under which we are operating, various sums of money and rentals (one-eighth and one-tenth), should we acquire patent thereunder. It seems now that in order to be sure of acquiring patent we should acquire the Tevis, McKittrick, Jastro et al., filings prior to the date of withdrawal, and [**2991**] whatever we pay for such filings should be deducted from the payments we are under contract to make to the owners of other filings, which by reason of legislation have since become valueless, except for work done thereon by us. Mr. Scribner had some negotiations with Mr. Jastro looking to the acquisition of these filings made prior to September 27, 1909, and had agreed upon terms at which we would ac-

quire the same. They afterwards withdrew negotiations.

I suggest that the matter be taken up with Mr. Jastro and an endeavor made to complete the acquisition of these titles, and at the same time arrangements be made with the owners of the filings acquired by us, that a corresponding reduction, or some reduction be made from the payments due them, as their filings and our work will both be lost, under recent legislation, unless these conflicting titles are acquired.

I recommend that the matter be turned over to Mr. Scribner and that he again open negotiations through such channels as he thinks best, looking to the acquisition of these titles. Mr. Jastro has been friendly to us throughout the entire matter.

* * * * * * * * *

(Signed) W. S. Porter

The matter was generally and very carefully discussed by the Committee and, upon motion to that end duly made and seconded and unanimously carried, the matter was referred to the General Manager with instructions to see Mr. Tevis and ascertain about what he would want and report back to the Committee.

* * * * * * * * *

G. Sheridan

Secretary.

Also, that portion of page 351 consisting of the first seven lines; the last paragraph of page 353, and all of page 354, as follows: [**2992**]

"Minutes of Adjourned Meeting of Executive Committee of Board of Directors of Associated Oil Company.

San Francisco, Cal., April 19, 1911.

"Adjourned meeting of Executive Committee of Board of Directors of Associated Oil Company, held at the office of the company, Wells Fargo Building, San Francisco, California, on Wednesday, April 19, 1911.

Mr. W. F. Herrin, President, in the Chair.

G. Sheridan acted as Secretary of the meeting.

Present: Messrs. W. F. Herrin and John C. Kirkpatrick and Assistant General Manager O. Scribner.

* * * * * * * * * *

The Assistant General Manager reported that he had seen Mr. Jastro in reference to lands in Elk Hills; that Mr. Jastro stated that his people wanted One Thousand Dollars an acre for all of Section twenty-six and $250 per acre for the rest of the land. The Assistant General Manager advised Mr. Jastro that the company would pay $1000 per acre even if the land were patented, in fact we would pay any money until the title to the land was clear. Mr. Jastro desired us to make a proposition, which the Assistant General Manager said we would not do at the present time.

There being no further business before the Committee, on motion to that end duly made and seconded, the meeting adjourned.

G. Sheridan
Secretary."

Again reading so much of page 362 of the same volume as ends with the words "Absent: W. F. Herrin and W. S. Porter;" and page 363, excepting the first two and last lines:

"Minutes of Regular Meeting of Executive Meeting of Executive Committee of Board of Directors of Associated Oil Company.

San Francisco, Cal., May 31, 1911.

"Regular meeting of Executive Committee of Board of Directors [**2993**] of Associated Oil Company, held at the office of the company, Wells Fargo Building, San Francisco, California, on Wednesday, May 31, 1911, Tuesday, May 30, 1911, being a holiday.

The Committee convened at eleven o'clock a. m.

Mr. F. H. Buck was elected Chairman of the meeting.

G. Sheridan acted as Secretary of the meeting.

The Chairman directed the Secretary to call the roll, which disclosed the following:

Present: Messrs. F. H. Buck, R. P. Schwerin and John C. Kirkpatrick, and Assistant General Manager O. Scribner.

Absent: Messrs. W. F. Herrin and W. S. Porter.

* * * * * * * * *

The Assistant General Manager reported that he had been in negotiation with H. A. Jastro relative to settling the claims of the Haberkern locators on lands held by the Associated Oil Company in Elk Hills; that the proposition as submitted by Mr. Jastro looking toward a settlement was in the judgment of the Assistant General Manager unreasonable; that he

had a Mr. Fennell working quietly on the matter, and that Mr. Fennell reported that all of the locators would dispose of their claims for $200 per acre for all of the lands, but those in section 24, for which they wanted $1,000 per acre, which money was to be paid within one or two years after patent was issued by the United States Government. The Assistant General Manager stated that in addition to the analyses made by Smith-Emery Co. and Thomas Price & Son of San Francisco, that he had E. A. Stabler & Co. of Los Angeles make and analysis of the substance purported to be Fullers Earth, and on which the Haberkern locators would base their application for patent; that Stabler & Co. reported that the only samples which could be used at all for the purposes for which Fullers Earth is used are those samples taken from two quarter sections, to wit, the northwest quarter of Section 22 and [**2994**] northwest quarter of section 26, 30-23, and that in view of this report he thought it better to litigate on the whole situation and compromise on these two quarter sections rather than accept the proposition submitted by Mr. Fennell; that in his opinion it was impossible to get the benefit of their prior locations if we did compromise, and that this was one of the main reasons for compromising at all, and that he was not in favor of compromising at this time.

The matter of settlement was left with the Assistant General Manager with instructions to report back to the Committee the result of any negotiations he may have.

The Assistant General Manager reported that one of the locators on the south half of Section 24 and the south half of Section 22 in T. 30, S, R. 23 E, Elk Hills, now held by the Associated Oil Company under lease and option to purchase, had offered to sell us his one-eighth interest in the above for $1200 net; that our option to purchase this land was at $250 per acre after patent had been issued by the United States Government.

The matter was very generally and carefully discussed by the Committee, and on motion duly made, seconded and unanimously carried, the offer was declined.

G. Sheridan
Secretary."

Also page 375 of the same volume, to and including the words "Absent: Messrs W. F. Herrin and F. H. Buck," and on page 376, the second paragraph:

"Minutes of Regular Meeting of Executive Committee of Board of Directors of Associated Oil Company.

San Francisco, Cal., June 27, 1911.

"Regular meeting of Executive Committee of Board of Directors of Associated Oil Company, held at the office of the company, [2995] Wells Fargo Building, San Francisco, Cal., on Tuesday, June 27, 1911.

The Committee convened at eleven o'clock a. m.

In the absence of the President, Mr. W. S. Porter,

First Vice-President, took the Chair, and presided at the meeting.

G. Sheridan acted as Secretary of the meeting.

Present: Messrs. W. S. Porter, John C. Kirkpatrick and R. P. Schwerin.

Absent: Messrs. W. F. Herrin and F. H. Buck.

* * * * * * * * *

On motion of Mr. Kirkpatrick, duly seconded and unanimously carried, the Assistant General Manager was authorized to settle the controversy on the Elk Hills Lands with what are known as the 'Haberkoern-Klipstein' interests on the basis of paying $200 and up to but not exceeding $250 per acre within a year after these interests secure patents from the U. S. Government, if they do secure patent, it being understood that this involved four sections only, section 5 not being included in the controversy. It was recommended that this be done in the name of some individual or outside corporation, the name of the Pacific Petroleum Company being suggested.

The General Manager advised the Committee that he had issued the following instructions in the matter of drilling on Elk Hills lands:

Section 5, 31-24; Well No. 1. Stop work on this immediately;

Section 22, 30-23; well No. 3. Stop work on this immediately;

Section 24, 30-23: well No. 3. Proceed with the drilling of this well;

Section 26, 30-23: well No. 1. As soon as the field Department has completed perforating this well and testing it to see the result obtained, discontinue work thereon, they to advise him when this is done.

Section 30, 30-24: well No. 1. Proceed with the drilling of this well.

The above instructions were discussed at length by the Committee and the matter went over for a week.

"Minutes of Regular Meeting of Executive Committee of Board of Directors of Associated Oil Company.

San Francisco, Cal., Sept. 19, 1911.

"Regular meeting of Executive Committee of Board of Directors of Associated Oil Company, held at the office of the company, Wells Fargo Bldg., San Francisco, Cal., on Tuesday, September 19, 1911.

The Committee convened at eleven o'clock a. m.

Mr. W. F. Herrin, President, in the Chair.

G. Sheridan acted as Secretary of the meeting.

Present: Messrs. W. F. Herrin, W. S. Porter, F. H. Buck, R. P. Schwerin and John C. Kirkpatrick.

Absent: None.

* * * * * * * * *

The General Manager reported that he had submitted to our attorney the question of cessation of drilling operations on lands held by the Associated Oil Company in Elk Hills under lease; that he advises that the Picket Bill provides that the rights of any person at the date of any order of withdrawal, which is a bona fide occupant or claimant of oil or gas bearing [2999] lands, and who at the date of the withdrawal is in the diligent prosecution of the work, shall not be affected or impaired by the order 'so long as such occupant or claimant shall continue in diligent prosecution of said work', and in his opinion under that law, in view of the policy of the Government, as exhibited by withdrawals and the laws passed, it is shown to be such that a cessation of drilling operations, without discovery, would destroy the rights of the locator, and that he is under obligation, in order to maintain any rights he has under the Pickett Bill to continue in diligent prosecution of his

work without interruption until final abandonment or discovery and there is, therefore, of course, great danger of losing the rights of this company and all rights of locators by a cessation of work.

The General Manager reported to the Committee that Messrs. Henderson and Bell were in the field at the present time and would return in a few days and upon their return would submit their recommendation as to whether or not we should continue operations on these Elk Hills lands. It was decided by the Committee to await the report of Messrs. Henderson and Bell.

In reference to the producing well on Section 26, Elk Hills, which well is now producing about forty-five barrels of oil per day, the General Manager reported to the Committee that he had submitted to our attorney the question of whether or not the Associated Oil Company should serve notice on the Lessors of the Southwest quarter of said Section to make application for patent under the following provision of our lease from them: 'Upon completion of any well in which oil has been developed, lessors shall make application for patent for land upon which the well is located, and lessee shall pay the necessary expenses incurred in obtaining patent;" that in our attorney's opinion the obligation is on the lessors to make the application for patent and for the lessees to pay the necessary expenses in-[3000]curred in obtaining the same, and that in his opinion the General Manager of the Associated Oil Company should make demand upon the locators under whom we hold set-

ting forth the facts as they exist and request of them that they immediately make application for patent.

The matter was very generally and thoroughly discussed by the Committee and the General Manager was directed to serve notice in accordance with the above.

* * * * * * * * *

G. Sheridan,
Secretary."

Also, page 439, to and including the name "Kirkpatrick"; the paragraph on the same page commencing with "On motion of Mr. Schwerin", all of page 440, ending with the word "approved", as follows:

"Minutes of Regular Meeting of Executive Committee of Board of Directors of Associated Oil Company.

San Francisco, Cal., November 28, 1911.

"Regular meeting of Executive Committee of Board of Directors of Associated Oil Company, held at the office of the company, San Francisco, California, on Tuesday, November 28, 1911.

The meeting convened at eleven o'clock a. m.

In the absence of the President, the First Vice-President, Mr. W. S. Porter, took the Chair, and presided at the meeting.

G. Sheridan acted as Secretary of the meeting.

Present: Messrs. W. S. Porter, F. H. Buck and R. P. Schwerin.

Absent: Messrs. Wm. F. Herrin and John C. Kirkpatrick.

* * * * * * * * *

On motion of Mr. Schwerin, seconded by Mr. Buck and unanimously carried, A. F. E's on the 1911 statement No. 48, were approved with the following exceptions: [3001]

* * * * * * * * *

Elk Hills No. 71, deepening Section 26, Well No. 3, to approximately 3500 ft. to test for oil on Northeast quarter, well now 518 ft. deep	$33,422.53
Estimate — drill new well on S.W. 1-4 of Sec. 26, to prove up this quarter, etc.	45,000.00
Total	$78,422.53
Making the total amount approved	32,897.61

The General Manager reported as follows in reference to recommendation of the Field Department that we deepen well No. 3 on Section 26 at a cost of $33,422.53, drill a well on the S. W. 1-4 of Sec. 26 at a cost of $45,000, and deepen well No. 1 on Sec. 30 at a cost of $12,020.25; 'This well on Section 30 is now 3,836 feet deep having passed through 12 feet of oil stratum at 2,713 feet. We have already expended on the five sections of land which we hold under lease in Elk Hills, $418,000. The Field Department advises that if we forfeit these leases, applying for patents on the 160 acres in Sec. 26 and the 160 acres in Sec. 30, on which we have made discoveries of oil, that we can remove material which will effect a salvage of approximately $100,000, the net result being that we would be in position to ask for patents on 160 acres in Sec. 26, and 160 acres in Sec. 30, which

will be done at once, and doing no further work on any of the other lands. Under those conditions these two wells will have cost us $318,000, provided the salvage is $100,000, as stated above. Our legal department is unable to advise us definitely what the action of the Interior Department will be in regard to these lands, but construes the Pickett Bill to mean that in order to hold lands and eventually acquire patent thereto, we must legitimately carry on the work on each of the twenty quarter sections involved in a manner to make a discovery of oil. This would mean that to be safe we must select these quarter sections at this time on which we deem it advisable to carry on such work. The work on each quarter sec [3002]tion would cost approximately $5,000 per month in order to conform to this construction, and if work is carried on on the eighteen quarter sections on which discovery has not been made, this would mean an expenditure of approximately $90,000 monthly. There are also conflicting mineral claims on these lands owned by other parties, who claim title by reason of discovery of Fullers Earth. These claimants are carrying on work on each quarter section, and have made applications for patent on portions of sections 24 and 30. We would be obliged to contest these applications in the Land Office.

In view of the uncertainty as to the status of our right to obtain patents to any of these lands, even if discovery is made, I recommend that we discontinue work entirely on these lands with the exception of

the pumping of well on Section 26 and the deepening of well on Section 30".

On motion of Mr. Schwerin, seconded by Mr. Buck, and unanimously adopted, the recommendation of the General Manager was approved.

* * * * * * * * *

G. Sheridan
Secretary."

At page 444, to and including the name "Kirkpatrick"; the last paragraph of the same page, and on page 445 through the second paragraph, ending with the word "Manager", follows:

"Minutes of Special Meeting of Executive Committee of Board of Directors of Associated Oil Company.

San Francisco, Cal., December 1, 1911.

"Special Meeting of Executive Committee of Board of Directors of Associated Oil Company, held at the office of the company, Wells Fargo Building, San Francisco, California, on Friday, December 1, 1911.

The meeting convened at 2:30 o'clock p. m. [3003]

In the absence of the President, Mr. W. S. Porter, First Vice-President, took the Chair and presided at the meeting.

G. Sheridan acted as Secretary of the meeting.

Present: Messrs. W. S. Porter, F. H. Buck and R. P. Schwerin.

Absent: Messrs. Wm. F. Herrin and John C. Kirkpatrick.

In reference to the deepening of well on Section

30, 30-24, Elk Hills, $12,020.25 having been appropriated for this purpose by the committee at their last meeting, as appears on A.F.E. Sheet No. 48, Elk Hills No. 72, the General Manager stated that while at the meeting held on November 28th he stated that he was in favor of carrying this well to a depth of 4500 feet as recommended by the Field Department, he had since that time consulted with the Geological Department and they reported that while we might find a producing sand at this depth of 4500 feet, it would not necessarily follow that this same sand would underlie other sections in this district and held by us under lease. The General Manager called the attention of the committee to the fact that we heretofore passed through an oil producing sand in this well at 2700 feet; that the well is now 3800 feet deep, and that the Field Department advise that they can complete the well at this depth without losing any of the hole, so that if in the future it is deemed advisable to carry this well deeper we can do so. The General Manager stated that in view of these reports from the Field and Geological Departments, if it met with the approval of the Executive Committee, he would not authorize the deepening of this well at this time.

On motion of Mr. Buck, seconded by Mr. Schwerin, and unanimously carried, authorization of November 28, 1911, to deepen well on Section 30, 30-24 to a depth of 4500 feet at a cost of $12,020.25 as appears by Elk Hills A. F. E. No. 72 on 1911 statement No. 48, was rescinded, it being understood that this well is

to be completed at its present depth of 3800 feet as re-[3004]commended by the General Manager.

* * * * * * * * * *

G. Sheridan Secretary."

Page 484, to and including the name "F. H. Buck", and through the word "Present"; also page 456, the second paragraph to and including the words "less than $100", as follows:

"Minutes of Regular Meeting of Executive Committee of Board of Directors of Associated Oil Company.

San Francisco, Cal., December 12, 1911.

"Regular meeting of Executive Committee of Board of Directors of Associated Oil Company, held at the office of the company, Wells Fargo Building, San Francisco, Cal., on Tuesday, December 12, 1911.

The Committee convened at eleven o'clock a. m.

In the absence of the President and First Vice-President, Mr. F. H. Buck was elected Chairman of the meeting.

Present: Messrs. F. H. Buck, R. P. Schwerin and John C. Kirkpatrick. Mr. F. B. Henderson, Assistant General Manager, was also present.

* * * * * * * * * *

The Chairman presented letter from the Field Manager dated December 12, 1911, recommending that an appropriation be made of between $900 and $1000 to cover assessment work for the year 1911 as follows:

ELK HILLS

On the N. E. 1-4 of Section 24, T. 30 S., R. 23 E. on

which no actual work has been done during the year 1911, but on which a complete drilling rig was erected and 100 ft. of hole drilled during the year 1910. Recommend that the hole be deepened 100 feet, estimated cost being $500;

On the S. W. 1-4 of Sec. 26, T. 30 S., R. 23 E., on which no work at all has been done. Recommend that a cabin be erected at a cost of not less than $100.

* * * * * * * * *

G. Sheridan
Secretary."

[3005]

Also, page 462, through the name "W. S. Porter"; and the three paragraphs on page 465, ending with the words "this meeting", as follows:

"Minutes of Special Meeting of Executive Committee of Board of Directors of Associated Oil Company.

San Francisco, Cal., December 14, 1911.

"Special Meeting of Executive Committee of Board of Directors of Associated Oil Company, held at the office of the Company, Wells Fargo Bldg., San Francisco, Cal., on Thursday, December 14, 1911.

The Committee convened at ten o'clock a. m.

In the absence of the President and First Vice-President, Mr. F. H. Buck was elected Chairman of the meeting.

G. Sheridan acted as Secretary of the meeting.

Present: Messrs. F. H. Buck, John C. Kirkpatrick and R. P. Schwerin.

Absent: Messrs. Wm. F. Herrin and W. S. Porter.

* * * * * * * * *

Thereupon the Assistant General Manager called the attention of the Committee to letter of the Field Manager dated December 12, which was before them on that date and asking that about $600 be appropriated for annual assessment work on the N.E. 1-4 of Section 24, 30-23 and on the S. W. 1-4 of Section 26, 30-23, Elk Hills, which at that time was not approved by the Committee.

The Assistant General Manager presented written opinion from the legal department wherein Mr. Tauszky advised that in his opinion we may be held liable by the lessors under our leases and advised doing the work for this year.

The matter was discussed by the Committee and on motion of Mr. Kirkpatrick, seconded by Mr. Schwerin, and unanimously carried, the Committee authorized the Assistant General Manager to proceed with the work, as recommended by the Field Manager at an expense [**3006**] of $600, this action being based on the opinion of the legal department and now before this meeting.

* * * * * * * * *

G. Sheridan
Secretary."

Reading from volume 2, of the minutes of the executive committee of the Associated Oil Company, page 69, to and including the word "None"; and page 70, to and including the words "said wells":

"Minutes of Regular Meeting of Executive Committee of Board of Directors of Associated Oil Company.

San Francisco, Cal., June 25, 1912.

"Regular meeting of Executive Committee of Board of Directors of Associated Oil Company, held at the office of the company, room 712 Wells Fargo Building, San Francisco, California, on Tuesday, June 25, 1912.

The meeting convened at eleven o'clock.

Mr. Wm. Sproule, President, in the Chair.

G. Sheridan acted as Secretary of the meeting.

Present: Messrs. Wm. Sproule, W. S. Porter, Wm. F. Herrin, John C. Kirkpatrick and Frank H. Buck.

Absent: None.

* * * * * * * * *

On motion of Mr. Porter seconded by Mr. Buck, the following resolution was unanimously adopted.

Resolved that the General Manager be and he is hereby authorized and directed to instruct the Field Department not to make any further expenditures until otherwise ordered by this committee on any lands in Elk Hills except on the lands in sections 24, 26 and 30, on which wells have been brought in, and to limit the expenditures on said lands to such as may be necessary in the operation of said wells. [3007]

* * * * * * * * *

G. Sheridan

Secretary."

Also, at page 98, to and including the name "Frank H. Buck"; and on page 100, the second, third and

fourth paragraphs, including the word "burdens", as follows:

"Minutes of Regular Meeting of Executive Committee of Board of Directors of Associated Oil Company.

San Francisco, Cal., September 17, 1912.

"Regular meeting of Executive Committee of Board of Directors of Associated Oil Company, held at the office of the company, Room 712 Wells Fargo Building, San Francisco, on Tuesday, September 17, 1912.

The meeting convened at 11 o'clock a. m.

Mr. Wm. Sproule, President, in the Chair.

Mr. P. G. Williams acted as Secretary of the meeting.

Present: Messrs. Wm. Sproule, Wm. F. Herrin and John C. Kirkpatrick and Assistant General Manager F. B. Henderson.

Absent: Messrs. W. S. Porter and Frank H. Buck.

* * * * * * * * *

The Assistant General Manager reports that Attorney Tauszky under date of August 27, 1912, advises that application of F. G. Munzer, et al., for a patent for portion of Sec. 24, 30-23, Elk Hills has been withdrawn without prejudice to right of applicants to file an application for patent to such land or any part thereof hereafter. This application has heretofore been protested by Guy Louthain, et al., and hearing of such protest was conducted in Visalia Land Office the fore part of this year.

Attorney Tauszky discussed with Messrs. Lamberson and Farnsworth, attorneys for protestants, the advisability of filing our application for patent to this land and also advisability of endeavoring to obtain ruling from the Land Dept. on the Munzer ap- [3008] plication, notwithstanding its withdrawal; it was the concensus of opinion that the better policy was to take no action upon these matters at this time. If application for patent is filed by Louthain, et al., the local land office will decline to issue notice on the ground that the land has been withdrawn prior to location by Louthain, et al.

The Munzer application for patent having been dismissed, we only risk an adverse ruling by seeking to have it determined. Therefore concluded to await further affirmative action on the part of the Munzer people and defend against same rather than assume or take any unnecessary risks or burdens.

P. G. Williams,
Secretary."

Volume 2 just referred to, the same as volume 1, contains the minutes of the Executive Committee of the Associated Oil Company; it is in my custody and under my control, and was produced here in court in response to subpoena.

Plaintiff introduced in evidence plaintiff's exhibit 6-QR-LL, being a lease dated March 12, 1910, between G. L. Blosser and others, parties of the first part, and W. O. Maxwell, party of the second part, in and by which the parties of the first part leased for the period of twenty years from date to the party of the

second part the southeast quarter of section 24, township 30 south, range 23 east, M. D. M., for the purpose of excavating, drilling and developing petroleum and other mineral deposits.

Plaintiff introduced in evidence plaintiff's exhibit 6-S-LL, being a supplemental agreement between the same parties above named, relating to the same land, and dated July 20, 1910, modifying the lease last referred to.

Plaintiff introduced in evidence Plaintiff's exhibit 6-T - LL, being original assignment dated November 14, 1910, by [3009] W. O. Maxwell to Associated Oil Company, of lease by G. L. Blosser, et al, to W. O. Maxwell, covering the southwest quarter of Section 24, Township 30 South, Range 23 East, M. D. B. & M.

Plaintiff introduced in evidence plaintiff's exhibit 6-U-LL, being original lease dated the 12th day of March, 1910, for the period of 20 years from its date of the southeast quarter of section 24, 30-23, from G. L. Blosser, et al, to W. O. Maxwell, for the purposes of boring, drilling and sinking for asphaltum, petroleum, natural gas, tar, gypsum, coal or other minerals.

Plaintiff introduced in evidence plaintiff's exhibit 6-V - LL, being copy of agreement between the last-named parties, modifying lease, plaintiff's exhibit 6-U-LL, and dated July 20, 1910.

Plaintiff introduced in evidence plaintiff's exhibit 6-W-LL, being assignment by W. O. Maxwell to Associated Oil Company, of lease, plaintiff's exhibit 6-U-LL, and dated November 14, 1910.

Plaintiff introduced in evidence plaintiff's exhibit 6-X - LL, being original lease dated March 12, 1910, Dan Evenger, et al, to W. O. Maxwell, of northeast quarter of Section 24, 30-23, for the period of 20 years from its date, to mine, excavate, bore, drill and sink for asphaltum, petroleum, natural gas, tar, gypsum, coal and other minerals.

Plaintiff introduced in evidence plaintiff's exhibit 6-Y - LL, being agreement dated July 20, 1910, between the last-named parties, for the modification of lease, plaintiff's exhibit 6-X - LL.

Plaintiff introduced in evidence plaintiff's exhibit 6-Z - LL, being original assignment dated November 14, 1910, by W. O. Maxwell to Associated Oil Company of said last-mentioned lease.

Plaintiff introduced in evidence plaintiff's exhibit [**3010**] 7-A - LL, being original lease dated March 12, 1910, Dan Evenger, et al, to W. O. Maxwell, for the period of 20 years from its date of the northwest quarter of Section 24, Township 30 South, Range 23 East, M. D. B. & M., to mine, excavate, bore, drill and sink for asphaltum, petroleum, natural gas, tar, gypsum, coal or other minerals.

Plaintiff introduced in evidence plaintiff's exhibit 7-B - LL, being original of agreement dated July 6, 1910, between S. M. Johnson, et al, and W. S. Badger, relating to three-fourths interest in the northwest quarter of Section 24, of 30-23, and transferring to W. S. Badger certain lands.

Plaintiff introduced in evidence plaintiff's exhibit 7-C - LL, being original of agreement dated Septem-

ber 12, 1910, between D. Evenger, et al., parties of the first part; S. M. Johnston, et al, parties of the second part; W. O. Maxwell, party of the third part; and W. S. Badger, party of the fourth part, assigning from fourth party to party of the third part lease and agreement between the parties of the second and fourth parts dated July 6, 1910, and providing that the parties of the first and second parts shall have half interest in the lands described as, and profits from, the northwest quarter of section 24, township 30 south, range 23 east, M. D. B. & M.

Plaintiff introduced in evidence plaintiff's exhibit 7-D - LL, being deed of assignment W. O. Maxwell to Associated Oil Company, of the northwest quarter of Section 24, township 30 south, range 23 east, dated November 14, 1910; which said lands were leased to W. O. Maxwell by Dan Evenger, et al, March 12, 1910.

Plaintiff introduced in evidence plaintiff's exhibits 7-E - LL, to 7-K - LL, inclusive, being powers of attorney as follows, respectively:

J. M. Dover and Margaret C. Dover, to J. F. Dover, — to sell and transfer any lands in Kern County, and shares of stock in [**3011**] Section Twenty-Five Oil Company, dated July 9, 1907;

W. A. McNeil to James W. Riggle, full power to handle any interest in township 30, range 24 East, and township 30, range 23 East, M. D. B. & M., dated February 12, 1910.

J. W. Heard to C. C. Painter, full power to act in any manner relative to lease and supplemental agreement dated March 12, 1910 covering north ½ of sec-

tion 24, and north ½ of section 26, township 30 South, range 23 East, M. D. B & M., executed March 10, 1910.

D. R. Evenger to W. Rhyne, to sign leases to W. O. Maxwell on lands in section 24, township 30 South, range 23 east, M. D. B. & M., dated March 25, 1910.

F. B. Wilson, sometimes known as B. F. Wilson, to W. S. Lierly, full power to locate, relocate, grant, bargain, sell, remise, release, convey and quitclaim for said Wilson, on lands in sections:

30 Township 30 Range 24
22 " 30 " 23
26 " 22 " 24
26 " 30 " 23
22 " 30 " 24 Dated June 2, 1910.

John D. Cage, Miss Emma Cage, W. F. Phillips, Mrs. Lenora Cage, Richard Dougherty, also known as Richard Doherty, J. L. Reed and J. A. Ross, to J. E. Baker, power to lease, let, demise, convey and contract for development for mineral in sections 28 and 30, township 30 South, range 24 east, M.D.B.& M., in Kern County, California, dated September 8, 1909.

Mrs. H. J. Dover to H. J. Dover, her husband, full power (general), dated March 16, 1910.

(The witness continuing, testified substantially as follows:)

These instruments, leases, memorandum of agreement, and powers of attorney, have been in my custody as secretary of the Associated Oil Company.

In 1910 a bond issue of twenty-five million was authorized, of which I should say more than fifty

percent was sold to the [**3012**] Southern Pacific Company; the original acquisition of them will show by my books, but I could not tell who has them now; I have a memorandum here of the issue of 1902, 1910, and 1909; as I have previously testified, the 206,268 shares of stock held by the Southern Pacific Company was transferred to it from W. F. Herrin.

Direct Examination: (resumed) November 29, 1913; San Francisco.

Since the last session I have procured from the records of the Associated Oil Company data as to the executive committee of 1909; they were W. S. Porter, F. H. Buck, W. F. Herrin, J. A. Chanslor, and Burton E. Green; I think Mr. Porter was Chairman.

Upon further reference to the records, I find that the number of shares held by Mr. Herrin on January 1st, 1905, was 39,284.92, which was about 20 per cent of the total issue; the number of shares then issued was 211,384.04; the total issue of 1903, on January 1st, was 184,223.17, of which none had been issued to the Southern Pacific Company, or any person, firm or corporation on its behalf; the total issue of stock of Associated Oil Company on January 1, 1904, was 190,847.34, of which 40,299 shares stood in the name of the Southern Pacific Company; none at that time was in the name of any other person for the Southern Pacific; in 1905, of the 211,384.04 shares none stood in the name of the Southern Pacific Company; but W. F. Herrin, Trustee, had 39,284.92; On January 1, 1906, the total amount of capital stock issued

was 228,384.04, at which time there were 148,684.92 shares in the name of W. F. Herrin, Trustee.

The records show that W. F. Herrin obtained the amount of stock represented by the difference between what he held January 1, 1905, and what he appears to have held January 1st, 1906, as follows: 83,100 shares from the Union Trust Company; 26,300 shares from C. H. Markham; I am not positive from whom the Union Trust Company of San Francisco obtained its stock, but I think it was [**3013**] originally issued by the trustees, — in other words, that the Union Trust Company was the first that held it; C. H. Markham obtained the 26,300 shares from Union Trust Company.

On January 1, 1907, the total amount of outstanding capital stock of the Associated Oil Company was 297,369.96; there was none in the name of the Southern Pacific Company; W. F. Herrin Trustee, held 148,684.92; on January 1st, 1908, the total amount of outstanding stock was 297,369.96, of which there stood in the name of W. F. Herrin, Trustee, 206,268 shares, according to my memorandum, but I cannot reconcile this with the total outstanding; I think the total capital stock had been issued, — the full 400,000 shares, because Mr. Herrin did not hold as trustee more than 200,000 shares until the capital stock was all issued, and I think the memorandum must represent the year 1909, instead of 1908; I will prepare a tabulated statement and present it at a later session.

In 1908 none of the stock stood in the name of the Southern Pacific Company; in 1909 my memorandum

shows 400,000 shares, total issue, and 206,971 in the name of the Southern Pacific, but none held by W. F. Herrin, as trustee; in 1910 the total amount issued was 400,000 shares; none stood in the name of W. F. Herrin as trustee; the Southern Pacific Company held 200,690 shares, and the same applies to the year 1911; in 1912, January 1, the total issued stock was 400,000 shares, of which 200,685 was in the name of the Southern Pacific Company; and in 1913, 400,000 shares, total issue, with 200,685 in the name of the Southern Pacific Company.

Of the bond issues concerning which I was to testify at this time, I have ascertained that there were two issues by Associated Oil Company; one in 1902, an authorized issue of five million; and the next issue was January 15, 1910, twenty-five million; of this latter issue the Southern Pacific Company received **[3014]** twelve million one hundred four thousand; of this authorized issue something more than thirteen million was actually issued; I am unable to say the exact amount; my recollection is that it was 13,685,-000; there have been more issued, so that now there are 13,685,000 and as to the exact amount I shall ascertain and report; Of the original issue the trustee was Union Trust Company of San Francisco, to the best of my recollection, and subsequently transferred to Southern California Trust Company; the second issue, the Union Trust Company of San Francisco; the principal office of the Southern California Trust Company is at Los Angeles.

Direct Examination (resumed); December 2, 1913.
San Francisco.

I have prepared in tabulated form a memorandum of the stock in the Associated Oil Company held by the Southern Pacific Company, showing from whom it was acquired, for the several years from 1904 to the present time; I examined the original books of the records of the Associated Oil Company for the purpose of ascertaining these facts; on April 5, 1904 the Southern Pacific Company acquired 4,029,900 shares of the capital stock of the Associated Oil Company, of a par value of one dollar each in the San Joaquin Oil Company and the Reed Crude Oil Company; at that date the total outstanding amount of capital stock of that company was 19,086,623 shares; on December 1, 1906, the Southern Pacific Company held 14,868,492 shares of Associated Oil Company stock; in addition to the amount before testified as having been acquired from the San Joaquin Oil Company and Reed Crude Oil Company, they acquired from the Associated Oil Company 10,838,592 shares, of the par value of one dollar each; those two make up the total of 14,868,492 shares; on that date the total amount of outstanding stock of Associated Oil Company was 29,736,996 shares, of the par value of one dollar; that figures out as lacking six shares of one half of the total outstanding stock; from the records I know that at that time the [**3015**] Southern Pacific Company did not through control of seven or eight other shares of the stock, control the Associated Oil Company; On October 1, 1908, the total amount

of stock of the Associated Oil Company owned by the Southern Pacific Company was 199,981.22 shares, of the par value of one hundred dollars each; the difference between the amount held on that date and that held on December 1st, 1906, was acquired from the Associated Oil Company; the amount acquired by the Southern Pacific Company from the Associated Oil Company was 51,296.30 shares, of the par value of one hundred dollars each; on October 1, 1908 the total amount of outstanding stock of the Associated Oil Company was 400,000 shares, of the par value of $100.; on October 9, 1908, the Southern Pacific Company acquired from the Associated Oil Company 6,286.78 shares, of the par value of $100 each, making a total of 206,268 shares; On November 20, 1909, the Southern Pacific acquired 703 shares, of the par value of $100 each, from the Associated Oil Company; there was still a total outstanding of 400,000 shares; this was the total authorized issue, and there has been no change since that time; there were no further acquisitions of stock by the Southern Pacific Company; On August 31, 1910, 6,281 shares of the par value of one hundred dollars each, were transferred to Mrs. M. W. Harriman, leaving in the hands of the Southern Pacific Company 200,690 shares of the par value of one hundred dollars per share; on May 10, 1912, five shares were transferred to Mr. Sproule, — William Sproule, President of the Associated Oil Company; he was president also of the Southern Pacific Company, I understand, on May 10, 1912; the Southern Pacific Company now

holds 200,685 shares of the Associated Oil Company; from my books, the Southern Pacific Company acquired a majority of the capital stock of the Associated Oil Company on October 9, 1908, and has since had control by a majority of the stock ownership, without interruption; the paper memorandum which I hand you is an abstract made by myself from the books and [**3016**] records of the Associated Oil Company; I have verified it and am satisfied that it is correct.

(Abstract memorandum consisting of the foregoing data introduced in evidence, and marked Plaintiff's Exhibit 10-M - LL.)

Mr. Dumble first acquired stock in the Associated Oil Company February 28, 1910, five shares, par value one hundred dollars each, transferred from the Associated Oil Company to E. T. Dumble, and held by him until July 24, 1911; the by-laws require that a director must hold stock, at least five shares of stock; Mr. Dumble was a director; I think in 1910 the election of directors was held on the third Tuesday of February; this is a complete record of Mr. Dumble's stock from the original of the Associated Oil Company; to the best of my recollection at the present time, the by-laws and rules of the Associated Oil Company required a director to hold at least five shares of stock; I did not make this memorandum myself, and cannot explain at the present time why it does not show stock in his name during the years 1905 to 1909, if he was then a director; he may have had stock, and yet there be a failure to transfer it

to his name; that is possible; I am unable to explain the discrepancy at this time; this information is abstracted from the stock journal and ledger; I do not think they are consecutive for each year, and have no idea whether there is more than one stock journal or ledger; I think there is more, but whether there are five, or fifteen, I cannot say; I believe in some cases there is a dual book, one in the forepart for the forepart for the journal, and the latter part is for the ledger; it may be in later years, when there were so many accounts, that they have separated the journal and ledger; that is the complete record of stock transfers, except the certificates themselves; to the best of my knowledge and belief these stock journals and ledger accounts show the ownership and source of title of capital stock of the Associated held by E. T. Dumble, W. F. Herrin, and [**3017**] the other directors for all the years therein represented.

I have here a tabulated memorandum of the bond matter, for the years 1902 and 1910, as regards the bonds owned by the Southern Pacific Company, as requested; the authorized issue in 1902 was five million dollars, of which amount 750,000 went to the Southern Pacific Company, 750 bonds of $1000 each; that is, they purchased on January 17, 1907, 90 bonds; February 8th, 1907, 450; March 2, 1907, 210; they have not matured; the authorized issue in 1910 was twenty-five million, of which to date the Southern Pacific Company acquired 12,104 bonds, of a thousand dollars each; the Southern Pacific Company did not own any other bonds but that, through the own-

ership of other corporations; 450 bonds went to the Pioneer Midway Oil Company; 760 to the Carlton Investment Company; 327 are now held by the Associated; there has been a total of 2403 issued to the Associated; the total amount issued all together was 13,641; now, of the 1902 issue there are 2,044 outstanding at present, of one thousand dollars each; this memorandum was prepared from the books of the company, and are correct; when the Southern Pacific Company purchased of the issue of 1910, ten thousand were purchased at that time, and some of these others were purchased since.

The par value of the capital stock of the Associated Oil Company was changed from one dollar to a hundred dollars, but I do not know the date; the capital stock of the company has not been increased or decreased since its organization.

Direct Examination (resumed): December 4, 1911; San Francisco.

I now produce an abstact of the title of the stock in Associated Oil Company held by E. T. Dumble, as taken from the original books and records of the company; it was prepared under my direction, and so far as I know it is absolutely correct; to explain: February 25, 1905, what was then a share of stock of the par value of one dollar was transferred from the name of [**3018**] C. H. Markham to the name of E. T. Dumble; on March 7, 1907, there was a share and a tenth transferred from Dumble and Porter, et al, trustee; to Mr. Dumble, I mean; On November 1, 1909, there was transferred from the name of the As-

sociated Oil Company one share; on February 28, 1910, there was transferred from the Associated Oil Company five shares; as an offset to these certificates transferred to Mr. Dumble, the following were cancelled: On March 7, 1907, to E. T. Dumble, one-tenth share, or one share of the par value of one hundred dollars; April 15, 1910, to the Associated Oil Company, one and one-hundredth shares; November 22, 1910, to the Associated Oil Company, one share; July 24, 1911, to A. D. McDonald, five shares, of the par value of one hundred dollars; these were qualifying shares — shares issued to qualify Mr. Dumble as a director; he now has no stock whatever; at the present time the by-laws require that a director shall have at least five shares in order to qualify; yet I wish to qualify that, as I do not know whether the by-laws at the present time require one share or five shares to qualify; the name of A. D. McDonald appears on the tabulated statement under the word "canceled" because the shares of stock were transferred to the name of A. D. McDonald.

The statement last referred to was offered in evidence and marked Plaintiff's Exhibit 11-G - LL, and is as follows:

"ABSTRACT OF TITLE OF STOCK IN ASSOCIATED OIL COMPANY HELD BY E. T. DUMBLE.

The next is a transcript of the ledgers — stock records of the Associated Oil Company, showing the shares of stock transferred to the name of W. F. Herrin, Trustee, and the shares of stock transferred from W. F. Herrin, Trustee; my record shows from whom they were transferred; this was prepared under my direction, and to the best of my knowledge and belief is correct.

The statement last referred to and offered in evidence was marked Plaintiff's Exhibit 11-H - LL, and is as follows:

To explain, as appears from the foregoing, on December [**3020**] 1st, 1906, there was transferred from Union Trust Company of San Francisco, Trustee, 148,694 shares, par value $100; and on the same date, from W. F. Herrin, ninety-two hundredths of a share, to W. F. Herrin, Trustee; October 1st, 1908, C. H. Markham, thirty hundredths of a share; on the same date, from treasury stock, which means A. O. Company — 51,296 shares; On October 9, 1908, from the same source, 6,286 shares and decimal 78; making a total of 206,268 shares; on November 20, 1909, there was transferred from W. S. Porter, et al, 6 shares; on the same date from Southern Pacific Company, 206,971, making a total of 206,977 shares.

In explanation of the cancellations, on November 20, 1909, covered by several certificates there was transferred to the Southern Pacific Company 206,268 shares; which means that on that date there was transferred to the Southern Pacific Company all the certificates of stock which were issued to W. F. Herrin as trustee down to October 9, 1908. August 31, 1910, to the Southern Pacific Company 206,971 shares; to Mrs. M. W. Harriman, shares.

The paper now shown me is the account with the Union Trust Company of San Francisco, as trustee, of the shares of A. O. Company stock acquired by them and transferred to other parties for their ac-

count; this was prepared under my supervision from the books and records of the Associated Oil Company, and so far as I know it is correct.

Said statement was introduced in evidence, marked Plaintiff's Exhibit 11-I - LL, and is as follows:

"ABSTRACT OF TITLE OF STOCK IN ASSOCIATED OIL COMPANY HELD BY UNION TRUST COMPANY OF SAN FRANCISCO, TRUSTEE.

Explaining the last exhibit, on January 1, 1905, there stood in the name of the Union Trust Company of San Francisco, Trustee, 577,876 shares of A. O. Company's stock of the par value of one dollar each; between the dates of January 1, 1905, and December 20, 1905, there was transferred from the name of J. E. Foulds, 7,900,000 shares, of the par value of one dollar each, to the Union Trust Company; September 23, 1908, there was transferred from the Union Trust Company of San Francisco, Trustee, 1,678 shares, of the par value of one hundred dollars each; on the same date, from the same party, seventy-six hundredths of one share; the last two lots were transferred by the Union Trust Company to itself.

In explanation of the cancellations, on December 1, 1906, there was cancelled and transferred to the name of Wm. F. Herrin, Trustee, 8,310,000 shares of A. O. Company stock, of the par value of one dollar each; September 23, 1908, transferred to Union Trust Company of San Francisco, Trustee, 167,876 of said stock, par value one dollar; December 13, 1909, transferred to O. Scribner, 1,678.76 shares, par value one hundred dollars each.

The Union Trust Company of San Francisco, Trustee, holds none of the stock now. [3022]

Now I produce the abstract of title of the stock held by Union Trust Company of San Francisco. Said statement was introduced in evidence, marked Plaintiff's Exhibit 11-J - LL, and is as follows:

ABSTRACT OF TITLE OF STOCK IN ASSOCIATED OIL COMPANY HELD BY UNION TRUST COMPANY OF SAN FRANCISCO.

[3023]

the foregoing exhibit shows that on January 1, 1905, there was standing in the name of W. F. Herrin 3,089,901 shares of Associated Oil Company's stock, of the par value of one dollar each; On December 20, 1905, there was transferred from the name of Frank H. Buck, 838,592 shares, of the par value of one dollar; March 7, 1907, transferred to Wm. F. Herrin, W. S. Porter, et al, Trustees, 101 shares, of

the par value of one dollar; November 18, 1909, transferred from W. S. Porter, et al, Trustees, 750 shares, of the par value of one hundred dollars each; December 13, 1909, from the same party, 3,065 shares, and September 6, 1910, from W. F. Herrin, 3,815 shares; I cannot at this time say who were represented by the "et al"; the probabilities are that the certificates show, and that in transcribing it to the ledger that term was used; I did not take this off the record myself, nor look at the books; I have not the certificates with me.

The next is the abstract from the ledger of the Associated Oil Company showing the number of shares of the company's stock acquired by C. H. Markham, and to whom they were transferred when he disposed of them; it is prepared in the same way as the others, and is correct so far as I know.

Said statement was introduced in evidence, marked Plaintiff's Exhibit 11-L - LL, and is as follows:

"	do.	4660	1,950,000
			2,630,001

Exhibit 11-L is thus explained: On January 1, 1905, there was standing in the name of C. H. Markham 2,630,001 shares of the par value of one dollar each; February 25, 1905, there was [**3024**] transferred to the name of E. T. Dumble one share; December 1, 1906, to Wm. F. Herrin, Trustee, 2,630,000 shares.

The statement now shown me is a transcript of the ledger showing the acquisition of Associated Oil Company stock by R. P. Schwerin, and the disposition of same so far as it is disposed of; it was prepared in like manner, under my supervision, and is correct.

The statement last mentioned was introduced in evidence, marked Plaintiff's Exhibit 11-M - LL, and is as follows:

ABSTRACT OF TITLE OF STOCK IN ASSOCIATED OIL COMPANY HELD BY R. P. SCHWERIN

ISSUED

Date	*From*	*Cert. No.*	*Shares*

11/27/06)	W. S. Porter)	A-12416-12435	
	R. P. Schwerin)	A-12746-12765	2,000
10/1/08	Treasury stock	C-14147	345
			2,345

12/2/09	W. S. Porter, et al,	D-2763-2782	1,000
7/7/10	R. P. Schwerin,	D-13174-13193	1,000

CANCELLED

Date	*To*	*Cert. No.*	*Shares*
11/27/06	R. P. Schwerin	A-12416-12435	1,000
6/29/09	Mrs. R. P. Schwerin	C-14147	345
12/2/09	R. P. Schwerin	A-12746-12765	1,000
			2,345
7/7/10	R. P. Schwerin	D-2763-2782	1,000

Showing that on November 13, and 27, 1906, there were two certificates issued, one from W. S. Porter for 1000 shares and one from R. P. Schwerin, making a total of 2,000 shares; October 1, 1908, from the A. O. Company, treasury stock, 345 shares; December 2, 1909, W. S. Porter, et al, Trustees, 1,000 shares; July 7, 1910, R. P. Schwerin, 1,000 shares; November 27, 1906 there was transferred from Mr. Schwerin's name, to R. P. Schwerin, 1,000 shares; June 29, Mrs. R. P. Schwerin, 345 shares; December 2, 1909, R. P. Schwerin, 1,000 shares; July 7, 1910, R. P. Schwerin, 1,000 shares. [**3025**]

The next one is a transcript of the ledger account, the shares of stock of A. O. Company acquired by Paul Shoup and parties to whom said shares were transferred subsequently; it was prepared the same as the other abstracts, and is correct as far as I know.

Said statement was introduced in evidence, marked Plaintiff's Exhibit 11-N - LL, and is as follows:

"ABSTRACT OF TITLE OF STOCK IN ASSOCIATED OIL COMPANY HELD BY PAUL SHOUP

- - - - - - - - - - - - -

ISSUED

Date	*From*	*Cert. No.*	*Shares*
2/9/10	Guy V. Shoup	D-6311	20
1/10/11	Paul Shoup	D-14595	10
"	"	D-14596	10
			40

Upon telephonic advice from the witness (through Assistant Secretary Coppage, of the Associated Oil Company) that the above footing should read "40" instead of "30", I have, by agreement and consent of counsel, corrected the same to read, "40".

Leo Longley, Special Examiner.

CANCELLED

Date	*To*	*Cert. No.*	*Shares*
1/10/11	Paul Shoup	D-6311	20
2/16/11	Earnest D. Mandenhall	D-14595	10
			30

In explanation of the foregoing, on February 9, 1910, there was transferred to the name of Guy V. Shoup, 20 shares; on January 10, 1911, from Paul Shoup, 20 shares; January 10, 1911, to Paul Shoup 20 shares; February 16, 1911, to Earnest D. Mendenhall, 10 shares. That is not right; according to this paper, 10 shares; he is not now a director ,and I think

has not been since a year ago, or more; it is my understanding that he sold all his stock at that time; I will check this afterwards and telephone the Examiner, but there is not any necessity of correcting it, except the "40", it totals 40.

I am now shown a transcript of the ledger account with J. C. Kirkpatrick, showing the acquisition of shares of A .O. Company stock, and the disposition of same so far as it has been disposed of. It was prepared in the same manner as the others. [**3026**]

The statement last referred to was offered in evidence and marked Plaintiff's Exhibit 11-0 - LL, and is as follows:

ABSTRACT OF TITLE OF STOCK IN ASSOCIATED OIL COMPANY HELD BY J. C. KIRKPATRICK

J. Barth & Company, J. C. Wilson, Carl Raiss & Co., I think are stock brokers, and I think Harris Winthrop & Company are New York people, but I do not know the others, outside of J. C. Kirkpatrick.

The paper now shown me is an abstract of title of the stock held by Rudolph Herold, Jr., from time to time, and prepared in the same way as the others; the other parties named I do not know, except J. C. Wilson, who I understand is a broker.

Said statement was introduced in evidence, marked Plaintiff's Exhibit 11-P-LL, and is as follows: [3027]

The paper which you now hold is the abstract of title of the stock of F. G. Drum, also prepared in the

same way, and is correct; it shows that on March 19, 1912, he acquired a hundred shares from Sutro & Company.

The statement last referred to was offered in evidence, marked Plaintiff's Exhibit 11-Q - LL, and is as follows:

Date	*To*	*Cert. No.*	*Shares*

To clear up the record as to my testimony the other day, regarding the discrepancy referring to Mr. Dumble, the original memorandum was prepared after reference to the indexes of the several ledgers; we have since gone through the ledgers, account [3028] for account, and found the additional transfers and acquisition, as reflected by this statement, the amended statement.

The defendants thereupon moved that the entire testimony here given by this witness be stricken from the record, on the ground that it is not relevant to any of the issues in this case, inasmuch as it does not tend to prove or establish or support any of the allegations of the complaint; and on the ground that it is not rebuttal, inasmuch as it does not deny, answer,

meet, explain or apply to any of the testimony introduced in behalf of the defendants in this case.

All of said testimony was duly objected to by counsel for defendants upon the grounds that the same is irrelevant and immaterial; that it does not rebut any testimony introduced on behalf of defendants; that it is hearsay, relates to transactions between persons other than the defendants in this case, but not questioning the accuracy of reports so far as the Associated Oil Company is concerned; upon the further ground that it is not the best evidence so far as concerns the books of said company.

L. E. GREENE

Witness called on behalf of the Plaintiff

November 29, 1913.

In Rebuttal.

Direct Examination.

I reside in Oakland, and am in business in San Francisco, as trust officer of the Union Trust Company of San Francisco; that is a trust company, organized under the laws of California, transacting a banking business and a trust business; I appear in response to a subpoena duces tecum to produce certain papers left with the Trust Company on behalf of the Associated Oil Company and other persons, and I have those papers with me.

A letter dated April 10, 1911, from Mr. O. Scribner, [3029] introducing Mr. W. S. Badger, was received by us; This letter I now produce; I have seen Mr. Scribner write; that is his signature; I feel sure that

the date of this letter was the first time that the Trust Company, or any of its officers, was notified that certain documents would be placed in escrow with the Trust Company;

Plaintiff introduced in evidence Plaintiff's Exhibit 7-L - LL, being a letter dated April 10, 1911, written by O. Scribner, Assistant General Manager of the Associated Oil Company, to Charles J. Deering, San Francisco, California, introducing W. S. Badger, and stating that Mr. Badger would deposit certain documents in escrow and take a receipt for them.

I was not acquainted with Mr. Badger, except by reason of that letter; in accordance with that letter the Union Trust Company received and accepted certain documents brought to it by Mr. Badger to be placed in escrow, and I feel sure that he was given a receipt; we divided the escrow into four parts, represent- each quarter section of Section 30, Township 30, Range 24, and marked them "Escrow 399", "Escrow 400", "Escrow 401", and "Escrow 402"; The first package that I produce contains the escrow papers embracing the northwest quarter of said Section 30; the first paper handed me from this package is the letter of instructions received from Mr. Badger as attorney-in-fact for the persons named.

Plaintiff offered in evidence Plaintiff's Exhibit 7-M - LL, being escrow instructions concerning the title papers to the northwest quarter of Section 30, Township 30 South, Range 24 East, M. D. B. & M.

The paper now shown me is a carbon copy, except as to my signature, which is missing, of a letter which

I wrote to the Associated Oil Company June 1, 1911, showing receipt of a paper, and I signed "Trust Officer" on behalf of Union Trust Company.

Said letter was introduced in evidence, marked Plain- [3030] tiff's Exhibit 7-N - LL, and is as follows:

"Escrow 399

Associated Oil Company, Wells Fargo Building, San Francisco, Cal.

Dear Sirs:

Attention of Miss G. Sheridan Secretary.

We have your favor of the 26th ultimo, enclosing agreement between J. E. Baker, and others, parties of the first part, and W. S. Badger, party of the second part, dated April 25th, 1911, notifying our escrows Nos. 399-402 inclusive.

Yours truly

.....

G.K Trust Officer."

I identify the next paper as a letter received by the Union Trust Company of San Francisco from the Associated Oil Company, transmitting the modification which I mentioned awhile ago as Plaintiff's Exhibit 7-N - LL which was in reply to this.

Plaintiff introduced in evidence Plaintiff's Exhibit 7-O - LL, being a letter dated May 26, 1911, from G. Sheridan, Secretary of the Associated Oil Company to the Union Trust Company of San Francisco, concerning the instructions mentioned, and directing amendment of the same.

Plaintiff introduced in evidence escrow instruc-

tions modifying the above-mentioned instructions, and the same were marked Plaintiff's Exhibit 7-P - LL.

In connection with said last-named exhibit, plaintiff introduced in evidence assignment, dated May 26, 1911, from W. S. Badger, transferring to the Associated Oil Company the contract and lease dated April 26, 1911, and the original contract of June 9, 1910. This was marked Plaintiff's Exhibit 7-P - LL.

The papers you have in your hand constitute eight deeds, John D. Cage to W. F. Herrin, dated July 1, 1910; Miss Emma Cage to W. S. Porter, July 1, 1910; W. F. Phillips to J. C. Kirkpatrick, July 1, 1910; Mrs. Lenora Cage to R. P. Schwerin, July 1, 1910; Richard Dougherty to O. Scribner, July 1, 1910; J. L. Reed to Paul Shoup, July 1, 1910; J. A. Ross to Rudolph Herold, Jr., July 1, 1910; and J. E. Baker to Frank H. Buck, July 1, 1910, which [**3031**] are the several papers referred to in the escrow papers just introduced; they are the original papers handed to the Union Trust Company by W. S. Badger on behalf of the parties he represented, and were so accepted and received by the Union Trust Company; Of the several grantees named I know Mr. Herrin and Mr. Porter; Mr. Schwerin I have seen, but do not know him personally; Mr. Kirkpatrick I have no personal acquaintance with; Mr. Scribner I know very well, also Mr. Shoup; I think I have met Mr. Buck, but am not sure, and I don't know Mr. Herold; Mr. Herrin is the same W. F. Herrin who is general counsel of the Southern Pacific Company, I assume; and he is the

same Herrin who is president of the Associated Oil Company.

Plaintiff introduced in evidence a deed dated July 1, 1910, John D. Cage to W. F. Herrin, and marked Plaintiff's Exhibit 7-Q - LL, of the northwest quarter of Section 30, Township 30 South, Range 24 East, M. D. B. & M.

Plaintiff introduced in evidence Plaintiff's Exhibit 7-R - LL, being a deed from Emma Cage to W. S. Porter, dated July 1, 1910, of her interest in the northwest quarter of Section 30, T. 30 S., R. 24 E., M.D.M.

Plaintiff introduced in evidence Plaintiff's Exhibit 7-S - LL, being deed from W .F. Phillips to J. C. Kirkpatrick, dated July 1, 1910, of his interest in the northwest quarter of Section 30, T. 30 S., R. 24 E., M.D.M.

Plaintiff introduced in evidence Plaintiff's Exhibit 7-T - LL, being deed from Mrs. Lenora Cage to R. P. Schwerin, dated July 1, 1910, of all her interest in the northwest quarter of Section 30, T. 30 S., R. 24 E., M.D.M.

Plaintiff introduced in evidence Plaintiff's Exhibit 7-U - LL, being deed from Richard Dougherty to O. Scribner, dated July 1, 1910, of all his interest in the northwest quarter of Section 30, T. 30 S., R. 24 E., M.D.M. [3032]

Plaintiff introduced in evidence Plaintiff's Exhibit 7-V - LL, being a deed dated July 1, 1910, from J. L. Reed to Paul Shoup, of all his interest in the northwest quarter of Section 30, T. 30 S., R. 24 E., M.D.M.

Plaintiff introduced in evidence Plaintiff's Exhibit 7-W - LL, being a deed from J. A. Ross to Rudolph Herold, Jr., of all his interest in the northwest quarter of Section 30, T. 30 S., R. 24 E., M. D. M.

Plaintiff introduced in evidence Plaintiff's Exhibit 7-X - LL, being a deed from J. E. Baker to Frank H. Buck, dated July 1, 1910, of all his interest in the northwest quarter of Section 30, T. 30 S., R. 24 E., M. D. M.

I have also brought with me the papers relating to the escrow of the northeast quarter of Section 30, 30-24, and now produce them, covering escrow instructions similar in tenor to the instructions in the previous escrow, together with eight deeds accompanying the escrow; they are the identical original papers which were accepted on behalf of the Union Trust Company from W. S. Badger, representing the Associated Oil Company or other individuals.

Plaintiff introduced in evidence Plaintiff's Exhibit 7-Y - LL, being escrow instructions last referred to.

Plaintiff introduced in evidence Plaintiff's Exhibit 7-Z - LL, being a deed dated July 1, 1910, John D. Cage to W. F. Herrin, of all his interest in the northeast quarter of Section 30, T. 30 S., R. 24 E., M. D. M.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-A - LL, being a deed dated July 1, 1910, Miss Emma Cage to W. S. Porter, of all her interest in the northeast quarter of Section 30, T. 30 S., R. 24 E., M. D. M.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-B - LL, being a deed dated July 1, 1910, W. F.

Phillips to J. C. [3033] Kirkpatrick, of all his interest in the northeast quarter of Section 30, T. 30 S., R. 24 E., M. D. M.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-C -LL, being a deed dated July 1, 1910, Mrs. Lenora Cage to R. P. Schwerin, of all her interest in the northeast quarter of Section 30, T. 30 S., R. 24 E., M.D.M.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-D - LL, being a deed dated July 1, 1910, Richard Dougherty (sometimes known as Richard Doherty) to O. Scribner, of all his interest in the northeast quarter of Section 30, T. 30 S., R. 24 E., M. D. M.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-E - LL, being a deed dated the same day, and to the same property, J. L. Reed to Paul Shoup.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-F - LL, being a deed dated the same day, and to the same property, J. A. Ross to Rudolph Herold, Jr.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-F - LL, being a deed dated the same day, and to the same property, J. E. Baker to Frank H. Buck.

I have here also the papers in the same transaction, relating to the escrow as to the southwest quarter of Section 30, Township 30 S. Range 24 E., consisting of the letter of instruction by Mr. Badger, similar in form to the last two preceding, together with eight deeds received pursuant thereto by John D. Cage to W. F. Herrin; Miss Emma Cage to W. S. Porter; W. F. Phillips to J. C. Kirkpatrick; Mrs. Lenora Cage to R. P. Schwerin; Richard Dougherty to G.

Scribner; J. L. Reed to Paul Shoup; J. A. Ross to Rudolph Herold, Jr., and J. E. Baker to Frank H. Buck. These are all the original papers handed to me under said letter of instructions.

Plaintiff introduced in evidence Plaintiff's Exhibit [3034] 8-H - LL, being escrow instructions last referred to.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-I - LL, being escrow deed dated July 1, 1910, J. E. Baker to Frank H. Buck, of all his interest in the southwest quarter of Section 30, T. 30 S., R. 24 E., M. D. M.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-J - LL, being deed dated July 1, 1910, J. A. Ross to Rudolph Herold, Jr., of his interest in the same property.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-K - LL, being deed dated the same day, J. L. Reed to Paul Shoup, of all his interest in the same property.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-L - LL, being deed of the same date, Richard Dougherty (sometimes known as Richard Doherty), of all his interest in the same property.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-M - LL, being a deed of the same date, Mrs. Lenora Cage to R. P. Schwerin, of all her interest in the same property.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-N - LL, being a deed of the same date, W. F. Phill-

ips to J. C. Kirkpatrick, of all his interest in the same property.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-O - LL, being a deed of the same date, Miss Emma Cage to W. S. Porter, of all her interest in and to the same property.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-P - LL, being a deed of the same date, John D. Cage to W. F. Herrin, of all his interest in and to the same property.

I have brought with me also the escrow papers relating to the southeast quarter of Section 30, of Township 30 South, Range 24 East, M. D. M., which you now have, being the identical and original papers which the Union Trust Company accepted from Mr. Badger, consisting of a letter of escrow instructions, and [3035] eight deeds, as follows: John D. Cage to W. F. Herrin; Miss Emma Cage to W. S. Porter; W. F. Phillips to J. C. Kirkpatrick; Mrs. Lenora Cage to R. P. Schwerin; Richard Dougherty to O Scribner; J. L. Reed to Paul Shoup; J. A. Ross to Rudolph Herold, Jr.; and J. E. Baker to Frank H. Buck.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-Q - LL, being letter of escrow instructions last referred to.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-R - LL, being a deed, dated July 1, 1910, John D. Cage to W. F. Herrin, of all his interest in and to the southeast quarter of Section 30, Township 30 South, Range twenty-four (24) M. D. M.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-S - LL, being a deed, dated the same as Exhibit 8-R-LL, Miss Emma Cage to W. S. Porter, of all her interest in and to the same property.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-T - LL, being a deed, of the same date, W. F. Phillips, to J. C. Kirkpatrick, of all his interest in and to the same property.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-U - LL, being a deed, of the same date, Mrs. Lenora Cage to R. P. Schwerin, of all her interest in and to the same property.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-V - LL, being a deed, of the same date, Richard Dougherty to O. Scribner, of all his interest in and to the same property.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-W - LL, being a deed, of the same date, J. L. Reed to Paul Shoup, of all his interest in and to the same property.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-X - LL, being a deed, of the same date, J. L. Ross to Rudolph Herold, Jr., of all his interest in and to the same property.

Plaintiff introduced in evidence Plaintiff's Exhibit 8-Y, being a deed, of the same date, J. E. Baker to Frank H. Buck, [3036] of all his interest in and to the same property.

I have produced all of the papers of which I have any knowledge consituting that escrow.

Cross-Examination.

None of these escrows have ever been taken up; I believe they have all expired by limitation.

The defendants thereupon moved to strike out all of the testimony of this witness, and all of the documentary evidence introduced in connection with his testimony, on the ground, first, that the same was not rebuttal; second, that it was irrelevant; third, that it was incompetent; in that it consisted of hearsay testimony, of transactions between persons not parties to this action, or agents, representatives or parties to this action.

The defendants duly objected to all of the testimony and documentary evidence introduced by this witness, upon the grounds that the same was irrelevant and immaterial; that it is not rebuttal of any testimony introduced on behalf of the defendants; that it is hearsay; that it relates to transactions between persons other than defendants in this action, but not questioning the accuracy of the exhibits, so far as the Associated Oil Company is concerned; and upon the ground that the evidence is not the best evidence so far as concerns the books of said company and the books of the Union Trust Company. [3037]

J. W. KINGSBURY, a witness called and sworn on behalf of the plaintiff, testified as follows:

DIRECT EXAMINATION

I am mineral inspector for the United States General Land Office, and my profession is geologist. I graduated from the University of Utah, taking

courses pertaining to mining engineering and obtaining a B. S. degree. Then I specialized in geology at Columbia and took minor courses in mining and metallurgy and obtained a M. S. degree at the Columbia University of the City of New York. I graduated from the University of Utah in the spring of 1903 and went to Columbia between 1905 and 1907 and in the spring of 1907 obtained the master's degree. Prof. Moses was at the head of the Department of Mineralogy at Columbia University. The duties of a United States Mineral Inspector are to examine land and ascertain if it is mineral; and also to examine mining claims for which mineral applications for patent have been made to see if they comply with the rules and regulations and see if it is mineral. I have been connected with the United States Land Office in that capacity since the latter part of May, 1909, and was stationed most of the time in California; about a year of the time in Utah. I have examined land containing coal, copper, gold, byerite, gypsum, nitrogen, and petroleum, and [**3038**] other hydrocarbons,—gas and asphaltum. I have visited, officially, for the Land Office, in connection with my work, the lands which are involved in this suit. The first time I went onto the lands in the Elk Hills was in December, 1910. I went there on the morning of December 6th and left in the afternoon of December 7th. At that time the Associated Oil Company had men working in the hills on either Section 24 or 26 of Township 30 South, Range 23 East, and from a distance I saw men working about Section 30 of Township 30 South, Range 24

East. I saw men drilling on Section 36, Township 30 South, Range 23 East, and on Section 30, Township 30 South, Range 24 East. I don't know whether they were drilling on Section 24 of Township 30 South, Range 23 East. The next time I went into the Elk Hills was on June 10, 1911, and then again in January, 1912, and in November, 1912, and April, 1913. Before my visit in June, 1911, I had heard that oil had been discovered on Section 26 and I went up there to see. I found men were working there and the derrick had been spattered with oil, and there was some oil on the tools coming out of the well, that is, the rotary drill pipe.

(It was stipulated between counsel that the testimony of this witness was considered as objected to by the defendants on the ground it is not rebuttal and is not relevant to any of the issues of this case.)

At that time I met representatives of the Associated Oil Company on the lands in the Elk Hills; I met L. J. King and Mr. Barnes and Mr. W. O. Maxwell. Mr. L. J. King was superintendent of the Associated Oil [**3039**] Company. I had a conversation with Mr. King about the discovery of oil on those lands. I remember speaking to Mr. King and asking him for permission to look at the well, and at the same time he informed me that there had been a discovery of a great amount of oil on Section 30, in Township 30 South, Range 24 East, in one of the Associated Oil Company's wells. I went with Mr. King and Mr. Maxwell onto Section 30 to look at the well and saw oil coming from the well, which I esti-

mated at about 2000 barrels in twenty-four hours. Mr. Maxwell said that he thought it was about 5000 barrels per twenty-four hours. There were a number of men working around the well and also a short distance to the southwest of the well laying a four-inch pipe line toward the well on Section 26, in Township 30 South, Range 23 East. On my visit in January, 1913, to the Elk Hills, I found all of the section corners of the lands involved, and most of the quarter section corners; I also located the wells and derricks, a number of wells and derricks in that vicinity. When I mention the section corners, I mean of the lands involved in this suit. That would not include all the corners in Section 30, Township 30-24, but all of the lands involved in Township 30-23 and two of the corners of Section 30, 30-24. I also observed oil in a sump to the west of the well on Section 36, 30-23. I noticed gas escaping from the well on Section 24, 30-23. At that time I couldn't say just what quantity of oil I did see in the sump to the west of the well on Section 26; it was quite a large quantity. What I have been testifying to was not altogether in January; it was [**3040**] somewhat into February, but on January 24th I went out with Mr. McCabe, head driller of the Associated Oil Company and I gauged the well on Section 30, 30-24, and according to my gauge it was producing 385 barrels per twenty-four hours and the gravity of the oil was 24.2 Baume. A cut of that oil was made at the laboratory of the Associated Oil Company at the Pioneer-Midway Camp, and it showed about 2.1 per cent. water and 6.2 per cent.

base settlement. I was present when that cut was made. The time when I located the section corners was in January and February and at that time during that period I located the derricks in the different portions of the sections involved. In November, 1912. I crossed over those lands and worked to the east of them for about four days. At that time the Associated Oil Company had three watchmen there watching the wells on Sections 24 and 26, Township 30 South, 24 East, and also the drilling material and such. I visited the lands in April, 1913, and examined the wells at that time on these three sections; that is, the wells in which oil had been discovered, to wit: Sections 26 and 24, 30-23, and Section 30, 30-24.

I took photographs showing the condition of the wells at that time. I have had the negatives completed and the photographs made; I had them fixed up and enlarged. These photographs were taken with a standard lens by me.

This one is a photograph of the derrick over Associated Oil Company's well No. 1, southeast quarter of Section 26, 30-23, and was taken on that trip in April, 1913. [**3041**] It correctly and substantially delineates the conditions as they existed there at that time. The derrick is about 82 feet high. Said photograph last referred to is introduced in evidence and marked Plaintiff's Exhibit 11-R-LL.

This photograph I am now looking at shows a portion of rig over well No. 1 in the southeast quarter of Section 26, Township 30 South, Range 23 East,

the oil tanks, pump, pipe lines, boilers and cook houses. Said photograph is introduced in evidence and marked Plaintiff's Exhibit 11-S-LL.

Both exhibits 11-R and 11-S, being the exhibits just introduced, are of Associated Well No. 1 in the Elk Hills. One picture is of the derrick and the other shows the pump, oil tanks, pipe lines, boilers and so forth.

This photograph shows a portion of the sump containing oil belonging to the Associated Oil Company west of Well No. 1, southeast quarter of Section 26, 30-23, and the surrounding land and some derricks in the distance on Section 26. Said photograph is introduced in evidence and marked Plaintiff's Exhibit 11-T-LL.

The embankment shown at the left-hand side of 11-T is approximately 160 feet long; the surface of the oil there was about 60 feet wide at the left-hand, or west side, and about 60 feet up the canyon; the depth where the pole is shown is about 4 feet; the blackened margin of this sump was oil-soaked, indicating that at some time it had considerably more oil in the sump; or it might have been caused by water raising the oil up and blackening the sides in that way; I made no test to see whether all the material I saw was oil or water; I mean to be understood as saying that it was all oil as far as I know. I don't absolutely know that it is oil. I didn't see any water in there. There was no pipe line leading from Well No. 1 to the sump shown in Plaintiff's Exhibit 11-T. There was a ditch and pipe out at the side coming

down and running towards the sump hole. There was an outlet from the well to carry [3042] the oil into the sump and that outlet was both a pipe and a ditch. The ditch was oil-soaked. On my last investigation there was some oil running into that sump from the well.

I now show you a photograph of the inside of the derrick on well No. 1, on the southeast quarter of Section 26, 30-23, showing the two gates and pressure valve; the gates were located by chains running through handles and around the pipes, and fastened with a padlock; the pressure shown was 320 pounds; the derrick had been spattered with oil, but at this time it was dry; the dark places in the picture are caused by the dark place where I took it; although it is spattered with oil. It would look dark if it had been in the light. It was covered with spattered oil clear to the top. The gates were entirely closed at the time I was there in April, but there was a little gas escaping at some points, but I did not locate it.

All the photographs which you have shown and introduced at this time were taken by me on April, 1913.

Said last-mentioned photograph introduced in evidence, and marked Plaintiff's Exhibit 11-U-LL.

The photograph now shown me represents a portion of the sump containing oil belonging to the Associated Oil Company of well No. 3, in the southwest quarter of section 24, 30-23; the embankment shown is 180 feet long at the top; from the surface of the oil to the top of the embankment is about 12 or 15

feet; I do not know how deep the oil is below the surface.

Said photograph introduced in evidence, and marked Plaintff's Exhibit 11-V-LL.

My recollection is that the oil extended about 50 feet up the canyon at that time; from the surface of the oil to the highest point of saturation on the margin of the sump was, vertically, about 2 feet; that blackened space shown on the photograph was saturated with oil. I do not know whether there was water under [**3043**] the oil, or not; they generally have a pipe at the bottom of a sump to let the water out, but the pipe in this sump was closed.

(The defendants make the same objection that was made to the introduction of the other exhibit purporting to represent a sump hole, which, of course, is understood to be in addition to all the general objections, which are not waived to any of this testimony.)

All the photographs already introduced, and the three which I now hold in my hand, were made by me in April, 1913, and developed in the same way as I have testified to in regard to the first photograph. They were taken by me and I took them to the Owl Drug Store, where I had them developed; and I examined them and then had enlargements made.

The photograph now shown me shows the rig over the Associated oil well No. 3, in the southeast quarter of section 24, 30-23, and the contrast of the land surrounding the well, which has been stained with oil, and that which has not been stained, and a small por-

tion of the sump; that up around the well, the blackened portion of the earth; the derrick was covered with oil-stains all the way up, spattered;

Said photograph introduced in evidence, and marked Plaintiff's Exhibit 11-W-LL.

The next photograph shows me in a picture of a pump at a sump a short distance east of the Associated Oil Company's well No. 1, in the southwest quarter of section 30, 30-24; this pump was connected with the four-inch pipe-line referred to by me; it was right over the sump, and connected therewith by a pipe; it was not in operation at that time; it was connected to a boiler; some men were working around section 26, but it cannot be determined how long since this pump had been operated.

Said photograph introduced in evidence, and marked Plaintiff's Exhibit 11-X-LL. [3044]

Here is a photograph showing the derrick over the Associated Oil Company's well No. 1, in the southwest quarter of Section 30, 30-24, and an oil tank, in which the production of the well was gauged January 24, 1912; I do not think this derrick was covered with oil.

Said photograph introduced in evidence, and marked Plaintiff's Exhibit 11-Y-LL.

In Plaintiff's Exhibit 11-W, under the derrick are a couple of gates connected with the casing from the well, and a pressure gauge; the gates were locked with chains the same as in Section 26; all three wells on the three sections mentioned were capped; I could hear gas escaping from the wells on section 24, in

30-23, and section 26, 30-23, I am sure, and I think gas was escaping from the well on section 30, 30-24; men were working around the wells painting the boilers and fixing them up, for the Associated Oil Company; none of the wells appeared to have been abandoned; they had the appearance of being closed down, that is all; in well No. 1 of section 26, 30-23 oil was coming out between the casing and running into the sump about 300 feet away; the pressure gauge showed 320 pounds; I estimated 400 barrels of oil in that sump at that time, on section 26; at the sump on section 30, well No. 1, of 30-24, the margin was blackened up several feet vertically, indicating that there had been more oil in it; it had a little oil in it at that time; the well on sections 26 and 30 were connected to the tanks near them with four-inch pipeline; there was a sign on the derrick over section 30, saying "Associated Oil Company's Well No. 1, Section 30, 30-24"; then there were some tanks down near the Pioneer Midway which the four-inch pipe line had been connected to at one time, bearing in big letters "P. M. O. Company", and a notice to employees signed by J. L. King, Superintendent, warning employees against matches; smoking and such things as that; there was also a statement of danger as to gas and oil; this was down near Fellows; the **[3045]** diameter of these tanks, I should judge, was about 50 feet, and the height 15 feet; they were of steel; the pressure gauge on the well on section 24 showed a gas pressure of 287 pounds; gas was escaping; At the request of Mr. Mills I examined the

record of this case showing alleged daily drilling reports on the three wells mentioned, introduced in the testimony of Mr. W. E. White, and constructed graphic logs based on those reports and telegrams; I took a certain scale, and put them down to scale; put down everything shown in the daily drilling reports shown in defendants' exhibits 175, 176 and 177, and gave the different distances of the different formations passed through, and the kind of formation; on the telegrams I added data by marginal notes; my data was all taken from the defendants' evidence except the red-ink notation between 3342 and 3465 feet, entitled "Oil formation. See above notes, March 10, 1911." This notation was taken from Mr. White's letter of March 10, 1911, filed as an exhibit herein, addressed to the Associated Oil Company by Mr. King.

Said log introduced in evidence, and marked Plaintiff's exhibit 11-Z-LL.

(It was stipulated between counsel that defendants reserved the right to make any additional objections to those already made, to this line of testimony, until the logs had been checked by the defendants' counsel.)

The paper you now hold is a similar log of well No. 3 in section 24, 30-23, and was prepared by me.

Said log introduced in evidence, marked Plaintiff's Exhibit 12-A-LL.

The telegram forming the basis of my red-ink notation on this exhibit 12-A was found in the record of Mr. W. E. White, and was sent from the field of

the company in the office in San Francisco, stating: "Flowing through six-inch casing spasmodically. Put out great quantity of oil sand. Also making good clean oil. Production **[3046]** at lowest figure 780 barrels oil yesterday. Without doubt will increase in flow." It was dated June 17, 1912.

The log next shown me is of the well on section 30, of 30-24, well No. 1, and was prepared in the same way.

Said log introduced in evidence and marked Plaintiff's Exhibit 12-B-LL.

From the comparison of the graphic logs prepared by me from the alleged daily drilling reports of the Associated oil wells on these three sections of land with the graphic logs constituting Defendants' Exhibits 175, 176 and 177, the differences in general are that the logs introduced by defendants aren't in detail, showing the different formations passed through as shown on the daily drilling reports, while my logs are. And then there are some other startling differences as to oil formations and such things. Defendants' Exhibits 175, 176, and 177 are not exactly correct logs or graphic pictures of logs even assuming the daily drilling reports introduced through the testimony of W. E. White, defendants' witness, is to be correct. The defendants' logs last referred to show oil sands in well No. 1 on Section 26 at the depth between 3850 feet down to 4030 feet with a little shell near about 3975 feet. My log shows the oil sand in that locality, with part of it shale in a couple of places. The log of the defendants in general is

correct at that depth. The defendants' log has a note here stating, "First showing of [3047] oil at 3342 feet", and it does not show oil sand at all from 3342 feet to 3465 feet. It shows shale. From the depth of 590 feet to 2432 feet the defendants' log shows, in formation, shale, blue shale, rock. It does not make any mention at all of the occurrence of boulders. By reference to the log prepared by me, Plaintiff's Exhibit 11-Z, the daily drilling reports show the occurrence of boulders between those depths in ten different places. The occurrence of boulders, geologically, is the indication of shore conditions. Defendants' log for this well, Defendants' Exhibit 176, between the depths of 3596 feet and 3774 feet, shows shale, shell; and at 3596 feet it shows compact sand, but does not show any trace of oil from 3596 feet to 3644 feet. The daily drilling reports, by reference to my log, show a trace of oil all through there. The defendants' log as to that well does not in any way indicate the true conditions as shown by the daily drilling report. Examining defendants' exhibit 175, the formation indicated as having been passed through between 1602 feet down to 1610 feet is shale, and the log prepared by me from the daily drilling reports for that depth shows clay and boulders. Between 1628 feet and 2080 feet, the defendants' log shows hard and soft shale. The daily drilling reports show, from 1628 feet to 1647 feet, shale and boulders; from 1647 to 1658, blue clay; from 1658 to 1666, hard shale; 1666 to 1710, blue clay; from 1710 to 2012, blue shale; from 2012 to 2031, soft blue shale and boulders;

from 2031 to 2080, shows blue shale. Assuming the daily **[3048]** drilling reports to be correct, Defendants' Exhibit 175 is not a correct picture of the formation passed through for the depths mentioned. Defendants' Exhibit 175, between the depth of 2525 feet to 2550 feet, does not show any occurrence of boulders. The daily drilling reports indicate the occurrence of boulders at that depth and those boulders indicate shore conditions there—sand and boulders from 2545 to 2550 feet. Defendants' Exhibit 175, between the depths of 2835 feet and 2845 feet, shows no indications of gas between those depths. ' The daily drilling reports, upon which that log is presumably based, by reference to my log, show there was gas struck between those depths. The daily drilling reports referred to, or the defendants' log for the well, does not show any oil-bearing formations were encountered at or near the bottom of the well. The daily telegrams sent to the Associated office from the field, from my examination of them, as to that depth, show oil-bearing formations were encountered and that considerable oil was discovered and also considerable oil sand. The defendants' log, the Associated log, does not show oil sand at or near the bottom of the well; nor do the daily drilling reports show any oil sand. When I am asked what the occurrence of oil sand instead of oil shale would indicate geologically, I would answer: Well, sand is a better formation for oil to accumulate in, as the more minute holes are not so compact as the shale. Also it would indicate that it was deposited near a

shore in the shale. Defendants' Exhibit 177, at the depth [3049] between 344 feet and 390 feet, does not show the occurrence of any gas. The daily drilling reports, by reference to my log, Plaintiff's Exhibit 12-B, show the occurrence of gas between those depths. Defendants' Exhibit 177, does not show any gas between 515 feet and 520 feet. By reference to my log as to that well, between those depths, the daily drilling reports show sand and gas. Defendants' Exhibit 177, between the depths of 2125 and 2200 feet, shows shale, but no boulders. By reference to my log, prepared from the daily drilling reports, those reports indicate the occurrence of shale and boulders between those depths. Between the depths of 2710 feet and 2720 feet, the defendants' log, Exhibit 177, shows hard oil sand, showing lots of oil. The daily drilling reports show hard oil sand from 2711 to 2713 feet, showing lots of oil. From 2819 to 3058 feet, or a distance of 239 feet, the daily drilling reports show blue shale showing oil for the entire depth. The defendants' log, Exhibit 177, gives a showing of oil at about 2915 feet. Plaintiff's Exhibit 11-Z was not made up entirely from the daily drilling reports, but I obtained the information which is inserted in red ink between the depths 3342 and 3465 from a letter. That information is contained in a daily drilling report of March 10, of 1911. Speaking generally of the three sump holes constituting the earthen reservoir for the reception of oil from these several wells of the Associated Oil Company, which we discussed this morning, I know from my

examination on the last date that I was out in the Elk Hills that provision was made by **[3050]** pipes to carry off the water which might have collected in the sumps. As to the condition of the well on Section 30, of 30-24, I was there when it was about 2422 feet deep and the well at that time was flowing. It was gushing; it was showing out of a spigot—direct flow. I traced the axis of the anticline crossing Township 30-23 at the time I was there. When I am asked what relation the lands in suit bear to that anticline with reference to the lands that we have been discussing, that is, Section 24 and 26 of Township 30-23, and Section 30, Township 30-24, my answer is, they have a similar relation to it and they are all on the same anticlinal structure. The sections of land in this suit are parts of Section 15, 17 and 19, all of Section 21, 23, 25, 27, 29, 33 and 35 of Township 30, South, Range 23 East.

CROSS-EXAMINATION OF J. W. KINGSBURY

My connection with the Department of the Interior as a mineral inspector began in 1909, in the latter part of May; I was at first assigned to Utah territory, with headquarters at Salt Lake City, to examine it as to coal and other hydrocarbons and metallic minerals, including ozokerite and Gilsonite, but not petroleum; I was stationed at Salt Lake City until August, 1910; then I went to San Francisco, as a practical miner for the Government; I had worked in mines in Utah, and also a little work in some mines in Nevada and Mexico; I was a mucker, timber-man,

timber-man helper, time-keeper, sampler, assistant in surveying, and surveying, and assisting in mine examinations; the mines were copper, gold, lead **[3051]** and silver; I assisted in examining a copper mine at Yearington, Nevada; I think I got the title Mineral Inspector after I went to San Francisco, at first working on the mother lode, gold and placer; continued that until December, 1910, then went into the oil fields; the general nature of my work in the oil fields has been examining lands to see if they were oil-bearing, and to see if the requirements were fulfilled where patents were applied for; at first I was not qualified for this work; I had a pretty good education in geology, and after looking into the situation to some extent I thought I was qualified; my work has been entirely for the Government while in California; I have never located any wells, or had anything to do with drilling them; I have watched drilling, both with rotary and standard drills, and have studied logs produced by each; I have made a study, and there is usually a great difference between the two in the same locality.

I have studied the terminology of different drillers, and find that they differ considerably; I would not feel safe in accepting the terminology of every driller as to some formations; such as boulders, and where they run into the hard rock I would feel pretty safe, but as to clays and gumbo and shales I would not; the various terms used by drillers I would feel safe in relying upon the use of the word "boulder,"—pretty safe.

I have never had occasion to examine the logs of two wells drilled very close together, say within three hundred feet, one of which was drilled with a Standard rig and the other with a rotary; if two wells were drilled, one with a Rotary and one with a Standard drill, one reporting boulders and the other not, I would judge that there were boulders in the vicinity, although the Standard tools probably missed them; they might go in on a number of wells and miss the boulders, while in another well you might strike them; you can usually tell when you hit them; I have never handled a drill when it struck a boulder, and never saw either of **[3052]** these drills strike a real boulder, but have seen the logs and have seen the trouble they had with such things; I cannot recollect just the number of logs that I have had occasion to construct, but it would go up to twenty, anyway, including those that I took from the drilling reports in the Elk Hills; I have examined many others; I found no fixed system in the construction of various logs which I have examined; they depend a great deal upon the interpretation of drillers, and those who compile the reports of the drillers; sometimes drillers term oil as a trace of oil, and sometimes they get a color, and call that a trace of oil, but the color is not always produce by oil; a little iron, or manganese might produce it; iron stain becomes hard, and when you mix it up it will break, while oil will follow your stick and come together again; I have forgotten just what manganese will do; I did know.

It often happens that "traces of oil" are reported

erroneously; I have an idea that I have examined materials said to be from the drilling of boulders reported in logs, but don't recollect just where; in some cases it came out in pretty good sized pieces of granite or igneous rock; I could tell with a microscope what kind of igneous rock it was, but did not do so; I don't recollect where I observed granitic material brought out from a boulder, but I know it was from rock in place, because they found oil below the place, and generally you consider that when you strike granite in place you are not going to find any sedimentary formations below that; I explain the occurrence of igneous rock that is not granite by saying that igneous rock has been washed there too; if you find—it depends on the kind of igneous rock you find whether you could find any sedimentary rock below; I can tell shale and broken shell from igneous rock.

I did not make any examination of the alleged boulders to which I referred in my direct examination, in the Elk Hills; I started to get data in this case about the middle of July last; **[3053]** I got my information from the testimony of drilling reports, and need no data outside of that; I was engaged in the operation of these logs about two weeks; I endeavored to construct them upon the same scale as the Associated Oil Company's logs introduced in evidence, and had them about completed a week ago; I had the prints made before that, but corrected and colored them; I missed the formation in two or three places; Mr. King, of the Associated, handed me logs of these wells, I think, in 1911 and 1912.

In 1912 I assisted in measuring the flow from the well in section 30; and was afforded every facility for making this measurement; in subsequent trips to the fields I found pressure gauges upon the wells indicating the pressure; they were not placed there by myself; they were there, and were not concealed from observation; they allowed me to go in there, and the gauges were open to observation; I always told them that I was a mineral inspector of the General Land Office, and it was generally known to all the employees.

I have no objection to the logs of the Associated Oil Company so far as they go; in a number of places they wrote the notes on the side, and in one instance stopped at a certain place, and a little later I picked up telegrams showing great improvement in the well, which I have indicated on the chart; to some extent the logs of the Associated Oil Company are misleading as to whether or not it is oil formation, but I do not think they are intentionally misleading; by "startling difference" between their logs and mine, I meant it was rather startling that they did not show some of the boulders; then in log of Well No. 1, Section 26, 30-23, in a side note on the log introduced by the defendants, the log shows oil formation from 3475 to 3490, while the drilling report shows, "We have washed the oil formation from 3342 to 3485 feet."; then from 3725 to 3848 feet, the log introduced by defendants of this same well No. 1, section 26, 30-23, shows shale, **[3054]** while the daily drilling reports show that the formation from 3742 to 3848 feet

contained some oil, and when I am asked: "Do you consider that an absolutely essential discrepancy?", "Couldn't shale contain oil?", my answer is: "I say they didn't show by the defendants' logs that the formation contained oil." This well No. 3, Section 24, 30-24, from 1602 to 1610 feet, by the log introduced by the defendants, shows shale, while the daily drilling reports show clay and boulders. The omission of the boulders certainly is a startling fact. Again, between 1628 feet and 2880 feet, the defendants' log shows shale, while the daily drilling reports show shale and boulders between 2012 feet and 2031 feet. Again, between 2525 feet and 2550 feet, defendants' log gives hard sand, while the drilling reports show hard sand and boulders. It is evidence there that in each of those cases the startling fact is the omission of boulders. Again, between 2835 feet **[3055]** and 2843 feet, the daily drilling reports show shale with a little gas, while the defendants' logs do not show any gas in this locality—at this point in the well, and the omission of the gas is the startling fact. I consider these as important discrepancies. In defendants' exhibit 175, log on well No. 3, Section 24, on the side notes they give a number of telegrams and end up with June 4th, where they "Pumped 90 barrels of oil and 10 barrels of mud. Shows great improvement," etc. Going on, there are other telegrams. They didn't put down, especially on June 13th, 1912, where it states: "Well flowed almost continuously merely pulling tubing. At the present time making eight or nine hundred barrels." I con-

sidered that as one of the startling discrepancies. Again, on June 17th, 1912, they have a telegram: "Flowing through six-inch casing spasmodically." That appears on defendants' exhibit 175. I will finish the telegram: "Put out great quantities of oil sand. Also making good clean oil. Produced at lowest figure 750 barrels of oil yesterday. Without doubt will increase in flow." The oil sand which was put out by the well,—it seemed as though they passed through that without seeing it. Defendants' exhibit 175 does not show that in any respect. Then, well No. 1, Section 30, 30-24, by defendants' log of this well, from 344 to 390 feet, shows no gas, while the drilling reports show some gas. Again, in 515 to 520 feet, the daily drilling reports show some sand and gas, while the defendants' log does not show any gas. From 2125 feet to 2200 feet, the daily drilling reports show shale and boulders, while the defendants' log **[3056]** shows shale. From 2819 to 3085 feet, the daily drilling reports show "blue shale, showing of oil", while the defendants' log gives a showing of oil at about 2915 feet, and shale. That is about the discrepancies I found and I was referring to those discrepancies when I spoke of the startling differences between the defendants' logs and my logs. I would have to know who made up the log before I could say the omission was or was not intentional. I was told to prepare my logs in detail from the daily drilling reports and then compare my logs with those introduced by the defendants; when a log shows items of production I think it should show all; it is

not a fact that I picked out a single telegram and have overlooked and intentionally passed by a great number of other telegrams showing a progressive diminution in the production of oil from the well in Section 24. It does diminish after that, but the reason for the diminution is that the sand came in, clogged it up, the bit was lost in the well, and they could not clean it out; then there is one thing here that I did not show on the log which is of as much importance or more than what I have shown; that is the telegram of August 12, 1912, that the well would produce 3,200,000 cubic feet of gas along with the oil in a day; this was omitted because I though I was putting on representative conditions; it was a matter of interpretation on my part, so I picked out the highest reported production to put on my log, because it showed the oil sand there, and then this gas production is very important, which I did not show; I have placed on the margin of my log for section 24 the telegram of June 17, 1912, because it showed oil sand coming out, while that is not shown in the drilling reports or in the log of defendants; I got it from the telegram; Mr. Mills told me to put on the margin in red ink "oil sand instead of shale"; this was from 3600 to 3800 feet, but I did not note on my log that this well had been cased solidly down to 3865 feet prior to the time when this telegram was sent; Page 7651 of the record shows that the casing was [3057] perforated from 3700 feet up and this telegram was after that perforation and I consider that the sand came in some place in where the casing has been

perforated. Just the locality, I could not state. The casing was perforated between the two points of 2500 and 3700 feet. The perforations were three-quarters by one inch holes and there were two holes per foot. I would not expect this sand that I referred to as so important to come in below the 3700 foot level, and when I am asked: "Is your log, where you have indicated that as coming in below the 3700 foot level, correct?", I answer: "On my log I have made broken lines. I didn't expect it to be exact, exactly in that locality. It is somewhere around where the perforations were." I expected my attention to be called to this discrepancy. I expected to be asked about that. My log, as far as the diffeernt kinds of formation passed through, shown in the daily drilling reports, is not inaccurate. Referring to this particular portion of my log where I have in heavy red lines covered a space approximately between 3600 and 3800 feet and labeled it "oil sand instead of shale," I have it in broken heavy lines—red lines—and it does not represent the exact locality of the oil sand; but when I put it down I intended it to represent the oil sand in some place around there. It would be very hard to give the exact location of that because most likely that was masked when they passed through it with a drill. I have indicated on my log the perforations from 2500 to 3700. That is important to the man who is drilling, but not to the geologist; from a geological standpoint I considered the sand as the most important thing to my mind; I had it up on a side note, but when I finally located the

sand between 3600 and 3800 feet, I did not indicate the perforations so as to make my log intelligible to a geologist because I did not have the time; I intended to put the formations on; I do not know as there is a discrepancy in favor of Exhibit 175; I did not intend to show perforations; I intended to show the formations **[3058]** passed through as shown by the daily drilling reports.

In my log for the well in section 24 sand is shown at 3104 feet; it shows sand and shale in a couple of places; ten feet of sand, 3104 to 3114, fine sand; the well was perforated at that point; the daily drilling reports show sandy shale at another point; from the reports I would say that the shale was solid; the gas and oil going out through that would loosen it up some; you get lots of shale and mud coming up with oil, lots of times; this sand being forced up led me to conclude that the formation near the bottom of the well was sand in some locality; there was nothing to prevent sand coming in through the perforations opposite 2500 feet, and 3700 feet, but I think it would come below 2940 feet. I say that because the hole bridged over at that point on account of the sand and there is reason for assuming that that sand didn't come from the ten foot fine sand formation at 3104 feet, because in the telegram it states it is oil sand there. I don't know that they struck oil in that fine sand. The sand is merely the sponge in which the oil accumulates and there is no essential difference in the sand itself. If that sand that came out picked up oil from some other point coming from shale, you

couldn't tell from the appearance of the sand after it got out of the well, but I don't see how that sand would flow in there without being washed in there in some way or another. I refer to the sand at 3104 feet. The daily report does not state that they obtained any water at that time, any great amount which would wash that sand in. They generally state when they get the water how much water it is. They have in these telegrams; it could be forced in by gas; they do not state that they struck gas, but that is not conclusive that they did not strike gas; there might have been gas there that was released afterwards. I want to correct that statement. I was looking at the wrong part of the well. I find where they struck gas above there but not below. I do not find anywhere in the drilling reports or in the telegrams or in **[3059]** the daily letters in connection with this well on Section 24 any statement that the formation below 3104 feet contained sand at any point, only when they got out the oil sand; it may come from below, or it may come from above; and when you ask me: "Is there any good oil sand there?", my answer is: "I am taking the daily drilling reports and telegrams." The oil sand may have come from anywhere below 2904 feet, where the bridging occurred.

Q. You were asked this further question: "Q—What would that indicate, geologically—the occurrence of **[3060]** oil sand instead of oil shale? A—Well, sand is a better formation for oil to accumulate in, as the more minute holes are not so compact as the shale. Also it would indicate that it was de-

posited near a shore in the shale." Are you now able—

Q. By Mr. Mills—Is that what you said?

A. If I said that I didn't mean it.

Q. By Mr. Lewers—What did you mean? I don't want to have you mis-quoted.

A. Nearer the shore than the shale.

Q. Nearer the shore than the shale.

A. Than the shale would be.

Q. Then, in your opinion, basing your answer, as I understand it, entirely upon the telegram of June 17, 1912, you would say there was a shore line down there at about 3600 to 3800 feet—the well on Section 24?

A. Well, that shore line proposition is rather indefinite. The shore is progressive always. It either advances or retreats. It might have existed in that locality and have advanced on farther up to where they find the shore now, where it has been eroded out and they can see.

Q. Well, do you at this time think that this telegram of June 17, 1912, indicates shore line conditions at the point where you have put this red ink notation in the margin of your log?

A. Not at that point; no. It indicates the sand—that it was nearer the shore than the daily telegrams would indicate. **[3061]**

Q. By Mr. Mills—The daily what?

A. Or I mean the daily drilling reports would indicate.

Q. By Mr. Lewers—In order to reach the con-

clusion that shore line conditions exist there, you disregard entirely as false the daily drilling reports concerning the formation passed through, do you? I am directing your attention to the shore-line conditions which you spoke of in your testimony being at the bottom of the well in section 24, or near the bottom. In reaching the conclusion that such shore-line conditions exist there, you did disregard as false the daily drilling reports showing a shale formation down there, did you not?

A. Not as false, no.

Q. Then as mistaken?

A. I think they are probably mistaken in some locality.

Q. And your sole reason for so doing is the telegram of June 17th, 1912? Is that correct?

A. I stated, I think, to that answer, that sand occurring there would show that it would be nearer a shore-line than the shale. That is what I wished to convey.

My sole foundation for that conclusion with respect to this well near the bottom of it is this telegram of June 17, 1912, and that telegram would not be so apt to be mistaken as the drilling reports, for the sand came out of the well—it was seen—while in drilling with a rotary drill they may have taken some of the mud which they put in and it might have come out at that locality and **[3062]** called it—and thought it was shale they were passing through. Assuming that the telegram is mistaken, and the drilling reports not, then I would not have any foun-

dation right there for the conclusion as to the shore-line, although I think the shore-line existed in that locality at one time. The drilling reports show, in well 24, that on the 16th of July they were down to 3600 feet, and on the 21st of July, a period of five days, they were down 3793, and blue shale was reported in the daily drilling report for each of those days.

I do not think the drillers would likely be mistaken between shale and sand every day for five days; they might have been mistaken one or two days and missed the sand, and the telegram of June 17th might have referred to hand anywhere up to as high as 3904 feet, so it is possible for the drillers to have made an accurate report of shale at that point and the telegram also be accurate; but in drilling with a rotary drill the reports are not very accurate; a driller will know sand when he gets hold of it; there are a great number of cases where when they drill with a rotary drill they pass through sand without knowing it; I do not think they would pass through 200 feet of sand without knowing it; I did not want to represent 200 feet of sand on my log, but some sand; I wanted to indicate by the broken lines that it was approximate; that is the notation which Mr. Mills suggested that I add on the margin, to which I have referred before.

I would like to make a correction in my testimony of this morning, where I was asked if I thought the logs introduced by the defendants were intentionally incorrect or a misrepresentation, and wherein

I said I didn't think so; and by that I meant that I don't know; I know nothing about how they were got up. I don't mean to be understood as being willing to admit that they were gotten up in good faith —neither way; I don't mean to make any decision whatever.

My attention was first called to the telegram of June 17th, [3063] 1912, in July of this year, 1913, by reading it myself; my log of the well on section 24 was entirely my own work; it must have been a month after I had it blue-printed when I corrected it, as I did not have access to the records when it was printed; I had access to the record while preparing the material that went to make up the log as originally prepared; it was based upon a careful checking of the drilling reports; between 2056 and 2080 I have blue shale indicated, hard blue shale; at 2056 to 2080 hard blue shale is indicated, and 2157 to 2167, hard blue and brown shale; the drilling reports show the same; I did not have room, so put in hard blue and brown shale 2157 to 2175 feet, because the color does not amount to much, but this is designated out to the side as blue and brown; at 2312 to 2355 feet I have soft blue shale; from 2312 to 2390 I have hard blue shale; I am crossing out the word "hard" between 2312 and 2355, as that is blue shale; I don't want anything to go in wrong if I happened to miss it.

I note that beyond 2312 feet they drilled 43 feet in one day; it didn't look as though it was hard to drill, they went pretty fast, but I don't know that

it was soft shale; all things being equal the distance drilled in a day would have some bearing upon the determination of the quality of the shale; I don't know as this could be designated as soft shale, but it looks like good drilling shale; I have never done any drilling or had any experience in drilling with a rotary or any other kind of machine to know whether you can drill 43 feet per day in hard shale.

My log shows hard brown shale at 2415 to 2423 feet; at that point I inadvertently put down brown in place of blue; it does not show exactly what was found by the driller, as I intended it to; at 2423 to 2452 feet I have hard brown shale; the reports show hard blue shale 2431 to 2437; there again I have an error of the same kind; that also is an error in not showing what was recorded in the drilling reports, as I intended this log to show; between 2423 **[3064]** and 2452 feet I have a showing of some gas; that is an error; my log tends to exaggerate to that extent; there is a gas showing there, but not all of that; unless corrected, my log would be misleading to that extent.

Taking into consideration the small amount of the formation left out there, I should consider the defendants' log correct, in general, as to well in section 26, Exhibit 176, between 3850 and 4043 feet; I have on my log in red ink "Oil formation. See above notes, March 10th, 1911." I have not noted sand here; I took this from the daily drilling reports, and considered it as sandy shale, in one locality; I don't know whether there is sand there or not; I

only meant to convey the inference that it was oil formation.

Q. Do you find anything in the drilling reports to show that it is an oil formation between those places?

A. Can I get the drilling reports, please? Page 7343, the daily drilling report, the 10th day of March, 1911, in the remarks, an additional report of the same date, stating, "After washing mud out of the hole and washing oil formation at 3342 to 3485 with drill pipe, we pulled pipe out of hole. As last pipe came out gas blew nearly all water out of hole and 30 feet above derrick. Hole bridged over with sand at 2640 feet, stopping flow." That is where I got one of them. Now, there is another place.

Q. The same thing; there is another place, is there not?

Mr. Mills: Well, let him look it up and complete his answer.

A. On page 7626, for March 13th, afterwards, "No. 10" (in parenthesis), 1911, 3548 feet, leaving out a little, "after washing mud out of hole and washing oil formation at 3342 to 3485 with drill dipe," et cetera, it goes on: "Hole bridged over at 2640 feet, stopping flow." **[3065]**

Q. By Mr. Lewers—You based that statement, then, upon those two reports,—which are identical, are they not, in substance?

A. Yes sir.

Q. And on the basis of that, you made your no-

tation which appears at the upper right-hand side of your log for this well, did you not?

A. Yes sir; I did, on the basis of that. I am using this record here for the basis for all my log —everything you find.

Q. Do you think that the omission of that notation would be a defect in a log, Mr. Kingsbury, of that well?

A. Yes; I think that would be quite a defect.

Q. And that is such a defect as you have called a startling discrepancy, is it not.

A. Yes sir; it is a startling discrepancy.

Q. That is the chief discrepancy between your log of this well and the log of the Associated Oil Company for the same well, is it?

A. That is one of the big discrepancies.

Q. And that is one which you would term "startling," is it?

A. Yes sir.

Q. I call your attention to Defendants' Exhibit 176, the Associated Oil Company log of this same well in Section 26, and ask you to examine the notes at the upper left-hand side of that log and say whether or not it says anything about this matter that you say is a startling discrepancy?

A. Yes sir; it does. **[3066]**

Q. Read what it says.

A. As the same is—I have got over here on mine.

Q. Well, will you read it, kindly?

A. "March 10th, depth 3548 feet, 4½-inch casing, 3168 feet washed mud from hole and washed oil

formation from 3342 feet to 3485 feet with drill pipe. Pulled drill pipe. Gas blew water 30 feet above derrick. Hole bridged with sand at 2640 feet, stopping flow." Of course there are discrepancies here. I believe, when I testified to that, I—noted that that occurred in this log of the defendants.

Q. Did you not mention that as one of the startling discrepancies between the two?

A. Yes sir; I believe I did. Also noticed these boulders here.

Q. Well, just a moment here. We will come to the other discrepancies. I want to finish with this one first. Is your notation concerning what happened on March 10th, 1911, correct? The one on your own log?

A. No sir. I have 3465 feet instead of 3485.

Q. In other words, this incorrect Associated Oil Company log gives 20 feet more of oil formation than you do?

A. Yes sir.

Q. From what do you conclude that that was all oil formation?

A. They state they washed the oil formation from 3342 to 3485 feet.

Q. Could they determine that it was oil formation in [3067] the process of washing?

A. No. I should think they had other information as to that which don't occur in the daily drilling reports.

Q. They, your conclusion is not based upon that

notation but is based upon a suspicion that they had other information, is it?

A. No; I have taken what was in the daily drilling reports.

Q. Do the daily drilling reports show oil formation between those points, 3342 and 3485?

A. The daily drilling report makes the report, on page 7343. They state that there is the oil formation there; they washed it.

Q. Now, you understood my question perfectly well. Aside from this report of washing, do the daily drilling reports show any oil formation between 3342 and 3485?

A. Aside from where they say they washed the oil formation?

Q. Yes.

A. They don't.

Q. Do the telegrams or letters or any other data that appears in the record, aside from this report of washing, show oil formations there?

A. Well, aside from where it states about washing that formation, I have not seen any other information.

Q. At whose suggestion was that red-ink notation of oil formation put on that log?

A. At Mr. Mills' suggestion.

Q. You had prepared the log without any such notation **[3068]** at that place, had you not, before that?

A. I had prepared the log with the notation up to the left-hand side—right-hand side—of the log,

showing this. Mr. Mills suggested that it would be good to have it down where the distances are shown; and I thought it would probably be pretty good, too.

Q. And you followed his suggestion?

A. It shows the accurate conditions.

Q. Was that put upon there for the purpose of creating the impression that there was sand there, —oil sand?

A. That was put down there to show that there was an oil formation there, just as is stated in the daily drilling report of that day, and nothing else —just to show what I found in the daily drilling report.

I know that there was oil between 3342 and 3465 from the daily drilling reports. They show oil in one report—the washing report. There are two places there and I am certain that I have correctly interpreted that report of March 10, 1911. I am referring to the washing report and I am quite positive that indicates an oil formation all the way down from 3342 to 3485; that is, from the washing report, and I base that upon my experience in the oil fields.

[3069]

Sometimes the mud they put down a rotary cases upon the sides and they have to wash it out lots of times before they can get the oil to come up, or the gas; it stops it off; it is for the purpose of testing out the well as to whether it contains either oil or gas; that is, at some times. Sometimes they know that it contains it; and when they know that it contains it, why, sometimes it won't come out unless it

is washed; the oil won't come out of the oil formation until they have washed it; and it is done for the purpose of allowing the oil to come up; the oil may not come out right at the start; it may take a considerable pumping before you can pump oil; it may contain oil, as oil blow-out; I do not remember whether there was pumping done there or not; I did not examine the production reports of that well altogether. I know the formation that is represented as sand on the bottom of this well on Section 26 is oil sand from the daily drilling report. I have not examined the production reports enough to say whether the showing of oil increased after they reached this formation at the bottom of the well which is marked as oil sand; at a depth of 199 to 222 feet, my log shows gumbo with boulders, also boulders and sand; the daily drilling reports show gumbo with boulders, also boulders and hard sand; I left out the word "hard" in my log, and it does not show what is in the drilling report; in the space from 278 feet to 291 feet, my log says rock and gumbo, with boulders, and the daily drilling report says rocks and gumbo with boulders; the drilling reports say "rocks", and my log says "rock"; that may be a typographical error. Assuming that it is correct, I don't know that it would mean anything to me unless they wanted to bring the impression that there were smaller rocks there as well as larger boulders; that is, assuming that this is correct. I think that the distinction between rock and rocks is important, the distinction is important; in refer-

ring to the depth on my log between 590 and 604 feet of this same well, the formation shown is rock. The drilling reports on [3070] page 7267 of the transcript state "rocks." I don't think that it means boulders. I think it means rock and hard substances that they are passing through, and as to the discrepancy between the daily drilling report and my log being at all important in that respect, I will say that "rocks" is different from the word "rock." If it means "rocks" in the sense of boulders, it is quite a discrepancy. The depth of 1215 to 1296 on my log shows blue shale and boulders. The daily drilling reports, page 7284 of the transcript, state, from 1215 to 1244 feet, shale and boulders; 1244 to 1296, shale and boulders. I don't know where I got the blue shale in my log; that is an error. It does not give exactly what is in the daily drilling reports as I intended to. In my log of that well I gave 2802 to 2803 as gumbo. It should have been 2802 to 2813, gumbo. That is an error of ten feet. The error is in the number, but in sealing it it would be the right size. My log at 3140 feet shows oil.

Q. Do you find that in the drilling reports?

[3071]

A. I must have found that some place. I don't see it here.

Q. Isn't this the fact, that after they had drilled that well to a considerable distance beyond 3140, that on March 19th, 1911, they began perforating, agitating, swabbing, and placing the well on air, and that the showing of oil at 3140 took place long after

all these things had been done and the well had been drilled away below? You will find that, I think, if you will refer to page 7632—that is, the showing of oil. Look under the date of May 10th, Mr. Kingsbury, 1911.

A. 3140 shows oil; yes sir.

Q. That was on the date of May 10, 1911, was it not?

A. Yes sir.

Q. Is it not a fact that this well had been drilled down to a depth of 3548 feet on March 5th, 1911? Look at page 7340.

A. March 5th, 1911, it was 3548 feet.

Q. And two months before the showing of oil was made they had reached a depth of 400 feet below the point where the showing of oil occurred? Is that right?

A. Yes sir; that is right.

Q. How far was the casing down on March 5th, 1911?

A. 3168 feet.

Q. How do you account for the showing of oil at 3140, then?

Mr. Mills—I don't know that the witness is called upon to account for it, inasmuch as he has testified that he took his log from the data, from the record itself. **[3072]**

Q. By Mr. Lewers—As matter of interpreting the record.

A. I don't know, unless they pulled the casing back.

Q. Well, did you inquire? I mean, did you examine the record to ascertain whether they did or did not?

A. No; I can't say that I did.

Q. Didn't you regard that as important in the preparation of your log?

A. In this case it would be important.

Q. Does your log show any perforations?

A. My log does not show any casing, either, nor perforations.

Q. Neither casing nor perforations. Will you examine the Associated oil log for this same well that you have before you and state whether it shows any perforations?

Mr. Mills—That is objected to as entirely irrelevant—whether it shows perforations or not. These logs are introduced to show the discrepancies between the facts and the logs introduced by the Associated Oil Company.

A. Yes sir. In a side note.

Q. By Mr. Lewers—What does the Associated Oil Company's log of that well show?

A. It shows that the well was perforated—or the casing was perforated; that is, the 3-inch line was perforated from 4000 feet to 3498 feet.

Q. Is that the only perforation?

A. Then, later, the 4½-inch casing was perforated from 3475 to 3330 feet.

Q. When was that done?

A. August 23rd. **[3073]**

Q. What year?

A. It does not give the year after the date.

Q. Well, will you turn to page 7347 of the drilling reports and state what appears there, if anything, concerning perforations, giving the date?

A. The date of March 19, 1911; perforated with twelve 7-16-inch holes per foot from bottom up to 3303 feet.

Q. You say that was on the date of March 19th, 1911?

A. Yes sir.

Q. Will you turn to page 7349 of the transcript, showing drilling reports, and state what was done at that time in connection with this well, and referring also to page 7350? It begins at the bottom of the first page.

A. Here on March 25th, 1911, "Well pumped intermittently. Some water. Also flowed; produced approximately 75 barrels of oil."

Q. Yes. Then what was done immediately following that?

A. They placed the well on air.

Q. What is the purpose of placing a well on air?

A. Sometimes use compressed air to get the oil out.

Q. To make it produce, is it not?

A. Yes sir.

Q. That was on what date, did you say.

A. March 26th, 1911.

Q. Knowing those facts, would you conclude that the showing of oil reported two months later, on May 10th, 1911, at 3140, came from 3140, or could it

have come from lower down, the well having been perforated at that time and also [3074] having been put on air?

A. I don't know just how much showing of oil there was there, or the character. I could not make any judgment on that.

Q. Would you regard that, under the circumstances, as a safe indication that there was oil at 3140—in the formation at 3140, I mean?

Mr. Mills—That is objected to Mr. Lewers, on the ground that it goes to a question not opened on direct examination, and as irrelevant and immaterial; calls for the conclusion of the witness, who does not pretend to have been there at all. He simply constructed the logs from the daily drilling reports.

A. Well, I could not decide that question. I don't know the conditions there—just how they located that oil.

Q. By Mr. Lewers—Refer, on your log for the well on Section 26, to the depth of 3265 to 3268, and read what your log shows?

A. Gumbo there.

Q. At 3265?

A. 3263 to 3268.

Q. What is that?

A. Oh, over here on the other side, 3265 to 3266, hard shale.

Q. Is that sixty-six or sixty-eight? It is blurred, and I could not make it out.

A. 3266.

Q. Then I will modify the question. Your log shows, from 3265 to 3266, what? [3075]

A. Hard shale.

Q. Will you look at the drilling report appearing at page 7336 of the record and state what it shows?

A. 3263 to 3266, blue shale.

Q. Then your log is incorrect, is it?

A. So far as—Yes sir; as to that.

Q. By Mr. Mills—"So far as" what?

A. As far as showing the kind or character of the shale between 3263 and 3266.

Q. By Mr. Lewers—That showing on your log was added after you had prepared the log in the first place, was it not?

A. Yes sir; that was.

Q. And it is a discrepancy, is it not?

A. It is a discrepancy; yes sir, as to these three feet from 3263 to 3266, as to the character of the shale.

Q. Do you regard that discrepancy as at all important?

A. Why, as it does not show what occurred in the drilling reports, that is. what was put down in the drilling reports.

Q. Do you regard the discrepancy between your log of the well in Section 26 and the Associated log for the same well, in regard to the perforations, as at all important? Is it what you would term "a startling discrepancy," if it had been the other way?

A. I didn't intend to put in the perforations.

Q. Well, do you regard the omission of those perforations as a discrepancy, to one who desires the history of that well for geological deductions?

[3076]

Mr. Mills: The log was not put in for any such purpose, Mr. Lewers. It was put in to show suppression of facts in different exhibits.

Mr. Lewers: I think it is showing that very distinctly. I am glad you admit that as your purpose.

Mr. Mills: Yes; that is the purpose—to show that they suppressed certain important facts in the logs introduced.

A. If this log were the only thing that I had, why, it would be a discrepancy; but as this log is practically correct—

Q. By Mr. Mills: Which log?

A. The log of the defendants is practically correct along that line, I didn't think it was necessary.

Q. Along what line?

A. In putting in the perforations.

My log does not show that after they drilled to a depth of 3548 feet, on March 5, 1911, that later the well was re-drilled from a depth of 2800 feet down to its ultimate depth of 4030; I used the first drilling reports down that far, to 3548; I made a comparison to some extent between the two drillings as shown by the daily drilling reports in the space between 2800 feet and 3548 feet that was passed over twice, to see whether the drillers reported the formation the same in both cases; they did not report the same, meaning to me that a rotary drill is not very accur-

ate in getting the formations passed through; when I am asked if those discrepancies or differences might not be due to the fact that different drillers were on when they reached the same place the second time, my answer is: "Well, there are two things to take into consideration—the different drillers, and the method of drilling." I find that as to shale and gumbo they use different interpretations; I have never seen a log that reported a formation of pulvidero; I do not know what it is; I have seen "hardpan," which I generally considered hard clay; there is no universal rule governing the expressions **[3077]** used by drillers, but boulders I think would be termed the same in the same locality; I do not know how the driller detects the symptoms of a boulder when he stands with his hand ready to avoid any trouble, and it hits a boulder; they tell me that they know when they strike a boulder, but I just don't remember what they did tell me about that; I know with a standard they are apt to cause the hole to become crooked; as to the rotary, I don't know. I have heard of a rotary drill "chattering." That expression means rebounding and jumping. It seems to me that a boulder would cause that. Any substance that will not grind up smoothly might cause that jumping. I couldn't tell you if that same effect is produced upon a rotary drill by the same striking hard shell at an angle where one side of the drill touched it and the other didn't. I do not know that a rotary driller ordinarily, whenever the drill strikes anything that causes it to rebound, jump, or

chatter, labels that "boulders." I cannot say to the contrary. Here at the top of the well in Section 26, 30-23, where they would not be apt to have either shells or anything like that, they have marked it "boulders."

At a depth of 3609 to 3664 feet, my log shows "Soft blue shale; hard blue shale; soft blue shale; having a trace of oil." My log shows a trace of oil in all these formations, the drilling reports show "Soft blue shale," and at the bottom it says "All the sofe blue shale formations show trace of oil." My log is not correct where it shows a trace of oil in other formations except the soft blue shale; I wish to correct this; where I stated that all the soft blue shale formations show a trace of oil; that is down as far as 3657; below that, to 3686 all the formations show oil. Between 3609 and 3664 there is fifteen feet of soft blue shale showing oil and seven feet of hard blue shale showing oil. The hard shale is between 3657 and 3664 and the rest of it does not show oil from the drilling reports, and my log is therefore incorrect in that respect. I would call that a startling discrepancy, but not inten- **[3078]** tional; that is, with respect to what I find in these drilling reports. In some respects I took these telegrams to form the basis of my information. I examined some of the telegrams to see whether they show these things. All my answers as to incorrectness are based on the daily drilling reports alone. I don't know whether I found anything in the telegrams altering that situation. I have not had a chance to examine

the telegrams since. My log of the well in Section 26, from 3860 to 3918, shows oil sand, good light oil. When they reached 3860 the casing was down 3572. I do not think the apparent showing of oil could have come from higher up. They had oil sand there; good light oil. They were drilling with a rotary drill and the hole would naturally be pretty well mudded. They keep them mudded up pretty tight and I do not think the oil could come down. I made a mistake in putting traces of oil opposite the gumbo, hard shale, between 3609 and 3657; that was inadvertent on my part. It shows traces of oil at different points and my log is inaccurate in that respect, it does not show the true conditions as reported in the daily drilling reports from which I made my log; it shows oil where it should not be; there is oil through that distance at different localities as shown by the daily drilling reports and the log of the defendants does not show any oil through that distance. Maybe they had inside information to make up this log; I don't know. According to the daily drilling reports, my log shows too much oil formation while the log introduced by the defendants does not show any oil formation in this locality between 3596 and 3664, and to some extent both are not to be depended upon as correct, although there is oil scattered through there —an oil formation scattered through there. I did not have a desire in every instance to magnify the oil showing; in one instance, between 3342 to 3465 feet, showing a trace of oil, I should have shown

3342 to 3485 feet; I there made a reduction of 20 feet, but this was entirely inadvertent.

It was on June 10, 1911 that I went to the well on section 30, **[3079]** 30-24 and observed the flow of oil, which I estimated at 2000 barrels; I did not take any measurements, but estimated from looking at it; I have had no experience in estimating the flow of oil; I have estimated the flow of water; I have estimated the flow of oils all along, and then would ask the men around; I endeavored to give a careful estimate of this well; Mr. Maxwell told me it was about 5000 barrels; he may have been there before; on this occasion we had been there but a very short time, and I assumed that the flow that I observed would continue for 24 hours; I think he overestimated it; he seemed elated and let that get the better of his judgment; he knew the position I held, and I think he took me over there to observe the conditions, so that if they should make an application for patent I would know the facts; he made no effort to minimize the amount or volume of oil.

As stated in my direct examination, I consider boulders an indication of shore conditions; they are generally hard, because they are water-worn, and by the process of elimination, the softer materials disintegrate, and the boulders are found in sand and gravel, although they might be found in finer material; where we have the boulders and sand laid down and then the sand washes away, later we have quiet waters coming on until you get **[3080]** the finer materials deposited around the boulders, and they may

rest on clay; they would rest upon shale and such materials, as it would have been hardened; if they fell into mud or clay, it would necessarily have to harden; I can think of conditions where boulders would be deposited by currents, then we get the quiet waters, and get the silt, and the boulders might be found resting in sand or gravel; you will notice that they find in one place at this well, boulders and sand; you even find boulders in rock, where the materials have hardened around them, after the deposit. It will take a long time after silt and clay are laid down by sedimentary deposit, before it hardens sufficiently so that the currents will not carry it away, and it would before the boulders arrived, a great deal of fine sand and coarse gravel; I would expect to find the boulders at the shore-line; the shore line would necessarily be flat, and it would take a very heavy current to transport boulders any distance.

I cannot cite any instance in the literature of geology where boulders have been actually found to have existed deposited in rock formation or hard shale. I cannot say that I have seen boulders mixed with shale or clay; it might be possible for ice flows and such things as that to carry boulders and drop them some distance from the shore line into fine silts or clays. The nearest boulder that I have shown in my log of the well on section 26 is 40 feet from the surface, deposited in gravel and sand, and would indicate unmistakable shore-line conditions; it is considered a fresh water deposit. I have never made

any examination of the formations along the Mount Diablo Range to the east of the Elk Hills, or examined the outcrops over there where shore-line conditions are revealed; I have to the southwest, and found boulders there embedded in sand, but not in shale or rock. The log of the well on section 26 introduced in connection with the testimony of Mr. Luke shows boulders in the same places as [3081] shows on my log; the log from which I obtained my information ws a graphic log, while this one to which you call my attention is a descriptive log; the graphic log shows the formations graphically, and a descriptive log just describes them; very often the graphic log combines the daily reports in order to show the officials of a company as entire formation. My logs were made to show the differences or discrepancies in the graphic logs of the defendants, especially with reference to oil and boulders. I didn't see the descriptive logs introduced; and these descriptive logs were not called to my attention by Mr. Mills, I think; if so I disregarded them; I was in the hospital about a month, and out of work for two months on account of sickness, and may have missed some instructions which were given me.

In the descriptive log of the defendants on well No. 3, Section 24 of 30-23, in the Elk Hills, are shown boulders at the same place shown in my log; and there is shown 750 barrels of oil which I did not notice on that log; I was not directed to examine the production charts shown during the testimony of Mr. White, that I recollect; I saw certain produc-

tion data on the graphic logs of the defendants, so I just put some on mine, to show that they did not have it complete, that there were some discrepancies; I find considerable discrepancies as to the production. I did not make mine complete; I picked out the highest one I could find of oil and called that representative; I did not make an accurate report, but a representative production. I didn't put in the gas. In looking over the data I find right after that that the well became clogged and we could not go by the production after that, so it would be a kind of a hard think to make an accurate estimate of the production.

As to the shore line, I have not attempted to chart that by the boulders in these wells; shore lines are variable; we find it maybe at the line which the shore was located at a certain time, in a geological epoch; it may have advanced to that point during **[3082]** that epoch for a number of miles; I think in its advance it would come pretty close to both sections 26 and 24, and through them; it may have been considerably higher in 26 than in 24; 26 is a little to the southwest of 24; if the shore-line conditions in section 26 come up to within 40 feet of the surface, I would not expect the same line of elevation on the shore-line continued, that would be revealed by an outcropping on the surface beyond section 26; that has been covered up; we have a deposit coming on top of that as it extends on farther to the west, as the shore-line advances, or retreats, rather, and the ocean advances;

Q. Then, you think the fold in the Elk Hills is more recent than the deposition of the last shore-line material that you have spoken of, do you?

A. Well, I don't know as to that, the material found right on the surface of 26.

Q. Well, you say you don't know. All right.

A. Now, I don't want it to be understood here that this **[3083]** graphic log from which you have drawn shows correct conditions.

Q. By Mr. Mills—"Log?" Is it a log?

A. Graphic chart, which is drawn here, shows correct conditions, for we don't know that this point at 1770 to 1600 is on the same strata as we find the gravel in 26—or, boulders in 26 at 40 feet to 360.

Q. By Mr. Lewers—It is the first indication of boulders in well on Section 24, is it not?

A. As found on 24.

Q. You think there might probably or possibly have been some above that?

A. There may have been. Certainly.

Q. Did you find anywhere in the Elk Hills, in all of your examinations, any outcrop of sands or boulders indicating shore-line conditions?

A. No. Those outcrops are—There are no outcrops. All that is covered.

Q. Even beyond the range?

A. Yes; beyond the range.

Q. They are still covered?

A. Yes.

Q. They come up to within 40 feet of the surface

on Section 26 but are not revealed in any of the ravines in the Elk Hills? Is that correct?

A. Well, now, that was—The material on Section 26 is fresh water deposit; was probably deposited when the land was above water there.

(Chart offered in evidence and marked "Defendants' Exhibit 201.) **[3084]**

I think the manifestation of a boulder would be more distinct with a standard rig, as we have loose tools, and in a Rotary they are pretty tight and rigid; a real boulder might be likely to cause trouble in either case; in either case, if the drill hit the boulder squarely, it would slow up; if it were hit on the side, and was small, it would probably be pushed aside, but if large, it would deflect the tools; it is very probable that a driller would know if a Standard drill went through it, if it were embedded in rock; the bailer would bring it up; if a Rotary drill struck it, it would grind it up, and it would come up as mush or mud; that is why I think a Standard would be more likely to reveal the presence of the boulder.

Q. Do you know with what sort of a rig the well in Section 24 was drilled?

A. I will look that up. Drilled with a—

Mr. Mills: Now, I object, again, to this line of cross-examination, as not proper, nor based on any questions or matters elicited on direct examination; and I advise the witness not to answer the question. It seems to me that counsel is trying to kill time

because we are getting to the close of this rebuttal testimony.

Mr. Lewers: Your suggestion, Mr. Mills, is entirely without foundation. This is proper cross-examination, and I consider the objection made because Mr. Mills knows very well that it is going to get at points that will cast entire discredit upon the testimony and conclusions of this witness.

Mr. Mills: I submit that you have now spent a day and a half in cross-examining this witness, and out of the entire time you have not spent half an hour on any matters that were elecited on direct examination.

Mr. Lewers: I want an answer to my question.

Mr. Mills: Well, I advise the witness not to answer it. **[3085]**

Q. By Mr. Lewers—Are you going to follow that advice, Mr. Kingsbury?

A. I will follow the advice of my attorney.

Q. Very well, then. I want a further foundation, however. Mr. Kingsbury, do you claim any privilege on the ground that the answer would tend to incriminate you?

Mr. Mills—You need not answer that question. If the court is going to compel you to answer, of course you will answer it.

Q. By Mr. Lewers—Do you refuse to answer?

Mr. Mills—We have sat here twelve hours, now, listening to a lot of irrelevant and immaterial questions, and I have objected to very few of them in hopes that you would finally get through.

A. With all due respect to the court, I will act upon the advice of my attorney until otherwise instructed.

Q. By Mr. Lewers—Would the answer to this question be revealing anything that you have received as a privileged communication in any respect?

A. That is along the same line as the questions which I have refused to answer.

Q. And you refuse to answer that, do you?

A. I think, upon the advice of my attorney, and with all due respect to the court, until I am—or, until the court makes a decision upon that point.

Q. I now ask you to examine page 7489 of the transcript in this case. Will you turn to it? (Witness examines transcript). Will you read what appears under "Remarks," on the rotary, for the 11th day of December, 1910, the **[3086]** drilling report as it appears on that page 7489?

A. That question is along the same line as—

Mr. Mills—Answer the question, and get through. Let's see whether we can get somewhere.

A. (Continuing) "Installing Rotary."

Q. By Mr. Lewers—Well, is that all that appears under those remarks? Read it all.

A. "Dismantling Standard rig; installing Rotary."

Q. Would you conclude from that that the drilling down to that point had been done by a Standard drill?

Mr. Mills—I object to that, as clearly calling for a conclusion of the witness on the testimony. The

testimony will show. The court will draw its own inference.

Mr. Lewers—You may answer.

A. As Mr. Mills has already said, the testimony introduced by the defendants will show.

Q. I am asking you for your conclusion. Will you kindly answer, without evasion?

A. I don't know as I am called upon to make any conclusions along this testimony.

Q. What depth was indicated by the report for that same day, as appearing on that same page?

A. The depth stated is 1555 feet.

Q. Will you examine your log for that same well and state where the first showing of boulders occurs —at what depth?

Mr. Mills—Which well is it?

Mr. Lewers—Twenty-four. [3087]

A. Twenty-four. The depth was 1570 feet.

Q. After they had changed to a rotary, was it not?

Mr. Mills—Well, I don't know that the witness knows anything about that, except what the testimony shows, Mr. Lewers. He does not claim to have been there at that time?

Mr. Lewers—You may answer.

A. That would be calling for a conclusion upon the testimony already given.

Q. You have not hesitated to draw many conclusions, on direct examination. Will you draw another one here? That was after the Rotary was installed, was it not?

Mr. Mills—How does he know, unless he was there, Mr. Lewers?

Mr. Lewers—You may answer.

A. I was not there to see.

Q. You are very ready to take the suggestions of counsel, I see?

A. Yes.

Q. That shows very good team-work. I shall not interfere with that. Now, will you turn to page 7312 of the record and state what is there said as to the kind of rig that was being used in drilling the well in Section 26?

A. On the 28th day of December, 1910, they were not using any tools.

Q. Well, what is said under "Remarks" for that date?

A. "Rigging up for Standard tools."

Q. At what depth was that, as it appears from that report?

A. The testimony shows that. The testimony of the other— **[3088]**

Q. Will you kindly answer my question? What depth was that?

Mr. Mills—He wants to know what is on the—what appears there.

A. The depths given here, "Depth last reported, 3174. Hole made, 1 foot. Present depth, 3175."

Q. By Mr. Lewers—Will you turn back over the pages before that showing the reports for drilling and state what sort of a rig is reported, say back for ten or fifteen pages?

A. Well, as for December 26th, 1910 page 7311, "Rotary rig."

Q. Turn back to page 7264, and read what is said under the report for July 7th, 1910, when they were down to a depth of 320 feet. What kind of a rig were they using

A. July 7th, 1910, "Remarks:—Rotary." I notice above that, they have "gumbo and boulders."

Q. They were drilling with a rotary then, were they not?

A. I don't know. It don't state so.

Q. Well, do you find any indication of a change from a Rotary to a Standard or from a Standard to a Rotary after they started the well?

A. They don't state what they started the well with.

Q. By Mr. Mills—What depth was that gumbo and boulders?

A. 316 to 319.

Q. By Mr. Lewers—Well, do you conclude from the fact that it does not appear what they started with that they started with a Standard?

A. They may have spudded in with a Standard.

[3089]

Mr. Mills—What well is this, Mr. Lewers?

Mr. Lewers—Twenty-six.

Q. Do you find any notation in those notes, daily reports, of rigging up or changing from a Standard to a Rotary?

A. It may have been rigged for both, to start with.

Q. Oh, I see. Why was it, then, that when they got down to 3175 they found it necessary to dismantle it and to rig it for a Standard?

A. I was not there.

Mr. Mills—That calls for a conclusion that the witness cannot possibly answer; and I therefore object to it.

A. I was not there. I don't know.

Mr. Mills—Just a minute.

Q. By Mr. Lewers—You say you were not there.

A. No.

Q. Well, you were not there in the first place, either, were you?

A. No.

Q. When they started the well?

A. No.

Q. Yet you were willing to volunteer a suggestion that it might have been rigged for both Standard and Rotary at the same time?

A. Yes sir.

Q. But when I call your attention to the report that they dismantled the Rotary and rigged up for a Standard, you are unable to make any suggestion. Is that because it shows the inaccuracy of your first suggestion? **[3090]**

A. Now, let's have that first question. (Record read by Special Examiner.) Now, I can't tell you why they did.

Q. Do you know whether or not they drilled with a Rotary again after they had reached 3175? Refer to page 7329 of the record.

Mr. Mills—I can't understand how you expect to prove by this witness, who manifestly does not know the facts, as to what happened at the well when he was not there.

Mr. Lewers—It is barely possible that I am anxious to show that he does not know anything about the facts.

Mr. Mills—Well, it is admitted that he was not there, excepting one or two times, when they were drilling.

Q. By Mr. Lewers—Have you found the page?

A. Yes sir. 7329.

Q. What were they drilling with at that point, according to the notes?

Mr. Mills—I object to that, unless the witness knows the fact, and he has already stated he does not know.

Q. By Mr. Lewers—You may read what it says

A. They were not drilling with anything.

Q. Well, what kind of a rig were they using?

Mr. Mills—If you know what kind of a rig they were using, answer the question without hesitation. If you don't know, say so.

A. Well, I don't know what kind of a rig they were using at that time.

Q. By Mr. Lewers—Will you read what appears under "Remarks", at the bottom of page 7329, under the date of February 10th, 1911, at a depth of 3175 feet? **[3091]**

A. "Rigging up Rotary."

Q. Will you read, on page 7334, under the head of "Remarks", under the date of February 21st, 1911, what is stated about the kind of drill?

A. "Rotary rig, from depth of 3177, working with 2-½ inch drill pipe."

Q. Will you refer to page 7340, and read what is said under "Remarks", for the report of March 4th, 1911, as to the character of the rig?

A. "Rotary rig."

Q. What depth were they at that time, according to the report?

A. According to the report, they were between 3527 and 3548.

Q. Now, referring to the well on Section 30, do you know what sort of a rig was used on that well?

A. Not from my personal knowledge.

Q. What kind of a rig was in operation while you were there?

Mr. Mills—Pardon me, before you answer that question. Is it your contention that the well on 24 was entirely drilled with a Rotary?

Mr. Lewers—No. My contention is that the well on 24 was drilled with Standard tools to 1555, and then with a Rotary the rest of the way.

Mr. Mills—On page 7312 it shows they were rigring up for Standard tools. 3175 feet.

Mr. Lewers—3175.

Mr. Mills—Yes. **[3092]**

Mr. Lewers: That is Section 26. It appears on Section 26 they drilled with a Rotary to 3175, temporarily installed Standard tools, and then went

back to Rotary and finished with the Rotary down to the bottom. So that Section 26 was entirely drilled, so far as any progress was concerned, with a Rotary.

Mr. Mills: That is, you claim that the evidence shows that?

Mr. Lewers—Yes. No question about that.

Mr. Mills: What is the use of going over this with this witness, if that is your contention. Let the evidence show it.

Mr. Lewers: I want to get these together.

Mr. Mills: You can't make your evidence any stronger to have a witness for the government testify that the evidence shows a certain thing.

Q. By Mr. Lewers: Now, is it not a fact that the well in Section 30 was drilled with a Standard to 1323, and a Rotary the rest of the way? Refer to page 7175.

A. From the evidence introduced by the defendants, it shows this fact.

From these I do not think that the fact that they drilled with a Standard in Section 24 down to 1555 feet had anything to do with the absence of a showing of boulders in the logs, nor do I think the fact that they drilled with a Rotary beyond that had anything to do with a showing of boulders, and my same answer applies to the well drilled entirely with a Rotary on section 26.

The word "boulders" means but one thing; I don't know whether a driller using a Rotary would denominate the chattering of the drill as an indica-

tion of a boulder; I have not had sufficient experience to state that there is any difference in the movement of a rotary drill in striking a real boulder and in striking any other substance or formation that would cause it to chatter and jump. I have not had an opportunity to see a Rotary drill strike a boulder; I notice in the papers handed me, the well logs, of well **[3093]** 6, Section 20, 32-24, that it was drilled with a Rotary, and that they have struck a number of boulders in this well, with sand and boulders, clay and boulders, coarse sand and boulders; the other log, which purports to have been drilled with a Standard, shows nothing referring to boulders, although we have what is reported as granite sand, which may have been boulders ground up .

Said last-mentioned logs introduced in evidence, and marked Defendants' Exhibits 202 and 203—LL.

REDIRECT EXAMINATION OF J. W. KINGSBURY

At the time I was on the trips with W. O. Maxwell, of the Associated, and L. J. King, superintendent of that company, to the well on Section 26, 30-23, and 30 of 30-24, it was June 10, 1911, before I ever heard of this suit; Mr. Maxwell was highly elated over the discovery of oil in the well on Section 30, as I stated before; so far as I know he did not know anything about the suit.

If a boulder were struck with a Standard drill some evidence of the boulder might be drawn up in the bailer in small fragments, which would be addi-

tional evidence of the boulder; in my opinion a Rotary driller knows when he strikes a boulder of any size, but I am not so familiar with the Rotaries, and could not answer exactly as to them; from my study of reports, striking the boulder at an angle sometimes breaks the bit, and sometimes deflects it; it does not follow because a drill strikes a boulder at one place that it must necessarily strike a boulder in the same strata a mile and a half away; it frequently happens that a well in one case will strike strata containing boulders and perhaps have trouble, while a well a short distance away going through the same strata may pass safely through and not encounter them.

The principal discrepancies between the daily drilling reports introduced by the plaintiff and the graphic logs known as Defendants' Exhibits 175, 176 and 177, is an omission of the boulders in the graphic logs, and the many missings of the production of **[3094]** oil, and leaving out places where gas was obtained; I consider it a startling discrepancy when drilling reports and telegrams sent from the field by the Associated Oil Company's employees show a production of from 750 to 900 barrels per day that the graphic logs which are alleged to have been made up from that very data show only 90 barrels a day; assuming that the drilling reports and telegrams are correct, and from that data I find a production of 750 barrels a day in one well, and the drill stem broke off, and while they were fishing for it for two or three weeks the well made 100 barrels a day, I think

750 barrels a day as I have on my log is representative in a conservative way of the capacity of that well.

RECROSS EXAMINATION
OF J. W. KINGSBURY

If a well is producing 750 barrels a day, I think a hundred barrels a day is a conservative estimate of production when the well is clogged with sand and drilling tools and such things. This well was clogged with sand last February, and I base my conclusions upon the assumption that it was clogged with sand and drilling tools. I regard my logs as calculated to convey a correct impression of the facts.

REDIRECT EXAMINATION
OF J. W. KINGSBURY

The inaccuracies pointed out by Mr. Lewers are of minor importance geologically and on the ground of production, but there are no inaccuracies in the amount of production of oil or in the occurrence of boulders.

RECROSS EXAMINATION
OF J. W. KINGSBURY

When you ask me if I regard the insertion of 200 feet of oil sand as a minor discrepancy in my log, my answer is that I have not inserted any 200 feet of oil sand; I have approximated the location **[3095]** where oil sand might exist, as shown from the telegrams, and I used broken lines to show it was an approximation. The oil and sand does exist—I will

say that; but I have used that side note to show an approximation where it probably exists. As far as what my logs were made out for, I am satisfied with them, and I am satisfied with the production of oil as shown by my logs. As an accurate resume of what is indicated by the drilling reports, telegrams, and daily reports of the Associated Oil Company for those wells, it shows what they could produce if in good condition.[3096]

GEORGE W. STEWART, a witness called and sworn on behalf of the plaintiff, in rebuttal, testified as follows:

DIRECT EXAMINATION

By Mr. Mills:

Q. You are the Register of the local United States Land Office at Visalia?

A. Yes sir.

Q. And are you at the present time?

A. Yes sir.

Q. Who is the Register of that land office at the present time?

A. The Receiver?

Q. I mean who is the Receiver?

A. Arthur H. Swain.

Q. How long have you held the office of Register of the land office?

A. Very nearly sixteen years.

Q. Continuously?

A. Yes sir.

Q. Then, I take it that you were Register of that office during the years 1903 and '04?

A. Yes sir.

Q. Now, I show you this bunch of bound papers, which purports to be a list of lands selected by the Southern Pacific Railroad Company. Will you examine it, please, and state what it is and where it has been?

A. This is a list, numbered 89, received at our office November 14th, 1903, and has been in our office all the time until I brought it here to San Francisco.

Q. Yes. That is, it has been under your official custody and control as Register of that office?

A. Yes sir. [3097]

Q. Now, will you state whether that is a selection list of indemnity lands within the main land limits?

A. Indemnity limits.

Q. Indemnity limits?

A. Yes sir.

Q. And is that the original document which was filed by the railroad company as of the date November 14th, 1903?

A. It is one of five copies.

Q. All originals, are they?

A. It is their usual practice to file five copies, and we treat them all as original so long as they are in our possession.

Q. Now, what is the practice in the Department with reference to the treatment of the five copies

after they are received? What do you do with them?

A. After approval, three copies are returned to the railroad company, one copy is retained for the permanent files of our office, and one copy in due course is transmitted to the General Land Office.

Q. Yes. Now, is this the copy which you retained in your office?

A. Yes sir.

Q. What does it contain? What papers does it contain, naming them? What is the first paper? Isn't the first paper a certificate of the Secretary of the Southern Pacific Railroad Company certifying that Chas. W. Eberlein was appointed acting land agent of the applicant, Southen Pacific Railroad Company, at a meeting held on the 2nd day of September, 1903, and since that time has been continuously the acting land agent?

A. It is.

Q. What is the date of that?

A. November 7th, 1903.

Q. Now, what is the next paper you find? The next is a list [3098] of lands, is it not, signed by Chas. W. Eberlein, as acting land agent?

A. Well, it is the application accompanying the list.

Q. Yes. And the next five pages—

A. Are the list of selected lands and a list of lands assigned as bases therefor.

Q. Yes. Followed by what?

A. By an affidavit of Chas. W. Eberlein.

Q. Dated?

A. Dated November 7, 1903. The next is a certificate signed by the Register and Receiver of the local land office. The next is a statement of Chas. W. Eberlein, acting land agent, that the railroad company offers to pay for the survey of the lands under protest.

Q. And the next paper is what?

A. The affidavit of Chas. W. Eberlein that he is acting land agent of the Southern Pacific Company.

Q. That is not the last paper, is it?

A. No.

Q. Next to the last?

A. Next to the last.

Q. And will you read the—not read it, but give the substance of that affiadvit.

Mr. Lewers: Do you expect to put the document in evidence itself?

Mr. Mills: Yes.

Mr. Lewers: Very well.

A. And that he has caused the lands selected in said list 89 to be carefully examined by the agents and employes of the company as to their character.

Q. By Mr. Mills: Yes; as to their mineral or agricultural character, eh? **[3099]**

A. As to their mineral or agricultural character; and that to the best of his knowledge and belief none of the lands returned in said list are mineral lands.

Q. When was that affidavit subscribed and sworn to?

A. Subscribed and sworn to November 7th, 1903.

Q. What is the last paper in this bunch?

A. That is a certificate from the Register of the Land Office at San Francisco regarding the base lands, with which we have nothing to do.

Q. What is the date of that certificate?

A. November 12th, 1903.

Mr. Mills: Now, with this identification, I offer this bunch of papers in evidence, as one exhibit, as the papers constituting the selection list No. 89 of lands selected by the Southern Pacific Railroad Company, indemnity limits, main line, filed November 14, 1903, as Plaintiff's Exhibit 12-M.

Mr. Lewers: I object to the introduction of the exhibit, on the ground that it is not rebuttal testimony, but, if admissible or relevant, is part of the case in chief.

Mr. Mills: This, you will remember, is part of the testimony which we both agreed we would put in at some time before we closed the case, you stating that you would put it in in your defense if I didn't put it in at some time; and, without conceding that it is not rebuttal, I offer it under those circumstances.

Mr. Lewers: Why, I have not at this moment the distinct recollection of what the agreement was, but whatever agreement we made in connection with it of course I don't intend to go back on but abide by. I have certain certified copies myself that I have obtained since we closed our case that I expect to offer.

Mr. Mills: I will ask the Special Examiner at this time to extend into the record Plaintiff's Exhibit 12-M, with the understanding, if it is agreeable to you, Mr. Lewers, that the original of **[3100]** any of these papers may be returned, upon the substitution of certified copies.

Mr. Lewers: That is perfectly agreeable to me.

Mr. Mills: All right.

The papers last referred to and offered in evidence are marked "Plaintiff's Exhibit 12-M-L.L.", and are as follows:

(Said exhibit appears in volume of Exhibits.) **[3101]**

Q. Now, using that as a basis, as Plaintiff's Exhibit 12-M, for your testimony, and basing your answers on your recollection of what happened, will you give the history of that selection list?

Mr. Lewers: I object, on the ground that that is not rebuttal, and on the ground that the selection list and documents in connection therewith are the best evidence; that this is an attempt to vary by parol evidence the effect and purpose of documents received and filed in the office of the Visalia Land Office in the regular course of business and as a part of the official business of said office.

A. This selection list was rejected November 17th, 1903, by the Register and Receiver, on the ground that the lands applied for were embraced in territory suspended by the Commissioner of the General Land Office—suspended from disposition.

Q. By Mr. Mills: Was that under an order of suspension made in February, 1900?

A. February 28th, 1900, by wire, by telegraph.

Q. And was that order in full force and effect at the time this list was offered on November 14th, 1903?

A. It was.

Q. As to the lands involved?

A. It was. I could not state at this moment whether it was the lands or—Let's see. Wait a moment. I can tell you in a moment.

Q. Was not the whole township 30-23 embraced in the order of suspension? Is not that true?

A. That is true. It affected all the lands embraced in the list.

Q. Yes. That is, all the lands selected, you mean. Not the base lands?

A. The lands they attempted to select under this list.

Q. Do you know whether or not, after rejection on November [3102] 17th, 1903, by your office, the Southern Pacific Railroad Company filed an appeal from that rejection?

A. Yes; I believe an appeal was filed.

Q. Now, do you know, in general, whether the order of suspension during the pendency of that appeal, was revoked, as to these lands, among others?

A. It was.

Q. That was under an order, generally, of February 20th, 1904, wasn't it?

A. I believe that was the date; yes sir.

Q. And what date did you receive the order at your office?

A. I think it was February 26th, 1904.

Q. Did this list, which you say was retained in the office, at that time contain all of these papers that it now contains?

A. Yes sir; it has not been changed in any manner.

Q. Excepting as to the survey signed by yourself and Mr. Swain as Receiver? Is that true?

A. I refer to no papers having been taken from those accompanying the list and none added to it.

Q. Now, I call your attention to that portion of the list which constitutes the certificate of the Register and Receiver, which appears originally to have been dated "Visalia, November, 1903", and which has been cancelled with a pen in such way as to read now "February 26, 1904", and also to certain cancellations in red ink of the words "returned and denominated as mineral land or lands or—". Will you explain those, please?

A. When the list was received, this certificate had written in the words, "Visalia Novr."—

Q. And a blank space?

A. In a blank space.

Q. And what else?

A And the figure "3", after the figures "190".

[3103]

Q. Yes; making "1903"?

A. Yes sir. And owing to the fact that the list

could not be accepted at that time, the date was not completed nor was the certificate signed.

Q. Yes.

A. And after the return—No; after the revocation of the suspension, and a letter from the Commissioner of the General Land Office stating that owing to such revocation the list could be acted upon by our office, the matter was taken up at the date on which the letter was received.

Q. What date was that?

A. February 25th, 1904.

Q. Yes.

A. And the certificate was given that date and a line drawn through "Novr" in the date line, and the words—

Q. Wait a minute. What insertion?

A. And we added to the date line, "Feb'y 26", and the figure "4" after the figures "190", making the date of acceptance by our office February 26, 1904.

Q. In whose handwriting were the words "Visalia Novr" and the figure "3" on the date line?

A. I have no idea.

Q. Was that on there when you received it?

A. Yes sir.

Q. In whose handwriting is the crossing out of the abbreviation for "November" and the words "February 26, 1904"?

A. In mine.

Q. Now, what have you to say about the red-ink cancellation of the words "returned and denomi-

nated mineral land or lands, or" in this sentence, "and that the same are not, nor is any part thereof, returned and denominated as mineral land or lands, or claimed as swamp lands"; Who did that? **[3104]**

A. I crossed that out with a red-ink pen, for the reason that the second plat of that township filed had a mineral return covering the lands which they applied to select, and I made that change to have the certificate agree with the fact. We then—

Q. Just a minute.

Mr. Lewers: He has not finished.

Q. By Mr. Mills: To make it clear—the plat filed by whom, the plat of survey I mean.

A. The plat of the official survey of the township, which we received from the United States Surveyor General.

Q. Proceed.

A. Showing his approval. All I was going to state was that the certificate was then signed by the Register and Receiver.

Q. Now, I call your attention to Plaintiff's Exhibit E, Mr. Stewart, and will ask you if this plat, or a duplicate of it was on file in your office, and is that the plat to which you referred when you say there was one filed by the Surveyor General?

A. It is.

Q. Now, at this point in the record will you read the certificate as to the character of the lands?

A. This mineral return?

Q. Yes; the lands which you referred to as in Township 30-23, as being covered by this selection.

A. "Mineral land, (in Midway Min'l District) S.E. ¼ and W ½ of Sec. 14; all of Secs. 15 and 16; E ½ and S.W. ¼ of Sec. 17; S.W. ¼ and E ½ of Sec. 19; all of Secs. 20, 21, 22, 23, 24, 25, 26, 27, 28 and 29; E. ½ and N.W. ¼ of Sec. 30; N.W. ¼ and E. ½ of Sec. 32, and all of Secs. 33, 34, 35 and 36—surveyed by Duee, is regarded by him as to be more valuable for mineral than for agricultural purposes."

Q. Now, will you read the certificate of the Surveyor General, beginning here? **[3105]**

A. "The above map of Township No. 30 South, Range No. 23 East, Mount Diablo Meridian, California, is strictly conformable to the field notes of surveys thereof, on file in this office, which have been examined and approved. U. S. Surveyor General's Office, San Francisco, California, August 1st, 1902. W.S.Graham, U.S. Surveyor General for California."

Q. When, as a matter of fact, was that filed in your office?

A. May 16th, 1903.

Q. And on the copy which you have in your office does that appear by any notation, and, if so, what notation?

A. "U. S. Land Office, Visalia, Calif. Officially filed, after due notice, May 16, 1903. Geo. W. Stewart, Register."

Q. Now, what do the words, "after due notice", that you used in the last endorsement, mean?

A. When the official survey of a township or of part of a township is filed in our office, we given no-

tice to the public by having a copy posted in the office of the County Clerk of each county in our land district and in all of the post offices in the vicinity of the land, also in our own office, for a period of thirty days, such notice stating the date on which the plat will be officially filed.

Q. Now, referring to the endorsement on Plaintiff's Exhibit E, under the words "mineral lands", the part that occurs in parenthesis, "In Midway Min'l District", what does that mean?

A. Well, it can't refer to an organized mineral district, because there is only one in our land district, which is at White River, and it must necessarily mean a local term for a certain territory.

Q. What does "Min'l" mean?

A. I would take it to mean "Mineral."

Q. Now, how much of this land the descriptions of which you read, in comparison to the whole township, was there, in acreage, **[3106]** included in this survey? Was there more or less than half of the township?

A. More than half.

Q. Had all of the rest of the township been previously surveyed?

A. Yes sir.

Q. On what basis?

A. All except on estimated area of one hundred sixty acres in the north-east corner, designated as being in Tule Swamp on Buena Vista Slough.

Q. And what not?

A. The rest of it had been surveyed in 1893 and 1901. No.

Q. What about this here (showing.)

A. Crossed out about 1901.

Q. Are you correct in that?

A. No.

Q. What about this survey up here?

A. I hadn't noticed that. I would like to correct that statement. The northern portion of the township, with the exception of the estimated swamp land area noted, and the south-western part had been surveyed in 1856—by Brice M. Henry, in 1855, and approved in 1856.

Q. Now, the northern portion of the township was included within the boundary limits of the survey by Mr. Henry in 1855, was it not?

A. Yes sir.

Q. Generally speaking?

A. Yes sir.

Q. And also Section 31 and a part of Section 30?

A. Yes sir.

Q. Now, at the time that you canceled out the words referred to, "Returned and denominated as mineral land or lands, or" on[3107] February 26, 1904, will you explain why you did that?

A. Simply to make the certificate agree with the facts.

Q. What facts?

A. That the official plat showed a mineral return covering that—the lands sought to be selected.

Q. Then it was due to the presence in your of-

fice, as an official file, of the official plat of survey approved August 1, 1902, and filed in your office on May 16, 1903, a duplicate of which constitutes the Plaintiff's Exhibit E, that you canceled that portion of the certificate in order to have the certificate comply with the facts?

A. It was.

Q. Did you have in mind at that time, Mr. Stewart, the plat of survey to which you have just referred, returning these lands as mineral lands, and all of them?

A. Well, when an application to select or enter is filed, we must necessarily examine our tract book to ascertain if the land applied for is vacant and examine the plat book to ascertain its acreage and whatever facts may be shown by the plat book; and by this reference we discovered that that land was covered by a mineral return.

Q. Well, then you had in mind, did you not, the fact that the land had been returned as mineral, when you canceled those words out of the certificate?

A. We did. I did.

Q. Now, you say there were five copies. Did you do that on all of the copies of that date?

A. That is my recollection. My practice was to treat those all as original copies.

Q. Who makes up those forms of the certificates, affidavits and list of lands which constitute what we have termed the selection list of the railroad company of which selection list 89 is **[3108]** a type?

A. I don't know. This is list 89—

Q. What I mean is, are they prepared by your office—those forms?

A. No part of the papers are prepared by our office.

Q. State whether or not they are printed forms.

A. They are printed forms, all except the certificate of the Register of the United States Land Office at San Francisco regarding the base lands.

Q. Then, is all of the wording of the certificate as it appears here in printed form, excepting where blank lines have been left for dates or the endorsement of the amount of fees and the signatures of the Register and Receiver, in print?

A. Yes sir.

Mr. Lewers: It is not your contention, is it, that those forms are originally printed and prepared by the officers of the railroad company and not by the government?

Mr. Mills: No, my contention is that the printed form was made up by the railroad company to comply with the railroad's idea of the requirements of the Land Office.

Mr. Lewers: You don't deny, do you, that those forms were prescribed by the Land Office years ago?

Mr. Mills: Well, I don't deny or affirm anything. I am simply eliciting the fact as to where they are prepared.

Q. So far as you know, these were first produced by the railroad company in your office—these printed forms?

A. Well, they were received from the railroad company with the list.

Q. Does the name "Charles W. Eberlein" appear in print in the different affidavits and certificates, excepting where he is required to sign?

A. Where his name appears in the body of the affidavit or **[3109]** certificate, it appears in print.

Q. Now, as I understand your testimony, after the selection list 89, which was received on November 14, 1903, had been rejected by you, did you hold this selection list, Plaintiff's Exhibit 12-M, in your office?

A. Yes sir.

Q. And you state that you had crossed out, by red ink cancelation, those words that I have referred to?

A. That is my recollection. I am satisfied I did.

Q. What became of the other four?

A. One was forwarded to the General Land Office and three were returned to Mr. Eberlein, which was our usual practice.

Q. After you received the notice of the revocation of the suspension from the General Land Office, on February 26, 1904, what did you then do with Plaintiff's Exhibit 12-M?

A. We didn't receive the notice on that date. We had received the notice prior to that date, but the Commissioner's letter of that date—

Q. Now, aren't you mistaken about that? Wasn't that letter dated February 20th, and didn't you receive it on the 26th?

A. Yes; but that was not our first notice of the revocation.

Q. I am speaking now of the notice which you received on February 26th.

A. Yes; but as your question is framed—

Mr. Mills: Read the question, please.

(Question beginning line 12, this page, was read by the Special Examiner.)

A. (Continuing.) Well, that was not our first notice of the revocation.

Q. Well, I say, after you received the notice of February 20th, what did you do?

A. Well, after we received the notice of February 20th, we **[3110]** accepted the selection.

Q. In the form in which it now appears, with the words canceled, "Returned and denominated as mineral land"?

A. Yes sir.

Q. I show you this paper, Mr. Stewart, and ask you what it is.

A. This is a letter, signed—

Q. A letter or copy of a letter?

A. A copy of a letter, the original of which was sent to the Commissioner of the General Land Office, and a press copy of which is now in our office, signed by me and—

Q. As what?

A. As Register of the United States Land Office at Visalia, and transmitting to the General Land Office the said List 89 with the papers filed in the case.

Q. What is the date of this letter?

A. December 11, 1903.

Q. Is that a correct copy of the letter which was sent by you to the Commissioner?

A. That is a correct copy that has been compared with the press copy in our office.

Q. And where is it found in your office—the press copy?

A. The Commissioner's Letter Book, Volume 40, page 57.

Mr. Mills: I will offer this in evidence as Plaintiff's Exhibit 12-M, and will read it into the record.

Mr. Lewers: We make the same objection—that it is not rebuttal.

(The letter last referred to and offered in evidence is marked Plaintiff's Exhibit 12-N and is read into the record as follows:)

Q. By Mr. Mills: I show you this letter, Mr. Stewart, and ask you what it is, just generally.

A. This is a letter from the then Commissioner of the General [3111] Land Office, W. A. Richards, to the Register and Receiver of United States Land Office at Visalia.

Q. Dated when?

A. Dated February 20, 1904, referring to rejection by our office of said List 89, affirming our action in doing so, and calling attention to the revocation of the order of suspension made since the date of our rejection of the list.

Q. Is this the original letter which your office re-

ceived officially from the Commissioner of the General Land Office?

A. It is.

Q. Are you acquainted with the signature of W. A. Richards, the Land Commissioner at that time?

A. I am.

Q. And have you received, in response to correspondence with that office—

Mr. Lewers: I will admit that is Mr. Richard's signature.

Mr. Mills: All right.

Q. What are these endorsements on the back of the letter? Don't read them, but what are they, generally?

A. At that time it was our custom to note on the back of the letter the letter designation of the division in which it originated, the date on which written, the date of receipt at our office, and the substance in brief, the action taken.

Mr. Mills: We offer this letter, together with the endorsement, as Plaintiff's Exhibit No. 12-O, and will ask the Special Examiner to extend it into the record.

The letter last referred to and offered in evidence is marked Plaintiff's Exhibit 12-O-L.L. and is read into the record.

Q. I call your attention to this letter, Mr. Stewart. What is this?

A. This is a letter from myself, as Register of the United States Land Office at Visalia, to Charles W. Eberlein, Acting Land **[3112]** Agent of the Southern Pacific Railroad Company.

Q. Dated?

A. Dated March 5, 1904, and—

Q. Is this a copy of a letter?

A. And noticing the acceptance of list No. 89. This is a copy of a letter taken from the press copy book in our office.

Q. And where is that press copy to be found?

A. Registered letter book No. 7, page 105.

Mr. Mills: You will agree that this is a copy, won't you, Mr. Lewers? Do you know anything about it?

Mr. Lewers: I don't know.

Mr. Mills: We offer this in evidence, with that statement, and will ask the Special Examiner to extend it into the record.

The letter last referred to and offered in evidence is marked "Plaintiff's Exhibit 12-P L.L." and is read into the record.

Q. Now, referring to Plaintiff's Exhibit 12-M, which is the selection list, first rejected, and afterwards, the lands having been relieved from suspension, accepted February 26, 1904, did any patent issue on that selection at that time?

A. No sir.

Mr. Lewers: I move that the answer be stricken out, and object to the question on the ground that it calls for a legal conclusion by the witness.

A. (Continuing) Well, as a matter of fact, patent did issue on that selection, under the decision of the Supreme Court of the United States, and not upon any other selection, the same selection proceeding.

Q. By Mr. Mills: What was the reason it did not issue on that selection, if you know?

A. Just a moment. The form of your question said "at that time." **[3113]**

Q. Well, what was the reason?

A. The Commissioner called for a re-arrangement of the selected lands and designation of different bases in certain cases.

Mr. Lewers: You say "a re-arrangement of the selected lands"?

Q. By Mr. Mills: Was there some trouble with the bases offered for the selected lands?

A. Evidently. It was discovered in the General Land Office. That is a matter with which we had nothing to do.

Q. Now, did the railroad company file another list subsequent to that time, which is marked "List No. 89, lands selected by the Southern Pacific Railroad Company, indemnity limits, main line", bearing serial number "03149" and afterwards canceled to "03151"?

A. Yes sir.

Mr. Mills: Let this be marked for identification as Plaintiff's Exhibit 12-Q.

(The list last referred to is marked Plaintiff's Exhibit 12-Q-L.L.)

Q. Is this the list you refer to, which I hold in my hands and now hand you?

A. It is.

Q. That is marked for identification "Plaintiff's Exhibit 12-Q"?

A. Yes.

Q. When was that received at your office?

A. September 6, 1904.

Q. Was it sent by mail?.

A. I don't remember if it was sent by mail or express. We received papers at this time both ways from the Southern Pacific Company.

Q. You are positive it was received on September 6, 1904?

A. I am.

Q. And does it bear such an endorsement? **[3114]**

A. It does.

Q. In whose handwriting?

A. Mine.

Q. When was that endorsement made?

A. On the date on which it was received.

Q. Now, have you had sufficient dealings, in your official capacity, with the railroad company known as the Southern Pacific Railroad Company, to know whether that company was punctual in its correspondence with your office?

Mr. Lewers: I object to that as calling for vague and general conclusion, not defining any particular correspondence.

A. Well, I consider that they were as punctual or more punctual—more punctual, as a rule,—than any firm doing business with our office, or any person.

Q. Now, ordinarily, in your correspondence with the Southern Pacific Railroad Company, either by express or by mail, what space of time was necessary to get a letter or express package from that

company's office in San Francisco to your office at Visalia, basing your answer on your recollection during all the period of years that you have done business officially with that company?

A. In a few instances we have received correspondence, or papers, on the day on which they were written, but ordinarily, it was on the following day. I would state that when we received them on the date on which they were written, we got the same from the postoffice after the close of business hours. Please read my answer. (Answer read by Special Examiner.) "Correspondence and papers.

Q. Then if a paper was received from that company dated, September 6, 1904, either by express or mail or otherwise, on what date would the paper be sent from the office of the railroad company?

A. Well, if it was—

Q. That is, on what date, not earlier than what date? **[3115]**

A. I would expect it to be not earlier than the preceding day.

Q. Will you examine the papers which constitute this exhibit, "Plaintiff's Exhibit 12-Q", and compare them with the exhibit known as "12-M", all excepting the list of lands themselves, and state whether they are identical, and, if not, in what particulars? That is, exclusive of dates.

A. They appear to be, except the certificate signed by the Register and Reeciver.

Q. And in what particulars is it different from

the list filed November 14, 1903, known as "Exhibit 12-M"?

A. No portion of the printed part of the certificate is canceled.

Q. That is to say, the words "returned and denominated as mineral land or lands, or", are left uncanceled?

A. Yes sir.

Q. In the last exhibit?

A. Yes sir.

Mr. Mills: We offer this in evidence as Plaintiff's Exhibit 12-Q.

Q. By Mr. Lewers: Just a question. Do you have any knowledge of when that was mailed to your office, or sent by express?

A. I have no knowledge.

Q. By Mr. Mills: "You have no knowledge". What do you mean by that?

A. Well, I have no knowledge of the date when it was sent from San Francisco, except—no definite knowledge—except that I presume it was sent on the preceding day.

Mr. Lewers: Same objection to the introduction.

Mr. Mills: I will ask the Special Examiner to extend Plaintiff's Exhibit 12-Q into the Record.

The papers last referred to and offered in evidence are marked "Plaintiff's Exhibit 12-Q - L.L."**[3116]**

Q. By Mr. Mills: Do you know of anything in the exhibit itself which would indicate that it was sent later than September 1st?

A. Later than September 1st?

Q. Yes.

A. The certificate of the Register of the United States Land Office at San Francisco, bearing date of September 2, 1904.

Q. Was that date on there as it is now when you received it?

A. It was.

Q. Now, referring to the list of lands in Exhibit 12-Q, what differences, if any, are there between those and the list of lands in 12-M?

A. The lands embraced in the two lists are the same thing, but in the later list they were made to agree with the description given in the plat of official survey.

Q. In Plaintiff's Exhibit E?

A. In Plaintiff's Exhibit E.

Q. Now, when you say the lands are identical, what lands do you mean are identical?

A. The selected lands.

Q. Well, is that true of the base lands?

A. No sir.

Q. Are there any differences?

A. Some changes were made in the base lands.

Q. Have you compared the selected lands, as appearing by Plaintiff's Exhibit 12-M, and also the selected lands in 12-Q, with the certified copy of the patent which was issued to the railroad company in pursuance of its selection of lands in that township?

A. I have compared them with the certified copy; yes.

Q. Does the patent agree, in point of description

of the lands conveyed, with the lands under the selection columns in 12-M, the [3117] first list, of November 14th?

A. No; it does not. While it embraces the same land, the description does not agree in designation of lot numbers with the letter and official plat.

Q. Does the description, in respect of the lot numbers, in Plaintiff's Exhibit 12-Q which is the selection list received September 6, 1914, agree with the lands in the certified copy of the patent.

A. They do.

Q. Now, referring to 12-M, which was the list accepted by you on February 26, 1904, do you know whether or not the Commissioner of the General Land Office returned the list which was sent to him by you?

A. I have no independent recollection of it, but his letter states that it was returned, and from that letter, and a subsequent letter written from our office to Mr. Eberlein, I am satisfied that it was.

Q. Before referring to that letter, I call your attention to this letter, which appears to be first in date, and ask you what it is a copy of.

A. The same bears date of July 14, 1904, and is a letter signed by me and written to the Commissioner of the General Land Office, transmitting the proof of publication of notice of the selection—over my certificate, isn't it?

Mr. Lewers: What is the date of that letter?

Mr. Mills: July 14, 1904.

The Witness: Is my certificate there?

Mr. Mills: Well, that don't make any difference.

Q. Now, is this a correct copy of the letter which was sent by you to the Commissioner on that date?

A. This was compared with the copy in our press copy-book and found to be correct, and it appears in Commissioner's Letter [3118] Book Vol. 40, on page 380.

Q. In your office?

A. In our office.

Mr. Mills: We offer this in evidence as Plaintiff's Exhibit 12-R, and will ask the Examiner to extend it into the record.

(The letter last referred to and offered in evidence is marked "Plaintiff's Exhibit 12-R L.L.")

Q. Now, in reference to your statement that the list 12-M was returned to your office by the Commissioner, I call your attention to copy of a letter dated August 4, 1904.

Mr. Lewers: Just a moment. I want to enter an objection to the letter of July 14, 1904, because it appears that there was an enclosure, a part of the letter which is not offered with it. It is incomplete.

Q. By Mr. Mills: What enclosures are referred to, Mr. Stewart, in that letter?

A. Proof of publication, proof of payment of the cost of publication, and non-mineral affidavit; also the Register's certificate of posting copy of the notice in the Land Office.

Q. Now, referring to the letter which I hand you, which appears to be a copy of letter of August 4,

1904, will you state who it is addressed to, and by whom?

A. It is addressed to the Register and Receiver at Visalia, California, and signed by J. H. Fimple, Acting Commissioner of the General Land Office.

Q. Did you receive the original letter of which this is a copy?

A. Yes sir.

Q. Is this a correct and compared copy?

A. Yes sir.

Mr. Mills: We offer this in evidence as Plaintiff's Exhibit [3119] 12-S, and will ask the Examiner to extend it into the record.

The letter last referred to and offered in evidence is marked "Plaintiff's Exhibit 12-S L.L.

Q. I call your attention to the last paragraph of this letter, which reads as follows: "Such selections will not be permitted. Said list No. 89 is herewith enclosed, and you will return the same to the company in order that a new list may be filed, properly describing the lands selected by legal subdivisions, and the errors in the bases assigned can at the same time be corrected." Did you, in pursuance of that instruction, return the company's list—or, I mean, the list of lands selected by the company, which was returned by the Commissioner to you, to the Southern Pacific Railroad Company?

A. While I have no independent recollection of it, I am satisfied that I did.

Q. I show you this letter, Mr. Stewart, and ask you what it is a copy of.

A. This is a copy of a letter signed by myself as Register, on the form used in such cases supplied to us by the General Land Office.

Q. Dated?

A. Dated August 10, 1904, addressed to Charles Eberlein at San Francisco, and calling attention to the requirements contained in the Commissioner's letter of August 4, 1904, now marked as Plaintiff's Exhibit 12-S.

Q. Did you send the original of which this is a copy to Mr. Eberlein through the mails?

A. I did.

Q. And on the date which the letter bears, August 10, 1904?

A. Well, it was mailed on that date.

Q. Well, that is what I mean. **[3120]**

A. Yes sir.

Q. That is, you deposited it in the postoffice on that date?

A. Yes sir.

Q. Properly addressed to him?

A. What I meant was this: All of our service, where it is not made personally, is by registered mail; and if it arrives too late at the postoffice for their hour of closing their registered letters on that date, they forward it the next day, but we deposit it in the postoffice.

Q. Well, you deposited it in the mail on that date, properly addressed to Mr. Eberlein, on August 10, 1904?

A. Yes sir.

Q. By Mr. Lewers: Have you any independent recollection of that?

A. I have not.

Q. By Mr. Mills: And with the postage prepaid?

A. No postage. That is an invariable rule; there is never any postage.

Q. That is, because it was government mail, there was no postage?

A. No postage. But we did pay, when we had on a ten-cent registry fee, whatever the amount was that was required at that time.

Mr. Mills: We offer this in evidence as Plaintiff's Exhibit 12-T, and will ask the Examiner to extend it into the record.

The letter last referred to and offered in evidence is marked "Plaintiff's Exhibit 12-T-L.L." **[3121]**

Q. Has this been compared with anything at all, any record you have?

A. It is compared with the copy in our press copy-book. It was found in Registered Letter Book No. 7, page 469, said letter-book being a file in our office.

Q. And it is a true and correct compared copy?

A. It is a true, correct and compared copy.

Q. On September 12, 1904, which was the date, according to the endorsement, that the list of lands selected by the Southern Pacific Railroad Company, known as Plaintiff's Exhibit 12-Q was accepted, did you have on file in your office the Surveyor-General's plat of the lands involved in that selection, returning

those lands as mineral lands, reported to be more valuable for mineral than for agricultural purposes?

A. We did.

Q. Why was it that you did not cross out, then, by cancelation, the words "returned and denominated as mineral land or lands, or", in the sentence, "and that the same are not, nor is any part thereof, returned and denominated as mineral land or lands, or", in order to make your certificate comply with the facts?

A. It was a re-arranged list of the lands described in the list filed on November 14, 1903, and there were no notations to make on the tract book or plat book, and we had no occasion to examine either, and I had forgotten in regard to the mineral return.

Q. Then it was inadvertent on your part, or a mistake, was it?

A. Yes sir. Had there been occasion to look at the plat book, anything that would have called to my mind the amended return, I would have made the same erasure on that as I did on the one filed November 14, 1904.

Q. And put it up to the Commissioner, or the General Land Office, as to what disposition should be made upon that kind of a certificate? **[3122]**

A. Yes sir.

Q. I show you a letter which purports to be a copy of a letter signed by you, addressed to Charles W. Eberlein, dated September 6, 1904, and will ask you if this is a true, correct and compared copy of such a letter—original letter—sent by you, properly

addressed, to Charles W. Eberlein, deposited in the mails on that date.

A. It is.

Q. Where is that recorded in your office?

A. In the press-copy-book known as "Registered Letter Book" No. 7, page 485.

Mr. Mills: I will offer this in evidence as Plaintiff's Exhibit 12-U, and will ask the Examiner to extend it into the record.

The letter last referred to and offered in evidence is marked "Plaintiff's Exhibit 12-U - L.L."

Q. I show you what purports to be a copy of a letter dated September 14, 1904, addressed to Charles W. Eberlein, by yourself, and will ask you whether that is a true, correct and compared copy from the official records in your office, of the original letter deposited by you in the mails on that day, addressed to Charles W. Eberlein.

A. It is, and it was compared with the press copy letter in Register Letter Book No. 7, page 499.

Q. Where the same is recorded?

A. Yes sir.

Mr. Mills: We offer this in evidence as Plaintiff's Exhibit 12-V, and ask the Examiner to extend it into the record.

(The copy of letter last referred to and offered in evidence is marked "Plaintiff's Exhibit 12-V - L.L."

[3123]

Q. I show you copy of a letter sent by you to the Commissioner of the General Land Office, dated September 14, 1904, and will ask you if it is a true,

correct and compared copy, from the official records of your office, of the original letter sent by you to the Commissioner on that date by depositing the same in the mails.

A. It is. And it is found in our office in the press copy-book known as "Commissioner's Letter Book 40, page 457.

Q. That is the book you have been referring to right along as on file in your office, one of the files in your office?

A. One of the books; yes sir.

Mr. Mills: We offer that in evidence as Plaintiff's Exhibit 12-W, and will ask the Examiner to extend it into the record.

(The letter last referred to and offered in evidence is marked "Plaintiff's Exhibit 12-W - L.L.")

Q. Is this, now, the complete record, so far as you know, of the matters and things officially known to you in connection with the selection of the lands in this suit by the Southern Pacific Railroad Company, so far as your office is concerned?

A. I think it is. I think this even embraces the letter in regard to the fees.

Q. Now, during the pendency and consideration of this List No. 89, of the Southern Pacific Railroad Company, for the lands involved in this suit, and embraced in that selection list, was there, at any time, any evidence concerning the mineral or non-mineral character of this land presented to or considered by yourself as Register, or by the Receiver, of the United States Land Office at Visalia, California,

other than as appears in these papers which you have produced, that is, these two lists?

Mr. Lewers: I object to the question, on the ground that it is calling for irrelevant, immaterial and incompetent testimony, and is not rebuttal of any matter brought in the defense in this **[3124]** case.

Mr. Mills: What is the answer?

A. Nothing that I recall.

Q. What do you mean by "Nothing that you recall"? Was there any evidence at all offered to you as to the mineral or non-mineral character of these lands, excepting what we find in these two selection lists?

A. No sir.

Q. Did you forward to the General Land Office, at any time during the period I have mentioned, while that matter was being considered, any evidence at all of the mineral or non-mineral character of the lands involved in this suit, excepting what appears in those lists?

A. I think not.

Q. Well, you are sure of it, are you not?

A. I am quite satisfied that we did not.

Q. The only evidence which was offered during the pendency and consideration of this matter as involved in these lists was the non-mineral affidavits of Charles W. Eberlein, was it not?

Mr. Lewers: To which I object, on the ground that it is leading and suggestive, and is calling for the conclusion of this witness as to evidence received at

some other office than his own as well as evidence received in his office.

Mr. Mills: I am speaking now of your own office.

Q. Was there any evidence at all received at any time during the pendency or consideration of this list of lands.

A. And referring to this list?

Q. Referring to these particular lands, excepting the several affidavits, as appear in those lists, by Charles W. Eberlein, as Acting Land Agent of the Southern Pacific Company.

A. No sir; nothing relating to these lists.

Q. Did you forward to the General Land Office all of the **[3125]** evidence as to the mineral or non-mineral character of these lands which you considered—you and the Receiver considered?

A. We did.

Q. Referring to the—

A. Except this: We considered the return on the plat, which we did not forward for the fact that they had a copy in their own office, of course.

Q. Now, referring to complete correspondence, so far as the official files in your office show in respect to these lands which you say you have now produced, you don't mean by that, do you, the correspondence with reference to the suspension of these lands,—the telegrams of suspension?

A. No; I don't.

Mr. Mills: Will you be satisfied to have the extension in the record, after they are compared with these papers, without certified copies?

Mr. Lewers: Yes; on the condition that you produce all of them. There are two letters, as I read the record, that are not produced.

Mr. Mills: If we can find those, we will do it.

Mr. Lewers: They are two important letters, too.

Mr. Mills: Can you give me a citation to them?

Mr. Lewers: Yes. Letter of February 11th, and letter of February 20th, 1904. They are the most vital letters in the whole bunch. I know what they are.

Mr. Mills: I think those are already in evidence, Mr. Lewers. I think they were put in evidence down there in Washington,—those very letters.

Mr. Lewers: Yes; but the letters received by Mr. Stewart—that they were received by Mr. Stewart does not yet appear. They were sent from Washington. We have proved that much.

Mr. Mills: I think the copies were put in in Washington, **[3126]** weren't they?

Mr. Lewers: Yes.

Mr. Mills: In the record?

Mr. Lewers: Yes.

Mr. Mills: Well, I will admit that he received them, if they were addressed to him.

Mr. Lewers: I have not my transcript here, and, of course, not knowing that Mr. Stewart was going on the stand—

Mr. Mills: If you have got the letters, or can get them out of the transcript, I am willing to agree that if they were addressed to him they were sent to him and he received them.

Mr. Lewers: They are the letters, as I recollect it, reporting that the lands had been investigated by the agent sent out by the Land Department, and reported to be non-mineral.

Mr. Mills: There are no such letters in evidence, at all, as that.

Mr. Lewers: Well, those are the two letters; and I shall insist upon their being produced. If it is agreed they will be produced later, it is all the same to me.

Mr. Mills: You don't have any objection to our having the transcript of the record appear for these exhibits, and leave these exhibits in evidence, without furnishing certified copies, do you?

Mr. Lewers: Mr. Stewart has assured me that these were compared by himself and Mr. Swain, and he knows them to be correct. The certificate would add nothing to that; so I shall not ask it.

Q. By Mr. Mills: I call your attention, Mr. Stewart, to Plaintiff's Exhibits 9-B, 9-U, 9-C, 9-D, 9-E, 9-V, 9-W, 9-X, 9-Y, 9-Z, 9-F, 9-A, 9-G, and 9-H, and will ask you if you have made careful examination of those papers since you arrived in San Francisco.

A. I have. **[3127]**

Q. When did you arrive in San Francisco?

A. Tuesday morning of this week.

Q. These papers constitute the record of proceedings in the case of Louthain v. Munzer, a contest case pending in the office of the Register and Receiver at Visalia, California?

A. Yes sir.

Q. Did you go over each page of that record after you got here?

A. I think I examined every page there except those—except the certified copies of documentary evidence.

Q. Yes. That is, you examined all the oral proof.

A. Yes.

Q. Now, was that contest case heard before you and the Receiver at Visalia?

A. It was.

Q. Do you know whether the witnesses were sworn there and testified?

A. They were. I presided at the hearing.

Q. Now, basing your answer on your recollection of the testimony and the examination which you made of this record, can you now state whether each and every witness testified as appears by that record?

Mr. Lewers: To which I object, on the ground that it is calling for incompetent testimony. That is not the proper manner of identifying an official document, a transcript of evidence.

Mr. Mills: I suppose you will admit, as matter of law, that a bystander in a courtroom can testify as to what a witness testified to, won't you, Mr. Lewers?

A. I am satisfied that it is a correct transcript of the testimony of the several witnesses who testified at that hearing.

Q. Did you at that time receive daily copy of the transcript?

A. We did. **[3128]**

Q. And did you read and consider it daily?

A. I didn't read it all daily. I simply—The different witnesses corrected their testimony, and they made several corrections in our office—that is, the expert witnesses—as shown by the marginal notes, over the signature of myself or the Receiver.

Q. These are photostatic copies, are they not?

A. I suppose that is what they would be called.

Q. That is, they are photographic copies?

A. Yes sir.

Q. And do they show the signatures of yourself and the Receiver?

A. They do.

Q. At any place?

A. Yes sir.

Q. Who was that testimony extended by, that is, who took the shorthand notes and afterwards extended it?

A. T. A. Elliott and Mrs. A F. Southard.

Q. That testimony was taken under a stipulation that the transcript should be received by both parties to the contest as the original testimony as if signed and sworn to, that is, signed by the witnesses after being sworn to?

A. Yes sir; and the stipulation states that the testimony was to be taken by T. A. Elliott and Mrs. A. F. Southard.

Q. Yes. Do you know, as a matter of fact, whether they did take that testimony?

A. They did.

Q. Now, is that record, which you have now examined, and which constitutes all of the record in that

case, the same record which you transmitted to the General Land Office?

A. It is.

Q. That is, a certified copy of it?

A. A certified copy. There were several exhibits, of course, [3129] minutes, and so forth, that are not here; but that is a copy of the transcript of testimony.

Q. That is a copy of the original testimony?

A. Yes sir.

Q. Sent by you to Washington?

A. Yes sir.

Q. I call your attention to Plaintiff's Exhibit 9-A, which appears to be a certified photographic copy of your certificate, as Register, certifying that the hearing in the case of Guy Louthain, et al v. F. G. Munzer, et al., was duly had before said office, that is, the United States Land Office, at Visalia, California, on January 9, 1912, and following days, and that all witnesses, before testifying, were by yourself duly sworn to tell the truth, the whole truth and nothing but the truth, in said action. Then follows the following: "I further certify that the testimony at said hearing was taken in shorthand by T. A. Elliott and A. F. Southard, by stipulation entered into by said parties and made part of this record. In witness whereof I have set my hand", and so forth, "this 15th day of October, 1915. George W. Stewart, Register." "Official designation of Officer." Do you recognize your signature from that photographic copy?

A. I do.

Q. Did you sign that?

A. I did.

Q. And on what date did you sign it?

A. October 15, 1913.

Q. Do you know how that figure "5" came to be put after the figures, "191", instead of "3", making it "1915"?

A. I do not. It was an inadvertent error.

Q. Who did it?

A. I don't know whether it was the clerk in the office or myself. I very rarely touch the typewriter, but, sometimes, when [3130] he is busy, I do.

Q. Well, do you know that it was signed by yourself last October?

A. I do.

Q. By Mr. Lewers: And that it was not signed in 1915?

A. Yes.

Q. By Mr. Townsend: You were at the World's Fair in 1915, weren't you?

A. I believe I was.

Q. By Mr. Mills: I show you this letter. What is that?

A. This is a letter from the Assistant Commissioner of the General Land Office to the Register and Receiver of the United States Land Office at Visalia, stating that the transcript of the testimony in the case had been sent to Mrs. Southard for her certification.

Q. This is dated November 1, 1913. Do you know

the signature of C. M. Bruce, Assistant Commissioner?

A. I do.

Q. How do you recognize it?

A. From the many letters that we have received bearing his signature.

Q. In official correspondence?

A. Yes sir.

Mr. Mills: We offer this in evidence as Plaintiff's Exhibit 12-X, and ask that the Examiner extend it into the record.

Mr. Lewers: We object, on the ground that it is hearsay.

(The letter last referred to and offered in evidence is marked Plaintiff's Exhibit 12-X - L.L.")

Q. By Mr. Mills: Now, what are these papers I hand you, four in number?

A. Those are sheets from the serial number register in our office, which was forwarded to me since I came here, and I removed **[3131]** these from the serial number register today in order that it may be returned to the office for daily use. These are—

Q. Take the first one that you are going to use.

A. These are a record of the applications for patent for the Fuller's Earth No. 20 Placer Mining claim, embracing the south-west quarter of Section 24, Township 30 South, Range 23 East, M. D. M.

Mr. Mills: Better mark that for identification as Plaintiff's Exhibit 12-Y. (Paper last referred to is marked Plaintiff's Exhibit 12-Y - L.L.) We will offer this in evidence, and ask the Examiner to extend

it into the record in tabulated form as it appears here.

Mr. Lewers: I object to the introduction of that testimony on the ground that it is hearsay testimony of a matter taking place between other parties not parties to this litigation in any manner, shape or form, and not authorized to represent any of the parties to this litigation or to make any statements which would be binding upon any of the parties to this litigation; that it is not rebuttal testimony; that it is irrelevant and incompetent. And I ask that the same objection be considered as made to all similar documents, as I apprehend that you are going to offer three or four more of the same kind.

(The sheet of record last referred to and offered in evidence is marked "Plaintiff's Exhibit 12-Y - L.L.", and a copy thereof, certified by the witness as "Register" and furnished to the Special Examiner is filed as Plaintiff's Exhibit 12-Y - L.L.)

The Witness: I will state that the said mineral application bears "Serial No." 04010. Said notation also shows that on May 17, 1913, an adverse claim, numbered 04132, was filed, affecting said land.

Q. By Mr. Mills: Does this involve the contest which is generally known as the contest or protest of the Associated Oil Company, through certain locators to the mineral claim on the land of the Eight Oil Company through certain locators? **[3132]**

A. It affects certain lands embraced in the case of Louthain et al v. Munzer et al.

Q. I say, isn't it generally known as the contest

between the Associated Oil Company and the Eight Oil Company, through certain locators?

A. Well, the contest bears the title that I gave, but the Associated Oil Company appeared to be the parties in interest.

Mr. Lewers: I move that that be stricken out, as a conclusion of the witness, and on the same general grounds as the objection heretofore made to that class of testimony.

Q. By Mr. Mills: Do you know whether any attorneys who appeared for the Associated Oil Company in other cases, appeared in this case?

Mr. Lewers: I object, on the ground that that is irrelevant and immaterial, and not rebuttal testimony.

A. We had no cases where they appeared by name.

Q. By Mr. Mills: Well, where they were a party in interest, what attorneys appeared for them before the Land Office?

Mr. Lewers: I object, as calling for a legal conclusion, and as not the best evidence.

Mr. Mills: Well, this record shows they had an interest in this case, Mr. Lewers, by exhibits introduced by the attorneys for the Associated Oil Company showing that they owned the rights of the locators.

Mr. Lewers: I don't intend to argue my objection with you. I have made it.

A. Charles G. Lamberson and E. C. Farnsworth.

Q. By Mr. Mills: Yes. Who appeared, then, for

the locators, backed by the Associated Oil Company, in this protest on Plaintiff's Exhibit 12-Y?

Mr. Lewers: I object, on the ground that it is calling for the conclusion of the witness; the question assumes something that **[3133]** the witness has not testified to.

A. This application has not been involved in any protest. The hearing to which you refer related to some lands embraced in mineral application 02710, and Charles G. Lamberson and E. C. Farnsworth appeared for the protestants at that hearing.

Q. By Mr. Mills: Well, in those protest proceedings, were there any exhibits offered before you, for your consideration, showing a transfer to the Associated Oil Company of any interests of those locators?

Mr. Lewers: I object, on the ground that the documents, if any such exist, are the best evidence.

Mr. Mills: You may answer.

A. There were agreements or documents of some kind exhibited showing the Associated Oil Company to be the principal party in interest.

Mr. Lewers: I move that the last part of the answer of the witness be stricken out, as a conclusion, not the best evidence.

Q. By Mr. Mills: Will you explain these three sheets of paper, in detail, including also Plaintiff's Exhibit 12-Y. I will first have these others marked, in their order, 12-Z, 13-A and 13-B.

(The sheets last referred to, other than the sheet previously marked "Plaintiff's Exhibit 12-Y - L.L".

are marked respectively "Plaintiff's Exhibits 12-Z, 13-A and 13-B - L.L." inclusive.

A. Plaintiff's Exhibt 12-Y is a copy of the notation on our serial number register, and refers to mineral application 04010, just referred to. The notation thereon shows the filing of an adverse claim bearing serial number 04132, filed on May 17, 1913. On Plaintiff's Exhibit 13-A is a notation regarding said adverse claim, the adverse claimants being W. S. Lierly, G. L. Blosser, Mrs. H. J. Dover, Margaret E. Dover, Executrix of last will and [3134] testament of J. M. Dover, deceased, S. A. Quimby, W. A. McNeil, F. N. Kaufman, and J. W. Kay by W. F. Lierly, Agent and attorney-in-fact, and is against the mineral application 04010 just referred to, and embraces the same land.

Q. Which one are you referring to now?

A. That is the adverse claim.

Q. Who appears there as the attorney?

A. Edmund Tauszky, of 702 Sharon Building, San Francisco.

Q. He is the attorney for the Associated Oil Company, is he not?

A. I don't know.

Q. Do you know where the Associated Oil Company's offices are—what building?

A. I do not.

Q. All right.

A. Exhibit 12-Z is a copy of application—

Q. You need not read all those names. Say "so and so et al."

A. (continuing) For mineral claims, mining claims, embracing Lots 2, 3, 4, 5, 6, 7, 10, 11, 12, 13 and south half of northwest quarter of Section 24, Township 30 South Range 23 East, M. D. M., which has not been adversed.

Q. What do you mean by "adversed?"

A. When rival mineral claimants file in our office, during the period of publication of a notice of application for patent and adverse claim their right to the land, the same suspends all proceedings in our office until this adverse is disposed of in the courts. Upon the date upon which an adverse claim is received, we notify the adverse claimants and the applicant thereof, by registered mail, and also notify the Commissioner of the General Land Office, of the filing of the adverse claim. This stops all proceedings in the Land Depart- **[3135]** ment until we receive official notice of the closing of the case in the courts.

Q. Well now, in the case of Munzer v. Louthain, or Louthain v. Munzer, as to which you neglected to send in a certificate until it was called for in October last, what was the reason that record was sent in without the certificate in the first instance?

A. The application for patent was withdrawn.

Q. By whom?

A. By the mineral applicants.

Q. Well, who were the mineral applicants?

A. Munzer et al.

Q. Munzer, et al?

A. Yes.

Q. Now, were Munzer, et al., the record claimants?

A. They were.

Q. Backed by the Eight Oil Company.

A. We didn't know them as such until that hearing was had.

Q. Well, did you than know that they were backed by the Eight Oil Company?

A. We did, by the evidence that was introduced.

Q. Now, what was the reason that the certificate was not attached when you sent the record that the certificate was not attached when you sent the record in to the General Land Office?

A. The relinquishment of an entry or withdrawal of an application to enter or select closes a contest or protest case affecting the lands embraced in such entry or selection.

Q. What closes it, did you say?

A. The relinquishment of an entry or withdrawal of an application selected by another. The case was therefore closed **[3136]** in our office. It was formerly the practice to retain in our office these papers of all rejected applications on dismissed contests; but this was changed a few years ago, and now the papers in all closed cases are forwarded to the General Land Office, and, owing to this being a closed case and not to be decided by our office, I noticed, when transmitting it, that the usual affidavits and certificates were not attached, but didn't consider it necessary, and forwarded them without it.

Q. Now, was there a subsequent application

made, on the basis of the discoveries of the Associated Oil Company, by the original applications, or for any other reason, that you know of?

A. There was subsequent application made, based on discovery of oil, but I don't know by whom the discovery was made.

Q. And that application was made by the original applicants, was it not?

A. I am not certain that they were the same ones in each case, but I think they were. There were eight applicants.

Q. Yes. Now, what did the former protestant do in respect to that application, that is, the protestants who had been backed by the Associated Oil Company?

A. When the withdrawal of the application for patent was filed in our office, we notified the attorneys for the protestants.

Q. Who?

A. I don't know whether it was myself or the Receiver.

Q. I mean who did you notify?

A. Charles G. Lamberson and E. C. Farnsworth, both residents of Visalia.

Q. Yes.

A. We notified them of the withdrawal of the application. I will state that we notitfied Mr. Lamberson and attempted to [3137] notify Mr. Farnsworth, but he was out of his office. Mr. Lamberson came over and looked at the withdrawal, and said, "Well, that closes the case." Mr. Farnsworth came later

and asked to see the withdrawal, and I don't remember that he made any remark at all. A day or two Mr. Lamberson was in our office and we asked him if he intended to take any further action regarding the matter. He said he didn't, that their object was accomplished, which was the extinguishment of that application for the patent. Mr. A. H. Swain, Receiver of the Land Office was present, and said, "I suppose, then, there is no reason why the record may not be sent to the General Land Office."

Q. What I am getting at is this: Was there a subsequent application made, and, if so, what became of it? Was it adversed?

A. Yes. That is what I have just testified to.

Q. Yes. That is what you referred to when you said the subsequent application made by the locators, backed by the Eight Oil Company, was adversed.

A. Well, the subsequent application by the former locators; but nothing in the application to show by whom they were backed.

Q. I thought you said here that you knew, from something that was present before you for consideration during the contest of one of those cases—

A. No; that was with regard to the Louthain case. This becomes a new application, which has never been under protest, although the same lands were affected.

Q. Now, that has been adversed by whom?

A. The parties whose names I just read, W. F. Lierly and others.

Q. And those are the parties who were represented by the attorneys of the Associated Oil Company. **[3138]**

A. Represented by Edmund Tauszky in this adverse.

Q. Now, where is that pending? Do you know?

A. No; I don't.

Q. What court?

A. I don't.

Q. So far as you know, then, the Associated Oil Company is still after a patent to the lands on Section 24 and 26 of 30-23 and Section 30 of 30-24.

A. We don't know them to be connected with this second application.

Q. Well, do you know them to be connected with any application.

A. The evidence introduced in the hearing covering the Louthain application shows them to be parties in interest.

Q. Yes. Are they after a patent in that case?

A. Not that I know of.

Q. They have adversed it—the locators, represented by the Associated Oil Company, have adversed that application of the original locators in the Louthain case, have they not, according to your records? I mean the same locators you identified by the exhibits in the case as being connected with the Associated Oil Company and backed by them?

A. Not all of those mentioned in this adverse claim appeared at the hearing; but part of the adverse claimants appeared at the hearing.

Q. Well, are any of them locators identified in interest with the Associated Oil Company, who adversed the claim, is what I want to know.

A. The Associated Oil Company has not adversed the claim, but part of those who did adverse the claim were the same ones who appeared in the former hearing, in which the Associated Oil Company appeared to be interested. **[3139]**

Q. Referring to Plaintiff's Exhibit 13-B, what is it a record of?

A. This is the notation on the serial number register, and bears "Serial No. 02916," and is an application by The Eight Oil Company, by S. P. Wible, attorney in fact, for patent for the Fullers' Second Consolidated Placer Mining claim, embracing all of Section 30, Township 30, Range 24 East, M. D. M.

Q. Now, what is the present status of that applicaton for patent?

A. That was embraced in the hearing known as Cage v. The Eight Oil Company.

Q. Was that held before you?

A. Yes; held before our office.

Q. And is involved in these papers, in the certified copies introduced in this case of John D. Cage v. Eight Oil Company?

A. Yes sir.

Q. Now, what is the present status of the application?

A. After the hearing was completed, stipulations were filed extending the time for the protestants to file their brief. This they have done, but I can't state

on what date it was filed, for I have not the contest docket there.

Q. By "the protestants", you mean Cage et al?

A. Yes. Lamberson and Farnsworth were the attorneys.

Q. Now, what company is backing the locators or protestants known as "Cage et al.," against the Eight Oil Company?

Mr. Lewers—To which I object, on the ground that it is calling for incompetent testimony, as being hearsay, and not rebuttal.

Q. By Mr. Mills—From your knowledge, based on the records produced before you in that hearing.

Mr. Lewers—I add the further objection that the records **[3140]** themselves are the best evidence.

A. I would have no knowledge, except from the records, and the records show the Associated Oil Company were interested.

Mr. Lewers—Move that the answer be stricken out, on the grounds of the objection.

Q. By Mr. Mills—Now, as I understand you, the parties backed by the Associated Oil Company, who constitute the protestants to the application for patent for the Eight Oil Company for Section 30, 30-24, have recently filed their brief in that case?

A. Yes.

Q. And what holds up a decision in the case now?

A. The time for filing the answer—

Q. The reply brief?

A. —the reply brief has been fixed by stipulation;

but I don't remember the date on which that is to be filed.

Q. So that that matter is now pending before you, is it?

A. Yes sir.

Q. For decision.

A. And after the filing of the reply brief, the protestants will file their closing brief.

Q. I call your attention, Mr. Stewart, to the testimony, which appears in this record at pages 3541, 3542 and 3543, of Eugene Overton, a witness produced on behalf of the defense. At the bottom of page 3541, he says: "In April, 1909—I have not got the exact date—a protest and contest was filed as to the north-east one-quarter of Section 12, by P. Barrett. That was tried January 25th and 26th, 1910, in the Visalia Land Office. On October 3, 1912, it was decided against the contestant. Q. By Mr. Lewers: Decided in your favor? A. Decided in our favor." Do you know what that contest was about?

A. What it involved? **[3141]**

Q. Yes.

A. Yes. It involved the mineral character of the land.

Q. "Q. By Mr. Mills: In that particular case a re-hearing has been applied for and granted, has it not? A. Not granted, as far as I know. It has been applied for. I have not received notice it has been granted. It has been? Q. I am asking you the question. A. No; I don't know that it has been granted. Q. You know a re-hearing has been asked

for, however? A. I know a re-hearing has been asked for; yes. Then, as to the north-west quarter of Section 12, on April 8, 1909, a contest was filed by J. M. Dunn. That has never been tried. As to the south-east one-quarter of Section 12, in April, 1909, a contest was filed by O. O. McReynolds. That was tried at the same time as the last trial that I mentioned and decided at the same time in the same way. As to the south-west one-quarter of Section 12, in April, 1909, a contest was filed by G. W. Derby, and that was decided at the same time and in the same way. Q. Have re-hearings been asked in all those cases? A. I think so. Q. You don't know whether it has been granted, do you? A. I do not now. How, was that all? Mr. Mills—That is all." 3543, "Redirect Examination, by Mr. Lewers. Q. Those contests were contests where the contestants claimed that this was mineral land? A. They did, yes. Q. And you say the decision of the Register and Receiver was that it was not mineral land? A. That was the decision." Is that correct?

A. No sir.

Q. Can you refer to any book or file in your office which contains a copy of that decision?

A. Yes sir.

Q. What is this book I hand you?

A. This is the press copy book of decisions.

Q. In your office, kept in your official custody?

[3142]

A. Yes sir.

Q. And does this decision, beginning at page 148,

and extending through 149 to 150, represent the decision in the cases referred to by Mr Overton in his testimony?

A It does. Those three cases were consolidated at the hearing, and one decision covers the three.

Q Do you know Mr Overton as the attorney for the Buena Vista Land & Development Company?

A I do.

Q Do you know whether they were attempting to acquire mineral lands down there under agricultural entry?

A Well, they were attempting to acquire lands there under an agricultural entry.

Q Now, what was the gist of the decision in that case?

Mr Lewers — I suggest the decision in the best evidence, itself.

Mr Mills — I am going to introduce it in evidence.

Mr Lewers — Then why ask the gist of it at the same time?

A We found in favor of the claimants.

Q Read the last paragraph.

A The last paragraph is as follows: "We find from the evidence submitted that said land possesses little value for agricultural (grazing) purposes, and that, while the geological formation, and the development on adjacent territory, are such as to indicate that said land may by future development prove to be valuable for the production of oil, it was not at the date of hearing demonstrated to be mineral in

character. It is recommended that said protests be dismissed."

Mr Mills— We offer in evidence and will ask to have extended into the record this decision, beginning at page 148 and ending at page 150.

Mr Lewers — Absolutely no objection. [3143]

The decision last referred to, offered in evidence and extended into the record (Appears in volume of exhibits.)

CROSS-EXAMINATION
of
GEO. W. STEWART.

By Mr Lewers:

Q Mr Stewart, did you pick out all of the letters yourself that were produced here by you, or were they picked out and designated to you by anyone else?

A I think I picked them out myself. Mr Swain might possibly have picked out some of them.

Q What were you requested to pick out, and by whom?

A Well, I think by Mr Dezendorf, the Chief of Second Field Division — he requested copies of all correspondence relating to these lands.

Q Relating to these lands?

A Yes. That is, the selection.

Q That is, the lands involved in List 89?

A Yes sir.

Q I notice that one of the letters which you have produced here, being the letter of February 20, 1904,

addressed to the Register and Receiver at Visalia, and signed by W. A. Richards, Commissioner, refers to Letters "N" of this office, dated February 11th and 20th, 1904, which letters are not produced. Have you those letters?

A I think they are in our office. I am quite well satisfied they are.

Q Will you, when you return to your office, have similar copies made and compared by yourself and furnish them to the Commissioner in this case? **[3144]**

A Yes sir.

Q And consent that they may be entered as evidence in connection with this selection?

A Yes sir.

Mr Lewers — You have no objection to that, have you?

Mr Mills — Well, I don't know. I might have an objection for immateriality, or some other reasons. I don't know. I have never seen them myself, unless they are in the record as introduced at Washington.

The Witness — May I state why they were not?

Mr Lewers — Have you any other explanation to make in connection with that?

A The reason that copies were not presented with these was, as I remember them, they refer to the revocation of the suspension, and List 89 not being noted thereon, we didn't think of making copies. But they do involve this land.

Q Your attention was not called to the reference,

in this letter of February 20, 1904, to the letters which I am asking for, was it?

A No sir.

Q That is how you happened to overlook it?

A Yes sir.

Mr Lewers — I suggest, Mr Stewart, that you send those letters to me, and I will then offer them in evidence.

The Witness — Very well.

Mr Lewers — So that this record may be complete in that respect.

The Witness — Very well.

Q By Mr Lewers — I call your attention to a certified copy, under the seal of the United States General Land Office, of a letter dated July 14, 1904, addressed to the Commissioner of the General Land Office, and signed George W. Stewart, [**3145**] Register, together with certain endorsements and enclosures, and ask you if that is your signature.

A Yes sir.

Mr Mills — That is the same letter, isn't it?

Mr Lewers — Yes; but this has an enclosure.

Q I call your attention to a photographic copy of an affidavit of publication—

Mr Mills — Just a minute, until I see what it is.

Q By Mr Lewers — (continuing) — and ask you if that is the enclosure referred to in your letter; whether that is the enclosure referred to in your letter—that affidavit of publication.

Mr Mills — I object to the question, because the certificate on the copy offered Mr Stewart does not

identify those papers as a part of those enclosures — unless he can remember to say that they are the enclosures referred to in the letter.

A I am satisfied that they are.

Mr Mills — What is the answer?

A I am satisfied that they are.

Mr Lewers — I offer this certified copy, and all the documents contained within it, in evidence as Defendant's Exhibit 204, and ask that it be extended into the record.

Mr Mills — I think that is all in evidence already by the evidence of the plaintiff.

Mr Lewers — You are entirely mistaken.

The documents last referred to and offered in evidence are marked "Defendant's Exhibit 204 L. L." (Appears in volume of exhibits.)

Q I call your attention to certain papers, attached together, and certified under the seal of the General Land Office, under date of July 16, 1913, consisting of copy of [**3146**] letter signed by yourself, addressed to the Commissioner of the General Land Office, dated December 11, 1903, photographic copy of notice of appeal in regard to Southern Pacific Railroad Company's List No. 89, signed by William Singer, Jr., attorney for appellant, and William F. Herrin, counsel for appellant, together with notations and endorsements as the same appear on the record on file in the General Land Office, and ask you if that is the notice of appeal to which you have referred as being filed in that case.

A I am satisfied from my own signatures thereon, and the notations made, that it is.

Q It is? The same one?

A Yes.

Mr Lewers — We offer these certified copies, bound together, in evidence, as Defendant's Exhibit 205, and ask that they be extended into the record.

Mr Mills — No objection.

The documents last referred to and offered in evidence are marked "Defendant's Exhibit 205 L. L." and (Appears in volume of exhibits.)

Q Referring, Mr Stewart, to the serial numbers noted on the outside of the lists that have been introduced in evidence, state by whom those serial numbers are put on there.

A That number is only on one. I put that on.

Q That was put on in your office?

A Yes sir.

Q Where is the White River Mining District, which you say is the only organized district in the Visalia Land District?

A I think it embraces land in the Southern part of Tulare County, and the northern part of Kern, and while I don't know all the land it embraces, it is about in Township 24, in 21 South, of Range 29 East, M.D.M. [3147]

Q And what minerals, if any, are in that district?

A Gold is all that I know of, so far as applications have been made to our office for patent.

Mr Lewers — That is all.

REDIRECT EXAMINATION
OF
GEO. W. STEWART.

By Mr Mills:

Q There is one other question I would like to ask you: You don't mean to say that there are no organized mining districts in your district except that, from your own knowledge, do you?

A I know it from the business that has been transacted in the office, and that applications for patents in every other part of the district, except in the White River Mining District, show the notice of location to have been recorded in the offices of the county recorders and not in the office of the local mining district recorder.

Q Well, what I mean to say is, you have no knowledge excepting what appeared before you officially?

A. No.

Q On that question?

A No.

Q There might be organized mining districts there that you know nothing about unless it came before you officially?

A It might be. Not probable, not likely.

Q By Mr Lewers — What is that last answer?

A I say it might be, but it is not likely.

Q By Mr Mills — Now, when you stated in Plaintiff's Exhibit 12-P, which is the letter addressed by you to Charles W. Eberlein, of March 5, 1904, as follows: "As part of the land [**3148**] applied for has been returned as mineral, and all is in a township con-

taining mining claims within six miles of mining claims, it will be necessary to make publication," and so forth, what did you mean by saying it was in a township containing mining claims? Did you refer to Township 30-23, in which these lands were situated?

A I did. I consulted our records and found applications for mineral patents for lands in that township, and within six miles of the land embraced in this application, which might have been in the same township or in the one adjoining.

Mr Mills — That is all.

RECROSS EXAMINATION OF GEO. W. STEWART.

By Mr Lewers:

Q Was there any other order of publication, or any other publication, for this particular application or selection?

A I think not. The first—No order was made for the list filed November 14, 1903, from the fact that it was rejected. And after it was—Let's see. I don't remember whether there was any made or not after we accepted it.

Q It was accepted in February, 1904, was it not?

A February 26, 1904; yes. I think that was the only publication made.

Q There was no publication ordered or made after the filing of the second or amended list, was there?

A I think not. No.

Mr Mills — It is understood that all these papers introduced are not objected to on the ground that they are not certified to or are not the originals?

Mr Lewers — No. [3149]

Mr Mills — He can withdraw these, can't he, for his files, by furnishing copies?

Mr Lewers — Yes.

Whereupon the further taking of testimony herein was adjourned until Friday, December 12, 1913, at 10 o'clock A.M., at the same place.

On Friday, December 12, 1913, the further taking of testimony by Plaintiff herein was adjourned, subject to resumption on notice to the Defendant and within the time limited by former stipulation, if, after further consideration, it is desired by plaintiff's counsel to put in further documentary proofs; but it was stated by Mr Mills that counsel for plaintiff, so far as now advised, do not contemplate putting in any further oral testimony in rebuttal.

On Monday, December 22, 1913, by stipulation and agreement of counsel for the respective parties, Plaintiff offered in evidence a pamphlet entitled "Some Problems of the Formation of Coal, Reprinted from Economic Geology, Vol. 111., No. 4, June-July, 1908," by David White, and the same was marked, "Plaintiff's Exhibit 13-C - L.L." and (Appears in volume of exhibits.) LIST OF LANDS
IN THE
Visalia LAND DISTRICT, CALIFORNIA.
SELECTED BY THE
SOUTHERN PACIFIC RAILROAD COMPANY
Successor by Consolidation to the Southern Pacific Railroad Company (of California).

- - - - - -

THE UNDERSIGNED, the duly authorized Acting Land Agent of the SOUTHERN PACIFIC RAILROAD COMPANY, successor by consolidation to the Southern Pacific Railroad Company (of California), under and by virtue of the Act of Congress, approved July 27, 1866, entitled, "An Act Granting lands to aid in the construction of a Rail-

road and Telegraph line from the States of Missouri and Arkansas to the Pacific Coast," and the further Act, approved July 25, 1868, entitled, "An Act to extend the time for the construction of the Southern Pacific Railroad in the State of California," and the Joint Resolution of Congress, approved June 28, 1870, "Concerning the Southern Pacific Railroad of California", and under and in pursuance of the rules and regulations prescribed by the Commissioner of the General Land Office, hereby makes and files the following list of selections of public lands claimed by the said Company as inuring to it as such successor and to which it is entitled under and by virtue of the grants and provisions of the said Acts of Congress, and the location of the line of route of the Railroad and Telegraph of said Company; being in part for the Sixth (6th) section (Twenty (20) miles) of the same, commencing at Lardo and ending at Sumner which said section of road and telegraph has been duly accepted by the President of the United States, as provided in the aforesaid Acts and Joint Resolution of Congress. The selections being particularly described as follows:

(Ink hand writing) *Charles W. Eberlein.*
Acting Land Agent of the Southern Pacific Railroad Company. [**3153**]

STATE OF CALIFORNIA)
: SS:
CITY AND COUNTY OF SAN FRANCISCO)

I, CHARLES W. EBERLEIN, being duly sworn, depose and say: that I am the Acting Land Agent of the Southern Pacific Railroad Company, successor by consolidation to the Southern Pacific Railroad Company (of California); that the foregoing list of lands which I hereby select is a correct list of a portion of the public lands claimed by the said Southern Pacific Railroad Company, successor as aforesaid, as inuring to it to aid in the construction of the railroad of said Company from Lardo to Sumner for which a grant of lands was made by the Acts of Congress approved July 27, 1866, July 25, 1868, and June 28, 1870, as aforesaid; that the said lands are vacant, unappropriated, and are not interdicted mineral or reserve lands, and are of the character contemplated by the grant, being within the limits of the exterior ten (10) miles Indemnity Belt, on each side of the line of route for a continuous distance of twenty (20) miles, being for the sixth (6th) Section of said road, starting from a point in the N.E. 4 of Sec. 9, T. 28 S. R. 26 E. M.D.B. & M. and ending at a point in the N.E. 4 of Sec. 5, T. 30 S. R. 29 E. M.D.B. & M. and that the specific losses for which indemnity is claimed are truly set forth and described in said list, and that said losses have not heretofore been indemnified in any manner.

UNITED STATES LAND OFFICE,)
Visalia, Feb'y 26 1904)

We hereby certify that we have carefully and critically examined the foregoing list of lands claimed by the Southern Pacific Railroad Company, successor by consolidation to the Southern Pacific Railroad (of California), under the grant to the said Southern Pacific Railroad Company (of California), by Acts of Congress, approved July 27, 1865, July 25, 1868, and June 28, 1870, above mentioned, and selected by Charles W. Eberlein, and duly authorized agent; and that we have tested the accuracy of said list by the plats and records of this office, and that we find the same to be correct; and we further certify that the filing of said list is allowed and approved, and that the whole of said lands are surveyed public lands of the United States, and within the limit of the ex-

terior ten (10) miles, Indemnity Belt, on each side; and thatthe same are not, nor is any part thereof, (erasure in red ink) claimed as swamp lands; nor is there any homestead, pre-emption, State or other valid claim to any portion of said lands on file or record in this office.

We further certify that the foregoing list shows an assessment of the fees payable to us allowed by the Acts of Congress, approved July 1, 1864, and July 31, 1876, and contemplated by the circular of instructions dated November 7, 1879, addressed by the Commissioner of the General Land Office to Registers and Receivers of the United States Land Offices; and that the said Company has paid to the undersigned, the Receiver, the full sum of seventy-eight ($78.00) dollars in full payment and discharge of said fees.

Honorable Commissioner General Land Office,
Washington, D. C.

Sir:

November 4, 1903, the Southern Pacific Railroad Company presented in this office its list No. 89 for lands in T. 30 S., R. 23 E., M.D.M., and on 17th ultimo, the same was rejected on the grounds that the said township was suspended. Notice was served on C. W. Eberlein, Acting Land Agent of said Company on last-named date. We are this date in receipt of appeal from our rejection, and same is transmitted herewith together with papers in case and evidence of service of notice.

Very respectfully,
George W. Stewart,

Southern Pacific Railroad Company : Quasi Contest

- - - - - - - - - - - - o 2555.

Register and Receiver,

Visalia, California.

Sirs:

November 14, 1903, the Southern Pacific Railroad Company presented to your office for filing its list No. 89 embracing 6109.17 acres in sections 15, 17, 19, 21, 23, 25, 27, 29, 33 and 35, T. 30 S., R. 23 E., M.D.M. You rejected said application to select on the ground that lands in said township were suspended from disposition under the agricultural land laws by telegram "P" of this office dated February 28, 1900. December 11, 1903, the railroad company filed an appeal from your said decision and on the same day you forwarded the record to this office for consideration. Your action in rejecting the application to select was correct, under conditions then existing, but by letters "N" of this office, dated February 11th and 20, 1904, the sections hereinbefore described were relieved from suspension. It would therefore appear that said application to select may now be granted, if no other objection thereto exists. Quasi Contest 2555 is accordingly hereby closed and selection list No. 89 herewith returned for appropriate action.

Very respectfully,

W. A. Richards,

Commissioner.

Department of the Interior
United States Land Office.

Visalia, Calif., March 5, 1904.

Charles W. Eberlein,
Acting Land Agent S.P.R.R. Co.,
San Francisco, Calif.

Dear Sir:

I enclose herewith accepted indemnity list No. 89 for lands in T. 30 S., R. 23 E., M.D.M.

Hon. Commissioner's letter "N" of February 20, 1904, affirmed action of this office in rejecting said location, but released land applied for from suspension and returned list for action of this office. Same

was accepted February 26, 1904, and has been noted on records of this office.

As part of the land applied for has been returned as mineral and all is in a township containing mining claims and within six miles of mining claims, it will be necessary to make publication of said list. This should be done at once.

Cery respectfully,

Geo. W. Stewart,
Register.

STATE OF CALIFORNIA,)
CITY AND COUNTY OF SAN FRANCISCO)SS:

I, CHARLES W. EBERLEIN, being duly sworn, depose and say: that I am the Acting Land Agent of the Southern Pacific Railroad Company, successor by consolidation to the Southern Pacific Railroad Company (of California); that the foregoing list of lands which I hereby select is a correct list of a portion of the public lands claimed by the said Southern Pacific Railroad Company, successor as aforesaid, as inuring to it to aid in the construction of the railroad of said Company from Lerdo to Sumner for which a grant of lands was made by the Acts of Congress approved July 27, 1866, July 25, 1868, and June 28, 1870, as aforesaid; that the said lands are vacant, unappropriated, and are not interdicted mineral or reserved lands, and are of the character contemplated by the grant, being within the limits of the exterior ten (10) miles Indemnity Belt, on each side of the line of route for a continuous distance of Twenty (20) miles, being for the Sixth (6th) section of said road, starting from a point in N.E. ¼ of Sec. 9 T. 28 S. R. 26 E. M.D.B. & M. and ending at a point in N.E. ¼ of Sec. 5 T. 30 S. R. 29 E. M.D.B. & M. and that the specific losses for which indemnity is claimed are truly set forth and described in said list, and that said losses have not heretofore been indemnified in any manner.

UNITED STATES LAND OFFICE.)
Visalia, Cal., September 12, 1904.)

We hereby certify that we have carefully and critically examined the foregoing list of lands claimed by the Southern Pacific Railroad Company, successor by consolidated to the Southern Pacific Railroad Company (of California), under the grant to the said Southern Pacific Railroad Company (of California), by Acts of Congress, approved July 27, 1866, July 25, 1868, and June 28, 1870, above mentioned, and selected by CHARLES W. EBERLEIN, the duly authorized agent; and that we have tested the accuracy of said list by the plats and records of this office, and that we find the same to be correct; and we further certify that the filing of said list is allowed and approved, and that the whole of said lands are surveyed public lands of the United States, and within the limit of the exterior ten (10) miles, Indemnity Belt, on each side; and that the same are not, nor is any part thereof, returned and denominated as mineral land or lands, or claimed as swamp lands; nor is there

any homestead, pre-emption, State, or other valid claim to any portion of said lands on file or record in this office.

We further certify that the foregoing list shows an assessment of the fees payable to us allowed by the Acts of Congress, approved July 1, 1864, and July 31, 1876, and contemplated by the circular of instructions dated November 7, 1879, addressed by the Commissioner of the General Land Office to Registers and Receivers of the United States Land Offices; and that the said Company has [**3173**] paid to the undersigned, the Receiver, the full sum of Seventy eight ($78.00) dollars in full payment and discharge of said fees.

United States Land Office
Visalia, Cal., July 14, 1904.

Hon. Commissioner General Land Office,
Wasshington, D. C.

Sir:

Your letter "N" of February 20, 1904, returned for

acceptance selection list No. 89 of the Southern Pacific Company. Said list was accepted February 26, 1904. As the land embraced therein is in the vicinity of mining claims we required said company to have publication of same made. We have received proof of publication and payment of costs thereof and non-mineral affidavit. Said papers and Register's certificate of posting notice in office are transmitted herewith.

No contests, protests or objections have been filed in this office.

Very respectfully,

Geo. W. Stewart,

Register.

"F" DEPARTMENT OF THE INTERIOR F.C.D. F.I.W.

GENERAL LAND OFFICE,

WASHINGTON, D. C., August 4, 1904

Address only the

Commissioner of the General Land Office.

Register & Receiver,

Visalia, California.

Sirs:

By letter dated July 14, 1904, you forwarded the Southern Pacific Railroad Company's Indemnity List No. 89, of selections made on account of its main line grant.

Under date of July 25, 1904, the resident attorney

for the company called attention to certain mistakes in the designation of lost land in the above list, the mistakes arising either from the fact that the lost land described had been previously used, or from the fact that they are within the indemnity limits of the grant, and he asked permission to substitute proper losses in said cases.

A cursory examination of said list shows that it does not conform to the regulations governing railroad selections, the tracts selected being divided to conform to the area of the particular tracts assigned as the basis of the selection, without regard to legal sub-divisions. For example, the "North 275.20 acres of the W 1/2", Sec. 25, T. 30 S., R. 23 E., is selected in lieu of the portion of a certain Rancho located in an odd-numbered section, area 275.20 acres, the remainder of the west half of said Sec. 25, 44.80 acres, being selected elsewhere to said list in lieu of another loss equalling that amount.

Such selections will not be permitted. Said list No. 89 is herewith enclosed, and you will return the same to the company in [**3177**] order that a new list may be filed, properly describing the lands selected by legal subdivisions, and the errors in the bases assigned can at the same time be corrected.

Very respectfully,

J. H. Fimple

Acting Commissioner.

R.C.M. [**3178**]

(Plaintiff's Exhibit 12-T - L.L.)

Charles W. Eberlein,
San Francisco, Cal.

Sir:

In reference to S.P.R.R.Co's Indemnity List No. 89 you are advised that under date of August 4, 1904, the Acting Commissioner of the General Land Office by reason of defective basis, being with regard to legal sub-divisions, returns said list to be delivered to you, that a new list may be filed properly describing lands selected by legal sub-divisions, and correctly assigning bases.

Sixty days from notice are allowed within which to comply with the requirements of the Commissioner, or to appeal from his decision to the Honorable Secretary of the Interior, and upon your failure to take action within the time specified the case will be reported appropriate action. A copy of the decision is inclosed.

Very respectfully,

Geo. W. Stewart,

Charles W. Eberlein, Esq.,
San Francisco, Cal.

Dear Sir:

In the matter of S.P.R.R.Co's list No. 89, received this date, will state that after reading the Acting Commissioner's letter I am of the opinion that the fees should be paid. I think there is no doubt that one payment is enough; that is, that the amount of one payment is all that would be retained by the Government. But as the Acting Commissioner's letter states that "Such selections (as the original No. 89) will not be permitted," and requires "that a *new list* be filed", it would appear that the payment of the usual fee will be necessary to make the selection perfect.

In the case of certain homestead entries that have been disallowed for various reasons, on the presentation of new applications by same party we have required the payment of the usual fees and commissions, and the applicants thereafter made application for the repayment of the sum paid on the former entry.

In the case before us an *amended* selection was not called for, and no time was given for complying with the Commissioner's requirements; and it was proba-

bly an error on the part of this office to have allowed you sixty days; It was treated by the G. L. O. as a matter optional with your Company.

In matter of original No. 89 the Commissioner does not mention the payment of fees, and as he declined to accept the selection, I am rather of the opinion that our acceptance of fees before would be considered an error, and that they are subject to repayment on application.

Should the List be forwarded to the G. L. O. without the fees, and payment be called for by the Commissioner later, then, should an application (complete in every way) be made for any of the land described in the List, in the mean time, the selection might be defeated as to the tract thus brought in conflict.

I am of the opinion that the present *new List* should be made complete by the payment of the usual fees.

Very respectfully,
Geo. W. Stewart, Register.

(ANNEXED PRINTED SLIP)

Notice.

United States Land Office, Visalia, California, April 14, 1904.

To whom it may concern:

Notice is hereby given that the Southern Pacific

Railroad Company has filed in this office a list of lands situated in the township described below, and has applied for a patent for said lands; that the list is open to the public for inspection, and a copy thereof by descriptive subdivisions has been posted in a convenient place in this office, for the inspection of all persons interested and of the public generally.

Within the next sixty days following the date of this notice, protests or contests against the claim of the Company to any tract or subdivision within any section or part of section described in the list, on the ground that the same is more valuable for mineral than for agricultural purposes, will be received and noted for report to the General Land Office at Washington, D.C.

Visalia, Cal., July 14, 1904.

Hon. Commissioner General Land Office,
Washington, D. C.

Sir:

Your letter "N" of February 20, 1904, returned for acceptance selection list No. 89 of the Southern Pacific Company. Said list was accepted February 26, 1904. As the land embraced therein is in the vicinity of mining claims we required said Company to have publication of said made. We have received proof of publication and payment of costs thereof and non-mineral affidavit. Said papers and Register's certificate of posting notice in office are transmitted herewith.

No contests, protests or objections have been filed in this office.

Very respectfully,
Geo. W. Stewart,
Register.

Visalia, Calif., December 11, 1903.

Honorable Commissioner General Land Office,
Washington, D. C.

Sir:

November 14, 1903, the Southern Pacific Railroad Company presented in this office its list No. 89 for lands in T. 30 S., R. 23 E., M.D.M., and on 17th ultimo the same was rejected on the grounds that the said township was suspended. Notice was served on C. W. Eberlein, Acting Land Agent of said Company on last-named date. We are this date in receipt of appeal from our rejection, and same is transmitted

herewith together with papers in case and evidence of service of notice.

Very respectfully,

Geo. W. Stewart

In Re Southern Pacific Railroad Co's List No. 89, selecting indemnity Lands of its Main Line grant; being parts of odd-numbered sections in Township 30 South, Range 23 East, Mount Diablo Base and Meridian.) *Notice of Appeal.*

To the Register and Receiver:

You will please take notice that the Southern Pacific Railroad Company appeals to the Commissioner of the General Land Office from your decision rendered on November 17th, 1903, rejecting the above-entitled list.

The list is in regular form, and the requisite fees were tendered, with presentation of the list for filing. The lands selected are vacant and unappropriated non-mineral lands, parts of odd-sections within indemnity limits of appellant's grant; nor is there any question about the sufficiency of the lieu bases used. The list was refused filing on the sole ground that "said township is suspended". In other words, the list would have been filed and approved but for an order of the Commissioner, made by telegram dated February 28th, 1900, to "suspend from disposition until further orders", the township containing these lands.

This appeal is based on the following grounds:

1. The Commissioner is without lawful authority to defeat, or by indefinite suspension of the lands injuriously delay, the operation of the Act of Congress of July 27th 1866 (14 Stat. 292) granting unto appellant the right to select those lands. The suspension order has now been in force nearly four years. If the Commissioner can lawfully suspend these lands for four years from selection by appellant, it would seem to follow that he may thus for all time suspend all lands from such selection. It is respectfully submitted that while the Commissioner may, in case of emergency, temporarily suspend particular lands to prevent fraudulent entry thereof, and the like, he is without lawful right to (particularly on ex parte representations), suspend for a longer time than is necessary to bring on a hearing, lands which but for such suspension appellant is entitled to select.

2. The Commissioner's order is that these lands be suspended "from disposition"; and the Register and Receiver erred in construing this to be an order forbidding indemnity selection thereof by appellant. The filing of this list would not have been a "disposition" of the land. If the lands are mineral in character, or any reason exists why they should not be patented to appellant, the facts can be ascertained as well after as before filing the list; hence, as beforesaid, the filing of the list would, in no sense, have been a "disposition" of the land.

It is most respectfully asked that the Register and

Receiver be directed to file this list as of the date it was presented.

Wm. Singer, Jr.,
Attorney for Appellant.

Wm. F. Herrin,
Counsel for Appellant.

P.

Address only the
Commissioner of the General Land Office.

Bakersfield, Cal., July 13th, 1900.

Hon. Commissioner,
General Land Office,
Washington, D. C.

Exhibit No. 1 mentioned in this letter is map 89 — California filed in Div. L.

Sir:

In compliance with your instructions, see letter "P", W. E. V., Dec. 19, 1899, directing me to investigate and report upon the mineral or non-mineral character of certain lands located in "Townships 15, 16 and 17 S. Ranges 10, 11, 12 and 13 E., M.D.M., Township 27 S. Ranges 27, 28, 29 and 30 E., M.D.M., Township 30 S. Ranges 21 and 22 E., M.D.M., Township 31 S., Range 22 E., M.D.M. and Township 11 N., Range 23 W., S.B.M., California, which are alleged to be oil lands (mineral)."

I have the honor to report as follows:— Immediately after entering upon this investigation, I was confronted with indisputable facts that warrant me in stating that the lands in question, and very much of the contiguous country, *are valuable only for their mineral worth;* there are no agricultural lands in any part of the suspended district; the mineral possibilities are something wonderful, and I make the prediction that this will soon be the largest oil field in the United States, if not in the world. I have visited all of the territory that stands suspended, and I find no people engaged in farming, cattle raising, or sheep herding, in all this vast area of land; for the simple

reason that it produces nothing that will sustain man or beast; it is essentially mineral land, and from the present outlook, will soon be a great source of wealth to the State, quite likely the revenue that will be obtained from these well known oil fields will exceed all other mineral products of the state, within a very few years. One is filled with amazement to witness the amount of development work that has been accomplished already, and the oil industry here in southern California is but a year old. These vast oil fields represent millions upon millions of dollars, and settle the fuel question of the Pacific Coast for generations to come.

I mail you a most excellent map of the country where these lands are located; the red lines are the exterior bounds of the lands that are held in suspension, and I cannot recommend too strongly, the propriety of reclassifying same. Doubtless, here and there, parts of a Township might be set back again in the agricultural list, but if not done, the agriculturist will not suffer; there are positively no lands in all this large list that would bring five cents an acre, for farming or grazing purposes. But for mineral purposes, these same worthless lands have risen in one short year to a valuation of $1,500 per acre in many instances, and it is a rare thing to hear any of the known oil lands offered at less than $1,000 per acre.

I will mark the above map Exhibit No. 1, as it will necessarily play an important part in connection

with the many reports that will be forwarded to the department.

I also forward Exhibit No. 2; this is an album of photographic views that were taken under my personal direction, and represent different portions of the oil fields under consideration; they tell their own story in plainer and more eloquent [**3189**] terms than I can. I searched in vain for an opportunity to photograph the improvements of some of the many homestead entries that have been recently filed on these valuable mineral lands.

The fact is, every Homestead entry, or lieu selection made under the act of June 4, 1897 (30 Stat., 36), during the past year, on any of the lands now under investigation, have been fraudulently made; they were taken for their mineral worth. There are no agricultural improvements on any one of these fraudulent entries, but we find Derricks and Oil Wells, everywhere; oil tanks in countless numbers filled to overflowing, and in many instances oil being pumped into holes dug in the ground, for the want of transportation facilities; scores of eight, ten and twelve mule teams constantly on the go to the different depots with their precious loads of oil, the same to be shipped to all parts of the country, dozens and dozens of individuals constantly arriving from various portions of the world for the purpose of engaging in the oil industry in some form or another; scores of miners, mechanics and laborers constantly arriving, and are immediately set to work at magnificent wages; train loads of mining machinery ar-

riving at each of the Railroad depots, daily; lands that one year ago would not command $1.00 per acre, readily selling at this time as high as $1,500 per acre, and even higher; these, are among some of the reasons that induce me to declare to the Hon. Commissioner that the lands under consideration are MINERAL, pure and simple. I will make reports on 4-480 in all cases that come within the proper scope of such form. Said reports will prove conclusively that the lands under consideration are mineral.

As to the character of minerals that prevail in the tracts covered by your suspension, I will state that the following constitute the prevailing minerals to be found in paying quantities within the borders of the said lands, viz:— crude petroleum oil, asphalt, sulphur, fullers- earth, and gypsum; the first and last in fabulous quantities, asphalt in great abundance, and fullers earth in sufficient quantity to build strong hopes for its becoming a paying industry in the near future.

I have spent much time in collecting facts and figures regarding the cost of development work, already accomplished in the oil fields in this locality. It has been necessary for me to consult with or correspond with over two hundred and fifty different Corporations, that are actively engaged in some form or another, in the development of crude petroleum oil in various portions of the suspended lands under investigation. I have received replies from about one half of the number, and promises from many who are not yet ready to report.

The earnestness and good faith of those actively engaged in developing and producing oil in the Kern River Oil District will not be questioned; it is safe to say that $1,500,000 has been spent in development work by these fearless and honest miners. This vast expenditure has been spent in producing crude petroleum oil, principally in Townships 27, 28 and 29 S., Ranges 27, 28 and 29 E., M. D. M. This territory is now producing large quantities of oil, and shipping to the full extent that the operators can secure transportation facilities; every barrel has to be hauled from six to seven miles, by wagon; this is a tedious and slow means of transportation; the S. P. Co. are now building a branch line into the oil field, which will be completed within 20 days, and it is claimed that the oil output in this field will soon reach 5000 barrels per day, with a prospect of 10,000 per day within a years time. Oil is quoted at $1.00 per barrel f.o.b., at this point; one days income, viz:— $5,000 is more than the entire belt of suspended lands in the Kern River Oil District would command, under the most promising circumstances that it [3190] would be possible to invent, as an agricultural proposition.

I desire to call the attention of the Hon. Commissioner to the following fact; the City of Bakersfield is one of the oldest settled localities that there is in southern California. For many years, the County of Kern, in which these suspended lands are located, has been known as a cattle and sheep country; now mark this fact, notwithstanding that the principal revenue of the County was obtained from cattle and

sheep husbandry, these lands that are now in dispute lay but from four to six and seven miles from said Bakersfield; had they been of any worth as an agricultural proposition, it stands to reason that every acre of the same would most naturally have been homesteaded long ago; but, within one short year, every acre of this heretofore worthless land, has become of agricultural worth, and especially to those who are engaged in the furnishing of Forest Reserve Scrip for speculative purposes. And not one acre of this land has been taken except for the oil it has been demonstrated that it contains, and that in fabulous richness.

I desire to call the attention of the Hon. Commissioner to a class of mineral filings that are working almost as great an injury to this and other oil fields, as are the so called scrippers; numerous cases exist where combinations have been formed for the purpose of controlling vast areas of the public domain, ostensibly, under the United States laws that govern mineral filings on the public domain. In so far as I have been able to learn the facts of the case, without making an abstract of the lands that are thus held down by the combinations referred to above, said parties have placed mineral filings upon more than 250,000 acres of the public domain, in the counties of Kern and Fresno, alone. In order that the parties engaged in scripping the lands that are now known to be unmistakably mineral might have an argument in their favor, they caused to be made a complete and accurate list of said filings. They are attested, un-

der oath, and I assume that they are practically correct. This sworn statement shows that in Kern County alone, within a year 103 persons have located 8,248 placer petroleum mining claims of twenty acres each, an average of over eighty claims of 1,600 acres to the person, or a total of 164,960 acres.

The statement from Fresno County makes a similar showing covering the time between January 1, 1899, and March 1, 1900., 97 persons have located 5,983 placer petroleum claims of twenty acres each, an average of over sixty claims; 1,200 acres to the person, or a total of 119,660 acres.

The parties making these numerous filings, have made no sort of improvement or development; they would seem to be purely speculative in character, and many of them are patrolled, and otherwise held by force.

I have accumulated a mass of documentary evidence that goes to prove as conclusively as it is possible to do under existing circumstances, that quite all of the territory that you have suspended in connection with the oil lands of the San Joaquin Valley, California are mineral (oil). I am waiting on Mr. E. E. Bush of Hanford, Cal., and J. B. Treadwell, of San Francisco, for valuable reports that they are preparing, as experts, for the use of the Hon. Commissioner in connection with the matter in hand; I am promised said reports in a very few days, and will immediately forward the same with other documents to the Department. The affidavits that I have secured are connected with cases that will be immedi-

ately reported on form 4-480, and the same affidavits will be used in a large number of cases. I herewith present the names of upwards of forty good and true representative men of California, who have given me permission to use their names in [**3191**] any court, at any time, as witnesses to prove that the lands under suspension are mineral:— E. E. Bush, Hanford, Cal., C. H. Congdon, Bakersfield, Cal., W. E. De Groot, Los Angeles, Cal., C. A. Canfield, Los Angeles, Cal., Milton McWhorter, Bakersfield, Cal.; W. H. Shafer, Selma, Cal., Timothy Spellacy, Bakersfield; J. J. Mack, Bakersfield; also of the same place, Jno. P. Kerr, W. M. Spencer, H. P. Bender, J. M. Keith, Walter James, J. M. Jameson, H. W. McCray, T. L. Reed, and Alvin Fay; also J. A. Stroude, Oakland, T. P. Spiers, San Jose, W. E. Knowles, Oakland, C. A. Fuller, Oakland, Maurice V. Samuels, San Francisco, W. T. Sesnon, Geo. L. Hoxie, Fresno, Hanford, W. S. Badger, Fresno, W. F. Chandler, Selma, J. B. Treadwell, San Francisco, W. F. Sesnon, San Francisco, H. H. Blood, San Francisco, E. L. Doheney, W. P. Book, and Jos. A. Chanselor, of Los Angeles; A. B. Butler, Fresno, I. W. Ross, San Francisco, G. V. Sessions, Sacramento, and Chas. S. Young, of San Francisco, all of California. Each and every one of these gentlemen are calculated to make first class witnesses; they understand the gravity of the question under investigation; I have talked with every one of the number, and as before stated, they are quite willing to respond whenever called upon. I have selected them because they will know what they are

talking about when put upon the witness stand, or in any other manner that it is possible the Government wishes to call upon them. I want to say right here that I might have extended this list to 100 if necessary. The list that I present represents expert miners, bankers, merchants, professional gentlemen, and hardy miners.

I have written and revised several reports to forward the Hon. Commissioner in the matter now under consideration; so manifold have been the changes that have occurred of grave import, since entering upon this investigation, that one after the other have been cast aside in consequence of their inferiority; this, I forward as a preliminary; the interests that are involved require long and faithful study; I am doing the best that I know how; I will send in a special report recommending the immediate suspension of *all* filings that have been made under the Act of June 9, 1897; also all homestead entries that have been made, since March 1, 1899. I of course refer to such as has been made within the bounds of the suspended lands; there is not one of them that will stand fire, after a report has been perfected on form 4-480.

I wish it were possible for me to properly impress upon the Hon. Commissioner the vast importance of the matter under consideration; it cannot be overestimated; should the lands under investigation be restored at this time, scrippers and would be homesteaders would soon cover all the territory involved in the suspension. It is idle to talk of these lands from an agricultural standpoint; a sheep could not

exist on 1000 acres of it, and it would be quite impossible for a homesteader to make a living on 50,000 acres, provided he depended on the surface of the soil from which to make it.

I will forward the remaining papers relating to this matter at the very earliest day; I am quite sure, within five days.

Very respectfully,

Jay Cummings.
Special Agent, G. L. O.

Sirs:

Referring to the protest of Guy Louthain, et al. v. F. T. Munzer, involving mineral application 02710, you are advised that I have forwarded the transcript in this case to Muskogee, Oklahoma, where, I am informed, Mrs. A. H. Southard is now employed, in the Union Indian Agency, for certification by her. Forward all papers in this case, including exhibits, which may be filed in your office, by special letter.

Please report also whether or not the protestants were specially advised of the withdrawal of this ap-

plication, and furnished you their written consent to such action.

Very respectfully,
(Signed) C. M. Bruce,
Assistant Commissioner.

[3198]

TESTIMONY OMITTED. During the trial appellants raised the issue of whether petroleum is a mineral, contending that neither within the meaning of the Act of Congress of July 27, 1866, and the Joint Resolutions of June 28, 1870 nor within the meaning of any Act of Congress or any recognized or established meaning is it such; and much testimony upon said issue was introduced both by appellants and appellee which is not made a part of this statement of the evidence on appeal for the reason that in the interval between the introduction of such testimony and the submission of the case the Supreme Court of the United States handed down its decision in the case of Edmund Burke vs. Southern Pacific Railroad Co., 234 U. S. 669, holding that petroleum is a mineral, and thus making such testimony immaterial.

UNITED STATES OF AMERICA, Plaintiff,
vs.
THE SOUTHERN PACIFIC COMPANY, a Corporation,
THE SOUTHERN PACIFIC RAILROAD COMPANY, a Corporation,
HOMER S. KING, Trustee,
JAMES K. WILSON, Trustee,
THE CENTRAL TRUST COMPANY OF NEW YORK, a Corporation,

THE EQUITABLE TRUST COMPANY OF NEW YORK, a Corporation, THE KERN TRADING & OIL COMPANY, a Corporation, Defendants.

PETITION FOR AND ORDER ALLOWING APPEAL.

To the Judges of said District Court.

The Southern Pacific Company, The Southern Pacific Railroad Company, Homer S. King, Trustee, James K. Wilson Trustee, The Central Trust Company of New York, The Equitable Trust Company of New York and the Kern Trading and Oil Company, each and all feeling aggrieved by the final decree filed and entered in the above entitled cause on the ninth day of August A. D. 1915 do hereby jointly and severally appeal from said decree to the United States Circuit Court of Appeals for the Ninth Circuit, and they file herewith their assignment of errors asserted and intended to be urged upon appeal and they pray [3201] that their appeal may be allowed, and they present herewith a good and sufficient bond for costs and damages and they pray that said bond may be approved by the court, and that pending said appeal all proceedings in this cause may be stayed, and they further pray that it may be ordered by the court that in preparing the transcript of the record upon appeal that all maps and exhibits

introduced in evidence by either or all parties may be bound in volumes and transmitted by the clerk as original documents as a part of the record upon appeal without being transcribed.

GUY V. SHOUP
JOSEPH H CALL
CHARLES R. LEWERS
Solicitors for said defendants.

JOSEPH H CALL
Of Counsel for said Defendants.

J. W. McKINLEY
Solicitor for the Equitable Trust Co.

The foregoing petition for appeal is hereby allowed upon bond being given as required by law in the sum of $10000- and upon approval of said bond the same to act as a supersedeas and as a bond for costs and damages, upon appeal, and it is further ordered that in preparing the transcript of the record upon appeal that all maps and exhibits introduced in evidence by either or all parties may be bound in volumes and transmitted by the clerk as original documents as a part of the record upon appeal without being transcribed.

Dated this January 29th 1916.

ERSKINE M. ROSS
Circuit Judge and Judge of the United States Circuit Court of Appeals for the Ninth Circuit. [3202]

(Endorsed:) Orig. No. 221 In the District Court of the United States For the Ninth Circuit Southern District of California Northern Division United

States, Plaintiff, vs. Southern Pacific Company, et al Defendants Petition for and Order Allowing Appeal Guy V. Shoup Charles R. Lewers, Joseph H. Call, Of Solicitors for Defendants. Filed Jan 29 1916 Wm. M. Van Dyke, Clerk By Chas. N. Williams Deputy Clerk. [3203]

No. 221

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE NINTH CIRCUIT SOUTHERN DISTRICT OF CALIFORNIA NORTHERN DIVISION.

UNITED STATES OF AMERICA,

Plaintiff,

vs.

THE SOUTHERN PACIFIC COMPANY, a Corporation, THE SOUTHERN PACIFIC RAILROAD COMPANY, a Corporation, HOMER S. KING, Trustee, JAMES K. WILSON, Trustee, THE CENTRAL TRUST COMPANY OF NEW YORK, a Corporation, THE EQUITABLE TRUST COMPANY OF NEW YORK, a Corporation, THE KERN TRADING & OIL COMPANY, a Corporation.

ASSIGNMENT OF ERRORS

The above named defendants Southern Pacific

Company, Southern Pacific Railroad Company, Homer S. King Trustee, James K. Wilson Trustee, The Central Trust Company of New York, The Equitable Trust Company of New York and The Kern Trading and Oil Company, having appealed from the final decree in said cause, filed and entered on the ninth day of August, 1915 do now jointly and severally file this, their Assignment of Errors, in connection with their petition for said appeal, which errors, and each of them, are asserted [**3204**] and intended to be urged upon appeal.

I

That said United States District Court for the Southern District of California, Northern Division, erred in adjudging and determining that the United States did not prior to issuing patent for said lands on December twelve, 1904, investigate and ascertain the true character of said lands as to their being mineral or non-mineral.

II

That said court erred in adjudging and determining that the United States did not on and prior to date of said patent have and possess equal knowledge with the Southern Pacific Railroad Company, and other defendants herein, and of the public generally, as to the true character of said lands, as to their being mineral or non-mineral.

III

That said court erred in adjudging and determining that the Southern Pacific Railroad Company, de-

fendant herein, or any other persons, knew at or prior to the date of issuance of patent to said lands that said lands, or any of them, contained valuable mineral deposits or were known to be mineral lands.

IV.

That said court erred in adjudging and determining that the Southern Pacific Railroad Company, defendant herein, or any one acting by its authority, falsely or fraudulently represented to the United States prior to issuance of said patent that said lands were not known to contain valuable mineral deposits, and that they were not known mineral lands.

V

That said court erred in adjudging and determining that [3205] the United States in the issuance of said patent relied upon, or had any right to rely upon, any statement, affidavit or representation of said Southern Pacific Railroad Company, or of its officers or agents, or that the United States was induced by any statement, or representation made by said Company, or of its officers or agents, to issue said patent to said lands, or any of said lands.

VI.

That said Court erred in adjudging and determining that it can be ascertained and determined from geological conditions and examination upon the surface of the ground that any tract of land contains valuable deposits of asphaltum or mineral oil.

VII.

That said court erred in adjudging and determin-

ing that it can be established and proven from geological conditions and superficial examinations without drilling wells, that such land contains asphaltum or petroleum in quantities sufficient to make said land valuable for those deposits, or of such quality as to make such land valuable for such deposits, or that such deposits can be found at a depth such as to make said land valuable for such deposits.

VIII.

That said court erred in adjudging and determining that any statement, affidavit or representation made by said Southern Pacific Railroad Company, or by any one acting on its behalf, at or prior to the issuance of said patent, as to the mineral or non-mineral character of said lands, or any of them, was false or untrue. [3206]

IX.

That said court erred in adjudging and determining that the Southern Pacific Railroad Company, or any person acting by its authority, at or prior to the date of said patent, made any statement or representation of fact to the plaintiff, as to the non-mineral character of said lands, or any of them, or did otherwise than express opinions as to the character of said lands, made in good faith and based upon a superficial examination of said lands without borings, excavation or examinations under ground.

X.

That said court erred in adjudging and determining that said patent to said lands, dated December

twelve, 1904, was not regular and valid determination by the United States, that said lands were subject to be selected as indemnity by the Southern Pacific Railroad Company under its grant of July twenty-seventh, 1866, and that said lands were not, by said patent, determined to be non-mineral lands, and of the character of lands that said Company was entitled to select as indemnity.

XI.

That said court erred in adjudging and determining that the patent of the United States to said lands, or any of them, be cancelled, annulled or vacated.

WHEREFORE, said appellants jointly and severally pray that said decree may be reversed, and that said District Court be ordered to reverse said decree and dismiss the bill of complaint herein. [3207]

To the Clerk of the District Court of the United States, Ninth Circuit, Southern District of California, Northern Division.

The Defendants in the above entitled cause, Southern Pacific Company, Southern Pacific Railroad Company, Homer S. King, Trustee, James K. Wilson, Trustee, The Central Trust Company of New York, The Equitable Trust Company of New York [3214] and the Kern Trading and Oil Company, having been allowed an appeal to the United States Circuit Court of Appeals, Ninth Circuit, from the final decree entered in said cause, do now in pursuance of their appeal hereby designate and indicate the portions of the record in said cause to be incorporated into the transcript on such appeal, omitting from each paper the formal parts.

1. Bill of Complaint with any amendments thereto.
2. Answer of defendants, other than Equitable Trust Company.
3. Answer of Equitable Trust Company.
4. Order of Court to transfer cause from Honorable Olin Wellborn to be heard by Honorable Robert S. Bean at Los Angeles.
5. Opinion of Bean, District Judge, on final hearing.
6. Final Decree, filed and entered August nine, 1915.
7. Defendants and Appellants Petition for Appeal and Order allowing same.

8. Defendants and Appellants Assignment of Errors on Appeal.
9. Defendants and Appellants Bond on Appeal and order approving same.
10. Citation on Appeal to Circuit Court of Appeals and return of service thereof.
11. All *precipes* to clerk designating parts of record to be transcribed and all notices to adverse parties of filing same.
12. All orders of court enlarging time to take testimony *to* either, or both parties. [3215]
13. All orders of court enlarging time of parties to prepare and file condensed statement of evidence, or amendments thereto.
14. Condensed Statement of Evidence to be transcribed hereunto attached and made a part of this *precipe* marked "Exhibit A".

vs.
THE SOUTHERN PACAFIC COMPANY, A CORPORATION, The Southern Pacific Railroad Company, a Corporation, Homer S. King, Trustee, James K. Wilson, Trustee, The Central Trust Company of New York, a Corporation, The Kern Trading & Oil Company, a Corporation, defendants.

C. C. No. 221.
Northern Division.

I, Wm. M. Van Dyke, clerk of the District Court of the United States of America in and for the Southern District of California, do hereby certify the foregoing three thousand nine hundred and two (3902) printed pages, numbered from 1 to 3902, inclusive, to be a full, true, and correct transcript of the record of the District Court of the United States of America in and for the Southern District of California, in the above and therein entitled suit, as the same was prepared and caused to be printed by the appellants, and that the original citation is attached thereto.

I do further certify that the fees of the clerk for com-
3904 paring and correcting the foregoing record on appeal prepared by counsel and presented to me for my certificate, amount to $10,031.10, and that said amount has been paid me by appellants herein.

In testimony whereof, I have hereunto set my hand and affixed the seal of the District Court of the United States of America in and for the Southern District of California, this 22nd day of March, in the year of our Lord one thousand nine hundred and seventeen, and of our Independence the one hundred and forty-first.

[SEAL.] WM. M. VAN DYKE,
Clerk of the District Court of the United States of America in and for the Southern District of California.

Received from above appellants three copies of the within record consisting of six volumes.

ALBERT SCHOONOVER,
U. S. Attorney,
F. P. HOBGOOD,
Special Assistant to Attorney General.

vs.
THE UNITED STATES OF AMERICA, APPELLEE. } No. 2958.

(Opinion U. S. Circuit Court of Appeals.)

Guy V. Shoup, Charles R. Lewers, Joseph H. Call, and Wm. F. Herrin, solicitors for appellants; F. P. Hobgood, jr., Special Assistant to the Attorney General, attorney for appellee.

Before Gilbert and Hunt, Circuit Judges, and Deitrich, District Judge.

DIETRICH, District Judge: This is an appeal by the Southern Pacific ailroad Company and other defendants from a final decree entered August 9, 1915, in the District Court of the Southern District of California, cancelling a patent issued to the Railroad Company on December 12, 1914, for 6,109.17 acres of land. The patent was pro-

cured, so the bill charges, through the fraud of the Railroad
3909 Company, in that it farsely represented to the Land Department that the lands were non-mineral and were the character contemplated by the grant of July 27, 1866 (14 Stat. 292), and the joint resolution of June 28, 1870 (16 Stat. 382, No. 87). This grant was to the Southern Pacific Railroad, the predecessor in interest of appellant, of every alternate section of public land, not mineral, designated by odd numbers, to the amount of ten alternate sections per mile on each side of the grantee's line of road. Suitable provision is made in the act for the lieu selection of unoccupied agricultural lands in odd numbered sections, within twenty miles of the line of road, to make good such losses as might be sustained from the primary grant because of the mineral character of lands embraced within the limits thereof. The lands in suit were selected as lieu lands under this provision, and embrace parts of sections 17 and 19, and all of sections 15, 21, 23, 25, 27, 29, 33, and 35, in township 30 south, range 23 east, Mt. Diablo Base and Meridian, which township and range will, for convenience, be referred to as 30-23. By regulation existing at the time the selection was made, the Railroad Company was required to attach to its selection list, and to file with the local land officers, an affidavit by its land agent "setting forth in substance that he has caused the lands mentioned to be carefully examined by the agents and employes of the company as to their mineral or agricultural character, and that to the best of his knowledge and belief none of the lands returned in the list are mineral lands." 19 L. D. 21. Such an affidavit, executed by Charles W. Eberlein, acting land agent of the company, was attached to the selection list in question, as was also another affidavit, in which he stated that the lands were "not interdicted mineral or reserved lands," but were "of the character contemplated by the grant, being within the limits of the exterior ten (10) miles indemnity belt," etc. While couched in tech-
nical language, the full scope of the charge as set forth in the
9310 bill is that whereas the lands were known to be valuable for their mineral oil, Eberlein falsely represented to the Land Department that they were nonmineral, and thus induced the department to issue the patent. There is some comment in the Government's brief upon the statement in the affidavit that affiiant had caused the lands to be carefully examined by the agents and employes of the company, and the correctness thereof is no doubt open to question, but there is no averment in the bill of its falsity, nor is any relief claimed by reason thereof. And besides, it is not thought that such a statement, even if untrue, is actionable in itself. Significant here only by reason of its association with the accompanying statement that the listed lands were nonmineral in character; in that connection it may serve to fortify the view that, in making the substantive representations as to the character of the land, Eberlein is to be held chargeable with knowledge of all the conditions which such careful examination, if made, would have disclosed. Accordingly, in determining the quality and legal effect of his representation that to the

best of his knowledge and belief none of the lands were mineral in character, we shall assume that he had all such available information, including, of course, everything that was known to the company's geologists and other agents or employes; and, indeed, as a matter of fact, we find that, through its several agencies, the company had such information as a fairly careful surface exploration of the territory by the prospector and geologist would afford, and, for present purposes, this knowledge must be imputed to Eberlein, its responsible agent and representative. With such information, could he truthfully and in good faith represent to the Land Department that to the best of his knowledge and belief the lands were nonmineral?

3911 When we come to analyze the record we find that as to the physical conditions there is little conflict in the evidence, and that, aside from the "expert" testimony, the greater part of it relates to the geological significance which people variously qualified or unqualified were, during the general period in which the lists were filed, inclined to attach to such conditions. The original list was offered for filing November 14, 1903, but to correct certain errors a new or amended list was filed on September 6, 1904. We therefore inquire what were the observable geological and other physical conditions during that period.

The lands are situated in what are locally known as the Elk Hills, the range of which is approximately fifteen miles long and six or seven miles wide at the widest point, with a northwesterly and southeasterly trend. Toward the east they fall quite abruptly for a thousand or twelve hundred feet to the broad San Joaquin Valley. From five to ten miles westerly, with a similar trend, is the main uplift of the region called the Temblor Range, between which and the Elk Hills are the McKittrick Hills to the north, and the Buena Vista Hills to the south, the several uplifts being separated and defined by narrow intervening valleys. To the prospector for oil doubtless the most conspicuous feature of the territory in 1903 and 1904 was the actual development, more particularly in the McKittrick Hills, but also at Sunset, twenty-five or thirty mile to the southeast, and at Midway, half way between, the latter fields both being upon the easterly flank of the Temblor Range. In the aggregate there were in these three fields in 1904 between two and three hundred wells (part of them producing), and particularly in the McKittrick field the presence of oil in large volume reasonably near the surface and economically susceptible to extraction was abundantly shown. Perhaps twenty per cent of these wells were in the Midway field, and the others were about equally divided between McKittrick and Sunset. If a line had been drawn from McKittrick to Sunset, through Midway, it would have been observed that all of the develop-

3912 ment was within a zone not to exceed a maximum width of three miles, and for most of the distance less than two miles. The railroad company's geologists, who were in the territory at various times during this period, doubtless noted oil seepages and oil sand outcrops for many miles along the line of the McKittrick develop-

ment, and in several places along a line or zone westerly from the Midway field. From observations readily made they must have concluded that underlying this zone there were shales in which it is supposed the oil originates, and beds of sand into which it migrates. They must have further concluded that the several uplifts are structural, that is they are the results of a folding or of foldings of the earth's crust, and they would have known that such a fold or anticline is a favorable formation for the accumulation and retention of oil. They would have determined that the principal dip of the country is northeasterly, and the general trend of the fold axes is northwesterly and southeasterly.

With these known conditions, and with such additional surface occurrences as might have been observed in the Elk Hills themselves (admitted by all to be of minor significance), should they, by a process of geological correlation, have reasonably concluded that the lands in question were mineral lands, in the sense in which the phrase is judicially used? They would have noted that from this zone of development it was a distance of between three and four miles to the nearest, and approximately nine miles to the most distant, of the lands in question, with a valley intervening. The only development, if such it may be called, upon the township in which the lands are embraced, or to the north, or to the east thereof, or to the south (aside from the Midway and Sunset fields, several miles away), was an abandoned prospect hole in section 8, 30–23, sunk to a depth of about 900 feet, in 1901, without encountering oil; and another abandoned hole on section 2, 31–24, sunk about 600 feet, in 1901, striking small amounts of oil. As to surface indications, such
3913 as gas blowouts, brea, and oil sands, which seem to be of about the same significance to the oil prospector that float and stain are to the lode prospector, the evidence is not highly satisfactory, and, when limited to the lands in question, or, indeed, to the entire township in which they are embraced, very meager. In a few places to the north and east, witnesses who testified doubtless believed that they found traces of oil that has vanished, but whether any importance at all can be attached to these occurrences is left in much uncertainty because of the doubtful character of the most conspicuous one, and the only one the existence of which was more or less generally known, namely, a so-called oil seepage in section 32, 30–24, a little more than a mile easterly from the east boundary of township 23. To say nothing of the view of the defendant's experts that there was no oil here, or anything to indicate the presence of oil, one of the chief experts for the Government testified that he had made two examinations of the sands (which, it is to be noted, were dry), and upon a chloroform test they gave no oil. He found some particles of carbon, and by a course of reasoning reached the conclusion that at some time in the past escaping gas carried oil, which had either been burned or had evaporated. But manifestly, if necessary to resort to such possible reasoning, it can scarcely be held that an occurrence of so doubtful a nature and significance must have been

regarded by the defendant's geologists in 1903 and 1904 as having an important bearing upon the question of the mineral character of the selected lands.

Resorting to the history of the region, the Railroad Company's geologists would have learned that until oil was discovered in the Kern River field near Bakersfield in the spring of 1899, thirty miles to the east, the land in suit, as well as the surrounding territory, had been used for grazing purposes only, and had not attracted
3914 serious attention for its mineral possibilities. That following the Kern River discovery there was widespread excitement, and the whole countryside was plastered with "locations" and "relocations". People from all walks of life were drawn into the race for claims. No one pretended to make an actual discovery, and one group of speculators, employing twenty-five or thirty locators, located approximately fifty square miles. Everything unpatented was taken in. The claims, of course, were speculative, and in the Elk Hills no actual discovery was made, and, with the two exceptions heretofore noted, there was no attempt at discovery or development. Claims were held not by working them, but by the cheaper method of relocation, so that in 1903 locations were sometimes piled upon each other three or four deep. As a result, doubtless, of the discoveries in the Kern River field and the later ones at McKittrick and Sunset, as well as of the current excitement, the Commissioner of the General Land Office, on February 28, 1900, directed the local land officers to "suspend from disposition until further orders" a large body of lands, including the entire township in which the lands in suit are situate, and of this withdrawal the Railroad Company and its agents of course had knowledge. While the question is perhaps of but slight importance, it may be said in this connection that in our view this order was intended to withdraw lands from agricultural entry only, and it was so generally understood. The interests of the Government were not imperilled by the possible mineral entry of comparatively worthless grazing lands, and therefore no reason existed for suspending that form of entry. And that the order was intended to be so understood is made clear by the contemporary construction of the department from which it issued. In response to a request of the Railroad Company that an investigation be made by the land office with a view to lifting the suspension, so that the lands could be selected under its grant, certain correspondence passed, in all of which it is assumed that the suspension extended only
3915 to agricultural entries. For example, in the letter of December 10, 1903, from Acting Commissioner Fimple to Special Agent Ryan, there is found this sentence: "It is stated that nearly four years have elapsed since the order of suspension and no mineral entries have been made for any of said lands." And in the letter of February 11, 1904, from the same office to the register and receiver of the local land office, advising them of the restoration of the lands to entry, the original order is referred to as having "suspended (the

land) from disposition under the agricultural land laws upon allegations that the same contain deposits of mineral (oil)." Although as thus appears the lands were open to mineral entry during three years or more after the excitement of 1899 and 1900, leading to the speculative location of all the public lands in the region, there was no effort to develop any of the lands in suit, nor, with the exception of the two ineffectual attempts already noted, was there any development anywhere in the Elk Hills, or any entry of any lands therein for patent. To state the case fully, it should be added that during this period the price of oil was comparatively low, and transportation facilities were poor.

Of all of these conditions—the "oil land boom", the following inactivity and depression, the rapid development in the narrow McKittrick-Midway-Sunset zone, the two abortive attempts at development in the Elk Hills, the total want of oil land entries, notwithstanding suspension from agricultural entries, the general abandonment of locations,—the Railroad Company's agents must have known, and must have considered as having more or less weight.

Such in outlines are the material features of the geology of the region and of its development as an oil field. The geologic facts are interpreted by oil prospectors and operators, and by geological experts; and to this class of testimony we now direct attention. It is too voluminous to review in detail, and the most general analy-
3916 sis must suffice. As to certain geological features of the region there is practical harmony of view. It is virtually conceded by the experts for the Railroad Company that in the McKittrick-Midway-Sunset zone it was known that there was oil in considerable quantities, susceptible to profitable extraction, and that an anticline such as is found in the Elk Hills is an occurrence favorable to the accumulation and retention of oil, to which prospectors would hopefully look upon discovering the presence of oil in adjacent territory. They also concede that it then appeared probable that some oil would be found, but not in sufficient quantities or near enough the surface to warrant extraction and marketing. Upon the other hand, while confident that oil is to be found in the lands in suit, the Government experts virtually concede that in the most favorable view its depth is great—so great in fact that under the conditions existing in 1903 and 1904, and, indeed, at the time the testimony was taken, extraction was economically impracticable. When it is borne in mind that a deep well costs at the rate of approximately $15.00 per foot, a large flow of oil, with fair prices, must be assured to justify the sinking of a well four or five thousand feet deep. While some estimates of the probable depth were ventured, they were made reluctantly, and were apparently based upon data insufficient to give them the weight of reasonably satisfactory scientific deductions. Nor could any intelligent estimate be made of the quantity or quality of the oil. But while in still other respects the geologists are in substantial agreement, when it comes to a statement of general conclusions upon the ultimate question of the character of the lands, there

is seemingly great diversity of opinion. To a certain degree, it is true, this variance is, upon analysis, found to be more apparent than real. For one witness to affirm and another to deny that the Elk Hills uplift is "oil territory" does not necessarily imply a
3917 real issue of fact, for the phrase "oil territory" has no fixed or well-recognized meaning, and may very well be used in one sense and understood in another. When, therefore, we look beneath the mere form of expression, we are not surprised to find that in a measure the seeming diversity disappears. We can illustrate the point and at the same time convey some idea of the scope and substance of the expert testimony as a whole better by quoting at considerable length from a single witness than by assembling fragmentary and conflicting statements from many. Naturally no expert witness for the one party will be wholly satisfactory to the other, but suppose that for our purpose we take the testimony of a witness called by the Government, Professor John Caspar Branner, of Stanford University, whose general competency and familiarity with the geology of the California oil fields are conceded. Dr. Branner visited the McKittrick field in 1900, but did not go into the Elk Hills. This latter territory he inspected for the first time about 1910, and again in 1912. The testimony given by him upon direct examination, upon which the Government most relies, is found in the following paragraph:

"I should say that if any competent geologist, observing the natural waste of oil about McKittrick and the stage of development in 1900 or a year or two subsequent, and visiting the Elk Hills and making some examination of the structural formation, failed to form an opinion that the Elk Hills were oil in character and that there was an oil-bearing zone underneath those hills, he did not understand his business."

Upon cross-examination he testified:—

"In passing upon the character of the Elk Hills, I did not determine in any way the quantity of oil and made no attempt to do so. I could not have done so from the examination I made. That could only be determined by putting down wells. One well might determine the matter and it might not. Development is required to determine whether or not that is a valuable oil deposit.

"A geologist does not determine the economic value of the land for oil. All he undertakes to do is to say whether or not the land has prospective value. I mean by prospective value, that the company proposing to develop that region should take it up—buy it, if necessary—and put down a well on it, should prospect it. I can best illustrate my idea of it by saying that I have considered it a reasonable investment, or, if you please to call it so, venture. I should have advised anybody who might have employed me to report on those propositions, to buy the lands with a view to developing them
as petroleum lands, from the surface indications and my
3918 knowledge of the surrounding conditions and of the oil formaitons in general. I could not, when I first examined the land,

have given an assurance that oil in valuable quantities could have been found. I could do so now on the basis of wells that have been put down there and have found oil. On the basis that in only two cases out of twenty-eight wells, some of them four thousand feet deep, indications of oil had been found, and in those two cases oil had been found in quantities not sufficient to make these particular wells profitable, I would not hesitate to advise operators to go ahead with prospecting. In the first place it depends on how those wells were located. If the wells were put down without reference to the geologic structure, they might go to an enormous depth without getting oil, and yet, they may move off to one side and put down a well, within a thousand or two thousand feet, and get entirely different results. And still, I may add, the general structure of the Elk Hills is so favorable to the accumulation of oil in that region that if they had gone to five thousand feet and not found the oil, I should still advise a company to not give up hope of finding it. * * *

"As to whether all the portions of a bed of Monterey shale would be equally producing I will say that these diatomaceous shales, being the source of oil, the oil does not as a rule stay in those beds. It passes out into an absorbing bed—a porous bed—where the oils accumulate. Now, the accumulation, therefore, depends on the presence of diatom beds to furnish the source, but the accumulations themselves, as you see, depend on the nature of the beds into which those oils pass; and you may have no beds there to receive that oil. The conditions may be unfavorable and the beds overlying them into which that oil can be expected to pass may vary in texture so that the oil accumulates more in one place than in another, so that the oil beds may be pockety even under conditions where you have diatomaceous beds of great thickness and evenness. * * *

"When I first went into the McKittrick District in 1900, I visited the Temblor Range. I had two assistants working with me to do topographical work, and we were mapping an area of several square miles, in detail, and my impression is I must have been there something like ten days or two weeks working on that geology.

"I made quite a careful examination during that period for the purpose of reporting on oil possibilities and reached the conclusion that there was oil, probably in paying quantities, on the property, if the wells were put down at certain points; and I located the wells and they found the oil, but I cannot say whether in paying quantities or not. From my surface examinations I could not determine with any degree of exactness whether there was oil there in paying quantities. That had to wait the test of the drill. * * *

"Even if I had not seen that seepage my opinion would have been, owing to the formation of the Elk Hills, that they were suitable for the accumulation of oil, but that would not necessarily mean that they had accumulated oil. That could be determined only by exploration. I suppose there are promising formations giving indications of adequate reservoir space for the accumulation of oil,

that do not produce oil in paying quantities. I should say such things do occur. * * *

3919 "Suppose you had an oil company and the geologist looked at that whole anticline. The geologist would naturally say 'Look for your petroleum along where these domes are.' But, at the same time, that whole arch there is practically an inverted arch or trough under which the petroleum accumulates. Now, there is an end to the petroleum somewhere. It is not going to accumulate everywhere in that entire arch. So, you can bore holes right along the crest of the anticline and in some places get great quantities of petroleum and in other places you won't get any at all, because the water crowds the petroleum up underneath there.

"There might have been an anticline broken across and so dislocated that the petroleum might have floated right out and it might have come out to the surface, especially on the side that is uplifted, so that it would be floated out to the surface and lost. There are sometimes processes going on in the oil beds where the oil is deposited which would make it unprofitable to get out the oil. * * *

"I do not think there is any way to determine from an examination of the surface how large an area yields oil at any particular point. It sometimes happens that the sand beds become hardened so that they cease to be media through which oil can pass, and it occasionally or even frequently happens that the sand beds pinch out between hard layers of strata. That is one of the reasons that one well is not a complete test of the character of any given territory, and as to other reasons therefor, I will say it depends on the localization of the oil. * * *

"I do not think that the presence or absence of water in the strata carrying oil could be regarded as decisively having a bearing upon where you would find the oil—certainly not in the light of what I understand to be the well-known fact in regard to the occurrence of petroleum in the San Joaquin Valley to-day. It used to be considered that if a well were put down and struck water there was no use looking for petroleum there; but I understand that the water has been shut out, in a number of instances, and the well has gone on deeper and found the petroleum below the water horizon.

"It is my general impression that the view I have first mentioned generally prevailed in the California oil fields until a few years ago.

"Other things permitting, water would force the oil into the anticline to where there is a large accumulation of gas developed at the crest of the anticline. The oil would stay on top of the water and the presence of water would have considerable bearing upon whether you would find oil in the anticline or not. These conditions can not be determined from a surface examination.

"It is not possible from a surface examination such as I made of the Elk Hills to determine the depth of the oil sands. There are only two ways in which that can be determined. One would be to work out the geology with great care and detail over the region—

not only in the Elk Hills themselves, but in the surrounding country—to find in what horizon the oil accumulates, and then by fitting one's evidence together and studying it one might come to the conclusion in regard to the depth at which the well would reach the oil-bearing bed. The only other way would simply be to put a well down and test it.

3920 "I have not made sufficient examination with that question in mind, to be able to tell whether you could ascertain the depth without a well, in the Elk Hills. I made no attempt to do so. The purpose of my examination was to ascertain, generally, whether that could be considered as possible oil territory, and I made no attempt to determine whether it was paying oil territory. * * *

"It is not ordinarily possible for a geologist, or practical oil man, to determine from the existence of an oil bed at a particular point, that the bed continues for any particular or definite distance in all directions or any direction, partly because the oil comes to an end where it rests on the water; partly because the porous beds are not infrequently more or less lenticular in form: that is, they may pinch out and come to an end of themselves in that way, by thinning down, or they may be interrupted by breaks, what we call faults or displacements of beds, so that the beds may be chopped square off."

Upon redirect examination he stated that the Monterey shales were very thick—approximately five thousand feet in the region just west of the Elk Hills and the Buena Vista Hills—and that he would not expect them to be so faulted as to be disadvantageous to the accumulation of oil in these hills; that he had no reason to believe that the oil sands were thin or hard or pinched out, and that geologically quartz mining is less certain than petroleum, but that coal mining is most certain of all. And then he testified:

"In coal mining one can get a very close idea of the tonnage to be taken out under a given tract of land: that is, we can calculate the product. It is the rule, in fact, in the anthracite regions in Pennsylvania, that the company will have in its reports by its geologist 'We have so many acres of land. This land yields so many tons an acre', and they count on that just exactly as if it were money in the bank. Now, in petroleum mining, of course you can't do that exact thing; there is an element of uncertainty about it that you don't find in coal mining. * * *

"I should expect to find certain parts of the folds in Elk Hills more productive than others; but it would be a pretty nice question to say just where the petroleum is going to come to an end. I don't think anybody could tell.

"It seems to me that the best chances for oil in the whole country in that region were in the Elk Hills and the Buena Vista Hills. In forming that opinion I took into consideration the possibilities of the nonoccurrence of oil resulting from the conditions of the sand and the pinching and hardness of the stratum, and other interruptions; I think that any reasonable geologist knows that there is a

certain amount of risk in any kind of petroleum mining. He counts on that.

3921 "I should say, decidedly, that the conditions in the Elk Hills are such as to warrant the ordinarily prudent man in the investment and expenditure of money with a reasonable expectation of developing a paying oil property. But I should like to explain this, that if we went back to the conditions as they existed there before any wells were put down in either of those hills and if I had been the consulting geologist for some company or party who anticipated putting down wells there, I should have put it to him in this way: 'In my opinion the geology, altogether, of the mountains to the west, and the floor of the valley, and everything taken together, strongly suggest that these hills are the best place in which to put down oil wells. There ought to be, so far as we can see, enormous quantities of petroleum under those two group of hills. Now, there is nothing absolutely certain about putting down an oil well in a new region; there is a certain amount of risk about it and you can't get away from that risk.' And I should have said to those men: 'If you have got money to risk you can afford to lose it, put it in there; if you can't afford to take any risks, you had better let somebody else do it.'

"I mean that anyone who had money to risk and who might afford to lose it might get larger returns for his money than he would from an ordinary investment. Perhaps I ought to say that one of the reasons for that risk lies in the fact that there is no way, short of putting a well down there, to determine the thickness of the strata that overlie the oil-bearing bed. As everyone knows, who knows anything about petroleum wells, you may have an enormous volume of petroleum so deep that you can't get it, and I should have said that may be the possibility there. Of course, the developments there have shown that the oil is there and the question now, of course, is entirely different from what it would have been before those wells were put down.

"It is my belief that there is an enormous petroleum deposit in those hills but I have made no attempt to work out the details as to the depth and am not prepared to state whether it would be twenty-five hundred or five thousand feet."

And again, upon recross:

"I did not mean to say that I could tell whether the oil-bearing beds under the Elk Hills were folded, faulted even, or what condition they were in; that I could not determine. It might possibly be folded and overturned.

"I don't know when I first heard of the change of view in reference to water being found in oil wells; it was comparatively recent; certainly within three or four years, but I would not say exactly. Prior to that time water in a well had been regarded as an almost fatal condition."

And still again, upon redirect:

"I should have said that I did not know whether water, under the conditions mentioned above, would be fatal or not, because my observation in regard to water led me to believe that it could be separated from oil horizons and that it was separated from them; but the well-drillers all protested so, that, as far as my experience went, when they got to water they gave it up as no use."

3922 And finally, upon recross:

"I do not mean to be understood as saying that I actually determined that the territory did contain an immense quantity of oil. I meant to say that if I had gone over that ground in 1900 with a view to saying whether or not those were probably petroleum lands, I should have, under those circumstances, pronounced them oil lands and recommended their exploitation to anyone who was able to take the risk. I realized that the risk might result in a total loss of the investment."

In considering this testimony it should be borne in mind that nowhere in the record is there any attempt to show, nor is there any claim, that any subdivision of the lands in suit contains more oil or is more valuable for oil than any other subdivision of such lands, or, for that matter, than any other part of the entire territory embraced in the Elk Hills. So that (to make a concrete case) if we are to find that the southwest quarter of the southwest quarter of section 19, 30–23, was known oil land, we must also find that every forty acres in a tract aggregating forty or fifty sections is of the same character. Having in mind this aspect of the case, perhaps we should supplement the testimony of Dr. Branner with the views of "practical oil men." Frank Barrett, a witness for the Government, was sixty-seven years old, and had been in the oil business all of his life—after 1905 in California. He examined 30–23 in 1899, and "recommended the entire south half of the township as good oil-bearing territory." And yet he testified:

"I believed the country might produce oil, and I was examining it with reference to its character as an oil prospect. I knew of no discovery of oil in the township and heard of none. I could not have said 'this is known oil territory.' I could only have said that, in my opinion, it would prove to be such. My experience extends back pretty nearly to the time the first oil well was sunk in this country. I have seen promising oil territory develop—not oil—but I have seen them throw out what was pretty near as good as oil—gas—plenty of it, that was utilized for manufacturing purposes. I have observed promising indications very frequently that didn't pan out. The oil business is a good deal like elections. I don't think the percentage of failures in the oil business is greater than 50% if it is gone into intelligently and systematically, but still, at the same time, you can't—well, I will illustrate to you. In one section a well down 3,200 feet and no oil; the next section to it 250 feet, and good

3923 producer. A high-priced expert couldn't see a bit deeper into the ground than another. The oil doesn't always appear where

they say it will. The true expert is the drill. You couldn't say that a territory is known oil ground till you put a drill in it. It is not known till it is proven."

W. E. Youle, an operator of long experience, also produced as a witness by the Government, having first stated that he regarded the Elk Hills as oil territory, testified:

"I didn't at that time come to the conclusion as to the depth we would have to sink. That would be out of the question. I never heard such a question asked before. It would be far from an experienced man's ideas to think of such a thing. There is a gamble in the oil business, and we are willing to go just as long as the string will let us or the money will let us, and often go very deep; and I do not believe that I ever heard an expert oil man or a geologist ask the question before what he thought of depth, because it is so utterly foolish to think that a man could tell anything at all about the depth."

And again:

"I know a man that had sixteen dry holes and made a million dollars after that. He got oil in the same country. He crept out and got it.

"The fact that oil is found on one section is not evidence that it may be found in every section in the township: there may be kidneys. Oil is not contained like a river underground, but in kidneys. While you are in the oil sand all the time, we know by experience that there are dry holes drilled in oil sand. Had those been drilled, the first one, two, or three, you might condemn the territory and throw it out, the same as the Associated did. It might have been possible to make a well for the purpose of getting the land cheap. I have had fellows do it on me, who owned the ground, and get the sand and wouldn't tell about it and you had a dry hole.

"The discovery of oil in one section or quarter section does not indicate to a practical oil man that oil will be discovered in every section in that township. It implies this: If you get oil in this section, experience has taught us that oil is not just in that little space in that well, but that it has a direction somewhere. And immediately you will find oil men locating and acquiring lands quite a distance from that well. You find that among oil men because experience has taught that there is a direction to that oil vein."

By "oil territory," it would seem to be clear, these and other Government witnesses mean territory where the observable geological conditions are such as to justify expenditures in prospecting, and prospecting by those who are able to take the chances. Using the language of the last-named witness:

"I had had no experience in that field to the extent of $50,000.00 in one hole. I could drill 3,500 or 4,000 feet for $50,000.00 or less.

"I did not contemplate having to go that far. The oil business is a gamble. It is not like farming. You just bet that you don't go down that deep, and that territory was good to have bet on. If
3924 you win once in four or five times, you make a lot of money. That is the reason why I would have advised people to spend

$50,000.00 or $100,000.00 there. I wouldn't advise widows and orphans and dishwashers and cooks who could not risk money; but if you wanted a chance to make a million dollars I would pick the Elk Hills quicker than any piece of land in there, because the formation justifies what I say."

As expressing the general views of the geologists produced by the defendant we can perhaps do no better than to quote the conclusion of Frank M. Anderson, who testified at great length touching both the geology of oil and the economic factors to be considered in producing and putting it upon the market, as well as in relation to local conditions in the Elk Hills:

"My conclusion as to the likelihood of the Elk Hills being then or ever being oil territory was negative. That is to say, I did not believe that they were oil-bearing or ever would be found to be oil-bearing. At least, not in paying quantities—not commercially oil-bearing. I suppose that I did expect there might be some insignificant deposits of oil found in them, as there might be in any part of the country between Sunset and Coalinga if there was a well put down in these beds. All of them throughout their whole extent are more or less organic in character, and if a well is put down in a strata containing these organic materials, there would be insignificant and unimportant occurrences of gas and oil found nearly anywhere, and that has been generally the case wherever wells have been drilled so far as I know. But as to these hills containing any commercial deposits of oil, I didn't believe they would, and I don't now believe they would."

It may be of some assistance to refer to the general views of two other geologists, who were not sworn, and who, so far as the record shows, were neutral touching the present controversy and the parties thereto. From certain bulletins prepared by Mr. Ralph Arnold, who, it was stated by Dr. Branner, has done "more work for the United States than any other man in connection with the oil geology in California", and "has the reputation, deservedly, of being an able geologist", the following extracts were read in evidence:

"Anyone at all familiar with the conditions of occurrence of petroleum in the California fields knows that any but the most tentative predictions as to the location of the oil are extremely hazardous. The following suggestions, based on the evidence in hand, although lacking definiteness for the reasons above stated, may be of some assistance to those engaged in developing this field."

3925 And again:

"It must be borne in mind, however, that absolute determination, by work on the surface, of the occurrence or nonoccurrence of oil in any one locality is not possible. The best that can be done is to calculate the degree of probability on the basis of surface indications and structural conditions."

And from a bulletin issued relative to another California field by Mr. Robert Anderson, who was Mr. Arnold's assistant, and upon his

resignation was put in charge of the petroleum work in California by the United States Survey, the following is taken:

"For an undeveloped region such as this, in which the character of the rocks makes it not impossible for oil to be present, but which for the most part has not been subjected to experimental test by the drill and in which the local tests made have been inconclusive, it is of course impossible to reach positive conclusions as to the occurrence of oil in commercial quantities at depths."

With the observable facts and conditions as we have sketched them, interpreted in the light of geologic science, should it be held that at the time of their selection in 1904 these lands were known to be valuable for petroleum? Upon behalf of complainant it is conceded that the available information was insufficient to constitute a "discovery", as that term is used in the mineral land laws, and that therefore the lands were not locatable or enterable as mineral lands. Butte Oil Co., 40 L. D. 602. But it is contended that land may be "known to be valuable" for its mineral content, and yet such knowledge be insufficient to constitute "discovery". Manifestly, from this view, if adopted, it would necessarily follow that there are bodies of unreserved public lands for the private acquisition of which Congress has made no provision. But whether "discovery" in a legal sense necessarily implies actual exposure to the eye, is an inquiry not directly involved here, and in view of its far-reaching importance, its definitive answer should await a suit in which it is directly put in issue. While, therefore, we put aside as being of
3926 doubtful relevancy the decisions which define "discovery", especially in the case of metaliferous deposits, we are inclined to regard as in point cases construing and applying section 2333 of the Revised Statutes of the United States prescribing the procedure where a lode is embraced within a placer claim. It is there provided that "where a vein or lode * * * is known to exist within the boundaries of a placer claim," an application for patent for placer which does not include an application for the lode, shall be construed as a waiver by the applicant of any claim to the lode, and the title thereto shall remain in the United States, notwithstanding the placer patent. The granting act under consideration here excludes from the grant all the lands which at the time of their selection by the grantee were known to be valuable for their minerals. The terms of exclusion in the two statutes, it will be observed, are closely analagous, if not identical in meaning. In construing and applying section 2333, it was said, in Sullivan v. Iron-Silver Mining Co., 143 U. S. 431:

"Defendants offered a mass of testimony, the scope of which was similar to that condemned as insufficient in the case of Iron Silver Mining Co. v. Reynolds, supra (124 U. S. 374). Its purport was that it was commonly believed that underlying all the country in that vicinity was a nearly horizontal vein or deposit, frequently called a blanket vein; and that the parties who were instrumental in securing this placer patent shared in that belief, and obtained the patent with

a view to thereafter developing such underlying vein. But whatever beliefs may have been entertained generally, or by the placer patentees alone, there was up to the time the patent was obtained no knowledge in respect thereto. It was, so far as disclosed by this testimony, on the part of everybody, patentees included, merely a matter of speculation and belief, based not on any discoveries in the placer tract, or any tracings of a vein or lode adjacent thereto, but on the fact that quite a number of shafts sunk elsewhere in the district had disclosed horizontal deposits of a particular kind of ore, which it was argued might be merely parts of a single vein of continuous extension through all that territory. Such a belief is not the knowledge required by the section. In the case referred to this court said: 'There may be difficulty in determining whether such knowledge in a given case was had, but between mere belief and knowledge there is a wide difference. The court could not make them synonymous by its charge, and thus in effect incorporate new terms into the statute'."

3927 See also Iron Silver Mining Co. v. Reynolds, 124 U. S. 377; United States v. Silver M. Co., 128 U. S. 673; Migeon v. Montana Central Ry. Co., 77 Fed. 249; Thomas v. South Butte M. Co., 211 Fed. 105; Barnard Realty Co. v. Nolan, 215 Fed. 996.

But of more decisive importance, the Government contends, is the comparatively recent case of United States v. Diamond Coal & Coke Co., 233 U. S. 236. Upon it, it places its chief reliance, and throughout the trial its representatives have studiously sought to establish a state of facts upon which to predicate the claim that in their legal aspects the two cases are substantially identical. The Diamond coal suit was brought to set aside, for fraud, homestead patents to what were alleged to be coal lands, in the State of Wyoming. The relief prayed for was granted by the Circuit Court of Appeals, and in affirming the decision the Supreme Court took occasion to re-state in comprehensive form the principles under which the issues in such a suit are to be determined. After referring to the familiar doctrine that the Government must bear the burden of proof, and "sustain it by that class of evidence which commands respect, and that amount of it which produces conviction," the court said:

"To justify the annulment of a * * * patent as wrongfully covering mineral lands, it must appear that at the time of the proceedings which resulted in the patent the land was known to be valuable for mineral; that is to say, it must appear that the known conditions at the time * * * were plainly such as to engender the belief that the land contained mineral deposits of such quality and in such quantity as would render their extraction profitable, and justify expenditures to that end. If at the time the land was not thus known to be valuable for mineral, subsequent discoveries will not affect the patent. If the proofs were not false then, they cannot be condemned nor the good faith of the applicant impugned by reason of any subsequent change in the conditions. We say 'land known at the time to be valuable for its *for its* minerals,' as there are vast

tracts of public land in which minerals of different kinds are found, but not in such quantity as to justify expenditures in the effort to extract them. It is not to such lands that the term mineral in the sense of the statute is applicable."

The novelty, if any there be, in this re-statement of the rule, is to be found in the suggestion that the requirement of "knowledge"
3928 of the mineral character of the land is satisfied by knowledge of "conditions" which are "plainly such as to engender the belief" that the land is valuable for its minerals. To be mineral in fact, it is further explained, the lands must contain "mineral deposits of such quality and in such quantity as would render their extraction profitable and justify expenditures to that end." Of course, it will not be assumed that the court intended to repudiate the doctrine which it had announced in Iron Silver Mining Co. v. Reynolds, and had reaffirmed in Sullivan v. Iron Silver, etc., supra, from which we have already quoted. There is no real conflict. The distinction is to be found in the fact that in one case the "belief" referred to was without any substantial basis, whereas in the other it was induced by deductions which the responsible, qualified, practical man would naturally make. The "belief" approval in the coal case is an intelligent, rational belief. It is the knowledge acquired through scientific deduction, or through reasonable inference, by persons competent, because of their learning or experience, to make such deductions or to draw such inferences. The court having there reasoned from visible to invisible conditions, it is here contended that if the conclusion was warranted that a coal measure lay beneath the surface of the lands in suit, by parity of reasoning it should be held here that there is oil beneath the surface of these lands. Two assumptions are involved. The first is that the occurrence of petroleum in the earth is subject to the same geological laws as coal measures. But is such the fact? True, both are to be found in horizontal or stratified deposits, but the record abundantly shows that the close analogy ends there, and in the case of oil not only are there more unknown factors in correlating the known with the unknown, but there are contingencies incident to commercial exploitation to which coal is not subject. Such in terms, as we have already seen, is the testimony of Dr. Branner. "In coal mining," he says, "one can get a very close idea of the tonnage to be taken out of a given
3929 tract of land; that is, we can calculate the product * * *. Now, in petroleum mining you cannot do that exactly; there is an element of uncertainty about it that you don't find in coal mining." Indeed the difference must be obvious. A coal bed is fixed and unchangeable in relation to the inclosing strata. It may be bent or broken together with the folding or crushing of the earth's crust, and its original continuity may be interrupted by faulting or erosion but its relative position remains unaltered. Not so with oil. It is mobile. It is not sought in the shales in which it originates, but in the porous sand-strata into which it migrates. If it has not escaped from the sands through some break in the continuity of the

inclosing strata, it may be uniformly persistent, but with no such degree of certainty as in the case of coal or phosphates. Owing to the pressure of water and gas, it may be forced to and held in "pockets," or confined to those portions of the folded sand stratum lying between certain horizontal planes or levels, above or below which zone there may be nothing but gas or water. For that reason, while the sand stratum may, like a coal bed, be continuous, and may be found at any point beneath a given area, it may turn out to be wholly barren of oil in one place, while carrying an abundant supply but a short distance away. Until recently at least, according to the testimony of Dr. Branner, to encounter water in driving a well rendered the enterprise hopeless, in the eyes of practical oil men. So too it has been more or less generally thought that oil does not abide the presence of sea water, and there is evidence to the effect that in this region sea water may be encountered from 1200 to 1500 feet beneath sea level.

Now as to the second assumption, that the "known conditions" are substantially the same here as they were in the coal case. In that case thirty-four patents had been issued to representatives of the coal company, to 2,840 acres of land, upon what are known as soldiers' additional homestead entries. The defendant, to
3930 whom the lands were conveyed, was engaged in mining coal upon a large scale from adjacent lands, and its well-informed and experienced superintendent acted upon its behalf and as its agent in the acquisition of patents, the proceedings for which were initiated in 1899, and continued through two or three years. The court said:

"For many years the district in which the lands were situate had been known to contain coal. They were surveyed in 1874, and the surveyor reported one of the sections as coal land, the others being contiguous to lands similarly reported. This was shown in the field notes and upon the official plats. The lands were in a valley, three or four miles in width, bounded on the east and west by foothills. A thick bed of coal was disclosed in the eastern face of the western hills, but its quality was not such as to make it of commercial value. Along the western base of the eastern hills was the outcrop of another coal bed. This outcrop had been weathered down and in some places covered by the wash from above, but it could be traced upon the surface for several miles. It had been opened up at different places, and the openings disclosed a coal bed, from six to fourteen feet in thickness, dipping to the west at an angle of from fifteen to twenty-five degrees from the horizontal, as did the Cretaceous rocks with which it was interstratified. This coal was of superior quality and recognized commercial value, and the rocks containing it were the coal-bearing strata of that region. The lands in controversy were west of the outcrop, in the direction of the dip. Some were near the outcrop and the east line of the farthest section was about a mile and a half away. There was nothing upon their surface showing the presence of coal beneath, nor anything indicat-

ing that the bed outcropping on the east and dipping to the west did not pass through them. Unless valuable for coal, they were not worth to exceed a dollar and a quarter an acre. They were arid sagebrush lands, about 7,000 feet above sea level, and afforded very limited pasturage. Without irrigation they were not susceptible of cultivation, and the cost of securing water for that purpose was prohibitive.

"Attracted by this outcrop, the coal company opened a mine thereon, in the vicinity of these lands, in 1894. In the beginning the output of the mine was small, but it reached 183,750 tons for 1897, 259,608 tons for 1898, and 441,277 tons for 1899."

It was further shown that this superintendent, who had knowledge of all the conditions, had in 1898 engineered a project for procuring the lands (which he deemed to be valuable for coal) through the medium of "dummy" homesteaders. These dummies having been paid $500.00 each by the company, later relinquished upon its request, so that its superintendent and another of its representatives might make the soldiers' additional entires. In 1898 this same superintendent had filed in the land office a sworn declaration attending his application to purchase one of the tracts in controversy, in
3931 which he stated that it contained a valuable vein of coal.

Within a half mile in each of three directions from the lands in question there was a quarter section upon which a good bed of coal eight feet in thickness had been disclosed. And this the coal company had purchased from one Lees for $3,400.00. The lands in question, unless valuable for coal, were not worth to exceed $1.25 per acre, and yet the company willingly spent at least ten times that amount to acquire the title.

"It was hardly intending to make an aimless or grossly excessive expenditure. It was a practical concern, operated by practical men. It had located a mine upon the outcrop five years before, and in the meantime had proved the wisdom of the undertaking by its mining operations. They had disclosed the existence of an extensive bed of valuable coal dipping to the west under the valley, and in that way had supplemented the evidence afforded by the outcrop and its surroundings."

The court summed up and closed the discussion as follows:

"An exposure to the eye of coal upon the particular lands was not essential to give them a then present value for coal mining. They were all adjacent to the outcrop and above the plane of the coal-bearing strata dipping under the valley. In alternate even-numbered sections they substantially paralleled the outcrop for seven miles, and in two places were separated from it by only a few rods. Those to the north were opposite the company's developed mine (No. 4), and those to the south were opposite the tract acquired through Lees, upon which good coal was disclosed. The outcrop, the disclosures in the vicinity, and the geological formation pointed with convincing force to a workable bed of merchantable coal extending under the valley and penetrating these lands. These conditions were

open to common observation, and were such as would appeal to practical men and be relied upon by them in making investments for coal mining. They did so appeal to the Cumberland people, as well as this company, both large concerns represented by men of experience, understanding the uncertainties and hazards of the business as well as its rewards.

"It will be perceived that we are not here concerned with a mere outcropping of coal with nothing pointing persuasively to its quality, extent, or value; neither are we considering other minerals whose mode of deposition and situation in the earth are so irregular or otherwise unlike coal as to require that they be dealt with along other lines."

Manifestly a case so remotely analagous can not be deemed to be conclusive of the issues here, especially in the light of the caution which the court took the pains to express in the closing paragraph of the opinion. The known conditions here are much further removed from the unknown, and even were the geological occurrences comparable, the character of petroleum is such that, as we have
3932 seen, speculation as to its presence at any given place beneath the earth's surface is attended with uncertainties from which explorations for coal are free. And other considerations to which the court there attached much weight, if not wholly wanting here, are so weakened as to have but little persuasive force. Here, as there, the lands had only a nominal value, but the defendant company here was paying nothing for them. Apparently it was under the necessity of taking these lands or incurring the risk of getting nothing under its existing grant. Upon the other hand, in the coal case, so persistent was the zeal of the coal company to acquire the lands that it not only resorted to fraudulent practices to obtain them, but was willing to pay at least ten times what they were worth for any purpose other than coal. As the court points out, the evidence of valuable coal beds was of such character, and was so abundant, as to induce intelligent and practical operators, not merely to prospect for coal, but to open up coal mines, and that such was the view of the company's superintendent there could be no doubt. Though still in its employ at the time of the trial, he was not called by the company as a witness to contradict or explain damaging statements and admissions attributed to him. Here, from the contemporary correspondence and maps and other data, and such testimony as appears to be credible touching oral statements made by different representatives of the company from time to time, we are convinced that Eberlein and the geologists, and also, it must be presumed, some of their superiors, regarded the lands as possible oil lands, and hoped that they might turn out to be such; but no one went further than to regard them as "prospecting" territory. Certain incidents, it must be admitted, are equivocal, and are susceptible of a construction which tends to give them a sinister aspect. Chief of these perhaps is the fact that Eberlein kept most of the correspondence and papers relating to the selection in a private file—conduct which the Govern-

ment contends signifies a consciousness of wrongdoing. Upon
3933 the other hand, it is pointed out that he had but recently come from New York to take charge of appellant's land department, and that he found it in an unsatisfactory condition; that the business of appellant was transacted through departments; that he soon found that his views were at variance with those of the heads of other departments who were in closer touch with the local management; and that he was solicitous about his records in order that they should be available for his use in absolving himself from blame should the San Francisco management be criticised by the New York officers, as he anticipated would be the case. Both theories are plausibly supported, but neither is entirely satisfactory. Upon the one hand, it is difficult to see why he did not at once lay the matter before the New York officers, and, upon the other, if he was conscious that his records would incriminate him, we are at a loss to understand why he should have taken pains to restore and preserve them after their partial destruction in the San Francisco fire, and especially after he knew that the only outstanding copies or duplicates had been totally destroyed. So of the incident of the proposed lease of the lands belonging to the company lying near those in suit, to a subsidiary organization, for mineral exploration. In one aspect, his objection to such lease would seem to imply a knowledge or belief that the lands in question were valuable for oil, and, upon the other, he plausibly explains that in view of the known attitude of the General Land Office and the prevailing speculation as to oil in the general locality of these lands, for the appellant to lease these or other lands which it owned in close proximity, for mineral exploration, would naturally arouse a suspicion on the part of the land officials that it, the applicant, had undisclosed information that the lands were valuable for oil, which, even though without foundation in fact, would be sufficient to cause an indefinite suspension of the application for patent.
3934 But whatever view may be taken of these incidents, manifestly neither the mental nor the moral attitude of Eberlein furnishes any substantive evidence touching the real character of the land or the controlling issue which we must decide. In this respect the case is readily distinguishable from the Diamond Coal case, where the company's superintendent was not only personally acquainted with the lands and all their surroundings, but was well-informed upon the subject of coal mining, and competent to form an intelligent judgment. Eberlein knew nothing about oil, was never upon the lands, and personally was unfamiliar with local conditions. One of his assistants, of whom he inquired, had a general knowledge of the lands; the company maintained other agencies for securing information touching land selections, to which, however, he seems not to have resorted. Apparently he entertained a view of the law prevailing in some quarters that the only investigation required before making application for patent was of the surface conditions upon the lands applied for. Upon recently coming to the land department of the

company he found selections under the grant in arrears, and if we say that he was anxious to make selections before all the available lands were gone; that he hoped that these lands would ultimately turn out to be oil lands; that he was anxious to procure patent before there should be such development upon, or in close proximity to, them as might demonstrate that his hope was not without substance; and that he had some vague fear that other representatives of the company had information or belief inconsistent with his representations, or would take a course tending to cast discredit thereon, and compromise him, his conduct may be explained better than by any other theory which has been suggested.

It is further contended that it was generally believed in the community in 1903 and 1904 that these lands contained valuable oil deposits. Some witnesses confirm and others deny the prevalence of such belief. Of course mere popular opinion upon such a subject is of no value. As already suggested, to amount to knowledge, the "belief" must be the rational conclusion or the scientific deduction of one who is qualified by experience or learning to form an intelligent judgment. Referring to coal, for illustration, would not nine out of ten ordinary men consider an outcrop sufficient to warrant a "coal location", especially if the venture entailed only a nominal expense. The outcrop would probably engender in the ordinary man a belief in the existence of an underlying coal bed. But, as stated in the Diamond coal case, the belief that rests upon "a mere outcropping of coal, with nothing pointing persuasively to its quality, extent, or value," is insufficient. And inasmuch as exploration for oil is admittedly subject to greater contingencies than coal, empirical belief relative to its occurrence is correspondingly less reliable. (And see the pertinent language hereinbefore quoted from Sullivan v. Iron Silver M. Co., 143 U. S. 431, 435, 436.) Moreover, it is difficult, after the lapse of years and the change of conditions, to reproduce a faithful picture of the state of mind existing in 1903 and 1904. It is easy enough for one who shared in the optimism characterizing the oil boom of 1900 and 1901 now unconsciously to project that feeling over in 1903 and 1904, or unconsciously to relate to that period the persuasive influence of more recent discoveries, better methods of extraction, and improved marketing conditions. Between 1904 and the time the testimony was taken, there had been a material increase in the price of oil. A railway had been extended up into the Midway valley. A Government Bulletin had been issued suggesting the view that oil would probably be found nearer the surface in the Elk Hills than had theretofore been thought probable. But most important of all perhaps was the striking of an enormous flow of gas in the Honolulu well in the Buena Vista hills, at a depth of about seventeen hundred feet, and the subsequent striking of oil in the same well. It is to be inferred that considerable excitement followed this discovery. The gas was encountered in July, 1909, oil in the

3935

3936

spring of 1910, and a few months later, in December, 1910, this suit was instituted, and thereafter, in due time, the testimony was taken. Whether these and other conditions, nonexistent in 1903 and 1904, had anything to do with the commencement of the suit, it is unnecessary to inquire. It is sufficient to say that no suit was brought or testimony taken until after the conditions arose, and that consideration of such new conditions must of necessity have given a measure of color to the testimony. The outstanding and undisputed fact is that, if there was faith at all in 1903–4, it was faith without works. While development was going on in the McKittrick-Midway-Sunset belt, there was an absolute want of activity in the Elk Hills. Not only was there no expensive exploration, but locations were being permitted to lapse, and there was not even sufficient interest to induce locators to maintain their rights by the comparatively inexpensive device of relocation. Moreover, although defendant's application was pending for a year, and it embraced lands covered by numerous locations, and though notice of its pendency was given by publication, as required by the regulations of the land department, no objection was raised either by the general public or the parties interested in the oil locations. In the meantime the department had sent a special agent to make inspection, and he had reported that the lands were non-mineral. True, his examination was hasty and superficial, but there is no suggestion of fraud or bad faith upon his part. Both he and his superiors at Washington had knowledge of the fact that although the lands had, for over three years, been under suspension from agricultural entries, no serious effort was being made by any one of the numerous locators to demonstrate the existence of oil in commercial quantities or to acquire
3937 title. And under such circumstances it is perhaps not strange that they readily concluded the land was non-mineral.

Let it be granted that the market for petroleum products was low at that time, and transportation facilities meager, and that capital was conservative, the fact remains that although, by the earlier boom, the attention of the experienced and inexperienced, the informed and uninformed, all classes—capitalist as well as promoter—had been drawn to this territory, and though in the near-by McKittrick-Midway-Sunset belt both exploration and operation were going forward, the defendant company was permitted, after public notice, to acquire a patent without opposition, protest, or question. It is difficult to reconcile such facts with the theory that it was generally believed that the lands were valuable for their petroleum content.

Without further discussion, our general conclusion is that the lands were not, in 1903–4, known to be valuable for their mineral. The conditions were such only as to suggest the probability that they contained some oil, at some depth, but nothing to point persuasively to its quality, extent, or value. Or, putting it in another way, the conditions were such as to suggest the possibility of oil in paying quantities, and to induce the more venturesome,—such as were willing

to take chances,—to prospect the field; but we are satisfied they were not "plainly such as to engender the belief" that any given section or other legal subdivision contained oil of such quality and quantity, and at such depth, as would render its extraction profitable. Having reached this conclusion, we deem it unnecessary to decide whether the evidence offered by the appellants touching exploration and development work within and near township 30–23, since 1904, which they contend demonstrates that the lands are not valuable for oil, is relevant for any purpose.

The decree will be reversed, with directions to dismiss the bill.

THE SOUTHERN PACIFIC COMPANY, ET AL., APPELLANTS,
vs.
THE UNITED STATES OF AMERICA, APPELLEE.
} No. 2958.

Assignment of errors on appeal to the Supreme Court of the United States.

Comes now the United States of America, by direction of the Attorney General, and assigns error in the decree of the United States Circuit Court of Appeals for the Ninth Circuit entered in the above-entitled cause May 6th, 1918, as follows:

1. Error in finding and deciding, contrary to the facts set forth in the bill of complaint and established by the evidence, that the lands embraced in the patent dated September 12, 1904, from the United States to the Southern Pacific Railroad Company, were not mineral lands excluded from the operation of the grant made by the act of Congress approved July 27, 1866, 14 Stat. 292, and joint resolution No. 87, approved June 28, 1870, 16 Stat. 382, under which said patent was issued.

2. Error in not finding and deciding, as set forth in the bill of complaint and established by the evidence, that the patent dated December 12, 1904, from United States to the Southern Pacific Rail-
3942 road Company, was procured through fraud of the railroad company, in that said company falsely represented to the Land Department of the United States that the lands embraced in said patent were non-mineral and of the character granted by the act of Congress approved July 27, 1866, 14 Stat. 292, and joint resolution No. 87, approved June 28, 1870, 16 Stat. 382, under which said patent was issued.

3. Error in reversing the decree of the District Court of the United States for the Southern District of California, entered August 9, 1915, with directions to dismiss the bill of complaint.

ALBERT SCHOONOVER,
Special Assistant to the Attorney General.

(Endorsed:) Petition for and order allowing appeal to Supreme Court U. S., and assignment of errors. Filed July 1, 1918. F. D. Monckton, clerk, by Paul P. O'Brien, deputy clerk.

vs.
THE UNITED STATES OF AMERICA, APPELLEE. } No. 2958.

Praecipe for Transcript of Record on Appeal to the Supreme Court of the United States.

To the clerk of the said court:

SIR: Please make and furnish me with a certified transcript of the record (including the proceedings had in said Circuit Court of Appeals), for use on appeal to the Supreme Court of the United States in the above-entitled cause, the said transcript to consist of a copy of the following:

1. Printed transcript of record on which the cause was heard in said Circuit Court of Appeals, to which will be added a typewritten copy of the following-entitled proceedings that were had, and of the papers that were filed in said Circuit Court of Appeals, viz:
2. Order of submission, entered May 10, 1917;
3. Order directing filing of opinion, etc., entered May 6, 1918;
4. Opinion, filed May 6, 1918;
5. Decree, filed and entered May 6, 1918;
6. Order, filed June 5, 1918, staying issuance of mandate;
7. Petition for an order allowing appeal;
8. Assignment of errors;
9. Original exhibits;
10. Praecipe for transcript of record;
11. Certificate of clerk, U. S. Circuit Court of Appeals to said transcript;
12. Citation on appeal.

ALBERT SCHOONOVER,
Counsel for Appellee.

Service of a copy of the within praecipe is admitted this 1st day of July, A. D. 1918.

CHARLES R. LEWERS,
JOSEPH H. CALL,
GUY V. SHOUP,
Counsel for the Appellants.

(Endorsed:) Praecipe for Transcript of Record on Appeal to the Supreme Court of the United States. Filed July 1, 1918. F. D. Monckton, clerk.

Certificate of clerk U. S. Circuit Court of Appeals to Transcript of Record upon Appeal to the Supreme Court of the United States.

I, Frank D. Monckton, as clerk of the United States Circuit Court of Appeals for the Ninth Circuit, do hereby certify the foregoing three thousand nine hundred and forty-three (3,943) pages, numbered from and including 1 to and including 3943, marked respectively, Volume I, II, III, IV, V, VI, to be a full, true, and correct copy of the record made pursuant to the praecipe filed by counsel for the appellee on the first day of July, A. D. 1918, under Rule 8 of the Rules of the Supreme Court of the United States, in the above entitled cause, including the Assignment of Errors on appeal to the said Supreme Court, and of all proceedings had and of all papers, including the opinion filed in said Circuit Court of Appeals in the above-entitled case, as the originals thereof remain on file and appear of record in my office, and that the same, together with the accompanying original exhibits, viz: Plaintiff's Gleaves-A to Gleaves-G, incl., Veatch-I, Martin-K, Hubbard-M, N, Martin-O, P, Q, R, Veatch-S to Veatch-Y, incl., Z, Veatch-AA, BB, CC, DD, Eberlein-EE to Eberlein-ZZ, incl., Hill H^a to $Hill^4$, incl., Sarnou J-1, Sarnou J-2, Shreve L., AAA to HHH, incl., QQQ to ZZZ, incl., 4-A to 4-W, incl., $4-H^1$, $4-H^2$, Taff-5H to Taff-5K, Kruttschnitt 5-L to Kruttschnitt 5-O, 5-P to 5-X, incl.; Treadwell 5-Y, Treadwell 5-Z, Treadwell 6-A, Winsor 6-B to Winsor 6-P, incl., 8-Z, 9-A to 9-Z, incl., 10-A to 10-L, incl., Williams 10-M to Williams 10-P, incl., 10-Q to 10-Z, incl., 11-A to 11-Z, incl., Kingsbury 12-A to Kingsbury 12-L, incl., Stewart 12-N, Stewart 12-P, Stewart 12-R to Stewart 12-X, incl., 12-Y, 12-Z, 13-a to 13-C, incl.; defendants' 1-4, Overton 5, Overton 6, 10, Thompson 12, Preetzman 13, 14, 15, Luke 16, Anderson 17 to Anderson 28, incl., Shaw 29 to Shaw 62, incl., Shaw 63 to Shaw 108, incl., Taff 113, Taff 114, Dumble 115 to Dumble 160, incl., Kruttschnitt 161 to Kruttschnitt 165, Shay 166-a, Shay 166-b, 167 to 171, White 172, 173, White 174 to White 178, Russell 179, Treadwell 180, Treadwell 181, Armstrong 182 to Armstrong 184 Bass 185 to Bass 188, Nevil 189 to Nevil 192, 193 to 200,
3945 Kingsbury 201 to Kingsbury 203, Stewart 204, Stewart 205;

and miscellaneous exhibits: Book, documents and evidence, part of record on appeal, not to be printed, per stipulation; package of papers and pamphlets, deposited with special examiner, not requested to be marked exhibits, constitute the Transcript of Record upon Appeal to the Supreme Court of the United States in the above entitled cause, as made and certified pursuant to the said praecipe.

Attest my hand and the seal of the said the United States Circuit Court of Appeals for the Ninth Circuit at the city of San Francisco, in the State of California, this 6th day of July, A. D. 1918.

[SEAL.] F. D. MONCKTON, *Clerk*,
By PAUL P. O'BRIEN, *Deputy Clerk*.

3946 United States Circuit Court of Appeals for the Ninth Circuit.

THE UNITED STATES OF AMERICA, APPELLANT,
vs.
THE SOUTHERN PACIFIC COMPANY ET AL., APPELLEES. } Citation.

To the Southern Pacific Company et al.:

You are hereby cited and admonished to be and appear in the Supreme Court of the United States at the city of Washington, in the District of Columbia, sixty (60) days after the date of this citation, pursuant to an appeal allowed and filed in the clerk's office of the United States Circuit Court of Appeals for the Ninth Circuit, wherein the United States of America is appellant and you are appellees, to show cause, if any there be, why the decree reversing the judgment of the United States District Court for the Southern District of California, Northern Division, in the above entitled cause, as in said appeal mentioned, should not be corrected and why speedy justice should not be done to the parties in that behalf.

Witness the Honorable William H. Hunt, Judge of the United States Circuit Court of Appeals for the Ninth Circuit, this first day of July, 1918.

WM. H. HUNT,
Judge of the United States Circuit Court of Appeals, Ninth Circuit.

Service accepted and copy received of the foregoing citation this first day of July, 1918.

SUPREME COURT OF THE UNITED STATES

OCTOBER TERM, 1918

No. 585

UNITED STATES OF AMERICA,
Plaintiff and Appellant,

v.

SOUTHERN PACIFIC COMPANY, et al.,
Defendants and Appellees.

BRIEF FOR APPELLEES.

Statement of Case.

a. Nature of Suit.

This is a suit brought by the United States, on December 10, 1910, against the Southern Pacific Railroad Company (and others claiming under the railroad company) to cancel a patent issued to this railroad company on December 12, 1904. This patent was issued under the authority of the Congressional grant of July 27, 1866 (14 Stat. 292) and conveyed 6109.17 acres of what are defined as indemnity lands in this grant, that is, lands situated in odd numbered sections more than twenty and less than thirty miles from the line of the railroad. These lands are situated in Township 30 South, Range 23 East, Mount Diablo Meridian, in Kern County, Cali-

fornia. They lie in a low range of hills, called the Elk Hills, near the southern margin of the great central valley of California, the southern part of this great valley being known as the San Joaquin Valley.

The charge in the bill of complaint is that the railroad company knew that these lands in the Elk Hills contained valuable deposits of oil when it filed its selection list in November, 1903, and when it obtained its patent on December 12, 1904, and that it concealed this knowledge from the government. The answer of the railroad company denies this charge and alleges in addition that the lands in suit were not only not known or believed to be valuable for oil at the time they were patented, but are, even now not known to contain oil. Voluminous testimony was taken before a commissioner of the court. No evidence was taken before the trial court itself. A decree was given by the District Court in favor of the government as to all the lands sued for. This decree was reversed by the Circuit Court of Appeals on the ground that the evidence was insufficient to establish the government charge (249 Fed. 794). The case is before this Court on appeal by the government from this decision of the Circuit Court of Appeals.

b. Situation of lands sued for.

The southern end of the great basin of the San Joaquin Valley, in which the lands in suit are situated, is formed by the junction of the Sierra Nevada Mountains on the east and the Coast Range Mountains which swing around from the west, that portion of the Coast Range which borders the south end of the San Joaquin

Valley being given the local name of "Temblor Range". This range has an elevation of from three to four thousand feet above the level of the San Joaquin Valley.

The Elk Hills cover an area about six miles broad and fifteen miles long, the lands in suit being near the middle of this area. The position of these hills and of the lands in suit with reference to the surrounding region is shown on Map No. 1 in the Appendix to this brief. At the western end of these hills, near the town of McKittrick, they are about four miles out from the Temblor Range. Toward the east they diverge from the line of the valley border until at their eastern end near Buena Vista Lake they are fully fifteen miles out in the valley. Another low range of hills, known as the Buena Vista Hills, lies between this eastern end of the Elk Hills and the Temblor Range, about four miles from the latter.

c. Brief outline of history of oil development in this region.

At the time these lands were selected and patented no discovery of oil had been made within their limits or nearer to them than four miles (R. 1729). It is also conceded that up to this moment no oil has been found in any of the ten sections in suit. In 1911 and 1912 a small amount was found in three even sections near the east border of the lands in suit, but this was not in commercial quantities and was obtained at a depth beyond practical drilling as carried on in 1904 (R. 1984-8, 3122-6).

In 1899, as the result of the sensational discovery of oil in the "Kern River field" near the town of Bakers-

field, about thirty miles east of the lands in suit, and also at McKittrick, a few miles west of the lands in suit, an "oil boom" developed in this region during which speculative "locations" for oil were made over a wide extent of territory along the border of the southern end of the San Joaquin Valley. No wells were drilled by these locators and their "claims" were allowed to lapse (R. 501-2). It is conceded that none of these men ever discovered a drop of oil in the lands in suit or in their immediate vicinity.

These locators were not practical oil men, and the character of their operations is well indicated by one of them, W. G. Sylvester, who testified for the government (R. 358-60). He was a dentist and knew nothing about oil, but joined in the rush. Although bound for another locality, he located in the Elk Hills because they "were probably as good as the rest". He had no idea that a discovery was necessary and says that his plan "was to cover as much territory with proper notices and monuments as possible".

This "oil boom" of 1899 also led to the filing of many forest lieu and other agricultural selections in the same region. Protest was at once made by oil locators against these selections. On February 21st and 28th, 1900, following the receipt of these protests, the Commissioner of the General Land Office sent telegrams to the local land officers withdrawing nearly fifty townships from "disposition". These townships were situated along the south and west border of the San Joaquin Valley and included the township in which the lands in suit lie (Exhibit QQQ, R. 1524).

It has been claimed by counsel for the government that this withdrawal suspended even mineral entries and that for this reason those who had made "locations" in the Elk Hills did not proceed to actually drill for oil. This, however, was not the fact. In a letter from the Commissioner to the local land officers dated July 19, 1900, it was stated that "these suspensions do not include mineral lands" (U. S. Geological Survey Bulletin No. 623 "Petroleum Withdrawals and Restorations" page 79), and in a later letter of the Commissioner, dated October 23, 1903, directing a special agent to examine the lands now in suit in connection with the railroad selections, it was again stated that these lands had been "suspended from disposition under the agricultural land laws on account of their alleged mineral (oil) character by telegrams 'P' of February 21 and 28, 1900" (R. 1542).

The same withdrawal included all the lands in the McKittrick, Midway and Sunset Districts, west and south of the lands in suit, in which there was extensive drilling for oil under mining locations from 1899 on, as already related. This development went on in spite of the withdrawal, which indicates that it was generally understood by oil men that their operations were not subject to the withdrawal. The inapplicability of this withdrawal to mineral locations was further evidenced in July, 1900, by a decision of the United States Circuit Court in the district where these lands lie in a bitterly fought contest between the "scrippers" and the "oil locators" (*Olive Land and Development Co. v. Olmstead*, 103 Fed. 568, 578).

The withdrawal of the lands in suit from disposition under the agricultural land laws persisted until February 11, 1904, when they were relieved from suspension. This was due to the report of the special agent of the General Land Office above referred to, E. C. Ryan, who reported to the Commissioner that he had made a careful examination of these particular lands and had found nothing "of any kind that would tend in my opinion to warrant said lands being classed as mineral in character".

His conclusions coincided in this respect with those of the practical oil men of the region. The fact is, as clearly appears from the exhibits introduced on each side (Plaintiff's exhibits Ha to Hd; Defendant's exhibit 13, which is a copy of the California State Mining Bureau Report for 1904) and from the evidence of witnesses to which reference will later be made, that until several years subsequent to the date of the patent now in suit the attention of practical oil men was confined entirely to scattered portions of a narrow strip of land many miles from the Elk Hills and along the base of the Temblor Range, where the sedimentary beds carrying the oil emerged from beneath the floor of the valley and had been uplifted by the elevation of the Temblor Range in past geologic ages.

Subsequent to the patent now in question this development crept slowly out farther into the valley until in 1908, 1909 and 1910 the wonderfully rich Midway field was developed from six to ten miles south of the lands in suit. At McKittrick, however, which is the region

nearest the lands in suit, it was found that the productive oil area did not extend out towards the valley but was confined to very narrow limits (R. 1728, 1842, Exhibit 116).

By 1910 the wells had progressed from the base of the Temblor Range as far as the Buena Vista Hills, which lie between the Elk Hills and the Temblor Range, and here in February, 1910, a well encountered a large flow of gas and oil (R. 1994). The man who drilled this well testified that on the day following this discovery he looked across the valley to the northwest and saw many drilling outfits being hastily moved over into the Elk Hills to begin work there, the discovery in the Buena Vista Hills having encouraged oil men to seek for oil even as far away as the Elk Hills (R. 1994).

The drilling done by the men who entered the Elk Hills as a result of the discovery of oil in the Buena Vista Hills was the first that was done in the township now in suit and in its immediate vicinity. The evidence shows that from 1910 to 1912 these men drilled thirty-six wells (See Exhibits O and 16) in these hills, some to a depth of over four thousand feet (one near five thousand feet), at a total cost of approximately two million dollars.* Only three of these wells found oil at all and these three were closed down after producing 9941 barrels of oil at a cost of $517,613.94 (R. 3122-6).

This suit was started during the height of the drilling excitement in the Elk Hills in 1910.

* The locations and depths of these wells are shown on Exhibit 16 reproduced as Map No. 6 in Appendix to this brief.

d. Selection and patent of lands in suit.

As already stated, the lands in suit lie in Township 30 South, Range 23 East, Mount Diablo Meridian, and are indemnity lands. They were surveyed in 1902 but the official plat of survey was not approved and filed in the local land office until May 16, 1903 (R. 3761). Thereupon for the first time these lands became subject to selection by the railroad company. C. W. Eberlein became land agent of the railroad company in August, 1903. He was immediately impressed by the fact that indemnity selections had been neglected by his predecessor and that large areas had thus been lost (R. 1154-5). He made inquiry whether any recent surveys had been made and, learning of the survey of the lands in question, he at once directed that a selection be made of these lands (R. 1157-8). His assistant, G. A. Stone, land grader for the company, was familiar with these lands from having been in that region frequently and assured Eberlein that they were non-mineral lands (R. 1028-9, Stone; 1088, 1137, Eberlein).

This selection list was filed in the local land office on November 14, 1903, accompanied by the affidavit of C. W. Eberlein stating that the lands were not "interdicted mineral lands", and that they had been examined by employees of the company and that "to the best of his knowledge and belief" none of them were mineral lands (R. 3754, 3829, 3832).

This selection was rejected by the local land office on November 17, 1903, on the ground that the lands had been suspended from entry by the general withdrawal

order of February 28, 1900, already referred to (R. 3756-7). On December 11, 1903, the railroad company filed an appeal from this rejection (R. 3863-7). In the meantime the railroad company had applied to the Commissioner of the General Land Office through its local attorney in Washington to have an examination made of these lands by some agent of the government to determine whether they were oil lands (R. 1544). E. C. Ryan, a special agent of the Land Office, was directed by the Commissioner to examine these lands and report whether they should be released from the suspension which had been made in 1900 on the supposition that they were oil lands (R. 1547). On January 22, 1904, Ryan reported to the Commissioner on this land (and on 480 acres several miles away), saying, "I have the honor to report that on January 10th, 11th, 12th, 13th and 14th, 1904, I made a careful examination of the lands in question and found no oil seepages, oil springs, surface or other indications of oil or minerals of any kind that would tend, in my opinion, to warrant said lands being classed as mineral in character, and I respectfully recommend that they be relieved from suspension" (R. 1550).

On February 11, 1904, the Commissioner wrote the local land officers reciting the substance of the Ryan report and directing that these lands be relieved from the oil suspension (R. 1555-6). The selection list was thereupon reinstated on February 26, 1904 (R. 3768, 3835). As part of the lands were within six miles of known mining claims, posting and publication of the selection list was ordered on March 5, 1904 (R. 3836).

The list was published in a daily newspaper of general circulation in the county where the lands are situated from April 14th to June 14th, 1904 (R. 3858-9). No contests or objections were filed (R. 3861). The Commissioner of the General Land Office asked for a change in the description of some of the base lands in this list and a rearranged list was filed on September 6, 1904, containing affidavits of C. W. Eberlein similar to those in the original application (R. 3771, 3837-51). The selected lands are the same in both lists (R. 3775). Following this, patent was duly issued on December 12, 1904 (R. 19-23).

Argument.

A. GENERAL OUTLINE OF GOVERNMENT CASE.

1. Character of evidence offered.

As already stated, no wells have been drilled on the lands in suit and no oil has been discovered on them. When the patent was obtained in 1904, the nearest discovery of oil in commercial quantity was in Section 29 of the township to the west, four miles from the nearest land in suit and in a different geological structure (R. 1729).

This being true, no evidence was produced or could have been produced to show that it was known by anyone in 1904 that valuable deposits of oil actually existed anywhere in the Elk Hills. The evidence on both sides shows a singular unanimity of opinion to the effect that the existence of commercial deposits of oil in any tract can be determined only by means of the drill.

The government was therefore compelled to rely entirely on opinion evidence. All of this evidence falls within the following classes:

First. Evidence of men who made speculative "locations" for oil in the Elk Hills during the excitement following the Kern River discovery in 1899. These "locators" drilled no wells, discovered no oil, and, with hardly an exception, abandoned their "claims" before 1904. They testified that they made their locations because they believed the Elk Hills to be "oil land". They also testified to the existence of an "oil seepage" in the township to the east of the lands in suit as well as other "indications" of oil in these hills.

Second. Evidence of geological experts who, on the basis of recent examinations, gave their conclusion that the Elk Hills were of such structure and in such position, in regard to productive oil territory and surface indications of oil in the region about, that the agents of the railroad company *ought* to have recognized their "oil character" in 1904. As will be shown later by reference to their testimony, they did not claim that the actual existence of oil could have been determined by them except by means of wells.

Third. Hearsay evidence of supposed statements by a deceased railroad geologist and by other railroad employees indicating that they believed in 1903 and 1904 that oil *might* be found in the Elk Hills. This evidence, as will be shown later, is contradicted by the contemporaneous statements, maps and reports given by these same men to their railroad associates and others.

Fourth. Correspondence and acts of railroad agents, particularly of C. W. Eberlein, land agent of the company, claimed to indicate a belief or hope in 1904 that the lands in suit might turn out to be valuable for oil, but not showing knowledge or discovery of oil or actual belief in its existence.

All of this evidence, as well as that given in reply by the defendants, will be hereafter discussed in such detail as is necessary to show the few ultimate facts upon which the decision in this case must rest.

Stripped of all that is but surmise or suspicion of fraud, the government evidence, taken at its face value and without regard to that given in defense, would show

only that these lands were selected at a time when it was believed or, rather, *hoped* by someone that oil might be found somewhere within them. It does not show that oil was actually known to exist in a single section in the Elk Hills. It could not be determined from this testimony that a *valuable* deposit of oil existed anywhere. Whether, if it did exist somewhere, it was within the reach of the drill is not disclosed. Opinion or surmise that oil might exist, at an unknown depth, from four to ten miles from its nearest *known* occurrence is not convincing proof that the conditions in 1904 "were plainly such as to engender the belief that the land contained mineral deposits of such quality and in such quantity as would render their extraction profitable and justify expenditures to that end *(Diamond Coal Co. v. U. S.,* 233 U. S. 236, 239).

The "belief" here referred to must be more than mere surmise or hope or conjecture. It must be a belief practically tantamount in its effect to actual knowledge, that is, a belief based on facts so complete as to exclude rational doubt. Even actual knowledge (or such a fully warranted belief) on the part of the railroad agents would not justify the relief here asked by the government if it went merely to the existence of *some* oil *somewhere* within the area sued for. This knowledge (or belief) must be shown to have also comprehended every element of location, quantity and quality which would have given this oil commercial availability and value under conditions then existing. Without such knowledge there could be no fraud, that is, there could be no consciousness that the government was being deprived of land which it ought to retain.

We shall show that the entire case of the government is based on a theory which leaves out of consideration all questions of extent, position, availability or value of oil within the disputed areas. On the contrary it frankly attempts to obtain a decree on the ground that every acre in suit has that nebulous thing termed an "oil value", that is, a speculative value, because the surroundings are claimed to promise that perchance oil will be found *somewhere* in the Elk Hills.

2. The government relies on proof of mere belief or speculation as to possible mineral character and not on proof of knowledge of actual mineral character.

a. Reasons which caused government to adopt its theory.

The election of the government to try this case on the theory just stated was compelled by the facts. Oil, unlike coal which stays where it was formed, is a fugitive substance, subject to so many unseen underground influences and movements that it has become a truism among oil men that the drill alone can determine its existence and amount (R. 485). At the time this suit was started much had been written about the California oil fields by government geologists, particularly by Mr. Ralph Arnold, a distinguished oil geologist connected with the United States Geological Survey. His conclusion concerning the prediction of oil in undrilled territory was thus stated by him in a bulletin published in 1907: "Anyone at all familiar with the conditions of occurrence of petroleum in the California fields knows that any but the most tentative predictions as to the location of oil are extremely hazardous" (R. 926). In another government bulletin by the same

author published in 1910 (Exhibit 10), in which he discusses the very region now in question, he said (p. 16) that "for furnishing definite information regarding the occurrence of the oil in any particular area there is just one instrument that may be relied upon, and that is the drill."

In addition to this conceded uncertainty concerning the occurrence of oil in untried territory, the government was confronted with the further difficulty that the lands in suit lie in a geological structure which in 1904 had not been tested at any point. It is generally understood among oil men in California that anticlinal structures in sedimentary formations offer the best promise for the accumulation of oil. This is due to the fact that oil, being lighter than water, is usually driven by the latter into those formations which are highest. Whether or not this has actually occurred in any anticline, such as that formed by the elevation of the Elk Hills, for instance, depends on whether there was any oil so situated that it could be drawn into the anticline, whether there is a porous sand or other formation to serve as a reservoir, and on many other facts which must await the test of the drill (R. 675).

Occasionally some of the great initial uncertainties as to a portion of an anticline or dome may be removed by the drilling of wells on another part of the same structure. In the present instance, however, this had not been done in 1904. The nearest existing wells (R. 1729) were on the McKittrick anticline to the west, from four to ten miles from the lands in suit and separated from them by a deep synclinal depression

(R. 2180). The productive area on the McKittrick anticline is very narrow and wells drilled on the side toward the Elk Hills have encountered water instead of oil (R. 2184-5). The development to the southeast of McKittrick in 1904 was along the base of the Temblor Range and still farther removed from the Elk Hills' structure (Exhibit 10, U. S. G. S. Bulletin 406, Plate 1).

It thus appears that the government at the outset of this suit was placed in a position making it manifestly impossible to obtain proof that the lands in suit were actually known to anyone to contain valuable deposits of oil. The only alternatives presented were to dismiss the suit or to attempt to sustain it by the proof of a speculative value of these Elk Hills lands as an oil *prospect*. This latter alternative was chosen regardless of the direct and specific charges in the bill of complaint that the defendants actually *knew* at the time of the patent that all of these lands contained *valuable deposits of oil*.

b. Evidence of unskilled witnesses.

The witnesses called by the government to prove the "oil character" of these lands consisted of two classes. The first were men of little or no practical or theoretical training in the search for oil. Most of these had made speculative locations in the Elk Hills during the oil boom of 1899. A few of these men were drillers, one or two had had some experience as producers of oil, but most of them were teamsters or farmers or followers of occupations not connected with the oil industry. The second group of witnesses were men

either of extensive experience in the oil business or of special skill as geologists.

We have inserted in the margin* a summary of the testimony of the first class of witnesses mentioned, giving literally or in substance their conclusions concerning the character of the region in suit. Nearly all of the witnesses based their conclusions on a supposed "gas blowout" or "oil seepage" on Section 32 of Township 30-24, just to the east of the township in which the lands in suit are situated. As will be shown hereafter (post p. 93), this supposed oil or gas seepage is merely a recent surface organic deposit having no relation to oil.

It is to be noted that these witnesses did not pretend to say that there is a valuable deposit of oil at any place in the lands in suit. In general their conclusions

* "I regarded the Elk Hills at that time as oil territory."—S. P. Drouillard (R. 117). "Thought it was good for oil * * * but deep."—L. G. Sarnow (R. 135). "Had a very high opinion of that land as oil territory."—F. D. Lowe (R. 151-2). "The formation was there to show that it was oil producing territory."—I. M. Anderson (R. 156). "I think it is good as oil territory."—M. S. Wagy (R. 180). Thought the Elk Hills was "a prospect * * * that would warrant taking a chance on."—J. I. Wagy (R. 261). "It was the general belief * * * that the Elk Hills were oil territory."—W. E. Ott (R. 277). "I regarded the Elk Hills * * * as oil lands."—I. N. Chapman (R. 315). Owen (railroad geologist, now dead) regarded the Elk Hills as "oil territory" in 1904—S. P. Wible (R. 321). Owen told me "before 1904" that the Elk Hills were "good oil territory" but "would be very deep".—Charles Brisco (R. 337). In 1904 Owen said "he thought there was oil there but that it was very deep and it wouldn't pay to go after it."—C. F. Haberkern (R. 350). "I believed that the indications in the Elk Hills were good. The prospects were, and that is all you ever 'wild-cat' on—your belief or expectations. * * * This was then an unknown field."—H. A. Blodget (R. 367, 395). I thought the Elk Hills were "favorable for oil property."—H. P. Dover (R. 462). "I regarded that as possible prospective oil territory * * * It was more of a gamble that it would be at those places closer to the croppings."—C. F. Whittier (R. 475, 477). "I thought there was a good probability of the lands in 30-23 * * * proving to be oil lands."—M. T. Hubbard (R. 491). "I was satisfied that there was a fair chance of getting oil there. * * * At that time it had no value as actual oil territory. * * * We were advised by experts that in all probability it was an oil country."—N. C. Farnum (R. 497, 510, 516). "I certainly regarded the Elk Hills at that time as good oil territory."—C. W. Lamont (R. 581).

apply to the entire range of the Elk Hills, including more than fifty sections. They defined this broad region as "oil territory" or "oil lands". These expressions are obviously vague and inexact. They may mean lands actually valuable because they contain a great deal of oil or merely lands which contain *some* oil. A careful analysis of all this testimony shows, moreover, that actual oil in the ground—whether in large or in small quantities—did not especially enter into the formation of their conclusions. To most of them the expression "oil land" meant only that the entire region had a speculative value, not for oil, but for *prospecting* in the *search* for oil. Nearly every one of these witnesses had made "locations" in these hills during the oil excitement of 1899 and 1900 and had held them for a time in the hope that some stranger would take them off their hands. The fact that they each and all abandoned these locations soon after they were made indicated to the Circuit Court of Appeals "that if there was faith at all in 1903-4, it was faith without works" (249 Fed. 785, 804).

c. Evidence of government expert witnesses.

The essentially fictitious character of the government's contention as to the "oil value" of those lands is made even more apparent by the testimony of its witnesses who claimed special skill either as practical oil men or as geologists. They were few in number and their evidence in this regard may be briefly summarized.

W. E. Youle, who had had nearly fifty years experience in the production of oil and who had been one of

those who located claims in the Elk Hills in 1899, but who never actually attempted to produce oil on any of these claims although actively engaged in drilling only a few miles away, said that "intuitively" these hills "looked good" to him (R. 553). Further, he said, "a geologist will say of all of those hills toward the Elk Hills and that whole country, 'there is good oil territory' but as to the depth, I don't see how they can tell. They endeavor to tell but the drill is the proof of it" (R. 564). * * * "Water streaks go through any formation. That is why the oil business is a gamble. It is because there is no man, geologist, expert or anything else, who can tell you where these faults are. There may be a world of oil there; there may be a tight streak of sand filled up with clay that won't let the oil through, and you might drill right into that spot. You cannot look down and see; you may be in the wrong place" (R. 566). * * * "The oil business is a gamble. It is not like farming. You just bet that you don't go down that deep and that territory was good to have bet on. If you win once in four or five times, you make a lot of money. That is the reason I would have advised people to spend $50,000 or $100,000 there. I wouldn't advise widows and orphans and dishwashers and cooks who could not risk money; but if you wanted a chance to make a million dollars, I would pick the Elk Hills quicker than any piece of land in there, because the formation justifies what I say" (R. 577). * * * "The fact that oil is found in one section is not evidence that it may be found in every section in the township. There may be kidneys. Oil is not contained like a river underground, but in

kidneys. While you are in the oil sand all the time, we know by experience that there are dry holes drilled in oil sand" (R. 578).

This witness summed up his conclusions as to the *value* of these hills thus, "From my observation and examination in those hills, I would not have advised that they be sold for their agricultural value * * *. I most assuredly would have advised my employer to acquire the lands at a price in excess of their agricultural value because of their oil possibilities" (R. 576). He did not attempt to say that oil actually existed in any particular place. This, he frankly conceded, could be determined only by the drill. Nor would he attempt to predict that the possible oil plane was within the reach of the drill. And, finally, the only *value* he was able to place on these lands was a conjectural value "in excess of their agricultural value" because of their oil "*possibilities*" and not their oil realities. His strong impression as to the uncertainty of the prediction of the actual existence of oil is shown by his statement at another place that "there is nothing there until you drill a well" (R. 567).

The only other practical oil operator of long experience called by the government as a witness was Frank Barrett. He testified that he made an expert examination of a portion of the Elk Hills in 1899. This was during the general oil excitement when locations were being made nearly everywhere in the vicinity of the oil fields (R. 517). He claimed that he then made a favorable report to the man who employed him to make this examination, although the evidence discloses that the

employer did not attempt to drill in the Elk Hills but directed his attention elsewhere (R. 479, Barrett; 505, Farnum). But Barrett did not pretend to say that he considered any part of the Elk Hills as *actual* oil land. "I could not have said, 'This is known oil territory' ", he testified, "I could only have said, in my opinion it would prove to be such. * * * The oil doesn't always appear where they say it will. The true expert is the drill. You couldn't say that a territory is known oil ground till you put a drill in it" (R. 485). Again he said, "I have observed promising indications very frequently that didn't pan out. The oil business is a good deal like elections" (R. 485). In reference to location of oil by means of geological science, he said, "I have known numerous instances where scientific men have pointed out where wells should be sunk and those wells have been sunk and nothing produced. That is not at all uncommon" (R. 486).

Three geological experts were put on the stand by the government. The first of these was F. O. Martin, a "mineral inspector" of the General Land Office, who had had no practical experience in the oil business. He first saw the region in question in 1910 but attempted to state the conclusions he would have reached had he seen them in 1904 (R. 610, 614). He testified that in the light of the "geological structure of the region" and the existing development in 1904, "I would have advised any company employing me to hold these lands in the Elk Hills for their mineral value. * * * I certainly would have advised my employer, who was not the owner of the land in 1904, to acquire it at a

price in excess of their value for agricultural purposes" (R. 614). * * * "I would not say that I could always, or even fifty per cent of the time, predict where oil would be found in paying quantities. * * * I would not predict that oil could be found in paying quantities unless under the most favorable circumstances" (R. 620).

All that this witness said was that he now believes that in 1904 he would have thought the Elk Hills as a whole were worth acquiring as a *prospect*. On being pressed on cross-examination to say what conclusion he would have reached as to their commercial value he said, "I would not be able to state that it would be found in paying quantities. I would be able to state that it would be found there, that oil would exist below the Elk Hills. * * * I would advise him to bore. That is the only way he would be able to find out" (R. 665).

It is to be noted that this witness goes to the extent of saying that he would have been positive that there was *some* oil in the Elk Hills. It appears elsewhere that he based this conclusion on the supposed oil seepage in the township to the east of the lands in suit (R. 613). As already stated, we shall (p. 93, post) show that this was not an oil seepage.

The most distinguished expert witness produced by the government was Dr. J. C. Branner, professor of geology at Stanford University. He did not visit the Elk Hills until 1912 at which time he spent part of one day there (R. 1014-15). In 1900 he made an examination of some supposed oil land several miles to the west

of the Elk Hills (R. 1002), and in 1910 he made an examination of the Buena Vista Hills, just south of the Elk Hills (R. 1014, 1989).

Dr. Branner's testimony is important because of his manifest attempt to state the situation fairly from a scientific standpoint. He frankly admitted that his opinion was influenced by developments since 1904, which would include the three wells in the Elk Hills which have found some oil (R. 1003). "My opinion was that the Elk Hills was the most promising area for petroleum in that region," he said. "I formed the opinion that it was oil bearing. That opinion was confirmed to a considerable extent by the developments that had taken place there recently, but everything seemed to fit together; that is, the geological structure, the development of the wells, the occurrences of the oil seepages,* and everything, pointed to the Elk Hills as a promising field for the finding of petroleum."

This was the opinion he formed in 1912. But he then attempted to give the conclusion he would have drawn in 1900, saying, "Had I gone into the Elk Hills in 1900, I would have arrived at the same opinion as to the character of these lands that I did on the later trip; decidedly so. The lands *were favorable for the accumulation of oil* and I should say that they *were oil in character*" (R. 1004).

At no point in the direct examination of this witness was his attention directed to the real question in issue

* As in the case of other government witnesses Dr. Branner took the organic deposit in Section 32 of Township 30-24 to be an oil seepage and considered it important as an indication of oil. He made no test to determine its real character (R. 1015).

—the value of these lands in suit for actual oil production. All he was asked to say and all he did say on direct examination concerning value was that he would not have advised the sale of these lands in 1904 for their "agricultural value" alone (R. 1005), which is the same test of mineral value propounded to all the other government witnesses by counsel for the plaintiff, and is in fact the test now relied upon by the government on this appeal.

But on cross-examination he was asked what conclusion he could reach as to the *real* character of these lands and his replies should be conclusive against the contention that these lands were known to be valuable for oil in 1904. "In passing upon the character of the Elk Hills", he said, "I did not determine in any way the quantity of oil and made no attempt to do so. I could not have done so from the examination I made. *That could only be determined by putting down wells.* One well might determine the matter and it might not. Development is required to determine whether or not that is a valuable oil deposit. A geologist does not determine the economic value of the land for oil. All he undertakes to do is to say whether or not the land has prospective value. I mean by prospective value, that the company proposing to develop that region should take it up—buy it if necessary—and put down a well on it, should prospect it" (R. 1007).

In explanation of the expression he had used, "suitable for the accumulation of oil", he said, "But that would not necessarily mean that they had accumulated oil. That could be determined only by exploration"

(R. 1016). Further he said, "I do not think there is any way to determine from an examination of the surface how large an area yields oil at any point. It sometimes happens that the sand beds become hardened so that they cease to be media through which oil can pass, and it occasionally or even frequently happens that the sand beds pinch out between hard layers of strata" (R. 1018).

On his attention being called to the important fact that the lands might be without value for oil because of the great depth of the possible oil horizon, he said, "I have not made sufficient examination with that question in mind, to be able to tell whether you could ascertain the depth without a well in the Elk Hills. I made no attempt to do so. The purpose of my examination was to ascertain generally whether that could be considered *possible* oil territory and *I made no attempt to determine whether it was paying oil territory*" (R. 1020). (Italics ours.) As he was employed by counsel for the government to make this examination, the answer just quoted clearly confirms what we have said as to the government theory of the case.

Finally, on redirect examination, Dr. Branner thus summed up his conclusions:

> "I should say, decidedly, that the conditions in the Elk Hills are such as to warrant the ordinarily prudent man in the investment and expenditure of money with a reasonable expectation of developing a paying oil property. But I should like to explain this, that if we went back to the conditions as they existed there before any wells were put down in either of those hills, and if I had been the consulting geologist for some company or party who anti-

cipated putting down wells there, I should have put it to him in this way: 'In my opinion the geology, altogether, of the mountains to the west, and the floor of the valley, and everything taken together, strongly suggest that these hills are the best place in which to put down oil wells. There ought to be, so far as we can see, enormous quantities of petroleum under those two groups of hills. Now there is nothing absolutely certain about putting down an oil well in a new region. There is a certain amount of risk about it and you can't get away from the risk. And I should have said to those men: 'If you have money to risk and you can afford to lose it, put it in there; if you can't afford to take any risks, you had better let somebody else do it.'

"I mean that anyone who had money to risk and who might afford to lose it might get larger returns for his money than he would from an ordinary investment. Perhaps I ought to say that one of the reasons for that risk lies in the fact that there is no way, short of putting down a well there, to determine the thickness of the strata that overlie the oil-bearing bed. As everyone knows, who knows anything about petroleum wells, you may have an enormous volume of petroleum so deep that you can't get it, and I should have said that there may be the possibility there. * * * I do not mean to be understood as saying that I actually determined that that territory did contain an immense quantity of oil. I meant to say that if I had gone over that ground in 1900 with a view to saying whether or not those were probably petroleum lands, I should have, under those circumstances, pronounced them oil lands and recommended their exploitation to anyone who was able to take the risk. I realized that the risk might result in a total loss of the investment" (R. 1025-8).

The closely guarded statements of the witness concerning the "oil character" of the lands in suit do not indicate a belief on his part that the "known conditions"

in 1904 "plainly" pointed to the existence of oil deposits in any section in suit, to use the language of this Court in a recent case, "of such quality and in such quantity as would render their extraction profitable and justify expenditures to that end" *(Diamond Coal Co. v. U. S.,* 233 U. S. 236, 239). Borrowing further from the language of the same case (p. 249), there is nothing in his testimony "pointing persuasively" to the "quality, extent or value" of the supposed oil. He does not even say that it exists at all in any of these lands. The most he says is that the Elk Hills *as a whole,* are "suitable for the accumulation of oil", but he refused to say that oil had actually accumulated anywhere.

His conclusions concerning the futility of predicting economic deposits of oil are in accord with the statement of the geologist Ralph Arnold already quoted (ante p. 14). This is natural as Arnold was a student under Dr. Branner (R. 1021).

Further light on the mental attitude of Dr. Branner toward attempts to predict the occurrence of oil deposits from surface indications is given by a report made by him in 1910 on the Buena Vista Hills (just south of the Elk Hills) at a time when oil had just been discovered on the margin of these hills (R. 1014). In this report he said, "If oil had not been found, however, in the region south and west of the Buena Vista Hills, a geologist would have been very bold indeed who would have ventured to predict the existence of petroleum in the Buena Vista Hills themselves" (R. 1992). If this was

his conclusion in 1910 concerning a range of hills far more favorably situated than are the Elk Hills and at a time when development and knowledge was far beyond that of 1904, it is evident that he would have regarded such a prediction concerning the Elk Hills in 1904 as more than merely "bold".

The remaining expert witness called by the government was A. C. Veatch, who had been connected with the United States Geological Survey for a number of years and engaged in work chiefly in the coal regions. He was the principal expert in behalf of the government in the trial of the case of *Diamond Coal Co. v. U. S.*, 233 U. S. 236 (R. 792-3). His testimony indicates a studied effort to bring the issues of the present case within those of the case referred to. Although he had done a great deal of geological work in the oil regions of other parts of the United States and also in South America, he had spent not more than two weeks in the examination of the California oil fields, only four days of this time being devoted to the Elk Hills (R. 774-8, 782). With the exception of a brief visit to the Elk Hills in 1910 (R. 778), he knew nothing about them or the conditions in the vicinity until 1912. He had had no practical experience in the production of oil anywhere (R. 737, 741, 748).

Unlike Dr. Branner, Mr. Veatch in his testimony assumed the attitude of a partisan special pleader, as, unfortunately, so many "experts" are prone to do. Probably this was largely due to the nature of his posi-

tion. He was employed by the Attorney General to serve as a trial assistant in scientific matters (R. 767). He assisted in collecting evidence, interviewed prospective witnesses and sat in court as the assistant and adviser of counsel for the government during the entire presentation of the case in chief (R. 783-7). It may well be assumed, therefore, that the theories of "oil value" suggested in the examination of other witnesses and advanced by him in his own testimony are those upon which the case of the government actually rests. Reference will later be made to other portions of his testimony (post pp. 76-83), but at this place we shall discuss only that which bears upon the mineral value of the lands in controversy.

He discussed at length the geology of the region and the seepages and other indications of oil in various places. As did other witnesses he assumed that the organic deposit in the township east of the lands in suit was an oil seepage, although he admitted that tests he had made with chloroform showed no oil (R. 712). Taking all these things into account, he concluded, attempting to speak as of the year 1904, that the Elk Hills were "oil lands" (R. 701). In the obvious effort to bring this case within the ruling in the *Diamond Coal* case, he likened the seepages and asphalt deposits many miles to the west and south of the Elk Hills to coal outcrops dipping in the direction of these hills. In this way he assumed that the exposed sandy strata in which these seepages appear along the base of the Temblor Range might be carried by geological deduction from four to

ten miles out beneath the Elk Hills, thus furnishing a place "suitable for containing" the oil (R. 698).*

He stated that the evidence was so "conclusive" (R. 712) that a geologist in 1904 must have regarded the Elk Hills as an "oil proposition", and that for this reason he would then "have advised the acquisition of these lands at a price in excess of their agricultural value" (R. 718). This is as far as he went on direct examination. No attempt was made by him to demonstrate that oil was known or could be known to actually exist in a single tract now in suit.

On cross-examination he was required to say in what respect the evidence was "conclusive", and replied, "It is conclusive in this: That I would advise a person to acquire that for oil land. I would advise him to drill it as oil land. I would not guarantee that he would get a commercial well" (R. 820, 823).

On being asked what he meant when he said this land had a *value* as "oil land", he replied, "The value of oil land—oil land has value which has no well and which has not been proven in the sense of proving it by a well. But it is a common commercial transaction to sell land

* In making this assumption concerning the lateral extent of the sand beds "suitable" for oil reservoirs, he failed to note, or disregarded, the convincing geological evidence, pointed out by other geologists (R. 2751-7, J. A. Taff; 2392-6, 2452, 2463, F. M. Anderson), that the ancient shore line, which existed when the supposed oil formations were laid down, ran along the base of the Temblor Range, a number of miles south and west of the lands in suit (R. 2396, 2753). At that time the Temblor Range was a narrow line of islands (R. 2435, 2449, 2753), and, by reason of a familiar law of physics, the coarser sands and sediments carried into the then existing inland sea by the necessarily small surface streams and by wave erosion would be deposited close to the shore, while the sediments carried out to the region of the present Elk Hills, which are a very recent uplift (R. 2445-8, F. M. Anderson; 2754-5, J. A. Taff), would consist of fine silt and mud not at all suitable for the accumulation of considerable amounts of oil (R. 2423-7, 2454-7, F. M. Anderson).

and pay an oil land price for it where there is not a single well on the land and which is not proven in that way'' (R. 825).

His exact conception of *value* in this connection is shown in the following answers given by him:

> ''Q. Did you mean when you used the word 'value'——
>
> A. A commercial value as an oil proposition.
>
> Q. Oil ould be produced in paying quantities?
>
> A. No.
>
> Q. Then you used the word 'value' having some other definition in mind, did you?
>
> A. I used it as having a value as oil land—— having a commercial value as an oil property.
>
> Q. Did you mean when you used the word 'value' * * * that it contained oil enough to add to its richness?
>
> A. I believed that it did.
>
> Q. Did you know that it did?
>
> A. No. I did not know that it did. That was my opinion as a geologist.
>
> Q. Could you determine in any way that it contained sufficient oil to add to its richness? That is, that the oil could be extracted at a profit of even one mill on a thousand tons?
>
> A. That cannot be determined.
>
> Q. Then when you all the way through your testimony speak of this being proven oil land or valuable oil land, you nowhere mean to be understood as saying that there is sufficient oil there that it can be extracted with profit?
>
> A. No; I mean that a man would be justified in buying that, perhaps, and paying an enhanced value, because of its oil value, and spending money in developing it'' (R. 825-7).

It is apparent from these answers that the only value he had in mind was that of a mere speculative *prospect.* He was compelled to admit that the actual existence

of oil *could not be* determined from a surface examination. Further answers given by him show that in the use of the word "value" he did not have in mind the conditions when this patent was obtained but those of some indefinite time in the remote future. This appears from the following:

> "Q. In your opinion then—I am now asking for your *belief*—there is a large quantity of oil under the Elk Hills?
>
> A. I believe so.
>
> Q. And at what depth?
>
> A. I should say it may be under five thousand feet or it may be over.
>
> Q. In 1904 could that have been mined at a profit?
>
> A. No.
>
> Q. Would it have been mined in 1904?
>
> A. No. But there are a great many valuable mineral deposits that cannot be mined at a given moment that are perfectly good mineral lands. * * * I believe the Elk Hills will ultimately be developed into good oil lands" (R. 885-6).
>
> Q. You say 'ultimately developed'. Will you hazard a prediction when that would be?
>
> A. No.
>
> Q. Will it be within the next ten years?
>
> A. It is possible.
>
> Q. And it is possible that it may not be for twenty years?
>
> A. It is possible.
>
> Q. Or a hundred years?
>
> A. I think that is very remote" (R. 885-6).

The reason why he conceded that this land could not be developed in 1904 or even now was because the conjectural "oil horizon" located by him beneath the Elk Hills was then far beyond the reach of the drill. He stated that his assumed oil "might be even deeper"

than "four or five or even six thousand feet" (R. 967). Owing to the peculiar drilling conditions in California a four thousand foot well was out of the question in 1904 with the drilling appliances then known (R. 144). The usual maximum depth then attained was from 1200 to 1500 feet (R. 171-2). B. K. Lee, a practical driller called by the government, said that the deepest well at McKittrick in 1904 was 2250 feet deep and that this was considered an "exceptional well" (R. 231-2).

3. Trial Court in this case decided on the basis of conjectural belief.

It is significant that the District Court, in its decree in this case in favor of the government, expressed doubt as to the proof of the mineral value of the lands in suit. This appears from the following extract from the opinion of Judge Bean:

> "The only question upon which I have had any doubt or difficulty is whether the evidence, notwithstanding the matters referred to, is sufficient to show that the patents should be set aside because the lands were in fact known oil lands at the time of the proceedings resulting in their issuance. There had been no actual discovery of oil within the boundaries of the land at that time but this was not necessary to determine their oil character. Oil like coal occurs in stratified forms of deposit, or rather, migrates into and permeates stratified deposits and follows them persistently and continuously, unless interrupted by some intrusion, to the end. Lands therefore may and often do become valuable for oil through adjacent disclosures and other surrounding conditions, although there has been no actual discovery within their boundaries" (R. 77).

This is a direct adoption of the theory expressed by the government expert A. C. Veatch (R. 698). But the learned district judge went even *further* and found as a *fact* that oil revealed at one place in the assumed "porous bed" would follow it "persistently and continuously to the end". No witness went so far and the court's assumption is at variance with all the evidence of practical and skilled men who have to deal with oil problems. The search for oil is not so simple. If it were the experienced oil expert Ralph Arnold would not have concluded that the prediction of oil in untried areas was "extremely hazardous" (R. 926).

No oil man feels justified in drilling a well four to ten miles away from an oil discovery, nor does he in fact find oil sands to be persistent (R. 1826-7, 1836-7, 1840, 1876-7, 1904-5, 1922-3). The best way to determine what experienced oil men knew and thought in this region is to consider what they in fact did. The evidence is undisputed that for years before and after 1904 they clung to a narrow belt along the base of the Temblor Range, from four to fifteen miles away from the Elk Hills. The intervening lands, which must have been of *known* oil value, according to the test of the District Court, were allowed to remain open and unclaimed for many years after 1904.

Nor does this test take into account any of the many uncertainties an oil man knows about. There is nothing said about an adequate source for the oil which is to be so widely diffused; nor about the probability of water preventing its migration; nor about the breaking off, or folding, or pinching out or changing in porosity of

the strata through which it is assumed to migrate; nor about the possible or even probable absence of sand beds in the Elk Hills in which the oil could accumulate. These are a few of the many uncertainties which caused so many witnesses on both sides to refer to the oil business as a "gamble".

The only limit placed by the District Court on the "persistent" and indefinite spread of this assumed saturated oil area was a possible "intrusion". There is no evidence showing that there are not hundreds of such "intrusions" between the Elk Hills and the McKittrick anticline, the nearest place where oil was known in 1904. Apparently it was assumed that none existed because none were known. In fact one very serious "intrusion" is known and its existence is not disputed. A deep synclinal depression lies *between* McKittrick and the Elk Hills and early wells drilled into this area showed that it is filled with water (R. 2180-5).

The District Court, however, assumed that the oil saturation continued from the McKittrick anticline across this deep syncline and into and across every acre of the lands in suit, a total distance of more than ten miles. No reason appears why the same deduction should not be carried entirely across the San Joaquin Valley, thereby calling in question the title of every farmer in that region. It might still be assumed there were no "intrusions" because none appear on the surface.

Only by making such an artificial assumption can the case of the government be sustained. Well might the trial judge express doubt as to the mineral value of the lands in suit. The existence of this doubt demanded

the dismissal of the bill, since it was the duty of the government to prove its case by "that class of evidence which commands respect and that amount of it which produces conviction" *(Maxwell Land Grant Case,* 121 U. S. 325, 379-81). Instead, this doubt was resolved in favor of the government, but this was done only by the acceptance of the government theory of mineral value based on belief or conjecture rather than on proven fact.

4. Practical consequences which the adoption of the government theory would produce.

Under an earlier head we pointed out the full substance and effect of the testimony of every government witness, save two, who gave testimony as to the mineral character or value of the lands in suit. One of the two omitted witnesses was J. W. Kaerth, a surveyor, who testified that there were numerous "asphaltum reefs" in the region in suit, but who declined later to attempt to point out any of them (R. 417, 423-4, 459-60). No other witness saw these asphalt deposits and the maps prepared by the government experts Veatch and Martin (Exhibits I and O) do not show any of them although they purport to show all such indications in that entire region. Mr. Veatch admitted that he found no such reefs (R. 801). The other omitted witness is J. R. Scupham, to whom reference will be made later (post p. 108), who claimed that as early as 1887 he informed certain officers of the railroad company that the Elk Hills "overlay an oil deposit".

[illegible] reduced to its ultimate substance, amounts only to the expression of

an *opinion* that the Elk Hills *as a whole* had a speculative value in 1904 because of the *possibility* that oil deposits lay somewhere beneath them, the position, depth, character, quantity and even existence of this oil being entirely conjectural. We shall later show that a large number of experienced and skilled practical oil operators who were in that region in 1904 and earlier entertained a directly contrary opinion (post pp. 83-90). But, disregarding this latter testimony for the moment, we are concerned only with the practical consequences which would follow from the adoption of the government theory as a ground for recovery in this case.

It appears to be the contention of the government that if it was thought in 1904 by the agents of the railroad company, or by others, that the lands in suit were "oil lands", a case is made. But it is not asserted—and indeed the very contrary is urged—that the use of this vague expression "oil lands" means that these lands were then lands valuable for the extraction of oil in a commercial way, or even lands actually containing oil in any quantity. In fact, it was expressly contended by counsel for the government during the trial that it was "wholly immaterial" whether the land contained oil in paying quantity or not as the only question was whether it was considered to be "mineral land" (R. 1920).

It is apparent that if hope or suspicion that oil *might* be found somewhere in the Elk Hills can give to the particular lands in suit the requisite mineral character to warrant cancelation, the railroad company

may lose by judicial decree lands which subsequent drilling may prove to fall unquestionably within its grant. Such a result is hardly in accord with equity.

This fallacy in the present position of the government may be shown in another way. This Court has held that the grant of lands to the defendant railroad company by the Act of July 27, 1866 became a binding *contract* on the construction and operation of the road (*Burke v. S. P. R. R. Co.*, 234 U. S. 669, 679-80). "Then", says that case, "it became entitled to performance by the government. In other words, it earned the right to the lands described". The lands thus described to which the *right* was complete were all non-mineral lands (not otherwise disposed of) in the odd numbered sections lying within the limits of the grant. The lands in suit came within these limits. If they are *in fact* non-mineral they belong to the railroad company as of right.

From this it necessarily follows that only those lands may be lawfully taken from the railroad company which were in fact mineral lands at the time of patent. The expression "mineral lands" as here used is no longer open to question. It includes only "such lands as were at the time of the grant [patent] known to be so valuable for their minerals as to justify expenditure for their extraction" (*Davis v. Weibbold*, 139 U. S. 507, 524; *Deffeback v. Hawke*, 115 U. S. 392; *Diamond Coal Co. v. U. S.*, 233 U. S. 236, 239). As stated in these as well as other decisions of this Court the expression "mineral lands" necessarily implies "valuable mineral lands" in order not to exclude from agricultural grants

those lands containing minerals in such condition or quantity as to be economically unavailable at the time the proofs for patent are presented. And it is further necessary that the existence of these "valuable mineral lands" must be *known* at that time in order that apparently vested titles might not fail by reason of subsequent discoveries. This being the established law, the mere possibility in 1904, which is all the government has shown, that minerals might be discovered in the lands in question, cannot be substituted for the required showing that these lands were then "known to be valuable for their minerals".

If these lands were not thus known in 1904 to be "valuable for their minerals", the issuance of the patent now in question was entirely proper. It is fair to assume that in the use of the two terms "mineral lands" and lands "not mineral" in the various acts of Congress for the disposal of the public domain, *all* public lands were intended to be described. "Mineral lands" were those which could be acquired under the mining laws. Lands "not mineral" were disposed of by the homestead, railroad, school and other "non-mineral" grants.

Our contention that the patenting of these lands was entirely proper notwithstanding suggestions that they *might* contain oil is borne out by the practice of the Land Department of the government as applied to this very grant. In 1895, Secretary Smith directed the issuance of a patent to the Southern Pacific Railroad Company of lands near those now in suit notwithstanding a general protest that they were all "mineral lands",

saying that he could find no authority "after exhausting the means at my disposal to ascertain the nature of the land included in the grant, for suspending the issue of patents for the reason that perchance in some of the lands patented mineral may be discovered" (*Benjamin v. S. P. R. R. Co.*, 21 L. D. 390). All that the testimony indicates in the present case is that in 1904 "perchance" oil might be discovered somewhere within the area in suit.

But, if the present contention of the government is correct, there must be a third class not capable of disposal under any law (See comment of Circuit Court of Appeals on this, 249 Fed. at 797). It is conceded that a mineral patent would not issue for a single acre in the Elk Hills on the showing of mineral made by the government in this case. This is so because the evidence is not sufficient to prove a *discovery* of mineral (*Chrisman v. Miller*, 197 U. S. 313). Though this proof would not warrant a mineral patent, yet to justify cancelation of our patent it must be found by this Court to show *more* than a mineral applicant is required to prove. All he need prove is that he has discovered sufficient mineral to reasonably justify a *hope* of developing a paying mine. But to justify the extraordinary remedy of cancelation of a non-mineral patent the proof must be convincing that there is more than a mere hope of valuable mineral. The existence of the mineral must be shown as a known fact, in such condition and quantity as to make it then and there commercially valuable. That is, far more proof is required to take land out of the category established by its non-

mineral patent than is required to establish a miner's "discovery" *(Chrisman v. Miller, supra).*

This point is worthy of further emphasis. If there was not a sufficient "discovery" of oil on these lands to sustain a mining location, there obviously was not a discovery of oil sufficient to establish them as actually "valuable" oil lands. There is nothing technical or peculiar in the use of the word "discovery" in the mining laws. This word has the same meaning there that it has elsewhere. It means the ascertainment of the existence of the mineral, its disclosure. It is charged, however, that although there was no discovery of oil in the Elk Hills the defendant nevertheless actually *knew* it was there and in valuable quantities. We confess that we cannot understand how the existence of a thing may be *known* and its measure taken when it has not yet been discovered.

Another fact fatal to the government theory of this case presents itself. Unless these lands were known in 1904 to be actually valuable for the oil that was in them (and not merely speculatively valuable because of the uncertain chance of their containing oil), the government suffered no legal damage by their loss and the railroad company, as we have seen, gained nothing not due it under its contract. Without legal damage to the government there can be no relief on the ground of fraud. This is the rule which this Court has applied in a similar suit by a private individual *(Southern Development Co. v. Silva,* 125 U. S. 247). The same rule has been held to apply in suits by the government it-

self (*U. S. v. San Jacinto Tin Co.*, 125 U. S. 273, 285; *U. S. v. Stinson*, 197 U. S. 200, 205).

In conclusion of this branch of the argument we call attention to the breadth of relief possible if the government theory of mineral value is adopted. We have shown that the proof offered to prove the "oil character" of the lands in suit was not directed to show that oil exists in any given acre or section. It applies generally to the entire area of the Elk Hills, consisting of more than fifty square miles. If such evidence may justify cancelation as to one acre it must likewise serve to prove that the entire range of hills is valuable for oil, notwithstanding the undisputed fact that in recent years many deep wells have failed to find oil in various parts of the hills (R. 1794-5, Kinsey; 1953-5, Lang; Exhibit 16. See Map No. 6 in Appendix to this brief). The failure of these numerous wells necessarily weakens the force of the broad assertions of the government experts and illustrates the danger of attempting to rely on such evidence.

B. LEGAL INSUFFICIENCY OF GOVERNMENT CASE.

1. But one broad issue in this suit.

From what we have already shown of the nature of the case made by the government it is apparent that the fundamental issue in this case is whether lands can be found to have been *known* mineral lands on evidence of opinion and conjecture which leaves uncertain the position, extent, economic value and even the actual existence of the asserted mineral. To put it another way, the issue is whether *belief* can take the place of *fact.*

The evidence which we shall hereafter discuss which shows that the real oil men in the vicinity and the agents of the railroad company did not know and did not even *believe* that these lands were valuable for oil, or that claimed to show the contrary impression, is really subordinate to this main issue. If the lands in suit were not known to be mineral lands at the time the proofs for patent were made, that is, were not then known to contain deposits of oil "of such quality and in such quantity as to render their extraction profitable" at that time, the inquiry is at an end, regardless of what may have been the belief or hope or purpose of the railroad company. Of course it is also true that if the railroad company did not know or believe that these were mineral lands, as defined by this Court, there was no fraud and can be no recovery in this case regardless of the actual character of the lands.

The case made by the government in its appeal to this Court leaves out of consideration both the question whether the lands in suit were actually valuable for the

production of oil in 1904 and whether this was then *known* to the railroad company. In its formal assignment of errors on appeal to this court (R. 3941) only three exceptions are taken to the ruling of the Circuit Court of Appeals and these exceptions are general and not in accord with Rules 35 and 40 of this Court. The first is that the court below did not find that the lands in suit were "mineral lands excluded from the operation of the grant". This does not disclose what is meant by "mineral lands", or when that character should have attached to them or when it became known. The second error assigned is that it had not been found that the railroad company had "falsely represented" that these lands were "non-mineral". This assignment has all the uncertainties of the first exception and in addition leaves out of account all question of good faith on the part of the patentee. If the lands did in fact contain valuable oil deposits in 1904 the representation to the contrary would be "false" even though no one then knew or even suspected that the oil was there. The third and last exception is "error in reversing the decree of the District Court". It is apparent that all that is in any degree specific in these assignments might be conceded and still the decree should be in favor of the railroad company.

2. The government relies on a showing of mere belief.

The government case is founded entirely on the use of the word "belief" by this Court in the case of *Diamond Coal Co. v. U. S.*, 233 U. S. 236, 239-40, without recognition, apparently, of the fact that the context indicates that what was there meant by "belief" was

a *conviction* based on evidence so convincing as to exclude practical doubt. It is occasionally possible, as it was in that case, to reason from the known to the unknown so definitely as to produce practical certainty. In that case the commercial extent and value of the coal bed was proven at many points close to the land in suit. At one point this coal bed approached to within a few feet of the area in suit and it was nowhere more than a mile and a half distant. It dipped beneath the area in suit and croppings on the further side gave evidence of its persistence beneath the entire area. This Court said that this evidence "pointed with convincing force to a workable bed of merchantable coal extending under the valley and penetrating these lands" (p. 248). From this language it is apparent just what sort of belief was meant. It is that resulting from evidence so full and definite that it points with *convincing force* to a conclusion which includes not only the fact of the *existence* of the mineral but its extent and value as well. The recent case of *United States v. Beaman,* 242 Fed. 876, decided by the Eighth Circuit Court of Appeals, in which the *Diamond Coal* case was applied, illustrates the point we are making. This was also a coal case, but the proof of the coal was far less convincing and was held insufficient. The court ruled that the evidence must be so complete "as to make the fact plain" that the land "contained mineral deposits of such quality and value and in such quantity as to make their extraction profitable".

In the present case the mineral in question is oil, which is notoriously uncertain in its occurrence, extent

and value as compared with coal (R. 1024, Branner; 2771 Taff). Instead of there being a demonstrated commercial supply of this oil within a few feet of the lands in suit, or even a mile and a half away at the most, the nearest known oil was in a separate anticline four miles from the nearest lands and ten miles from the most remote (R. 1729). In Section 32 of the township east of the lands in suit was a doubtful seepage. The lands themselves were untested and the depth and character of the formations were unknown.

Under such circumstances a belief entertained by anyone in 1904 that these were valuable oil lands or, in the language of the government experts, merely "oil lands" could not have been a conviction that merchantable oil existed. Yet the government now insists that such a belief has been made *proof* of the actual mineral character of these lands by this Court.

In our view, this Court has fully guarded against such unwarranted use of the word "belief" in the concluding paragraph of its opinion in the *Diamond Coal* case, which reads:

> "It will be perceived that we are not here concerned with a mere outcropping of coal with nothing pointing persuasively to its quality, extent or value; neither are we considering other minerals whose mode of deposition and situation in the earth are so irregular or otherwise unlike coal as to require that they be dealt with along other lines" (p. 249).

The fact that mere "indications" of the existence of oil are not proof of its existence or of its quantity or location has received judicial recognition on many occa-

sions. In truth, the fact that oil is "irregular and otherwise unlike coal" may be said to have been generally conceded by every court having occasion to pass upon the matter, except only the trial court in the instant case (R. 77). The Circuit Court of Appeals, however, in its decision in this case, pointed out in detail the many differences between coal and oil (249 Fed. 785, 798-801).

In *Brewster v. Lanyon Zinc Co.*, 140 Fed. 801, 806, the Circuit Court of Appeals for the Eighth Circuit, in speaking of an oil field in Kansas, said:

> "The field was practically undeveloped and its extent was unknown. Experience in other oil and gas fields had demonstrated that wells drilled in the vicinity of producing wells were not infrequently unproductive. The only method of certainly determining whether or not particular lands contained oil or gas in paying quantity was by drilling thereon to considerable depth."

In the case of *Nevada Sierra Oil Co. v. Home Oil Co.*, 98 Fed. 673, 675, Circuit Judge Ross, whose experience is extensive in cases affecting oil lands, was called upon to determine whether a discovery of oil had been made in an undeveloped tract closely adjoining another tract in the Coalinga oil district in California, on which latter tract were several producing oil wells, both tracts being on the same anticline. In rejecting the claim of discovery he said:

> "There is evidence on the part of the complainant going to show that Wilson discovered sandstone and shale thereon as well as on adjoining lands, and that there were seepages of oil on some of the adjoining lands, as also wells on one of the adjoining tracts, which were producing more or less oil.

> But these were nothing more than indications of existing oil under the surface of the ground in question, which might or might not prove to be true. Mere indications, however strong, are not in my opinion, sufficient to answer the requirements of the statute, which requires, as one of the essential conditions to the making of a valid location of unappropriated public land of the United States under the mining laws, a discovery of mineral within the limits of the claim. * * * Indications of the existence of a thing is not the thing itself. * * * Mere indications of mineral, I repeat, do not constitute the discovery of the mineral itself. If so, a location made upon the discovery of such indications, followed by the proper marking of the boundaries and the doing of the statutory amount of work within the prescribed time, whether the work resulted in the actual discovery of mineral or not, would entitle the locator to apply for and upon due proof and payment, receive the government title to the land as mineral land; which obviously would not only be unauthorized by any provision of the statute, but would be in direct conflict with the sections already cited."

It has been contended by the government that the decision of Judge Ross in this case, and other similar decisions arising under the mining laws, are of no importance to the present inquiry because the mining law requires the ocular demonstration of the mineral in an opening made on the land itself. But we do not so read the law or the decisions. The mining statute merely says that, "No location of a mining claim shall be made until the discovery of the vein or lode within the limits of the claim located" (Sec. 2320, Rev. Stat. U. S.). All that the word "discovery" means here is the ascertainment of the existence of the vein or lode *within* the claim. Such a discovery can rarely be made

with certainty except by a physical exposure within the claim, but even in the case of a lode it has been held that the exposure to the eye may be elsewhere (*Brewster v. Shoemaker,* 28 Colo. 176, 182). That is, the words of the statute, "within the limits of the claim", govern the place where the "vein or lode" must be and not the place furnishing the evidence of their presence *within the claim.* The statute concerning placer claims makes no special requirement as to the actual *place* of discovery. All that is required is that a placer location be made "under like circumstances and conditions" as a lode location (Sec. 2329, Rev. Stat. U. S.). The special statute of 1897 for the location of oil claims makes no change in this respect except the requirement that the proof show that the claim is "chiefly valuable" for oil (29 Stat. L. 525). Under the placer law it has been held that evidence of gold appearing within the claim, *held insufficient in itself to constitute a discovery,* might be supplemented by evidence showing greater amounts of gold disclosed in adjacent ground in a gravel bed apparently passing beneath the claim in question so as to make a showing of a complete discovery (*Lange v. Robinson,* (C. C. A.) 148 Fed. 799; *Cascaden v. Bortolis,* (C. C. A.) 162 Fed. 267). These cases really hold that the *evidence* which actually constituted the full discovery came from *without* the claims. That such a condition *might* also exist as to an oil claim under exceptional facts is indicated by the decision of Judge Ross in another case in which he overruled a demurrer to a bill which alleged a discovery of oil not disclosed in the claim but deduced from sur-

rounding conditions and developments (*Nevada Sierra Oil Co. v. Miller,* 97 Fed. 681, 688-9.) It is obvious that the practical question, with which the mining law is alone concerned, is whether there is valuable mineral *within the claim.* Evidence which certainly indicates this is *discovery,* no matter where the evidence is found, and the word "discovered" is used in the mining law in exactly the same sense in which it was used by this Court in the case of *Deffeback v. Hawke,* 115 U. S. 392, 404, where it was said, "We also say lands *known* at the time of their sale to be thus valuable, in order to avoid any possible conclusion against the validity of titles which may be issued for other kinds of land, in which, years afterwards, rich deposits of mineral may be discovered."

Cases arising under the mining laws, in which it is held that oil is so uncertain in its occurrence and extent that surrounding conditions do not prove a discovery, are therefore directly in point. And they are of special importance since the *amount* of mineral which the miner must show to sustain his claim is far less than must be shown to overcome an agricultural patent (*Chrisman v. Miller,* 197 U. S. 313, 323).

In the case just referred to, in the decision rendered by the Supreme Court of California before it was appealed to this Court, this was said:

> "To constitute a discovery, the law requires something more than conjecture, hope, or even indications. The geological formation of a country may be such as scientific research and practical experience have shown to be likely to yield oil in paying quantities. Taken with this there may be

other surface indications, such as seepage of oil. All these things combined may be sufficient to justify the expectation and hope that, upon drilling a well to sufficient depth, oil may be discovered, but one and all they do not in and of themselves amount to a discovery."

Miller v. Chrisman, 140 Cal. 444, 446.

As in the case decided by Judge Ross, this was said of a location made close to seepages of oil and not far from producing oil wells located on the same anticline. It is apparent that the same decision would have been made with even more emphasis if the land in question, as in the present case, had been in another range of hills and from four to ten miles from the seepages and development relied upon as proof of mineral value.

The case of *Olive Land, etc. Co. v. Olmstead,* 103 Fed. 568, also decided by Judge Ross, furnishes even stronger evidence of the judicial recognition of the futility of attempting to determine the existence of valuable oil deposits from surface indications. In this case the plaintiff had filed forest lieu scrip on the tract in question (but had not yet obtained a patent) and the defendant claimed it under an oil location. The plaintiff sued to quiet his right under his selection. The defendant answered setting up his location. He alleged that the tract in question "had no appreciable value for any purpose except for petroleum that may be obtained by boring or drilling therein; that it is in a well recognized petroleum producing belt, and that adjacent properties in the belt are actually producing petroleum in large and profitable quantities, and that the surface indications of such producing lands and upon the lands in

controversy are the same; that the surface rock and sand and the surface geological formation and stratification upon the lands in controversy are such as would lead any experienced petroleum expert or any practical geologist familiar with petroleum bearing lands in California to pronounce the same oil or petroleum territory, and chiefly valuable therefor; that one of the most pronounced and well marked anticlinal folds of sandstone and shale formation in Ventura County runs through the land in controversy and has its apex thereon, and that where said anticlinal fold is most exposed by a declivity which sharply cuts the same, bituminous sand several feet in thickness and 100 or more feet long is clearly visible, which sand, when excavated gives out a distinct odor of petroleum; that such bituminous sand, in the formation in which it is found, shows the land in controversy to be mineral or petroleum in character, and constitutes such a discovery as would justify any prudent miner in locating the same * * * " (pp. 570-1). The plaintiff moved for judgment on the pleadings, which, of course, admitted what the defendant had pleaded. We therefore have here much stronger and more direct testimony of the "oil value" of the tract in question than the government has presented in our case. But because all the things alleged by the defendant were found by the court to be but "mere indications" of oil which was not *known* to exist in fact they were not held sufficient to overcome the "presumption" that the land was of the character indicated by the acceptance by the land officers of the plaintiff's selection.

This decision was quoted and followed by District Judge Bledsoe (whose experience in oil cases is even greater than that of Judge Ross) in the recent case of *United States v. McCutchen,* 238 Fed. 575, 591. This latter case is of peculiar interest in the present connection. The claim there in question is situated in the Midway oil field and lies between the Elk Hills and the Temblor Range, entirely within the area which the government geologist, A. C. Veatch, said was "conclusively" demonstrated to be "valuable oil lands" as early as 1904. The government, however, in the *McCutchen* case, sued to quiet its title to the land on the ground that McCutchen had made no discovery of oil on his claim prior to *September 27, 1909,* when the land was withdrawn from mineral entry. That is, the government alleged and proved in that case that oil was not known to exist as late as 1909 in an area which in the present case is claimed to have been known to contain valuable oil deposits many years earlier.

To the same effect as the cases just cited are the following: *Bay v. Oklahoma, etc., Oil Co.,* 13 Okla. 425; *Weed v. Snook,* 144 Cal. 439; *New England, etc., Co. v. Congdon,* 152 Cal. 211; *McLemore v. Express Oil Co.,* 158 Cal. 559.

The proposition that "indications" are not sufficient has also been recognized in the decisions of the Land Department. In *Dughi v. Harkins,* 2 L. D. 721 (not an oil case), Secretary Teller ruled that mineral character could not be predicated on a mere "theory" that the land "may produce" valuable minerals, adding "in other words, it is facts and not theory which must

control". This decision was quoted with approval in the opinion of this Court in *Davis v. Weibbold,* 139 U. S. 507, 522. In *Hutton v. Forbes,* 31 L. D. 325, 330, producing wells on "*immediately adjacent lands*" and strong indications of oil on the tract in question were considered proof of "actual or known mineral character", but there was no suggestion that the inference could be carried to lands miles away and in a different structure. In *Southwestern Oil Co. v. Atlantic, etc., Ry. Co.* 39 L. D. 335, however, there were no producing wells close at hand but merely "indications" on the land itself, consisting of oil seepages and bituminous shale. This was held not enough for a discovery. In *Butte Oil Company,* 40 L. D. 602, locations were held insufficient which were based on a well containing a small amount of gas and a surface seepage of oil. The rejection of these claims was largely based upon the conclusion of an eminent geologist, Mr. Bailey Willis, that seepages were unsatisfactory evidence of oil at any given place beneath the ground because of the "irregular line of ascent of the oil from its unknown source" (p. 604).

3. Belief not based on clear demonstration is not proof of mineral character.

The courts have uniformly refused to permit belief to be substituted for actual knowledge. The *Diamond Coal* case, as we have shown, presents no exception to this. The cases so holding are numerous. From them may be cited: *Deffeback v. Hawke,* 115 U. S. 392; *Iron Silver Mining Co. v. Reynolds,* 124 U. S. 374; *Iron*

Silver Mng. Co. v. Mike & Star Co., 143 U. S. 394; *Sullivan v. Iron Silver Mng. Co.*, 143 U. S. 431.

In passing on this point in *Iron Silver Mng. Co. v. Reynolds, supra,* in connection with the question whether a lode was *known* to exist within a placer claim, this Court said (p. 383):

> "The court below instructed the jury that it was unnecessary to declare what circumstances might be sufficient to affect a patentee with knowledge as prescribed by the statute, 'for if, in any case, it appear that an application for a patent is made with *intent* to acquire title to a lode or vein which *may* exist in the ground beneath the surface of a placer claim, it is believed a patent issued on such application cannot operate to convey such lode or vein'; and further, that 'that intention could be formed only upon investigation as to the character of the ground, and the belief as to the existence of a valuable lode therein, which would amount to knowledge under the statute'.
>
> "This instruction is plainly erroneous. The statute speaks of acquiring a patent with a knowledge of the existence of a vein or lode within the boundaries of the claim for which patent is sought, not the effect of the *intent* of the party to acquire a lode which may or may not exist, of which he has no knowledge. Nor does it render belief, after examination, in the existence of the lode, knowledge of the fact.
>
> "There may be difficulty in determining whether such knowledge in a given case was had, but between mere belief and knowledge there is a wide difference. The court could not make them synonymous by its charge and thus in effect incorporate new terms into the statute."

The case just quoted is important to the present inquiry in another way, as it contains a fit characteriza-

tion of the sort of evidence that is relied on by the government to prove knowledge in this case. In speaking of the evidence offered in that case, this was said (p. 379):

> "The evidence offered by the defendants, as to the knowledge of the patentees, was of a vague, uncertain and unsatisfactory character. It consisted principally of impressions, beliefs and inferences on the subject, drawn from loose statements made, or theories advanced by the patentees, or persons alleged to have been interested in the claim, or the supposed motives of their conduct."

In the later case of *Sullivan v. Iron Silver Mng. Co., supra,* this Court again condemned the confusion of belief with knowledge and the use of conjectural testimony, saying (p. 435):

> "And after that, defendants offered a mass of testimony, the scope of which was similar to that condemned as insufficient in the case of *Iron Silver Mng. Co. v. Reynolds, supra.* Its purport was that it was commonly believed that underlying all the country in that vicinity was a nearly horizontal vein or deposit, frequently called a blanket vein; and that the parties who were instrumental in securing this placer patent shared in that belief, and obtained the patent with a view to thereafter developing such underlying vein. But whatever beliefs may have been entertained generally, or by the placer patentees alone, there was up to the time the patent was obtained no knowledge in respect thereto. It was, so far as disclosed by this testimony on the part of everybody, patentees included, merely a matter of speculation and belief, based not on any discoveries in the placer tract, or any tracings of a vein or lode adjacent thereto, but on the fact that quite a number of shafts sunk elsewhere in the district had disclosed horizontal de-

> posits of a particular kind of ore, which it was argued might be merely parts of a single vein of continuous extension through all that territory. Such a belief is not the knowledge required by the section."

The theory thus rejected by this Court is very like that adopted by the trial court in the present case, to which reference has been made (ante p. 33).

4. Greater evidence is required to cancel a patent than would have warranted a refusal to grant it in the first place.

Much of the argument of the government has appeared to be made on the theory that cancelation must be ordered in this case if the proven facts are such as would have justified the land officers of the government in refusing the patent in 1904. But this is not the law. The issuance of the patent created a new situation. In the absence of convincing evidence to the contrary it will be presumed that the patent was regular and proper. This suit is in no sense a writ of error or a rehearing to determine whether the evidence in 1904 justified the issuance of the patent. This is directly declared in *United States v. Marshall Mining Co.*, 129 U. S. 579, 588, in the following language:

> "Some point is made, in the bill and in the argument, concerning the amended survey of the Tunnel Lode claim, and the manner of its presentation to the Commissioner of the General Land Office, with other irregularities which are suggested and pointed out; but we think it must be taken to be the settled doctrine of this court that a bill in chancery, brought by the United States to set aside and vacate a patent issued under its authority, is not to be treated as a writ of error, or as a petition for

a rehearing in chancery or as if it were a mere retrial of the case as it was before the land office, with such additional proof as the parties may be able to produce.

"The dignity and character of a patent from the United States is such that the holder of it cannot be called upon to prove that everything has been done that is usual in the proceedings had in the Land Department before its issue, nor can he be called upon to explain every irregularity or even impropriety in the process by which the patent is procured."

5. Fraud cannot be predicated upon the expression of an opinion concerning the existence of hidden mineral deposits.

We have seen that the theory of the government is that the railroad company was guilty of fraud because it knew in 1904 or *ought to have known* that the lands in the Elk Hills were "oil lands", that is, lands so conditioned as to render it possible (or probable) that oil might be found somewhere within them. Such a state of mind would not be knowledge of the *fact* that valuable deposits of oil lay in the very areas in suit, but merely an opinion that it was or might be there or elsewhere in the same range of hills. The affidavit of the railroad selecting agent was in this case but an expression of his opinion that these were not "interdicted mineral" lands (R. 3829) and that "to the best of his knowledge and belief, none of the lands in said list are mineral lands" (R. 3833).

It is not claimed that the maker of this affidavit, or anyone else connected with the patentee, actually knew

or could have known in 1904 of any deposit of oil in these lands. The facts open to them at that time were equally open to anyone else. And the essential ultimate fact whether there was or was not a deposit of oil in these lands was hidden from them as well as from others.

This distinction between the expression of opinion which is not actionable and that of fact, which is, has been often pointed out. "The test by which to determine whether or not a representation is a mere expression of an opinion or a substantive fact, is this: If the representation is as to a matter not equally open to both parties, it may be said to be a statement of fact as such, but if it is as to a matter that rests merely in the judgment of the person making it, and the means of deriving information upon which a fair judgment can be predicated, are equally open to both parties, and there is no artifice or fraud used to prevent the person to be affected thereby from making an examination and forming a judgment in reference to the matter for himself, the representation is a mere expression of an opinion, and, however incorrect, does not support an action for fraud" *(2 Addison on Torts,* Wood's Ed.. Sec. 1186). "Again, it is an expression of opinion, and not a representation of fact, when the existence or non-existence of the matter spoken of, as a present fact, is capable of physical determination, but has not yet been definitely ascertained, and there is no such existing evidence in its favor or against it, except such indications of the probability of its existence as might legitimately give rise to a belief or opinion, but would not warrant

a positive assertion" *(Black, Fraud and Rescission,* Par. 77).

The case of *Southern Development Co. v. Silva,* 125 U. S. 247, 252, applies the distinction as we have just stated it, holding that the representation must be as to a *fact* to warrant relief in equity. It was charged that the defendant, in selling a mine, misrepresented the amount of ore in sight. This was held insufficient, this Court saying, "Besides, the quantity of ore 'in sight' in a mine, as that term is understood among miners, is at best a mere matter of opinion. It cannot be calculated with mathematical or even approximate certainty. The opinion of expert miners, on a question of this kind, might reasonably differ quite materially."

In *Gordon v. Butler,* 105 U. S. 553, the plaintiff was told by the defendant that a quarry, then but slightly developed, but near a known valuable quarry, was worth at least $48,000. On the faith of this statement the plaintiff loaned the defendant $10,000 on the security of this quarry, and, on its proving to be worth less than the loan, sued to recover his loss on the ground of a false representation. In denying relief this Court said:

> "To justify any imputation of fraud in giving the certificate, it was necessary to show that the parties signing it had knowledge, at the time, that the value of the property was materially less than their estimate. And from the nature of the property, and its imperfectly developed condition, such knowledge was impossible. No one could know its actual value until further development was made. Until then, any estimate must have been entirely speculative and conjectural. It would depend as much, perhaps, upon the temperament and expectations of the party making it, as upon any knowledge of the

> facts. * * * Wherever property of any kind depends for its value upon contingencies which may never occur, or developments which may never be made, opinion as to its value must necessarily be more or less of a speculative character, and no action will lie for its expression, however fallacious it may prove, or whatever injury a reliance upon it may produce."

In the case just cited this Court referred with approval to the case of *Holbrook v. Connor,* 60 Me. 578. In this case a vendor represented that land he sold was valuable for oil. When this proved untrue the vendee sued to recover damages. It appeared that at the time of the sale the land had not been tested and it was then unknown to both parties whether it was valuable as oil land, except so far as might be inferred from production of oil on neighboring lands and from a single well on the land in question. The court held that the representation was to be regarded as a matter of opinion and would not support the action.

These cases are so closely analogous to our own case that the principle they establish should be controlling. This principle is that neither law nor equity will grant relief where the right is uncertain. Relief is not denied because representations complained of are found to be mere opinions, but because the ultimate *fact* upon which the relief depends is not made certain.

The cases we have referred to have all been instances where it was represented that the lands contained minerals. The principle must be the same, however, where, as in our own case, the representation is that the lands are *not* valuable for mineral. In each case

opinion is equally uncertain and in each case the observable facts are equally open to all. The case of *Synnott v. Shaughnessy*, 130 U. S. 572, however, presents a situation similar in this respect to our own case. This was a suit by the vendors to cancel a sale of a mine on the ground that the vendee had concealed the fact that there was a valuable lode on the property. It was charged that this lode was discovered by an agent of the vendors and that this agent had colluded with the vendee in concealing this lode from the vendors and in obtaining a sale at a small price. The proof showed that at the time of the sale this lode had not been opened up or its value developed, but was indicated only by surface "float". A day or two after the sale the buyer opened up a valuable mine at the place where the "float" occurred. In denying relief this Court said (p. 579):

> "Such purely surface indications, open to all ordinary observers, and situated on or near the path along which the plaintiffs travelled in going to and from their work, must have been known to them, and are not such as to be made the subject of concealment and misrepresentation. The fact, however, that there was no such discovery of an actual vein or body of ore demonstrates that there could have been no such fraudulent and collusive concealment and misrepresentation, as to its limit and extent, as is charged in this complaint. It required not only a considerable excavation, but also a great outlay of money and great labor on the part of the defendant to develop the existence of a vein of ore."

If the railroad company had known that there was a valuable oil deposit in any tract in dispute and had represented, as it did, that this tract was not mineral,

the government would have a right to recover the tract thus known to be valuable if it relied on the representation and not upon its own investigation. But the cases we have been considering show that if, at the time this representation was made, the actual character of the land was not known and could not be known, the representation actually made was but the expression of an opinion concerning a matter equally open to the observation of all, and, hence, not adequate warrant for cancelation of the patent. And these cases furnish further evidence, if any is needed, that this Court did not intend to make mere belief a substitute for knowledge and fact by its decision in the case of *Diamond Coal Co. v. U. S.*, 233 U. S. 236.

6. Character and amount of evidence required to justify the relief sought.

What we have discussed in the preceding pages naturally leads up to the consideration of the rules which this Court has on many occasions laid down as to the amount and character of proof required to cancel a government patent. Surmise and suspicion that fraud was accomplished or intended is not enough nor, in cases such as this, is evidence which leaves in doubt the essential character of the land sought to be recovered. The fundamental proposition is that the respect due to patent titles is such that they can be set aside by the extraordinary relief of cancelation only where the proof is clear, both that the government has lost what it was entitled to keep and that it has suffered this loss through the intentional wrong of the patentee.

We say "intentional wrong" because a careful and laborious search of the authorities reveals no case where a patent has been canceled for fraud except on such a showing. We are aware that it is now contended by the government that fraud may be predicated on what the patentee *ought* to have known, but did not in fact know or believe. Loose statements may be found in text books lending some support to such a conception of fraud, but, as stated, the courts have always required in cases of this sort that the proof should show some consciousness of the falsity of the representation complained of. Reference can here be made to only a few of the cases in which this Court has ruled, either directly or by necessary intendment that the fraud must be actual, that is, intentional. In *U. S. v. Stinson,* 197 U. S. 200, 206, relief was denied because the conduct of the defendant was found not to "indicate a consciousness of wrongdoing." In *Maxwell Land Grant Case,* 121 U. S. 325, 378, the established "honesty of purpose" and lack of "intentional fraud" decided the suit in favor of the defendants. In *U. S. v. San Jacinto Tin Co.,* 125 U. S. 273, 299, it was found that there was "no such case made of intentional fraud, or actual fraud * * * as justifies the cancelation of the patent." In *U. S. v. Iron Silver Mng. Co.,* 128 U. S. 673, 676, it was said that the false representation must have been "knowingly made". See also: *U. S. v. Clark,* 200 U. S. 601, 608; *U. S. v. Budd,* 144 U. S. 154; *Diamond Coal Co v. U. S.,* 233 U. S. 236; *Washington Securities Co. v. U. S.,* 234 U. S. 76.

In suits of this character the government, unlike a private suitor, is not required to return to the patentee any consideration he may have paid, as a condition to equitable relief *(U. S. v. Trinidad Coal Co.,* 137 U. S. 160). Such suits are therefore essentially penal in their nature. From this it follows that the damage to the government must be real and the fraud which caused it must be intentional, and the proof of each must be strong and convincing. Again, the issuance of the patent itself by a co-ordinate branch of the government is an act to which the courts must accord full respect. "Muniments of title issued by the government", says this Court in *U. S. v. Des Moines Co.,* 142 U. S. 510, 541, "are not to be lightly destroyed."

It is needless to refer to the many decisions of this Court defining the required measure and character of proof demanded in such cases. In the case of *Diamond Coal Co. v. U. S.,* 233 U. S. 236, 239, most of them are cited and their result is thus summed up:

> "The respect due to a patent, the presumption that all the preceding steps required by law were duly observed, and the obvious necessity for stability of titles resting upon those official instruments require that in suits to annul them the government shall bear the burden of proof and shall sustain it by that class of evidence which commands respect and that amount of it which produces conviction."

C. THE PATENT IN THIS CASE WAS ISSUED SOLELY BECAUSE OF THE INDEPENDENT DETERMINATION BY THE GOVERNMENT THAT THE LANDS IN SUIT WERE NOT MINERAL LANDS.

It is necessary for the government to show in this case that it was induced by the fraud of the railroad company to conclude that these lands were not valuable for oil. It is charged in the bill of complaint that by reason of the false affidavits of C. W. Eberlein, the railroad selecting agent, the officials of the government "were induced to and did omit to make any examination, investigation or inquiry" or to "in any manner adjudicate or determine whether any of said lands were in fact mineral or non-mineral in character" (R. 13-14). These allegations were made because they were necessary to the statement of a cause of suit. This Court has held that a false representation must be relied upon to be actionable either in law or equity (*Southern Development Co. v. Silva*, 125 U. S. 247, 250). This decision was in a suit between private litigants, but the rule is the same when the government is the plaintiff. "When the United States enters a court as a litigant," says Mr. Justice Field in the case of *United States v. Flint*, 4 Sawyer 43, "it waives its exemption from legal proceedings and stands upon the same footing with private individuals, and therefore, if on a consideration of all the circumstances of a given case, it will be inequitable to grant the relief prayed against a citizen, such relief will be refused by a court of equity though the United States be the suitor."

There was, however, an entire failure to support these allegations in the bill. In fact, the proof shows that the patent now in question was issued solely because the agents of the government had examined the lands in suit and reported to the General Land Office that they were not oil lands.

Going back to the time preceding the application for the patent it appears that the government land officers knew as much about these lands and of the general situation in the region as did the railroad company. In 1899, as we have seen, protest was made by the oil locators against agricultural selections in this region. E. C. Finney, the clerk in the General Land Office, who later had most to do in that office with the rialroad selection of the lands now sued for, testified that in the latter part of 1899 that office received "various letters and petitions from people in California who * * * represented that, unless the lands were suspended from agricultural disposition and the various forms of forest lieu selections, scrip, railroad selections and other non-mineral filings, patents would be obtained thereto under the agricultural laws without affording sufficient time to make adequate explorations for minerals, and the Commissioner was asked to suspend the lands from disposition for a reasonable time so that explorations might be made in areas alleged to contain oil" (R. 1581-2). As a result of these protests thousands of acres in this region, including the very lands in suit, were in 1900 withdrawn from agricultural entry because they were alleged to be oil lands (R. 1581-2; 1524). This shows that the attention of the government was called to the

possibility of there being oil in the Elk Hills several years before the patent issued.

Following this withdrawal, Jay Cummings, a special agent of the General Land Office, was directed to report whether any of these withdrawn lands should be restored to entry. On July 13, 1900, he sent a long report to the Commissioner in which he described in enthusiastic and even extravagant terms the oil possibilities of the entire southern end of the San Joaquin Valley, saying that petroleum might be expected to be found in "fabulous quantities" almost anywhere within the withdrawn area (R. 1528). In the same report he called attention to what he termed fraudulent attempts to gain agricultural titles to many portions of the withdrawn area. The allegations upon which this withdrawal was based and the report of Cummings must have impressed the land officials in Washington with the idea that the entire suspended region might be valuable for oil, so that no mere *pro forma* selection affidavit to the contrary could have made an impression. It is quite probable that Cummings made other later reports to the same effect. He stated in the report mentioned that it was his intention to make further reports. S. P. Wible, a witness for the government, testified that Cummings was in and out of the McKittrick district for several years after 1900 (R. 331).

The information received by the government land officials up to this time was general rather than specific. But in 1902, George H. Eldridge, a distinguished geologist connected with the Geological Survey (R. 929), made a study of the geology of the McKittrick region

in relation to the occurrence of oil. His conclusions were published early in 1903 in *Bulletin 213* of the Geological Survey. In this bulletin he discussed the McKittrick oil field and other adjacent fields and called attention to the fact that the McKittrick oil formation was very narrow and that there were other "parallel folds", his description of which would apparently include the Elk Hills and the Buena Vista Hills. As to these latter folds he said they were "apparently, so far as is at present known, without especial accumulation of petroleum" (R. 929-30).

This is an important contemporary statement by a distinguished and disinterested geologist that oil was not then known to exist *outside the narrow McKittrick anticline*. This bulletin was one of the official publications of the Interior Department and, if it became known to the officials of the Land Department, must have led to a material modification of the impressions produced by the Cummings report. It was known to the geologists of the railroad company in 1903, when they began work in this region, and must have served to confirm their own views and those of practical oil men as to the narrow limits of oil (R. 2378).

Following the issuance of this bulletin the railroad selection of these lands in the Elk Hills was filed on November 14, 1903 (R. 3754). The affidavits accompanying it merely alleged, in the general form prescribed by the government itself in the Regulations of July 9, 1894 (19 L. D. 21), that the selected lands were not "interdicted mineral lands" and that "to the best

of the knowledge and belief'' of the selecting agent none of them were mineral lands (R. 3829, 3832).

These affidavits appear to have made no impression against the earlier idea of the government land officers that all the suspended lands might be valuable for oil. The selection was promptly rejected. The sole reason for the rejection was the withdrawal order of February, 1900, which was itself supported only by hearsay reports (R. 3756-7). It is obvious, therefore, that the land officials of the government were not convinced and misled by the selection affidavits in the manner alleged in the bill of complaint.

An appeal was at once taken by the railroad company from the order rejecting the selection (R. 3865). In a letter written by the chief counsel of the railroad company on December 9, 1903, to the land agent of the company the suggestion was made that a *hearing* might be had before the local land officers to determine the character of the land (R. 1577-8). This clearly indicates that there was nothing to conceal so far as the railroad company was concerned. In connection with earlier selection lists conflicting with this general withdrawal order the company had asked for such hearings (R. 1473). But about this time the government, instead of directing hearings in the usual way, had inaugurated the system of having specific tracts within the withdrawn area examined by its own special agents to determine whether they contained oil or not (R. 1528, 1483). This procedure did not apply to railroad selections alone, but seems to have been generally followed as to

any sort of application for a non-mineral patent within the withdrawn area (R. 1513-16).

Because of this practice, instead of at once asking for a hearing, the railroad company in this instance applied to the Commissioner of the General Land Office to have an examination made of the lands now in suit by a special agent (R. 1544). On December 10, 1903, the Commissioner replied that a special agent had been instructed to examine and report on them (R. 1483).

The direction to examine these lands was sent to E. C. Ryan, then a special agent of the General Land office. He appears to have been a man in whom that office had considerable confidence. He was the son of the Assistant Secretary of the Interior, and from 1904 to 1907 was in charge of a field division of the General Land Office at Los Angeles, California, with several men under him (R. 1547, 1604, 1607). Official correspondence in evidence further shows that he had been relied on for the examination of other alleged oil lands in the same region prior to this time (R. 1520-1).

On December 10, 1903, the Commissioner directed Ryan to examine the specific lands applied for by the railroad company in the Elk Hills (R. 1547). On January 22, 1904, Ryan reported to the Commissioner on this special examination, saying, "I have the honor to report that on January 10th, 11th, 12th, 13th and 14th, I made a careful examination of the lands in question and found no oil seepages, oil springs, surface or other indications of oil or minerals of any kind that would tend, in my opinion, to warrant said lands being classed

as mineral in character, and I respectfully recommend that they be relieved from suspension" (R. 1550). About 480 acres of the lands referred to in this report are not in this suit, but the evidence shows that not more than a day was given to these outside lands (R. 1972).

This conclusion of Ryan concerning these lands was accepted by the government land officials. His letter was indorsed as a "report on the mineral (oil) character of certain lands", etc. (R. 1551). The Commissioner, on February 11, 1904, in an official letter to the local land officers recited the finding of this special agent, *and nothing else*, as the basis for an order relieving these lands from the oil suspension (R. 1555-6). The rejected selection list was thereupon reinstated on February 26, 1904 (R. 3768, 3835). The list was then advertised for two months in a daily paper in the district (R. 3858), no contests or protests were filed (R. 3861), and the patent was thereafter issued on December 12, 1904.

No further proof of any sort was offered by the railroad company. It is true that on September 6, 1904, a "rearranged" list was filed by the railroad company to correct some purely formal errors in the description of the base lands for which the indemnity was asked, which amended list contained duplicates of the non-mineral affidavits filed with the original list (R. 3771, 3837-51). These affidavits, identical with those accompanying the first list, could have had no more probative effect than the first ones had.

It thus appears that the patent in this case was granted *entirely* on the authority of the Ryan report

with the possible assistance of the Eldridge bulletin. It is therefore not true, as alleged in the bill, that the government officials were "induced" by the railroad company not "to make any examination, investigation or inquiry" as to the character of these lands. We are not concerned with the effort which was made to belittle the qualifications of Ryan to make this examination or to show that he did it in a perfunctory way (R. 1598-1601). It is enough to say in this connection that the testimony of D. W. Maddux, a disinterested witness, who accompanied Ryan during his entire examination on that occasion, shows that he did go over all the lands in question and did endeavor to make a complete examination (R. 1970-3).

It makes no difference whether Ryan was competent or not or whether he made the right sort of investigation of these lands. He was the man chosen by the government to examine them. He did examine them and his report was accepted and acted upon. Not only did the government rely on his report as conclusive, but the railroad company was also led to accept it as conclusive. C. W. Eberlein, who made the selection of these lands for the railroad company, testified that when he heard through the letter of the Commissioner to the local land officers that this examination had been made and its result, he felt that the officers of the government had "backed up the non-mineral character of that land entirely" (R. 1162-3). There is not the slightest suggestion in the evidence that the report of Ryan was influenced by the railroad company, or that it was thought that he was not fully qualified. Eberlein testi-

fied positively that he had nothing to do with Ryan or his report, and that he did not believe that anyone else connected with the railroad company had (R. 1162). In fact, a letter written by Eberlein, on December 10, 1903, indicates a strong apprehension that Ryan was antagonistic to the railroad company and might report adversely on general principals if urged to hasten his examination (R. 1579).

The attempt made in this case to minimize the importance of the Ryan report to the detriment of the rights of the defendants may properly be met by what was said by this Court as to a similar attempt in the case of *Colorado Coal Co. v. United States*, 123 U. S. 307, 321. "If his official conduct was impugned," it is there said, "nevertheless his misconduct, if proved, was not imputable to the defendants, and they should not be prejudiced by the odium of an accusation against him. The United States had trusted him, and, inspired by that confidence, the defendants also had relied upon his official acts".

We have seen that the railroad company intended to ask for a hearing to determine the character of the lands now in question, and that this would have been done if the government had not chosen to proceed through its own agents to determine the matter. Even after Ryan had been directed to report on the lands it was the expressed purpose of the company, as shown by its correspondence, to ask for such a hearing before the local land office in case Ryan's report should be adverse (R. 1484-5). This is not surprising. In another similar case, a few years earlier, the railroad company

had established the character of lands in the vicinity of McKittrick by the taking of testimony before the local land office. In this case, *Tulare Oil and Mining Co. v. S. P. R. R. Co.,* 29 L. D. 269, only four years earlier, and during the excitement caused by the Kern River discovery of oil, the Secretary of the Interior had affirmed a decision of the local land officers holding that land *within a mile* of the outcrop and of producing wells at McKittrick was not oil land. This decision was reached in a case where the railroad selection was vigorously contested by locators, and it is hardly probable that lands in the Elk Hills, from four to ten miles farther away, would have been found to be oil lands in 1904, while the known oil area was still so closely confined to the narrow McKittrick anticline. If such a hearing had then been had as to the lands in suit there is little practical doubt that it would have resulted in a decision for the railroad company which would preclude the present charge of fraud.

But the government chose its own method of determining whether these lands were oil lands and acted upon it. Every act it did in finally granting the patent was based on its own independent investigation and decision. It did not rely on anything done or said by the railroad company in deciding that these lands were not oil lands. On the basis of this fact alone, the decision should be for the defendants.

D. THE LANDS SUED FOR WERE NOT KNOWN MINERAL LANDS AT THE DATE OF THE PATENT.

This branch of the argument has been largely anticipated in what we have said in an earlier part of this brief concerning the case made by the government. It is our purpose here to show somewhat more fully the geological theory upon which the government rests its contention that the lands in suit are "oil lands", and also to contrast this theory with the views of the experienced oil geologists and of the many practical oil men who testified for the defense. We shall point to what was actually done by these men in their search for oil during the time in question as a conclusive reply to the conjectures of the government experts as to what they would have thought and done if they had been on the ground in 1904.

1. Artificial geological theory relied on by government.

As already stated, the geological theories on which this case was rested by counsel for the government were the product of the mind of the witness A. C. Veatch. He prepared a map, Exhibit I, on which he represented a scattered line of asphalt deposits, oil sands and oil seepages extending a distance of thirty miles along the base of the Temblor Range from a short distance northwest of McKittrick to and beyond Sunset to the southeast. Assuming that all of these emanations came from the same general saturated stratum, he made the further purely artificial assumption that this saturation would extend laterally from this line of exposure half the distance of the line of exposure,

or fifteen miles (R. 702, 718). This distance would take in the lands in suit. From these two assumptions he drew the conclusion that "both the Buena Vista Hills and the Elk Hills fall within the proven area from geologic determinations" (R. 702). The wells which existed in 1904, he said, were merely a confirmation of this deduction, and he testified that he would have reached the same conclusion without the wells (R. 823).

We have stated this remarkable proposition just as it was advanced. We have done so because the government case really rests upon it alone. Mr. Veatch was the only witness who pretends to have determined that the Elk Hills were a "proven area" for oil in 1904. It is therefore important to know just how he reached his conclusion.

He admitted that this theory was his own invention and that he knew of no other geologist having applied it anywhere (R. 811). An analysis at once reveals why it was never applied elsewhere. His basic assumption is that his thirty mile line of oil indications were all in one saturated horizon. He was forced to admit that he had not endeavored to determine whether this was so or not (R. 835-7).

He further admitted that, if some of these indications were exposed on the upturned edge of a sedimentary bed distinct and separate from other beds in which the remaining indications appeared, his ratio of lateral oil saturation in the bed in question would only be one-half the exposed edge of this particular sedimentary bed

(R. 847-8). That is, if the exposed oil sands in a particular horizon were only five miles long, he testified that his "geologic determination" would extend to the side of that horizon for a distance of only two and a half miles (R. 808).

The witness J. A. Taff, an oil and coal geologist of long experience, who had had occasion in connection with his work to make a careful and detailed study of the geology of the entire region along the base of the Temblor Range, completely shattered this basic assumption. He pointed out the fact that the seepages, sands and other indications, used by Mr. Veatch to make his thirty mile line, appeared on the edges of at least three different horizontal beds separated by intervening layers of strata (R. 2758-9). And he further pointed out the fact that some of these seepages came from formations which were not porous enough to serve as oil reservoirs in a commercial way and which were in such position, that is, were so old and so deep in the general formation, that by no possibility could they be reached by the drill if their plane extended beneath the Elk Hills (R. 2777). Thus, on the face of the visible geologic evidence, even if Mr. Veatch's rule of lateral saturation were correct, the individual exposed "oil segments" are so short that lateral saturation could not reach the region of the Elk Hills in any instance.

Mr. Veatch's second assumption, concerning the extent of lateral saturation, was likewise condemned by all the geologists who testified for the defendants. F. M. Anderson, one of the most experienced and skilled oil geologists in California, and who had been engaged in the

mapping and study of the oil fields of the San Joaquin Valley almost continuously since 1903, testified that this line of seepages and other indications gave no warrant for assuming that oil would extend out even for a tenth of the distance of the outcrop (R. 2546). He also pointed out the fact, which Mr. Veatch evidently did not realize, that the sands capable of being saturated with oil could be expected to extend only a short distance from the ancient shore line evident along the base of the Temblor Range, owing to the tendency of the sands and gravels to be deposited close to shore (R. 2392-6, 2423-7, 2452, 2463). He explained, at a length too great to be even summarized here, the many uncertain factors of structure, water, faulting, diffusion of oil, absence of source for its supply, alteration of strata and sands, and other conditions which interfere with geological prediction, and stated, as the result of his long experience in the direction of practical oil work, that it was not possible for any geologist, no matter how well qualified, to decide the oil bearing character of land on the basis of structure alone (R. 2547). A geologist, he said, may infer the existence of oil and may with some assurance point out the places where oil can *not* be found, but the only way he knew to actually determine its existence was by drilling (R. 2548-9, 2621-2). The witness J. A. Taff also rejected the Veatch assumption as impractical and called attention to the fact that there was the same sort of a line of seepages and oil sands for a distance of a hundred and fifty miles along the west side of the San Joaquin Valley, which, he said, would make the "oil zone" extend seventy-five miles out into the

valley, if the Veatch assumption were correct (R. 2759, 2777). W. H. Ochsner, another experienced oil geologist, expressed the opinion that the Veatch hypothesis was "exceedingly unwise" and, if followed by drilling, might be "disastrous" (R. 2191-2).

This Veatch hypothesis, by which the "proven" oil character of the lands in suit is sought to be established, is obviously irrelevant, even if correct, unless it is shown that it was known and relied on in 1904. There is no evidence that it was. It is certain that the railroad company had no such notion. F. M. Anderson, the geologist, was in the employ of the railroad company in this very region in 1903, and for several years after that. We have seen that he had no confidence in any such theory. His associate in geological work for the railroad company in that region was Josiah Owen, now deceased. Mr. Anderson testified that he and Owen studied and discussed the geology of this region in 1903 and later, and that they were then in agreement in the conclusion that the Elk Hills "were a long way out from the foothills of the Temblor Range where the oil was likely to be", and that they were "too far away to ever be valuable oil territory" (R. 2383, 2388). This is confirmed by a map, reproduced as Map No. 4 in the Appendix to this brief, which Owen made in March, 1903, and on which he indicated all the lands "supposed to contain oil" as being close to the base of the Temblor Range. The only other man in the employ of the railroad company in that region prior to 1904, who was at all conversant with the oil business, was J. B. Treadwell. He was in charge of the development of oil for use as fuel

on the railroad from two small tracts of land *leased from private owners* on the McKittrick anticline (R. 432). This work was begun in 1899 (R. 164-5) and Treadwell remained in charge until he was succeeded by Owen early in 1903 (R. 424, 2907). During this time Treadwell prepared a map (R. 2903) for the information of E. T. Dumble, chief geologist of the company, showing what he then considered the limits of the possible oil territory (Exhibit 116, reproduced as Map No. 3 in Appendix to this brief). This map shows a very narrow line or area of possible oil territory confined entirely to the McKittrick anticline. This shows that if the Elk Hills were capable of being "proven" in 1904 by this recently invented theory these employees of the railroad company were not aware that it could be done. We shall show under the next head that those who were actually endeavoring to produce oil in this region at that time were equally without thought that there might be oil in the Elk Hills.

It is very apparent that the theory we have been discussing was advanced by Mr. Veatch in the effort to bring this case within the ruling in the case of *Diamond Coal Co. v. United States*, 233 U. S. 236. But he made the double mistake of assuming that oil evidences its occurrence in the same way that coal does and of carrying his deduction many miles farther than it was carried in that case. In this he finds no support in the testimony of any other geologist who appeared in this case. Dr. J. C. Branner, who also testified as an expert for the government, in particular failed to agree with him. According to him, coal mining is not subject to

the uncertainties of oil mining. "In coal mining", he said, "one can get a very close idea of the tonnage to be taken out under a given tract of land; that is, we can calculate the product. It is the rule, in fact, in the anthracite regions in Pennsylvania, that the company will have in its report by its geologist, 'We have so many acres of land. This land yields so many tons an acre', and they count on that just exactly as if it were money in the bank. Now in petroleum mining, of course, you can't do that exact thing; there is an element of uncertainty about it that you don't find in coal mining" (R. 1024).

The witness J. A. Taff, who had had long experience in the examination of coal deposits throughout the country while he was connected with the United States Geological Survey, explained the differences between coal and oil in more detail. Coal, he said, was usually laid down slowly over broad and low lying swampy areas where the conditions remained stable for long periods of time. When formed it stayed just where it had been deposited (R. 2766-7). Oil on the other hand is derived from a source and in a manner not fully understood. It is almost invariably produced from some other formation than that in which it originated. As a rule it is found commercially only in beds of sand. These sand deposits, under the conditions which prevailed in California, are local in character, as if formed by shifting currents and wave action close to the shore lines of former seas and lakes. As the extent of the sand is itself uncertain and the presence of the oil within the sand is still more uncertain, oil can be predicted with

far less assurance than can coal (R. 2766-7). He further testified that even in the case of coal he would not have felt justified in predicting its occurrence as far from the outcroppings as the Elk Hills are from the oil indications along the base of the Temblor Range (R. 2788-93).

2. The real test of what was known is what was thought and done by practical oil men.

The evidence shows that at the time this case was tried development for oil had extended from McKittrick to the southeast into and through the Midway Flat and into the Buena Vista Hills, thus opening up an immense oil territory which was untouched as to the greater part in 1904. To some extent this remarkable development is shown on the map prepared by the government witness F. O. Martin (Exhibit O, reproduced as Map No. 2 in Appendix to this brief). The wells which existed in 1904, both those which were productive and those which were not, are shown on Government Exhibit I, which is not reproduced in this brief on account of its size.

The greater part of this development has occurred since 1908. In 1899 the first successful oil well was drilled at McKittrick (R. 165). At that time there was not a well in the Midway Flat, which is now one of the most prolific oil fields in the world. The first well to strike oil in the Midway field was drilled in March, 1901 (R. 2059). This well was drilled in the foothills at the base of the Temblor Range and the wells which followed it still clung to these foothills until as late as 1907 (R. 2060-1).

Until long after 1904 not a well was drilled by a practical oil man in the Elk Hills or even in the Buena Vista Hills, which lie much closer in towards the oil "indications" along the Temblor Range. The first well was drilled in the Buena Vista Hills in 1909 and 1910. The witness John Pollard, who drilled this well, testified that it encountered a heavy flow of oil on February 2, 1910, and that on the following day there was a great rush to get drilling rigs into the Elk Hills because of the encouragement given by this discovery in the other range of hills (R. 1994).

This, in outline, represents the course of development in this region. There was no legal obstacle to prevent the development of the Midway field and the Buena Vista Hills in earlier years. Oil men are notoriously diligent in following up the quest for oil. There must, therefore, be a reason why they allowed these valuable areas to remain unclaimed so long. This reason is found in their firm conviction up to 1904, and later, that the only possibilities for oil lay close along the base of the Temblor Range. The real situation is well explained by the witness J. J. McClimans, a Pennsylvania oil man of long experience, who went to McKittrick in 1900, and who has remained in charge of oil properties in different parts of this region ever since. "From 1900 to 1905", he said, "the oil development was along the Temblor Range. The only place where there was any oil at that time between McKittrick and Sunset was in the Midway on Section 8, 32-23. Between that and McKittrick there was no development at all; while at McKittrick the development was south and west of the town. The

impression at that time amongst oil men was that the oil was very narrow and I know that they were afraid to go out one side or the other for fear they would get off the belt, and they hugged the Temblor Range pretty close. This continued to be the idea, to my knowledge, up to 1908" (R. 1932). David Kinsey, another experienced oil operator who came to this region before 1900, testified that up to 1905 and later the general belief among oil men "was that the oil zone was pretty well up in the hills from Sunset to McKittrick" (R. 1796). Even as late as 1909 one of the most experienced and successful oil men in that region told Kinsey that he was "crazy" to think of getting oil only a short distance from these hills (R. 1796). Kinsey himself went into the Elk Hills to drill for oil, but not until the rush of 1910. After drilling a perfectly dry hole to a depth of 4850 feet he gave up in disgust (R. 1794-5).

E. J. Miley, another practical oil operator in this region since 1900, testified that prior to the discovery of oil in the Buena Vista Hills in 1910 it would not have been considered "good judgment" to look for oil in these hills or in the Elk Hills (R. 1724). This is in line with the statement of the government expert, Dr. Branner, already quoted, that a geologist "would have been very bold indeed to venture the prediction of oil in the Buena Vista Hills" if it had not been discovered in the vicinity (R. 1992).

Many other witnesses testified to this general impression that the oil zone was narrow and close in to the Temblor Range, but reference can be made to only a few of them (R. 1826, 1887, 1974, 2007, 2060, 2077). Even

the government witness, H. A. Blodget, who showed a strong prejudice against the railroad company in his testimony, and who made hundreds of speculative locations in the Elk Hills during the oil excitement of 1899, admitted that he confined his actual drilling for oil close to the Temblor Range, because he considered that place "more certain" and regarded the Elk Hills as an "unknown" field (R. 393-5). The action of all these men in clinging close to the Temblor Range speaks far more persuasively of what was thought and known at that time than does the testimony of the witness who did not come into this region until later years or of those whose present testimony is unconsciously influenced by the developments which have since taken place.

In reply to the attempts of the government to show that the Elk Hills in particular were generally considered by oil men to be valuable for oil prior to the date of the patent now in suit, the defendants offered the testimony of twenty-five men, all of whom had been engaged in the oil business in that vicinity prior to and at the date of the patent. Most of these men were then actively producing or prospecting for oil in the McKittrick or Midway district. They were in a position enabling them to keep in close touch with current opinion as to where oil might be found. Unlike many of the government witnesses, they were searching for *oil* and not merely for "locations" to be held for speculation. Many of them were active in the search for new territory, either for themselves or for companies by whom they were employed, and therefore reviewed the possibilities of that entire region. If the Elk Hills were at that time *known*

to be oil lands, these men would inevitably have learned that fact. If there had even been a common impression that these hills were possible or "prospective" oil land, they would have heard of it. Most of them had occasion to go into the Elk Hills between the years 1900 and 1905, either to examine them for oil possibilities or for other reasons. Many of them had examined the alleged seepage on Section 32 of Township 30-24. And, with possibly two exceptions, they were men whose interests at the time they testified were entirely independent of those of any of the defendants.

It is not possible to discuss their testimony in detail within the space at our disposal, nor is it necessary to do so. Their names and references to the record where their testimony is to be found are inserted in the margin.* With that unanimity that can come only from the

* NOTE.—(1) E. J. Miley, operator at McKittrick since 1900 (R. 1715-16); (2) David Kinsey, driller and superintendent on "West Side" since 1896 (R. 1796-7); (3) H. C. Goodyear, at McKittrick from 1902 to 1905 doing general work around oil wells (R. 1818); (4) W. H. Cooley, operator and superintendent in McKittrick in 1903 (R. 1810); (5) S. J. Dunlop, operator in Midway since 1899 (R. 1820-1); (6) Fred H. Hall, interested in development of oil in Midway since 1901 and familiar with Elk Hills then and during recent development (R. 1824, 1826); (7) H. W. Thomas, operator of extensive properties on "West Side", in oil business since 1900 (R. 1829-30); (8) R. K. Howk, dealer in oil well machinery, operator of wells at McKittrick from 1901 to 1904 and engaged in examining prospective oil lands for other people at that time (R. 1842-44); (9) B. M. Howe, manager of oil companies, in oil business since 1898, drilling in Midway and examining surrounding country for locations in 1901 (R. 1887); (10) J. J. McClimans, operator in oil business since 1884 in Pennsylvania, and since 1900 in California, operating at McKittrick 1900-4 (R. 1932); (11) H. H. McClintock, superintendent of oil properties, superintendent pipe lines for Standard Oil Co. in McKittrick and Midway fields 1904-10 (R. 1974); (12) M. H. Whittier, operator of extensive oil properties in California and Indian Territory, twenty-three years' active experience, began operating oil wells at McKittrick in 1899 and in close touch with conditions there since (R. 1984-5); (13) C. A. Allison, sold oil well supplies in "West Side" 1900-3 (R. 1999-2000); (14) C. A. Barlow, oil operator in Midway since 1901, collected data for Barlow & Hill's maps from 1901 on, concerning oil development in "West Side" fields (R. 2007); (15) Chas. T. Burks, oil operator in Midway since 1900 (R. 2060); (16) L. E. Doan, operated oil properties in Kern River, Coalinga and "West Side" fields since 1900 (R. 2071); (17) L. B. McMurtry, oil operator in

clear truth of what they say, they testified that during all the years between the beginning of the oil industry in that region and the date of the patent in question, and even later, the common impression was that the oil lay in the narrow zone that has been described along the Temblor Range, and that the Elk Hills were not even considered to be within the range of *possible* production. They even failed to recognize the possibilities of the present Midway field at that time, although a few of them said that it was "suspected" that oil *might* be found there.

It has been claimed in argument that some of these witnesses lent support to the Veatch theory of the wide diffusion of oil. It is true that a few of them, in response to cleverly framed questions on cross-examination, made statements which, if taken without their context, might lend color to the claim that oil sands are persistent and continuous over a wide extent. The fact that these men acted on the assumption that the oil was in a narrow zone, is, of course, ample proof that they did not really believe that distant areas could be "proven" by deduction from surface indications or from existing development. Reference to the testimony of some of those who

Midway and elsewhere since 1900 (R. 2077); (18) E. W. Kay, oil operator in Midway since 1900 (R. 2085); (19) Fred Kimble, in oil business since 1900, at McKittrick and vicinity looking for oil lands in 1903 or 1904 (R. 2117-8); (20) John P. Kerr, fifteen years in oil business, engaged in looking for prospective oil land for large company in "West Side" fields from 1901 on, examined Elk Hills in 1902 (R. 2125); (21) R. E. Graham, oil operator in Midway since 1901 (R. 2132-3); (22) Samuel Shannon, oil operator, began oil business at Coalinga in 1898, went to "West Side" fields in 1904 (R. 2140-1); (23) U. S. Waugh, in oil business since 1898 (R. 2146-7); (24) C. A. Hively, field superintendent Kern Trading & Oil Co., in oil business since 1900, at McKittrick 1900-5 (R. 2161); (25) D. S. Ewing, attorney, interested in oil business in "West Side" fields since 1901 (R. 2250).

are claimed to lend support to the government theory, which testimony is similar to that given by the others, will further show that such claim is unfounded. H. W. Thomas, a practical oil man, as were the others to whom reference will be made, assented to a number of leading questions suggesting that oil might be presumed to "persist for quite a distance" (R. 1835-9). But when he was pressed to say that oil was a "probability" at the point thus defined only as being at "quite a distance", he replied that it would be no more than a "possibility" since oil men had found that it was not "safe" to draw deductions very far from their wells (R. 1837). He added that no oil man would assume that it was safe to drill for such a sand seven or eight miles away from producing territory and said that "even within one mile it would be a gamble" (R. 1840). The witness F. H. Hall stated that "oil sands generally have some uniformity in the direction in which they dip from the outcrop, except where they are broken up", but he added, "I do not mean to say that it is safe to assume that this will be true for several miles" (R. 1826-7). R. K. Howk was asked many questions along the same line (R. 1859-64) and, although he did not dissent from the theory that oil sands might persist "indefinitely unless interrupted" (which is of course obvious), he added the practical remark that oil men "had tried by going out on the dip of the sand and failed to find it" (R. 1861), and recited instances where this had occurred in apparently promising areas close to producing wells (R. 1877). One other instance will be given as it is typical of the ideas of all these men. B. M. Howe, in answer to the

same sort of questions, replied that the oil sand might be presumed to continue "for a ways" unless it "pinched out" and said that "in nearly all oil fields the sand has a certain limit for oil, and when you pass that limit it is water" (R. 1904-5). It is apparent from the testimony of these witnesses that the continuity of the sand and the presence of oil within it are so uncertain that they can not be taken to have been *proven facts* in 1904 in the Elk Hills, from four to ten miles from then producing wells.

3. There are no "indications" of oil in the Elk Hills.

Much of the testimony introduced by the government was devoted to the description of a supposed seepage of oil in Section 32 of Township 30-24, just east of the lands in suit, and of other indications of oil in the Elk Hills. The testimony concerning these was so intermingled with references to seepages, oil sands and asphalt deposits many miles away along the base of the Temblor Range that one unfamiliar with the entire record might gain the impression from this part of the testimony that there were many surface exudations of oil in the Elk Hills and even on the lands now in suit.

But that such is not the fact appears from the maps prepared and introduced by the government itself, Exhibits I and O. Exhibit I was prepared by Mr. Veatch, the chief expert witness for the government, and purports to show the oil wells that existed in 1904 as well as all the seepages or other forms of oil indications found by him or described by other witnesses (R. 111-13). This map shows only two such indications

anywhere near the lands in suit, one just east of these lands in Section 32 of Township 30-24, and the other to the west in Section 14 of Township 30-22. As these two places are situated at the ends of the anticlinal fold which passes through the lands in suit much importance has been attached to them as proof that there is oil in this anticline. On this map Mr. Veatch has indicated another place in the southeastern part of the Elk Hills and remote from the lands in suit, where one of the witnesses, who was without experience in the oil business, had found what he took to be a "very much dried" oil sand (R. 146). Mr. Veatch took this "indication" on faith and it does not appear that he ever saw it (R. 709). It also appeared that he never examined the alleged oil indication on Section 14 to the west of the area in suit but had merely observed the place where it was supposed to be in passing on a train over the line of railroad that runs near it (R. 776-7).

Exhibit O (See Map No. 2, Appendix to this brief) was prepared by F. O. Martin and J. W. Kingsbury, mineral inspectors of the General Land Office (R. 610-12). Unlike the former exhibit, the Martin map purports to show conditions as they existed in 1912. It is to be noted, that this map shows only *one* seepage or "indication" in the entire range of the Elk Hills, that in Section 32 of Township 30-24. He did not testify that he had made any test to determine whether this alleged seepage contained oil. Mr. Veatch, however, did test it with chloroform and found no trace of oil, but he explained this by saying that the oil had probably been "burnt out" in recent years (R. 712-13). The omission

of any possible indication of oil on the Martin map is important as he had spent a great deal of time from 1910 to 1912 in examining the entire range of the Elk Hills and claimed to be familiar with practically every foot of the region (R. 346, 610, 626-7).

We may take it as established, therefore, that these two maps show all the oil indications claimed to exist in the Elk Hills. As already stated in an earlier part of this brief, Jacob Kaerth, a surveyor, testified that he had seen "asphaltum reefs" in many places in the township in which the lands in suit lie (R. 417). Mr. Veatch admitted that he had seen none of these although he had been on every section in this township (R. 801-2). Frank Barrett said that he saw an oil seepage on Section 17 of the lands in suit in 1899 (R. 479-80). But as these lands were not then surveyed and as this witness showed considerable confusion as to his distances and directions, it is probable that he had in mind the supposed seepage in Section 32 in the township to the east. At any rate, no one else saw any seepage in Section 17.

Very little need be said of the "indication" in Section 14 to the west of the lands in suit. As we have seen, the witness Martin omits it. And other witnesses for the defense showed that it consisted merely of "wash" or "float" deposits of asphalt that had been carried down the canyon by water from the vicinity of McKittrick, where there are extensive deposits of asphalt. The witnesses Hotchkiss and Miley determined its real character as early as 1900 (R. 1745, 1789, 2090). Miley said that its character was so evident that any

competent geologist must have recognized that it was merely "float" (R. 1790). This explains why the government expert, Martin, did not mention it on his map. J. A. Taff, the geologist for the defendants already referred to, made a careful examination of this place and its vicinity in 1913 and found that the material observed there did not come from the formation but consisted of separate particles of asphalt, mixed with other detrital material, carried by the stream from the southwest (R. 2765-6). No attempt was made to contradict this testimony on rebuttal. We may therefore take it to be an established fact that there is no seepage at this place. Thus disappears the supposed evidence of oil at the western end of the anticline which passes through the area in suit.

The other supposed evidence of oil in Section 32 at the eastern end of this fold likewise disappeared. Great reliance was placed on this supposed "seepage" in the testimony for the government and it is very likely that misapprehension as to its true character caused many inexperienced oil prospectors to locate claims in its vicinity during the oil excitement of 1899 and later. It is also probable that subsequent realization that it had no connection with oil is what led to the early abandonment of all these claims.

The evidence shows that this supposed "seepage" is a purely local and surface deposit of vegetable matter, somewhat resembling peat, and having no connection with oil or with anything beneath. One or two of the government witnesses, who were not experts in making oil tests, claimed that they had gotten an oil showing

from this material by the use of chloroform. Although the chloroform test is the recognized method of determining whether oil exists or has existed, this test requires an amount of experience and skill not possessed by the ordinary man. An expert by this test can determine whether oil ever existed in a sand even though the sand appears perfectly dry and may have been exposed to the air for a century or more (R. 2764-5).

The geologist F. M. Anderson made a thorough examination of this deposit. He described it as a brownish colored surface deposit of organic material with a fetid smell and containing crystals of sulphur (R. 2474). From this it is apparent that the oil could not have been burned entirely out of it in recent years, as suggested by Mr. Veatch, since this would also have consumed the sulphur. Mr. Anderson tested this material with chloroform and other reagents, with the assistance of a chemist, but did not discover the slightest trace of oil (R. 2476-7). In his opinion this deposit did not have "any connection whatever with the occurrence of petroleum anywhere" (R. 2475).

The most thorough test of this deposit was made by J. A. Taff. In order to determine its extent and character he ran a cut clear through it from top to bottom, thus obtaining a cross section of the entire deposit and demonstrating that it had no connection with or impregnation from the formations below it. A short distance from the surface he found places where this material appeared moist and would "ball up" in the hand (R. 2760-2). This is the same thing which was observed at this place by the government witness

Drouillard in 1874 and 1899 and which led him and others to think that there was oil in this place (A. 121-2). It was to explain the disappearance of this supposed oil that Mr. Veatch suggested that the deposit had been burned since 1899. Mr. Taff also made a series of careful tests of this material but found no trace of oil but did discover that when it was dried it would burn like peat. He concluded that this place was not an oil seepage or petroleum gas "blowout" and that it had no significance in determining the character of the lands in the Elk Hills (R. 2761-2).

This evidence was so conclusive that no effort was made to rebut it. It is confirmed by a careful geological map of this region issued by the Geological Survey in 1910 (Exhibit F), which does not show a single oil sand or asphalt deposit anywhere in the entire range of the Elk Hills, although it shows them in great detail along the base of the Temblor Range. We are therefore able to say from the evidence that there is not a single oil "indication" in the Elk Hills or anywhere near them. With these alleged seepages gone at both ends of the anticline referred to and even from the entire hills, the sole remaining conditions upon which the possibility of oil in the Elk Hills could have been predicated by anyone in 1904 are the wells and seepages many miles away along the Temblor Range. It is, therefore, apparent that the artificial theory of Mr. Veatch, to which we referred a few pages back, must be adopted and applied in its entirety to sustain a decree for the government.

4. The lands in suit have not yet been proven to be valuable for oil.

It is our contention that these lands were not only not *known* to be mineral lands at the time they were patented but that they could not have been so known for the very good reason that subsequent drilling on sections interspersed with them has shown that the finding of oil is hopeless as to the western part of the township and doubtful as to the eastern half. It is obvious that if these lands are not now known to contain valuable deposits of oil the government was not defrauded in 1904 in any view we may take of the evidence. As to the lands which are sued for, it is conceded that not a drop of oil has yet been discovered in any of them.

We have already seen how the discovery of oil in the Buena Vista Hills to the south, in 1910, led to a rush into the Elk Hills. Following this discovery all sorts of people went in to these hills in the effort to find open lands on which to drill. This rush was like that which follows any important mining discovery. Even practical oil men and companies caught the fever, since the unexpected discovery in the Buena Vista Hills had upset their prior notions. The field manager of one of the large oil companies said that his company went in because "everybody was going in; we followed along like a lot of sheep" (R. 2051). Many such companies joined in the rush, including the Associated Oil Company, to be referred to later, of whose stock the defendant Southern Pacific Company owned fifty-one per cent (R. 1888, 1804, 2134, 3656-7). During this rush the present suit was brought.

It was not possible to obtain evidence showing the total amount expended in the Elk Hills for drilling following this influx. The proof shows a total of nearly two million dollars and the real figure is probably much greater. Wells were drilled from one end of the hills to the other, ranging from a few hundred feet to nearly five thousand feet in depth. These wells and their depths and results as to the discovery of oil are shown on Exhibit 16, prepared by the witness W. J. Luke from personal investigation in the field and from the evidence in this case (R. 2256-9). This map is reproduced as Map. No. 6 in the Appendix to this brief. *It shows that there were thirty-six of these wells drilled in the Elk Hills and that only three resulted in the discovery of as much as a gallon of oil.* These three were drilled by the Associated Oil Company and will be spoken of later. Before the evidence in this case was closed these hills were abandoned so far as the search for oil is concerned. One witness testified that he had ridden from one end of the hills to the other in December, 1912, without meeting a soul (R. 2134). Another said that in November of the same year all the properties were idle and that in some places the derricks had been torn down and hauled away (R. 2259). Another witness said that this region now looked to him "like a cemetery of disappointed hopes" (R. 2736).

On the western side of the township in which the lands in suit are situated the Scottish Oil Company drilled a well 4005 feet deep in Section 20, got nothing and abandoned the well and the section (R. 2041-2). This well was near the crest of the anticline and, there-

fore "favorably located" according to geological notions (see Exhibit O, Map 2, Appendix). The Redlands Oil Company, of which the government geologist Ralph Arnold was an incorporator (R. 1980), drilled a well 2850 feet in Section 30 of the same township, got what they thought was a "color of oil", thoroughly tested the well and then abandoned the ground (R. 1954-5). As an indication of the fallibility of geological prediction it is interesting to note that Mr. Arnold advised his associates that they would probably get oil at a depth of 1800 feet (R. 1981). Their failure confirmed his earlier published statement, already referred to, that the prediction of oil in an untried field is "extremely hazardous". Their experiment cost them $50,000 (R. 1954). Another company drilled on Section 32 of the same township to a depth of 2425 feet, got nothing and abandoned its claim after spending $45,000 (R. 1954). Another drilled on Section 28 of this township to a depth of 1670 feet, found some gas but no oil and abandoned the property in April, 1911, after spending about $40,000 (R. 1953-4).

The witness John Lang, who had charge of the drilling of the last well mentioned, acted as adviser in the drilling of the other wells. In December, 1912, he testified that he thought the *eastern* part of this township was "possible" oil territory, but did not think there was any chance to get oil in that part of the township where the Scottish well was drilled. As to the other shallower wells already mentioned, the most he would say was that they might "have a chance" to get oil if they went

deeper (R. 1963, 1968-9). This is far from "clear and convincing" evidence that this part of the township is valuable for oil.

On the eastern side of the township all of the prospect wells were drilled by the Associated Oil Company beginning in 1910. Nine unsuccessful wells were drilled on Sections 22, 24 and 26 to depths ranging from a few feet to nearly three thousand feet. Three other deeper wells drilled by this company did encounter oil in quantities which for a time gave promise of being substantial. These discoveries were made in Sections 24 and 26 of this township and in Section 30 of the township to the east. These wells were respectively 3887, 4030 and 3838 feet deep and were the only wells in these hills that found more than a "color" of oil, though others were as "favorably situated" on the anticline and were as deep or even deeper. It thus appears that the only real evidence of oil anywhere in the Elk Hills was furnished by a subsidiary of one of the defendants *after* this suit was started.

Whether these three wells found oil in commercial amount has been the subject of much controversy. More than five hundred pages of the record (sent up as a separate exhibit) are filled with the confidential daily operating reports of those in charge showing the effort to make them productive. Detailed discussion of this evidence is unnecessary. The witness W. E. White, who was in daily touch with the drilling of these wells, has fairly summarized their record in three simple graphic charts (Exhibits 172, 173, 174). They were drilled by competent men and Mr. White testified that every

known means was employed to make them productive (R. 3170). They were finally shut down in August, 1912 (R. 3156), the production of each of them at that time not exceeding an average of ten barrels a day (R. 3125-6). This would barely pay the wages of a single pumper.

A few facts stand out prominently in connection with these three wells. They cost approximately $60,000 apiece to drill, or more than $15 a foot, and the total cost of all the work of this company in the Elk Hills was $517,616.94 (R. 3124-5). Although two of these three wells gave promise at times of producing at the rate of more than 400 barrels a day (Exhibits 172, 174), their *actual* total production during more than a year of effort to make them produce was only 9941 barrels of oil (R. 3125-6).* It has been sought in argument to materially increase this total by adding up the daily estimates of rate of flow appearing on the charts mentioned above. But Mr. White showed that these "estimates" of *rate* of flow have no real relation to actual production, which was determined by measurement of the oil as it was accumulated (R. 3206, 3250, 3381-2). From the above figures it appears that the oil actually produced cost about $51 a barrel, considering the total amount this company spent in its work, or nearly a hundred times the then market value of the oil. The greatest monthly production of any of these wells was made by that in Section 24 in June, 1912, and did not equal a hundred barrels a day (R. 3126). The witness F. M.

* The amount of 22,651.15 barrels given for one of these wells on page 3125 appears from the context to be a misprint in the original exhibit and should be 2,265.15 barrels.

Anderson showed by amortization tables, based on the experience of numerous other wells, that, even if these wells had shown a daily average of 100 or 150 barrels, they could never be made to pay for their individual cost of drilling and operation (R. 2497-2537).

We have seen that development in the western part of the township in question has shown that it can not be considered even as possible oil land at this time. As to the eastern portion it may be *possible* oil land, looked at in the light of recent development. Even to this extent it must be admitted that its character is shrouded in doubt. If doubtful now, after extensive testing in recent years, it seems too clear for question that in 1904 none of these lands could have been *known* to be actually *valuable* for oil. This Court has ruled more than once that the question whether land is known to be valuable for mineral must be answered in the light of the conditions at the time proof for title is made. If at that time the mineral was unattainable it could have no value then in a commercial sense. As earlier pointed out, it would have been impossible in 1904 to have drilled wells to the depths of these three wells in the Elk Hills with the appliances and methods then known. Many witnesses bore testimony to the fact that great strides have been made in recent years in drilling methods. The witness David Kinsey, who drilled a well in the Elk Hills in 1910 to the remarkable depth of 4850 feet, has described the reasons why it is so hard to drill deep wells in the soft and shifting California formations. He said that even in 1905 there was no machinery "equal to the attempt" to drill a hole 4000 feet deep.

In drilling deep holes, he said, it was necessary to case the hole from top to bottom with extra strong screw jointed pipe so constructed and applied that it could be raised or lowered and thus kept free to pass down with the drill. The available casing in 1904 was not of such design or strength as to stand the strain of long "strings" of it thus suspended from the surface. On this account he said that the ordinary wells in 1904 did not go to a depth of more than 1200 or 1600 feet (R. 1796-8). Therefore, even if the oil which the Associated Oil Company encountered in the Elk Hills had been far greater in amount and its existence had been *known* in 1904 by some sort of divination, it would not have been then valuable as it was unattainable.

The fact that the only *proof* of any oil at all in the Elk Hills was made possible by a company controlled by the Southern Pacific Company, and that this was done *after* the present suit was begun, denotes complete unconsciousness of an earlier fraud. Guilty men do not ordinarily thus assist in proving a material fact from which the imputation of their wrong may be drawn. The importance of this circumstance has not escaped counsel for the government. Various efforts have been made to reconcile it with the charge of fraud. It has been suggested that the railroad company allowed its subsidiary to drill lands interspersed with those in suit because revelation of the hidden oil was certain in any event through the acts of others seeking the same land. This explanation does not fit the facts. Plausible pretext could readily have been found to hold this and other land, without drilling, until this suit was disposed of, or

to delay the actual disclosure of the oil while apparently seeking it with diligence. The large amount spent and the strenuous effort to make the wells produce indicate the utter absence of such a plan. More convincing yet is the testimony of those in charge of the Scottish well in Section 20 to the west that they were encouraged and even assisted by the Associated Oil Company, which had no interest in their claim, to drill deeper when they had actually made up their minds to quit (R. 2043, 2046-7).

It has also been claimed that the Associated Oil Company did endeavor to conceal the extent of its discoveries and to wreck and ruin its wells so that they would be unproductive. But it can not be readily believed that more than half a million dollars would thus be thrown deliberately to the winds by sane men or that, in doing so, they would not have planned better to avoid even a showing of oil. The well casing could easily be driven clear through the oil sand, thus cutting it off until occasion came to open it up.

Without regard for consistency it has also been argued that those in control of the railroad company permitted the Associated Oil Company to discover oil because it was their purpose to gain fraudulent title to the odd sections in this township by the patent now in question and to obtain some of the even sections by means of mineral patents. The latter aim could be accomplished, it is said, only by diligent drilling and actual discovery of oil and for this reason the subsidiary company was given a free hand. Though apparently plausible, this suggestion does not accord with the way in which ordinary men might be expected to proceed in the effort to

conserve the fruits of a conscious fraud. The Associated Oil Company sought a mining patent to only a portion of three sections in this township, and its actual discoveries in this township would not entitle it to more than 320 acres. The railroad company owned but fifty one per cent of the stock of this subsidiary. If there had been a conscious fraud in obtaining the 1904 patent, the danger of disclosing the actual existence of oil would be apparent to those in control. Sane men, if guilty of concealing their knowledge of oil in a tract of six thousand acres which they desired entirely for themselves, would not thus deliberately disclose oil in sections interspersed with their own and thus put their larger holding in possible peril merely to secure a half interest in 320 acres, especially where suit had already been brought charging them with this fraud. The truth of the matter is that the conduct of the railroad company in connection with these wells can be explained only on the ground that there was no fraud and nothing to conceal.

E. THE RAILROAD COMPANY DID NOT BELIEVE IN 1903 AND 1904 THAT THE LANDS IN SUIT WERE VALUABLE FOR OIL.

Much that has already been stated is applicable to this part of the discussion. It has been shown, we believe, that the lands in suit were not *known* by anyone to be valuable for oil at the time they were patented. The case might well be rested on this. But, in order to remove even the imputation that a fraud was contemplated, we shall briefly refer to the ample and convincing evidence proving the good faith of the railroad company in selecting these lands for patent.

At the outset we desire to call attention to one fact which clearly differentiates this case from that presented in *Diamond Coal Co. v. United States,* 233 U. S. 236. In that case the evidence showed that the defendant had no occasion to seek the lands there in question unless they were coal lands, as it could utilize no other sort. This alone was strong proof of a wrong intent. But in our own case this was not the situation. The railroad company was given a large grant of lands, good, bad and indifferent. Its selections were confined within prescribed limits. It had to take these lands or none at all. When its primary or base lands were taken by others, it could select indemnity lands which were even more limited and precarious in choice since no right of the railroad company attached to them at the date of the grant but only after they had been selected and this selection had been approved. Again, the railroad company was not engaged primarily in the oil business and acquired thousands of acres which had little, if any other than a grazing value. The evidence

shows that the lands in suit are of this character. At the time this suit was brought they were leased by the railroad company to sheep men for an annual rental, just as were thousands of other acres in the same region. One lessee testified that he held a lease for these lands together with more than 300,000 other acres of railroad lands (R. 1697). J. A. Ogden, a practical stockman, testified that he had lived in the vicinity of the Elk Hills and that he had grazed cattle in these hills for years and that there was good feed there for a considerable part of the year (R. 1982). H. J. Hart testified that for six months or more these hills had good green feed and that in places where water was applied the soil showed great fertility, and further stated that considerable water was encountered in some of the shallow wells drilled there (R. 2112-16). Ample justification therefore existed for selecting these lands, especially as very little indemnity land remained which could be selected (R. 1154-6, 1313).

A preliminary word of explanation is necessary in order to understand the relation to the issues in this suit of the various employees of the railroad company who will be referred to. The actual selection of the lands in question was made by C. W. Eberlein, who became land agent of the company in August, 1903, and resigned in June, 1908 (R. 1037, 1253). His duties were confined entirely to the selection and sale of lands (R. 1038-9). For many years before the advent of Eberlein, who was sent to California to take charge of land matters by E. H. Harriman (R. 1036), Jerome Madden (now dead) had been land agent. A distinct department

was engaged in the development of fuel oil for use on the locomotives of the company. This department, with which Mr. Eberlein had no connection, was organized in 1897 or 1898 with the employment of J. B. Treadwell to take charge of the development or purchase of oil for use as fuel on the railroad (R. 434). Specifically, Mr. Eberlein was land agent for the Southern Pacific *Railroad* Company, which owned the grant, and Mr. Treadwell was in the employ of the Southern Pacific Company which operated the road under a lease (R. 434), the latter company owning all the stock of the former. Mr. Treadwell went to McKittrick in 1899 and began the production of oil from two small leased tracts close to that town (R. 432). He had nothing whatever to do with the examination or selection of lands for patent (R. 434). Early in 1903 he was succeeded in this work of developing oil by E. T. Dumble, who held the title of chief geologist of the Southern Pacific Company (R. 2907). Josiah Owen, who died in 1909, was placed in immediate charge of this work (R. 2907, 1607). Mr. Owen, who was a geologist, was assisted in his field work by F. M. Anderson, the geologist to whom we have already made frequent reference. During 1903, a subsidiary company, known as the Kern Trading & Oil Company, was formed to operate the oil wells of the company and also to take over by lease such lands of the Southern Pacific Railroad Company as were thought to be "actual", "probable" and "possible" oil lands. This was done to take these lands out of the control of the land agent and thus prevent their possible sale to outsiders, as is explained by Mr. Kruttschnitt, who was

then general manager of the operating railroad company (R. 3084-5). This subsidiary company actually took charge of these lands in April, 1904 (R. 2946), but the lease itself was not finally prepared until August 2, 1904, at which time Mr. Eberlein positively declined to sign it. This circumstance will be discussed more fully later as great importance is attached to it by the government. The lands included in this lease lay to the south and west of those in suit, as appears from Map No. 7 in the Appendix to this brief.

a. Evidence of John R. Scupham and Thomas J. Griffin directly imputing fraudulent plan.

These are the only witnesses for the government who attempted to show that the railroad company consciously planned to obtain a patent to these lands because of the belief that they were oil lands.

The first of these witnesses said that in 1887 he was a "consulting engineer" for the directors of the railroad company (all of whom were dead when he testified) and that during that year he was sent to McKittrick by the general manager of the company (also dead) to report on whether the *asphalt* deposits at that place would justify the building of a branch road to McKittrick (R. 585-7). He testified that he spent part of the first day looking at the asphalt and then spent two days exploring the Elk Hills for oil from four to fifteen miles from the place he was sent to examine. He claims to have found several oil seepages in these hills (R. 587). On his return, he says, he reported to the general manager that the Elk Hills "overlay an oil deposit", which

information was received with gratification and the instruction to go to Jerome Madden, the land agent, to see whether this land had been surveyed so that it could be patented (R. 588, 595). He discovered that it had not been surveyed and says that Madden agreed that this land ought to be surveyed and selected at once as it was valuable for oil (R. 589).

At the most, if this testimony were true, it would show no more than the expression of a conjectural opinion and not knowledge that there was oil in the lands in suit. But even to this extent it does not accord with other facts. H. A. Blodget, a witness for the government, testified that the asphalt deposits at McKittrick were called to the attention of the railroad company by him *after* 1890 and that he induced the building of the road about 1893 (R. 361-3). It is also hardly probable at that early day, when little was thought of oil, that a man sent to examine asphalt deposits would conclude this work in a few hours and then spend two days at distant points looking for oil. And, although he says that Jerome Madden agreed that an application for a survey should be made at once, a simple procedure, and Madden remained land agent of the company for many years, these lands were not surveyed until 1902 and not selected until 1903. This was sixteen years after the alleged report of this witness and after Madden had retired from office and the general manager mentioned had been dead seven years (R. 593). W. E. Youle, another government witness, who had charge of the mining of asphalt at McKittrick in 1893, testified that the supply ran short and that he was told by a

representative of the railroad company that the road would be torn out unless more *asphalt* was found (R. 551). This indicates that oil possibilities were not in mind at that time. And Mr. Scupham admits that he never took up any land in the Elk Hills although in later years he was actually seeking oil lands (R. 607).

The true explanation of the testimony of this witness was furnished by a man who had known him for many years. William Hood, chief engineer for the railroad company, who knew Mr. Scupham since 1868, said that he "had a tendency to wish to appear to be well informed upon every subject upon which he might be questioned" and "that in order to continuously talk, facts as to the subject made very little difference to him". He added that it was commonly said of him that "the partition between his memory and his imagination was obliterated" (R. 3397-8). Mr. Hood, who had himself been connected with the railroad company since 1867, said that the last connection he knew of Mr. Scupham having with the railroad company was as a mere transit man in a survey party in 1872 (R. 3397). It further appears from the testimony of Mr. Scupham that he could very well have gained a familiarity with the region in suit from his activities in the oil fields in that vicinity in recent years.

The only other testimony directly imputing a fraudulent *purpose* is that of Thomas J. Griffin. He recited two conversations, one with J. B. Treadwell in 1902 and the other with E. T. Dumble in 1904. In the first, which he says took place in Texas, Treadwell showed him a map and pointed out the township now in suit

and told him that as a result of the reports of the railroad geologists as to its oil value a patent would be applied for (R. 1327-8). The second conversation, he said, took place in 1904 during the time he was in the employ of the Rio Bravo Oil Company, a subsidiary of the Southern Pacific Company in Texas, and while he was on a train about thirty miles east of the lands in suit. He claims that on that occasion Mr. Dumble pointed toward the Elk Hills and said, "Griffin, right over yonder about thirty miles is the biggest oil field in the world. I know it; so does all the rest of us know it. * * * We have large holdings and expect to have more" (R. 1331).

This testimony is emphatically denied by both Mr. Treadwell and Mr. Dumble (R. 3413-20, 2970-1). There are many improbable features in the story about the Treadwell conversation which the latter pointed out but which need not be discussed here since the proof concerning the other conversation shows that the entire testimony of this witness was a deliberate falsehood. There is no doubt he testified merely for the sake of notoriety. It is to be remembered that he said that his conversation with Mr. Dumble was while he was in the employ of the Rio Bravo Oil Company. Mr. Dumble was in charge of this company and Mr. Griffin claimed that he was going to California with Mr. Dumble on business connected with that company. From the testimony of Mr. Dumble and from documentary records it appears that Mr. Griffin did work for that company between June 1 and September 1, 1904, and at no other time (R. 2972-3). A diary and other contemporary records

kept by Mr. Dumble showed that he had himself made several trips to San Francisco from Texas in 1904 but that Mr. Griffin did not accompany him and further showed that on none of these trips did he pass over or near the line of railroad on which this conversation is claimed to have taken place (R. 2967-8). Further than this it appears from numerous time rolls, receipts, and other papers signed from day to day by Mr. Griffin during the period he was working for the Rio Bravo Oil Company, and particularly from his own itemized *personal expense accounts* rendered to that company during each month of that time, that he was not out of the state of Texas on any day during this period except on two or three short trips to New Orleans (R. 2742-5, Exhibits 30, 31, 32, 33, 34). In a similar way, that is, by current documentary records made by himself, his continuous presence in Texas was established for almost a year before June 1, 1904 (R. 3539-43). It is therefore conclusively demonstrated that the incident and conversation he related could not have occurred. In fact, so clear was this that in the briefs and argument in the Circuit Court of Appeals no reference was made to him by counsel for the government. And by way of full measure a number of reputable citizens of Texas and California testified that he had a very bad reputation as to veracity (R. 3474, 3484, 3489, 3495, 3513, 3515, 3543).

b. Belief of C. W. Eberlein, the selecting agent.

The selection of these lands was made by Mr. Eberlein very shortly after he became acting land agent for

the company, which was in August, 1903. Prior to that time Jerome Madden had been land agent for many years under the supervision of the local officials of the company in California. Mr. Eberlein's position, however, was different. He came into office shortly after E. H. Harriman assumed control, and was sent by the latter from New York to investigate and reorganize the land departments of various roads in the "Harriman System" (R. 1036, 3081). Mr. Kruttschnitt, who was then in charge of the railroad as vice-president and assistant to Mr. Harriman (R. 3080), described Mr. Eberlein as a "nervous, energetic, strenuous person" (R. 3090). He at once discharged every employee in the land department except G. A. Stone, a land examiner, whom he made his assistant (R. 1040-2, 1188). Just before this he had been engaged in the reorganization of the land department of the Union Pacific, and, as he expressed it, had "put it in shape to sell (the land) and did sell it; sold it out very rapidly" (R. 1156). He desired to do the same thing with the Southern Pacific grant but found conditions much more "complicated" (R. 1157). One of the first things he discovered was that through what he considered the inattention of his predecessor large areas of indemnity land had been lost through tardy selection and that for this reason the company had about 50,000 acres of indemnity selection rights and little or no surveyed land to which these rights might be applied (R. 1154-5).

It had been his policy in his prior work to select indemnity lands as soon as they were available (R. 1180). On inquiry he learned that the lands in suit had just

been surveyed and he at once directed his assistant to prepare a selection list for them (R. 1157, 1313-15). As he expressed it, he "could not understand why they had not been selected at once". It has been suggested that he was instigated to make this selection by others. He was emphatic, however, that the selection of these particular lands was due entirely to himself and was positive that if anyone at all had interfered in the matter he would have remembered that fact (R. 1314-5). In truth, the evidence shows such intolerance on his part of the suggestions of others and such friction between him and other employees of the company at that time that his acceptance of a suggestion to select these lands would have been surprising (R. 1167, 1222-3).

At the time he made this selection he had no idea that the lands were or might be valuable for mineral of any sort (R. 1088, 1160, 1163, 1167, 1249-50). He asked Stone, his assistant, whether there was any mineral on them and was told that the latter was quite familiar with these lands and that they were not mineral lands (R. 1088). He was so thoroughly satisfied with what Stone told him of his knowledge of these lands that he did not consider it necessary to have any further examination made (R. 1137). When Stone's account of the character of these lands was shortly afterwards confirmed by the independent examination made by the government itself, he had no reason to consider a further examination (R. 1163). Mr. Stone testified that his knowledge of these lands was general from having been frequently in that region for two years preceding the selection and during the time he was a land examiner for the company (R. 1029).

The only evidence that the selection of these lands was suggested to Eberlein is found in the testimony of Stone, who at the time he testified was quite old and very infirm (R. 3115). The condensed statement of his evidence still bears some indication of the great uncertainty in his mind between surmise and fact. He said that these lands were selected "at the suggestion of Mr. E. T. Dumble, I think" (R. 1029). Again he said that he "thought" that Dumble "pressed the selection for reasons best known to himself" (R. 1030). He had been discharged by Eberlein later on and admitted that this had caused "some bitterness" (R. 1029). According to Eberlein, Stone was "pretty hostile" after this discharge (R. 1184). He had written vague threatening letters (R. 3115-19) due to resentment caused by his discharge and to a "nervous break-down" (R. 1182-7). Under such circumstances his uncertain surmise that he *thought* that E. T. Dumble had asked the selection of these lands is not at all convincing. He did not say that this suggestion had been made to him but the inference was that he *suspected* that it had been made to Eberlein, who, he said, directed the making up of the list (R. 1029).. On the other hand, both Eberlein and Dumble testified that no such thing had occurred and it further appeared that these two men did not meet until nearly a year later (R. 1099, 1120, 1136, 1141-2, 1295, Eberlein; 2927-8, 2983, 3014, Dumble). Testimony of the vague and uncertain character of that given by Stone, even if not flatly contradicted by those against whom his suspicions were directed, is not of the sort which "commands respect" or "produces conviction".

c. Belief of railroad agents who were directly concerned with production of oil.

If there had been any thought that the lands in suit should be selected because of their supposed or possible oil value it seems obvious that it should have originated with those railroad officials and employees who were at that time interested in procuring oil for the company. The case of the government has been tried on the theory that such an idea did thus originate. We shall not attempt to review the entire evidence as to this feature of the case, particularly that part of it which deals merely with alleged hearsay statements and present impressions of what was or was not thought in 1904. Fortunately, we have in the record many clearly established contemporary acts and documents which show what was really thought by the railroad company at that time as to the character of the lands in suit. It is therefore not necessary to rely on later recollections which may be colored by subsequent happenings.

As already stated, the first railroad agent in this region who knew anything about oil, was J. B. Treadwell. He was employed to find oil land for the company and leased privately owned lands close to McKittrick instead of going onto any of the many sections then owned by the company in that vicinity. It appears from Exhibit 179 that prior to 1904 the railroad company had patents, some of which dated back to 1892, covering nearly every odd section in the present Midway oil fields, in the Buena Vista Hills and even in a large part of the Elk Hills. Notwithstanding this large area of land which has since proved valuable for oil in many places, Treadwell,

who was free to go where he pleased, selected land on the McKittrick anticline. This is a convincing indication that he did not then conceive that lands away from the Temblor Range outcroppings had a value for oil. A map prepared by him in 1902 (Map No. 3, Appendix to this brief) shows that he did not then believe that the oil land would extend beyond the narrow McKittrick anticline. It is true that he did recommend that large areas of the lands of the company should be withdrawn from sale in 1899, during the oil excitement of that time. This was done because speculators were buying them at small prices and Treadwell thought that these lands should be held until the company could determine for itself whether they might be oil lands (R. 425-7, 3469-70, Exhibit 115). In fact, this was somewhat the same sort of a withdrawal as that made by the government in 1900. Jerome Madden, the land agent, complained of these Treadwell withdrawals, as they interfered with sales and included very much more land than could be known to be valuable for oil. On being called to account by C. P. Huntington, then president of the company, Treadwell admitted that the reservations were far broader than his information justified but Huntington finally decided that the reservations should stand "as the company could just as well speculate in it as anybody outside" (R. 3470).

The claim that Mr. Treadwell believed that there was oil in the Elk Hills is based solely on the fact that in 1899, during the oil excitement, he was induced by some of his drillers to "locate" some claims in the township east of the lands in suit and in the vicinity of the sup-

posed seepage already referred to. He testified that these locations were made but further stated that as soon as he had a chance to examine the land he and the others concluded to abandon the locations and no attempt was made to keep them up (R. 436, 3426-7, Treadwell; 128-30, Jean; 134-6, Sarnow). The abandonment of these locations is convincing proof that he did not believe that there was oil in these hills.

The testimony offered by the government to prove that Josiah Owen, the railroad geologist, believed that the Elk Hills were oil lands consisted entirely of the recollection of various witnesses of what Owen had said during his lifetime. Testimony of this sort is notoriously unreliable. But, taken at its face value, it did not prove what the government contends, as will appear from a brief reference to what these witnesses said. S. P. Wible, a government witness who claimed an intimate acquaintance with Owen, testified that Owen told him in 1903 or 1904 that he "believed the Elk Hills might contain oil", that "the oil measures lay under them and he thought they would probably be so deep they couldn't be reached and made to pay" (R. 328). Other similar statements were related by this witness as having been made by Owen at that time and during later years, but none of them were more positive. C. F. Haberkern, another government witness, said that Owen told him in September, 1904, that the land in the Elk Hills was "very valuable for fullers earth and gypsum but he thought there was oil there but that it was very deep and wouldn't pay to go after it" (R. 350). No claim has been made in this case that these

lands are valuable for gypsum or fullers earth and the government expert, F. O. Martin, testified that there was not enough of either in these hills to be valuable (R. 683). W. H. McKittrick, another government witness, said that in *1907* Owen told him that he had found large quantities of fullers earth in these hills. "He said", added the witness, "there was a possibility of oil there but oil could not be found under thirty-four hundred feet; of course at that time no one thought of going thirty-four hundred feet for oil" (R. 528).

Owen may have thus speculated on the possibility of oil being found beneath these hills but this testimony does not show a very strong conviction on his part. His son, who had been in close touch with his ideas concerning this region in the later years of his life, said that he was told by his father in 1909 that he was certain that there was a great deal of fullers earth in the Elk Hills and that he thought "there was a chance of oil being there, but that it was deep" (R. 1638-9). This was five years after the date of the patent in question. It is apparent that even at this late time he was still very doubtful. We have already seen that in 1903 Owen agreed with the geologist F. M. Anderson that the Elk Hills were too far from the Temblor Range to be valuable for oil (R. 2382-3, 2388). In 1907 he said the same thing to W. H. Ochsner, another geologist who was associated with him in work in this region (R. 2172). And in 1904 or 1905, on his return from several days' examination of these hills, he told C. A. Hively, who was employed under him, that he "was

unable to discover any indications which led him to believe that there was any oil in the Elk Hills field" (R. 2161).

We are not left to the fallible recollection of witnesses to discover what Owen really thought. In March, 1903, he made a long geological report to E. T. Dumble in which he discussed the geology of the Midway and McKittrick region and suggested where oil might be found but did not mention the Elk Hills as an oil possibility (R. 1615-20). With this report he sent a map (R. 2977), which is reproduced as Map No. 4 in the Appendix to this brief. On this map, to which reference has already been made, the only lands he indicated under the legend "supposed to contain oil" are situated along the base of the Temblor Range. It is interesting to note that the largest areas thus indicated by him are entirely beyond the outside limits of the railroad grant (See Map No. 7). He does indicate an anticline runing through the Elk Hills in Township 30-23, but did not suggest that there was oil there. This was a confidential map for the information of his superiors and there is no question of its authenticity as the legend is in the writing of Owen himself (R. 2977), who died before this suit was threatened. It is far more satisfactory evidence of what Owen then thought than is anything else produced in the case.

From April 1, 1903, Owen and F. M. Anderson worked together in this field (R. 2398, 2406-7). As earlier stated, it had then been determined that a subsidiary company should take over by lease all of the railroad lands which might possibly prove valuable for

oil so that these lands might be in control of the operating officials of the road. These two men were set to work examining the region and making up a list of lands to be included in the lease. Mr. Anderson says that their instructions were very general and that they were allowed to "follow their own devices" as to what land they should include (R. 2427). Mr. Dumble spent little time in the field except in visiting the wells which were in operation, but depended entirely on Owen and Anderson for geological information (R. 2909, 3001). As a result of the joint work of Owen and Anderson, the former submitted maps showing the lands which they thought should be included in this lease, one for the McKittrick field and surrounding region and the other for the Coalinga field about seventy-five miles to the north (R. 2910). From these maps and other data which he had received in the same way Mr. Dumble prepared a map which he sent to Mr. Kruttschnitt, the operating head of the railroad company, with a recommendation that the lands shown on this map be placed in the proposed lease. This map is reproduced as Map No. 5 in the Appendix to this brief. It shows these lands in three classes, "oil lands", "probable oil lands" and "possible oil lands". Of the third class Mr. Dumble said in his letter to Mr. Kruttschnitt, which was dated September 21, 1903, that their value depended "upon the continuance of normal dips and conditions" and that they represented "untested anticlinals which show good indications of oil" (R. 2913). The map shows that these merely *possible* oil lands lie to the south and west of the lands in suit, while the lands

designated as "oil lands" or "probable oil lands" are still farther away. That is, the outermost limits of what they then regarded as merely *possible* oil lands lay between the Temblor Range and the lands in suit. They did include in this category Section 31 in the township in which the lands in suit lie, but this was done solely because this and other sections along the same general diagonal line lay on the north flank of the extension of the proven McKittrick anticline toward the Buena Vista Hills (R. 2702, Anderson; 2953, Dumble). Map No. 7 (Appendix) shows that this lease when finally made up in August, 1904, and when renewed in 1907, followed the same general lines, except that Sections 11 and 13 of Township 30-22 were cut out of the leases.

All this shows that until long after the selection and patent of the lands in suit Mr. Dumble and those associated with him in the search for actual or merely possible oil lands did not include any part of the Elk Hills, though many sections in them were patented. Mr. Dumble, who was in active charge of all this work, has testified that he did not believe that the lands in the Elk Hills were to be thought of as oil lands in 1904 (R. 2905, 2928, 2988, 3014). He further stated that he had nothing whatever to do with the patenting or selection of these lands and did not even know that they were to be selected or had been selected until late in 1904 (R. 2983, 3014-15). His testimony in this respect is borne out so fully by correspondence and other records which he produced that there remains no reasonable ground for doubting the truth of what he says. Doubt has, however, been sought to be cast on what he

testified, as to his belief and that of Josiah Owen, by the introduction of evidence that he and Owen owned stock in the Eight Oil Company, which held locations on some of the even sections in the Elk Hills (R. 323). This evidence was so introduced and has been so used in argument as to create the impression that these claims were taken up in 1904. But it later appeared that these claims were located in 1907 (R. 351), that they were located for fullers earth only (R. 535-8), and that Mr. Dumble had no connection with this company until 1909 (R. 3044-50).

It has been heretofore argued by counsel for the government that the railroad company should have had a special examination made of the lands in suit by Mr. Dumble or his assistants before these lands were selected. The obvious answer is that there was nothing in the knowledge of the time or in the attitude of the government itself suggesting the need of such an examination. And, if it had been made, it would not have changed the situation. The conclusions these geologists reached at that time as to other lands in the vicinity indicate that such an examination would have but confirmed their then idea that these lands were far beyond the limits of possible oil. It is to be remembered that this question must be considered from the standpoint of that time and not of the present. The universal thought of practical oil men then was that the oil was confined within narrow limits far from the lands in suit. There was nothing known or thought at that time suggesting that it was incumbent on anyone to have lands so far away from what was believed to be pos-

sible oil territory examined by geologists on the bare chance that they might be valuable for oil. We have seen that even the government geologist Eldridge eliminated them from the range of possibility. And the failure of the railroad geologists to specially examine them is proof that they were not even suspected to be oil lands. If they had been, it is fair to assume that this fact would have been indicated on some of the confidential reports and maps prepared by the railroad company for its own use. And, in further proof of the limited conception of oil possibilities in 1904, Map No. 7 in the Appendix to this brief shows that the railroad geologists then failed to include in their list of oil lands some of the prolific Midway oil lands lying *between* the Buena Vista Hills and the Temblor Range, although they did include the Buena Vista anticline because it appeared to be a continuation of the proven McKittrick anticline. Much has been learned about this region since 1904 and this case should be judged in the light of that time, when the imagination of oil men was far more limited in its range than it is now.

F. CORRESPONDENCE OF C. W. EBERLEIN, RELIED ON BY GOVERNMENT, DOES NOT INDICATE FRAUDULENT PURPOSE.

Much was made by the government in the courts below of the refusal of C. W. Eberlein to sign the lease of 1904 to the Kern Trading & Oil Company and of certain correspondence which preceded and followed this refusal. In our opinion these matters have been given an importance far out of proportion to their real significance. In fact, in the decision of the District Court the correspondence referred to entirely displaced discussion of the real issue of the case as to whether the lands sued for were mineral in character and known to be such. Properly considered in the light of other facts in the case, this correspondence not only does not indicate fraudulent knowledge or purpose but proves the very contrary, as we shall point out. This was the conclusion reached by the Circuit Court of Appeals (249 Fed. at p. 802).

Before taking up the discussion of this correspondence, we desire to have this Court understand exactly what we consider to be the greatest possible legal bearing these Eberlein letters can have on the real issues of the case. Taken in their most unfavorable light, they show no more than that Eberlein may have thought oil *might* be found in the lands for which he was seeking a patent. This would be mere conjecture on his part and not knowledge that these lands actually did contain valuable oil deposits. Nothing short of such knowledge will satisfy the charge of fraud here made. The only permissible use of these letters, therefore, would

be to show a wrongful *purpose* on his part. Whether or not such a purpose, if found to have existed, resulted in fraudulent and actionable *damage* to the government must depend on other evidence in the case as to the character of the land sued for and what was *known* about it..

In connection with these letters one important fact must be noted. With one exception, they were produced by Mr. Eberlein from a file he had carefully retained in his possession after he left the service of the railroad company in 1908 (R. 1082, 1133, 1177, 1256). During the great San Francisco fire of 1906 these letters were badly charred and burned and practically destroyed. He had copies made from their charred remains and kept these copies until they were produced in court (R. 1134, 1258-61). There is nothing to show that he did this because of a desire to injure the railroad company. On the contrary, he testified that he kept this file for his own "protection", or, as he further explained, "for the protection of the *railroad* company and myself" (R. 1128, 1134). He also said that Judge Cornish of New York, his superior officer in charge of land matters, told him to "keep it close for my own protection as well as his own" (R. 1279). As appears throughout his testimony, he and Judge Cornish were strenuously opposed to having a lease made to the Kern Trading & Oil Company of a large area of railroad lands which would otherwise have remained under their own dominion. The Eberlein letters contain a host of arguments against such a lease. It is evident that he intended to defeat it at any cost. In fact, he never did

sign or consent to it in any way up to the time he resigned in 1908, although he knew from 1904 that the lease was actually in force and being acted upon by everyone else although unsigned by him (R. 1120, 1221).

Guilty men do not ordinarily thus preserve the only evidence of their own guilt. The contention of the government is that these letters show a guilty purpose *on the part of Mr. Eb rlein.* If so, he must have been aware of both the guilty purpose and of the significance of the letters. Why, then, should he have so carefully preserved them and why should he have restored them after the fire of 1906 had furnished a convenient excuse for their destruction and had destroyed the files of his associates? The only explanation consistent with ordinary experience and probability is that he did not think that they indicated a fraud on his part or that of anyone else and did think that they would justify something he had done. He kept these letters because he thought they would be a "protection" to him in case it should be claimed at some time that he had acquiesced without protest in the execution of a lease depriving his department and the Southern Pacific *Railroad* Company of control over such a large body of lands. In one of these letters he stated that he feared that the subsidiary company to whom the lease was to be given might "fall into hostile control" to the damage of the company he represented (R. 1077). He testified that in saying this he had in mind the experience of some of the eastern coal roads and feared that E. H. Harriman might sometime question the making of this lease (R.

1239, 1256). For this reason he determined to make and preserve a "record" of his own position (R. 1196).

Mr. Eberlein belonged to the New York office of the railroad company. In 1903 he was sent to California, at the suggestion of Mr. Harriman, by W. D. Cornish, who was vice-president of the Southern Pacific Railroad Company and in charge of its land affairs (R. 1074, 1096). The primary purpose of his mission was to investigate railroad land administration in California. Mr. Eberlein testified that he never conceded the authority of anyone in California to control him and acted on the assumption that he was "solely in charge" and, he added, "I insisted on doing the thing in my own way" (R. 1167, 1233-4). He admitted that this attitude and the manner of his appointment brought him into frequent "collision" with other officers of the company and said that "the only surprise in the situation is that I lasted as long as I did" (R. 1223).

Shortly after his arrival in California in 1903 he was made *acting* land agent of the Southern Pacific Railroad Company to succeed Jerome Madden. This position was not sought by him and he was anxious to close up his work and get out of it as soon as possible (R. 1301). He at once discharged every employee in Madden's office except the land examiner, G. A. Stone, whom he made his assistant (R. 1188). His attention was early called to the fact that the company had lost a large amount of indemnity lands because of failure to make prompt selections (R. 1154-5). He inquired about recent surveys and learned that one had just been made of

the township in which the lands in suit are situated. "I know I could not understand", he says, "why they hadn't selected it at once. It was always the plan in my time to get after indemnity as soon as it was surveyed" (R. 1157-8). There is no doubt he urged this selection vigorously, as such was his habit. "Mr. Eberlein", testified Mr. Kruttschnitt, "was a nervous, energetic, strenuous person; everything he went into, he went into apparently heart and soul as if it were the only thing to be attended to" (R. 3090). To the suggestion that Stone may have instigated this selection Mr. Eberlein emphatically demurred, saying, "I instigated Stone" (R. 1181).

On November 14, 1903, he filed his selection list for the lands in suit. This list was rejected by the local land officers because the lands were within the area which had been withdrawn from agricultural entry by the blanket order of February 28, 1900 (R. 1159-60). An appeal was taken by the railroad company from this rejection on December 11, 1903 (R. 3864). In connection with this appeal Mr. Eberlein wrote his letter of December 10, 1903 (R. 1577), to D. A. Chambers, attorney for the company in Washington. This is the first letter quoted in the opinion of the District Court as an indication of fraud (R. 74). In this letter, after complaining in his characteristic way because the appeal had been signed by one of the attorneys for the company instead of by himself, he said:

> "I am particularly anxious in regard to this list as the lands adjoin the oil territory, and Mr. Kruttschnitt is very solicitous in regard to it.

"I have had in mind the suggestion you made some time ago in regard to inducing Mr. E. C. Ryan, Special Agent at Los Angeles, to make his report.

"I am not acquainted with Mr. Ryan and it is a matter for serious consideration as to how to approach him.

"It would not do, certainly, to ask for a report recommending the release of the lands selected by us from suspension. In my opinion it would not be politic to ask for a release in any particular district.

"Mr. Ryan would, in all probability, jump at the conclusion that the railroad had some special information in regard to that district, and the result would probably be that our request would have the opposite effect from that desired.

"All that I could do would be in a general way to ask him to submit a report of the lands covered by the order of suspension, which, as you know, embraces a very large area.

"How would it do to ask the Department to suggest to Mr. Ryan that he make a report of so much of the lands within the suspension limits as he has examined up to this time?

"It might be that such a report would cover the very district in which we are operating, and we would then be relieved from the danger of having called particular attention to any locality" (R. 1578-9).

Mr. Kruttschnitt was then general manager of the Southern Pacific Company and in charge of the operation of its trains. He was also assistant to the president, E. H. Harriman. He testified that he had been directed by Mr. Harriman to assist Mr. Eberlein generally in his work, but that he had nothing to do directly with the selection of lands for patent. On being asked if he were specially interested in the lands now sued

for, he said, "I was not. My interest was simply and solely to carry out the instructions of my superior officer, the president, to help matters on that Mr. Eberlein was engaged in" (R. 3094). He further testified that in 1903 or 1904 he had no information or belief derived from Mr. Eberlein, or from any other source, that the lands in question were or might be oil lands (R. 3083, 3089).

It is probable that Mr. Eberlein used Mr. Kruttschnitt's name in this letter merely to stir Mr. Chambers into more rapid action. As usual he was in a hurry to get results. The tone of the entire letter indicates that he suspected a lack of enthusiastic cooperation on the part of the company's law department with which Mr. Chambers was connected. The letter is singularly frank and open, yet it contains no statement indicating that he then even thought that the lands selected were *within* the oil territory. All he said was that they *adjoined* the oil territory. To a certain extent this was true as they lie from four to ten miles east of the then known oil territory. We have already noted that he was greatly concerned because of the large losses of indemnity lands the company had already suffered. Possibly and probably he feared that this land, because of the mere fact that it was near an oil district, might be taken up by speculators if the company selections were not promptly approved. In one of his later letters, to be hereafter quoted, he refers to this very danger (R. 1079).

The references in this letter to E. C. Ryan, the government's special agent who later examined these lands,

prove beyond question that the acts of Mr. Ryan were in no way influenced by the railroad company. In fact, Mr. Eberlein quite evidently feared that Mr. Ryan would, on general principles, report adversely if he were informed that the railroad company was interested. In this connection he testified that he never saw Mr. Ryan or communicated with him in any way (R. 1161-2).

In January, 1904, E. C. Ryan completed his examination of these lands and reported to the government that they were not oil lands (R. 1549). As a result, the general withdrawal order of February 28, 1900, was canceled as to these lands, the application of the railroad company was accepted and the patent was issued on December 12, 1904. In the meantime the selection had been duly advertised and no protests had been received. During all of this time there is no evidence that information had come to Mr. Eberlein or anyone else connected with the company to indicate even a suspicion that there was oil in these lands. In fact no such information could have come as no development had taken place and no oil had been discovered except that from four to ten miles away and in a different range of hills.

We have seen that prior to the date of this patent the operating department of the Southern Pacific Company, under the direction of Mr. Kruttschnitt, had taken possession and control of all patented lands of the Southern Pacific Railroad Company then thought to be "actual", "probable" or "possible" oil lands. Only a few years earlier, Jerome Madden, who preceded Mr.

Eberlein as land agent, had sold large areas of railroad land on the eastern border of the San Joaquin Valley for $2.50 an acre, many of which lands later proved to be valuable for oil. On this account the operating officials of the company, who wanted the oil for locomotive fuel, decided to take the control of all possible oil territory from the land department in order to prevent similar sales (R. 3085). Pursuant to this plan Mr. Kruttschnitt caused the Kern Trading & Oil Company to be organized in May, 1903, to act as the "fuel bureau" of the Southern Pacific Company (R. 3085). As already related, E. T. Dumble, the chief geologist of the operating company, with the assistance of his subordinates, prepared and submitted a map (No. 5, Appendix) to Mr. Kruttschnitt in September, 1903, showing the lands to be taken over under the three heads of "actual", "probable" and "possible" oil lands. The fact that the lands now sued for were not then patented was, of course, sufficient reason for excluding them from this map. But the company did own at that time at least ten other sections in the Elk Hills as favorably situated as the lands now in question (Exhibit 197). None of these were listed by Mr. Dumble as being even *possible* oil lands although there were no restrictions placed on him as to what lands he should include and he was unaware until October, 1904, that the lands in suit had been selected or that it was intended to select them (R. 2953).

The lease transferring the lands designated on the map prepared by Mr. Dumble was finally completed, and signed on August 2, 1904, by C. H. Markham, who

succeeded Mr. Kruttschnitt as general manager of the Southern Pacific Company. On that date Mr. Markham presented the lease to Mr. Eberlein and asked him to sign it as land agent of the Southern Pacific Railroad Company, the lessor (R. 1111). Mr. Eberlein refused to do so and the further correspondence quoted by the District Court as proof of fraud followed this refusal and the insistence of Mr. Markham that the lease should be executed.

The first letter referred to in this connection was written by Mr. Eberlein to his superior officer, Judge W. D. Cornish, who was in New York. It appears in full at pages 1075-9 of the record. As it is long, only portions will be here quoted. Mr. Eberlein began with a complaint about the Kern Trading & Oil Company. "I am totally in the dark", he said, "as to the objects, rights, etc. of this corporation. I have asked for information several times, but it has never been furnished me". He then mentioned the proposed lease, saying, "This lease was concocted without any reference to me, and it has now been sent over for me to execute on behalf of the Southern Pacific Railroad Company. * * * Inasmuch as the lease is made by the land department and the head of that department is taking the responsibility therefor, it does not seem proper that the Southern Pacific Railroad Company shall have nothing to say in regard to the disposition of its royalty oil. * * * As I have already stated, this matter has been hatched for my signature without submission to me and without consultation."

This portion of the letter shows that his real reason for refusing to sign the lease was because it had been "concocted" without consulting him and because it would remove such a large body of lands from the control of his department. The letter contains many other objections to the lease, both generally and as to minor details, but these were mere make-weights, as the chief burden of his complaint was that he had not been consulted. He seemed to fear that if he signed the lease without formal authority from the directors of his company, his action might be questioned at some later time. "Do you think", he said to Judge Cornish in his letter, "it would be wise and expedient and would it serve the purpose of protection if I were to demand action of the board of directors of the Southern Pacfiic Railroad Company ratifying and confirming the lease as it stands, and directing the land agent to sign the lease?"

We have already noted that when called as a witness in this case he stated that he had carefully preserved a copy of this letter and of others for his "protection". Undoubtedly he used this word in the same sense in his letter and in his testimony. His purpose was to make a "record" for his future "protection" by reporting the matter to the New York officers of his company so that the responsibility might rest with them. In his testimony, in speaking of this letter, he said, "All I wished in that case was that all of these different matters be put forth in the light in which they appeared to me and then let my superior officer take the responsibility. * * * It looked to me like a very serious

thing for a man who was less than six months in as complicated a position as that is, and without any information except what he could glean, to take the responsibility for such a lease as that" (R. 1238-9).

Apparently the operating officials of the company had been insistent that the lease should be executed at once. Mr. Eberlein testified that Mr. Markham at that time pressed him to sign the lease "over and over again" and that there was a disposition to "jam" the lease through (R. 1114, 1170, 1257). On account of this urgent demand Mr. Eberlein in this letter asked Judge Cornish to telegraph him what to do, and as an assurance that he could prevent immediate action while awaiting Judge Cornish's reply he further said, "I can stave off the delivery of this document for some time yet, I think, for the reason that if the knowledge of this lease becomes public property it will probably cause us a great deal of trouble in the United States Land Office, and may result in the loss of a large body of adjacent lands which may hereafter turn out to be mineral and oil bearing". This is the portion of this letter which was quoted by the District Court as evidence of fraudulent knowledge (R. 75).

It is to be noted that he spoke in terms of conjecture merely. He said that the lands "may *hereafter* turn out to be mineral". He had no knowledge, or even belief, that they were in fact mineral lands. No such knowledge was then possible. He was merely speculating on a remote chance, which was probably far less real to him than was his strong desire to defeat the lease at any cost. This is further shown by the concluding

paragraph of the same letter where he said, "If it becomes known that we have executed a lease of lands interspersed with those already under selection by us, and that the lease is for oil purposes, it seems to me that it will immediately encourage oil speculators to file upon the land so selected and that the government will have good ground for refusing patent, inasmuch as we practically fix the mineral status of the land by this lease".

It is apparent from this language that the only fear he had was as to the *appearance* which would be caused by this lease and not that it would in fact indicate knowledge of oil. And this language, whether intentionally or not we do not know, made this appearance worse than it was by stating that the leased lands were "interspersed" with those in the selection, which was far from true (See Map No. 7, Appendix).

This was a confidential and intimate letter to his immediate superior, yet it gave no hint that he thought the selected lands were in fact valuable for oil. On the contrary this letter at another place calls Judge Cornish's attention to the fact that the government had examined these lands and found them not to be oil lands. And Mr. Eberlein testified, in reference to this letter, that what he feared was not any disclosure of *fact* concerning the character of these lands, but that the lease would create a dangerous *presumption*, which, though false and contrary to the facts as he knew them, might be taken by the government as an excuse for delaying or denying the patent. His prior observation

had convinced him, he said, that very little was required to induce a government land officer to deny a railroad patent (R. 1090-1, 1167-8, 1249-50).

On September 10, 1904, Mr. Eberlein wrote a similar letter to C. H. Markham (R. 1053-6). In this letter, after objecting to the lease on a variety of grounds, he said:

> "In addition to this there is a very urgent reason for delaying the execution of these papers. We have selected a large body of lands interspersed with the lands to be conveyed by this lease, and which we have represented as non-mineral in character. Should the existence of this lease become known it would go a long way toward establishing the mineral character of the lands referred to, and which are still unpatented. We could not successfully resist a mineral filing after we have practically established the mineral character of the land. I would suggest delay at least until this matter of patent can be adjusted" (R. 1055-6).

The most that he said in this letter was that the lease "might establish the mineral character of the lands". This meant only that the lease might give them a speculative or presumptive value because of propinquity. In addition to writing this letter, Mr. Eberlein testified that he had a number of talks with Mr. Markham in which he protested strongly against the making of the lease because of its possible effect on the patent application (R. 1093, 1171). It also appears that Mr. Markham sent this letter of September 10, 1904, to Mr. Dumble and that the latter replied, stating in effect that the objections were unfounded (R. 2950). If these men had been aware of anything improper in the

selection, they should at once have taken alarm and canceled or modified the lease. But they did not. Instead, on September 21 and again on October 17, 1904, Mr. Markham wrote Mr. Eberlein asking him "whether there is anything in the lease that is really objectionable" (R. 1061, 1069). This question is significant of their understanding of the real reasons which caused Mr. Eberlein to object to the lease. Mr. Kruttschnitt, who at that time was still in control of oil development for the company as the superior officer to Mr. Markham, and who then knew of Mr. Eberlein's refusal to sign the lease, testified in this connection, "He knew I had instructions to develop oil on the lands of the company and I have never been able to trace his objection to signing the lease to anything except pique because he had not been consulted and he considered himself slighted" (R. 3088).

Other letters passed between Mr. Markham and Mr. Eberlein, the former at all times urging the execution of the lease. In a letter dated October 18, 1904, Mr. Eberlein so far yielded in appearance to the insistence of the others that he said that the "whole transaction can be closed as soon as Mr. Dumble reports", referring to some corrections in descriptions that were being made by the latter (R. 1071). But Mr. Eberlein says that he had no intention to sign the lease when he wrote this letter but was merely "sparring for time until Judge Cornish had a chance to pass on it" (R. 1219). But Judge Cornish, although he encouraged Mr. Eberlein to persist in his refusal, never saw fit to otherwise interfere with Mr. Kruttschnitt's plans, although he knew

that the lease had been put into effect without Mr. Eberlein's signature (R. 1242-5). This latter act was done at once and from that time on this lease was treated in every respect as if it had been fully executed (R. 1117-18, 1132, Eberlein; 2958, 3009, 3032, Dumble; 3087-8, Kruttschnitt). Mr. Kruttschnitt testified that as the Southern Pacific Company owned every share of stock of the Southern Pacific Railroad Company he regarded the signing of the lease as necessary only as a "book-keeping" matter and therefore went ahead, since he was acting under the order of Mr. Harriman to develop oil for the company (R. 3088). This latter fact probably explains why Judge Cornish did not attempt to interfere but chose, instead, to assist Mr. Eberlein in making and preserving a "record" for their joint "protection" in the event future developments should cause Mr. Harriman to question the policy of the lease itself.

We have emphasized the conduct of Kruttschnitt, Markham and Dumble in connection with this lease for this reason. They were the persons directly concerned with the procuring of oil and oil lands for the company. If there had been a fraudulent purpose to acquire these lands in the Elk Hills for oil, they, of all persons, should have known it. If they did, their conduct was curiously inconsistent. If they were guilty, the Eberlein letters and protests must have instantly put them on their guard. They are intelligent and able men. The first two are now at the head of two of the largest railroad systems of the country, the Southern Pacific and the Illinois Central (R. 3080, 1171), while Mr. Dumble

had been state geologist in Texas for ten years before he became the chief geologist of the railroad company (R. 2897). It is not to be assumed that men of this caliber would be blind to the danger of exposure and consequent failure of the fraudulent scheme in which it is claimed they were engaged. If they had been guilty, we would expect them to have taken steps at once to avert the danger Mr. Eberlein had suggested. They could have done this readily by changing the lease so as to cut out all the lands near the Elk Hills, especially as such lands were then and are now undeveloped and of slight prospective value for oil. They also must have known that the mere *signing* of the lease was a matter of slight consequence, as an advertisement to the world of what they believed to be oil lands, compared to their visible acts of operation and control of the leased lands in the field itself. Yet, despite the protests of Mr. Eberlein, they proceeded with their operations in the name of the Kern Trading & Oil Company without secrecy of any sort (R. 2947, 2954). In fact, not the slightest change seems to have been made by Mr. Dumble and his associates in the course they had originally outlined. This is not consistent with the conduct of men instigated by a fraudulent purpose.

The only thing done by Mr. Dumble in compliance with Mr. Eberlein's desire was the letter he wrote on December 7, 1904, to W. H. Bancroft, who had succeeded C. H. Markham as general manager. In this letter he said, "In connection with our correspondence regarding the transfer of property to the Kern Trading & Oil Company, I have had a conversation with Mr. Eberlein

and it seems for reasons of policy regarding certain unpatented lands that it will be best not to execute the lease of lands between the Southern Pacific Railroad Company and the Kern Trading & Oil Company at present" (R. 1072). Mr. Dumble testified that he sent this letter after a conversation with Mr. Eberlein about the time the letter was dated (R. 3026) and not on October 6, 1904, as is stated in the opinion of the District Court (R. 76). He said that this conversation made little impression on his mind and that he wrote this letter simply out of deference to Mr. Eberlein's insistence and because it was a matter of indifference to him at the time since the lease was in operation and his work was not being disturbed (R. 2954, 3026). If he had been conscious of anything improper in the matter of the selection of the lands in suit it is not at all likely that he would thus have put his recommendation in the permanent form of a letter addressed to a man in the same building to whom he might readily have given the caution verbally.

The real attitude of Mr. Eberlein toward this lease is shown by the fact that he refused to formally recognize that it existed even after the lands in suit had been patented (R. 1120). As late as February 6, 1907, he wrote a letter to the auditor of the railroad company *denying all knowledge* of such a lease (R. 2955). He then had the original charred lease in his possession as he had saved it from the fire of 1906 and had kept it in his own possession until he produced it in this case (R. 1099, 1177, 1261, 1272). He knew that a search was being made for a copy of this lease following the

destruction of the company's records by this fire but so great was his opposition to the lease, even after all danger was past, that he refused to disclose his copy. Therefore, after a further examination and report by Owen and Anderson, a new lease was drawn up on December 12, 1907, including the lands which are shown on Map No. 7 in the Appendix to this brief. So well was Mr. Eberlein's attitude understood at that time that this lease was signed on behalf of *both* the lessor and lessee by E. E. Calvin, who was vice-president of one and president of the other (R. 2965). And Mr. Eberlein testified that both he and Judge Cornish refused to recognize even this new lease (R. 1276, 1286).

This new lease did not include any of the lands now sued for, although at the time it was executed they had been patented for three years. It included a much larger area than the earlier lease. Owen and Anderson were told to add such lands as they thought proper without restriction (R. 2960). This appears clearly in a notation made by Mr. Dumble at the time on a preliminary list he sent to Mr. Owen and which was found in the papers of the latter after his death with his own notes as to what should be added, which did not include anything in the Elk Hills (R. 1611, 1614). Mr. Anderson testified that he and Owen worked together and that they understood that they were free to include any land they thought might be valuable for oil (R. 2412-15, 2427). He further testified that he did not include the lands now in suit in his 1907 recommendation solely because he did not consider them oil lands (R. 2724-9).

We have discussed these Eberlein letters and the incidents relating to them at much greater length than their real consequence warrants simply because they have been given a meaning and importance by the trial court and by counsel for the government out of keeping with their slight value in determining the real issue in this case. We have elsewhere discussed the total lack of *knowledge* possessed by Mr. Eberlein or anyone else in 1904 concerning possible oil in the lands sued for. Unless such knowledge existed there could have been no fraud. It therefore makes no difference what Mr. Eberlein may have *thought* or what interpretation is now sought to be put upon his words at that time. Even if he did suspect that deep drilling might disclose oil somewhere in these lands, this would not afford a single element of *fact* for the foundation of this suit, or tend to prove the allegation of the bill that these lands were *known* to be valuable for their oil contents when they were selected for patent.

CONCLUSION.

This brief has been necessarily prepared without knowledge of what appears in the brief for the government. We believe, however, that we have called attention to the salient facts upon which the decision of this Court must ultimately rest. Discussion of much of the voluminous record has been omitted since it seems

to us that the controlling facts are few and clearly established. We are confident that the government has failed to prove its charges. In truth, it has offered nothing more substantial than surmises and suspicions. It certainly has not proven its case by "that class of evidence which commands respect and that amount of it which produces conviction".

The words of Mr. Justice Miller in characterizing the case made by the government in *United States v. San Jacinto Tin Company*, 125 U. S. 273, 300, so fitly describe the present case that we may adopt them as our own summary. "So far", he said, "from there being the satisfactory evidence here pointed out of a fraud against the government having been perpetrated in this case, there is really little but suspicion, fierce denunciation, and a bitter use of such words as 'fraud', 'deceit' and 'imposition'. If the case stood alone upon the testimony introduced by the government it would, so far as any fraudulent purpose is concerned, do but little more than raise a suspicion that the parties engaged in the transaction sought their own interest at the expense of the government, and not always by the most appropriate means; but when the testimony for the defense is considered, it refutes, not only the existence of any such fraudulent intent or dishonest acts, but it removes from the main actors in the matter even the suspicion of having used underhand and improper means for the accomplishment of their purposes."

We respectfully submit that the decree of the Circuit Court of Appeals in this case should be affirmed.

SUPREME COURT OF THE UNITED STATES

October Term, 1918

No. 585

United States of America,
Plaintiff and Appellant.

v.

Southern Pacific Company, et al.,
Defendants and Appellees.

APPENDIX TO BRIEF FOR APPELLEES,
Containing maps referred to in brief.

Charles R. Lewers,
Solicitor for Appellees.

William F. Herrin,
Joseph P. Blair,
Of Counsel.

In the Supreme Court of the United States.

OCTOBER TERM, 1918.

THE UNITED STATES OF AMERICA, appellant,
v.
THE SOUTHERN PACIFIC COMPANY et al.
No. 585.

APPEAL FROM THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE NINTH CIRCUIT.

MOTION BY THE UNITED STATES TO ADVANCE.

Comes now the Solicitor General and respectfully moves the court to advance the above-entitled cause for hearing on a day convenient to the court during the present term.

This is a suit by the United States, filed in the District Court of the United States for the Southern District of California against the Southern Pacific Company and others to cancel a patent of the United States for about 6,000 acres of land issued to the Southern Pacific Railroad Company on December 12, 1904, under authority of the act of Congress of July 27, 1866, 14 Stat. 292, and the Joint Resolution of June 28, 1870, 16 Stat. 382, No. 87.

97958—19

The bill alleged that the lands were mineral in character, being particularly valuable on account of deposits of oil and petroleum therein, and not properly subject to acquisition by the Southern Pacific Railroad Company under the granting act, which excluded mineral lands, and that the company, with knowledge of these facts, at the time of making application for patent thereto concealed the true character of the lands from the Land Department. The defendants denied these averments. The value of the lands is placed at ten million dollars.

The District Court found in favor of the Government and entered its decree accordingly. Upon appeal the Circuit Court of Appeals, Judge Gilbert dissenting, reversed that decree and remanded the case with instructions to dismiss the bill. 249 Fed. 785.

The main question in the case is whether at the time of the proceedings resulting in the issuance of the patent the lands were known to be mineral in character, there being then no actual discovery of oil therein. The District Court, under the doctrine laid down in *Diamond Coal and Coke Co.* v. *United States*, 233 U. S. 236, held the surrounding conditions clearly such as to indicate that the lands were chiefly valuable for oil. The Circuit Court of Appeals, distinguishing the instant case from the *Diamond Coal and Coke Co.* case, held that deposits of oil differed so inherently from coal that this doctrine was inapplicable.

The case is of importance because its decision will probably materially affect several pending cases involving a large oil acreage of great value and will also guide the Land Department in cases presented to it. Moreover, the lands here involved are in Naval Petroleum Reserve No. 1, set apart for the use of the Navy.

Opposing counsel concur in this motion.

ALEX. C. KING,
Solicitor General.

JANUARY, 1919.

STATEMENT 1

The selection lists and accompanying nonmineral affidavits of the railroad land agent 4

ASSIGNMENT OF ERRORS 8

ARGUMENT 9

I. In a suit to annul a patent as fraudulently covering mineral lands, belief as to mineral character is established by proof that the known conditions at the time of the proceedings which resulted in the patent were plainly such as to engender the belief that the lands contained mineral deposits of such quality and in such quantity as would render their extraction profitable and justify expenditures to that end, and this rule applies to oil lands 9

(a) The evidence shows conclusively the striking similarity of coal and oil in their mode of deposition and situation in the earth 13

(b) The defendants' contention is unsound that the true and only test by which to determine whether lands are oil lands is the drill and the actual production of oil in paying quantities upon the lands 34

(c) Congress nine years before the issuance of the patent in controversy recognized the soundness and practicability of determining by geological evidence, in advance of development upon the lands, whether they are oil lands 44

II. A suit brought by the United States to cancel a patent for fraud stands upon a different plane from the ordinary private suit to recover real estate 50

III. A representation recklessly made without knowledge of its truth, but which is in reality false, is a fraudulent representation 52

The duty was incumbent upon the Railroad Company to examine the lands to determine their mineral or agricultural character before filing a selection list 53

IV. Findings of fact of District Judge Bean 56

(1) The lands were in a known and well recognized oil district and withdrawn from entry because of their probable oil character 56

(2) The lands are of no value for agricultural purposes. 62

(3) Eberlein's affidavits that he had caused the lands to be carefully examined were false 63

ARGUMENT—Continued.

Page.

(4) The documentary evidence and Eberlein's correspondence show that the railroad officials knew that the lands were oil bearing..... 72

(*a*) Eberlein refused to execute the lease to the Kern Trading & Oil Company in August, 1904, because it fixed the mineral status of the lands in suit and the Government would have good ground for refusing patent, if the facts were known..... 82

(*b*) The correspondence concerning the lease of oil lands to the Kern Trading & Oil Company was kept separate from the general files and guarded with the utmost secrecy..... 89

(*c*) Stone's threats, after his discharge, to reveal to the Government the confidential knowledge he possessed in regard to the irregularities in connection with the patenting of lands, and especially the selection of the lands in suit, resulted in his securing a pension from the Railroad Company..... 94

(5) The known conditions at the time of the proceedings which resulted in the patent were plainly such as to engender the belief that the land contained oil deposits of such quality and in such quantity as would render their extraction profitable and justify expenditures to that end..... 97

(*a*) The Elk Hills are of anticlinal structure which is most favorable for the accumulation and retention of oil..... 98

(*b*) Diatomaceous shales are the source of oil in California and the Elk Hills are situated just in front of the thickest portion of these shales..... 103

(*c*) The evidence shows that prior to patent the Elk Hills, of which the lands in suit comprise the center, contained well known seepages, blowouts, oil sands, deposits of asphaltum and other indications of oil..... 106

(*d*) Oil bearing sands, seepages, asphaltum, and other evidences of oil in great abundance in the vicinity of the lands in controversy..... 129

(*e*) Oil development in the McKittrick, Midway, Sunset, and Kern River Fields prior to patent..... 137

ARGUMENT—Continued.

(*f*) The evidence demonstrates that the dip of the oil sands and strata exposed in the seepages and outcroppings for thirty miles along the oil development from McKittrick to Sunset is towards and under the lands in controversy..... 139

V. The testimony shows that experienced, practical oil men generally believed, prior to the date of the assailed patent, that the Elk Hills were valuable for their oil contents..... 146

(a) The belief in the oil value of the lands in suit was also entertained by the experts, officers, and agents of the Railroad Company..... 156

(b) The Southern Pacific was induced to build the branch railroad from Bakersfield to McKittrick because of the belief in the oil producing character of the country tributary thereto..... 172

(c) The fraudulent manner in which the Southern Pacific acquired patent to the lands involved in the Tulare Oil Company contest is in keeping with its fraudulent conduct in securing patent for the lands now sued for..... 174

VI. Mineral locations made in the Elk Hills prior to patent cover every section of the lands in controversy..... 177

The failure to develop the locations made in the Elk Hills between 1900 and 1904 was due: (1) to the depression in the oil business which occurred in 1901 and continued for several years; (2) to the inadequacy of railroad transportation; (3) to the withdrawal order of February 28, 1900; and (4) to the lack of money on the part of some of the locators..... 180

VII. The Government prior to patent did not determine or adjudicate that the lands in suit were non-mineral..... 188

(a) The patent was issued in reliance upon the non-mineral affidavits of Eberlein..... 198

(b) The representation need not be the sole inducement..... 202

VIII. The proceedings resulting in the patent were ex-parte, no issue was framed, no hearing was had and the patent is not conclusive against the Government but it may cancel the patent by showing that it was obtained by means of false and fraudulent proofs..... 204

The non-mineral affidavits were actionable..... 205

ARGUMENT—Continued. Page

IX. The defendants who are trustees in deeds of trust executed prior to the issuance of the patent are not purchasers for value of the after-acquired property and the lien thereon is subordinate to the right of the Government to cancel the patent for fraud on the part of the patentee 208

X. Subsequent development in the Elk Hills 211

(a) Successful wells of the Associated Oil Company... 213

(b) Unsuccessful wells 228

In the Supreme Court of the United States.

OCTOBER TERM, 1918.

UNITED STATES OF AMERICA, Appellant,
v.
SOUTHERN PACIFIC COMPANY ET AL. } No. 585.

APPEAL FROM THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE NINTH CIRCUIT.

BRIEF FOR THE UNITED STATES.

STATEMENT.

This is an appeal by the United States from a final decree (R. VII–26) entered May 6, 1918, by the United States Circuit Court of Appeals, Ninth Circuit, reversing a decree (R. I–81) entered August 9, 1915, by the District Court of the United States for the Southern District of California, Northern Division.

This suit was instituted by the United States on December 10, 1910, to annul and cancel patent No. 135 (R. I–19) issued to the Southern Pacific Railroad Company on December 12, 1904, embracing 6109.17 acres of land and including parts of sections 17 and 19 and all of sections 15, 21, 23, 25, 27, 29, 33 and 35 of Township 30 South, Range 23 East, Mt. Diablo Base and Meridian.

The lands in suit are in the southern half of said township 30–23, which is located in a range of hills known as the Elk Hills which are about 16 miles long and six or seven miles wide, situate in Kern County, California.

The bill of complaint charges that the patent was procured through the fraud of the Southern Pacific Railroad Company in that it selected and made application for patent for the lands in controversy supported by certain affidavits wherein it was falsely and fraudulently represented that said lands were not interdicted mineral lands and were of the character contemplated by the grant made by the Act of Congress approved July 27, 1866, 14 Stat. 292, and joint resolution No. 87 approved June 28, 1870, 16 Stat. 382; that said representations contained in said application and affidavits were false in that the said lands were and are mineral lands; that all of said representations were well known to the Railroad Company to be false; were made for the purpose of deceiving the plaintiff and inducing the issuance of the patent and that plaintiff was deceived by said false and fraudulent representations and was induced to and did rely upon the same in issuing said patent. R. I–10–13.

This grant to the Southern Pacific Railroad Company of California, of which the defendant, the Southern Pacific Railroad Company is the successor in interest, was of every alternate section of public land, not mineral, designated by odd numbers to the amount of ten alternate sections per mile on each side

of the line of the road. The Act provided that whenever any of said sections shall have been granted, sold, reserved, occupied by homestead settlers, preempted, or otherwise disposed of, other lands should be selected by the Company in lieu thereof, under the direction of the Secretary of the Interior, in alternate sections and designated by odd numbers not more than ten miles beyond the limits of said alternate sections.

The Act further provided (§ 3):

> That *all mineral lands* be, and the same are hereby, excluded from the operation of this act, and in lieu thereof a like quantity of unoccupied and unappropriated agricultural lands in odd-numbered sections nearest to the line of said road, and within twenty miles thereof, may be selected as above provided: *And provided further*, That the word "mineral," when it occurs in this act, shall not be held to include iron or coal. R. I–5.

The lands lie within the indemnity limits of the grant, having been selected by the Railroad Company in lieu of lands lost within the primary limits.

The taking of testimony began in April, 1912, consumed more than a year, and was concluded in December, 1913. The testimony consisted of more than ten thousand typewritten pages.

The Railroad Company contended that petroleum was not a mineral and much evidence was offered on this phase of the case, but this position was abandoned after the decision of *Burke* v. *Southern Pacific R. R. Co.*, 234 U. S. 669.

The case was exhaustively argued for ten days before Judge Bean in the District Court and he handed down his opinion on June 9, 1915, holding that the Government was entitled to the relief demanded. His opinion will be found in R. I, beginning at page 71. It is not reported.

A final decree was entered in the District Court on August 9, 1915, cancelling the patent embracing the lands in controversy. R. I–81. From this decree the defendants appealed and the case was argued in the Circuit Court of Appeals on May 10, 1917, before Hon. Wm. B. Gilbert, Senior Circuit Judge, presiding, and Hon. Wm. H. Hunt, Circuit Judge, and Hon. Frank S. Dietrich, District Judge.

The opinion of the Circuit Court of Appeals written by District Judge Dietrich was filed on May 6, 1918, and will be found in R. VII, beginning at page 3. 249 Fed. 785. "Our general conclusion", the opinion states, "is that the lands were not, in 1903–4, known to be valuable for their mineral. The conditions were such only as to suggest the probability that they contained some oil, at some depth, but nothing to point persuasively to its quality, extent, or value." R. VII–25.

Gilbert, Circuit Judge, dissented.

From the decree of the Circuit Court of Appeals, entered on May 6, 1918, reversing the District Court with directions to dismiss the bill, the Government appealed.

The selection lists and accompanying nonmineral affidavits of the railroad land agent.

The official survey covering the lands in suit was filed in the Local Land Office on May 16, 1903 (R. VI–3761), and the Railroad Company filed its first selection list of these lands in the local Land Office on November 14, 1903. R. VI–3752. This selection list was accompanied by two affidavits of Chas. W. Eberlein, acting land agent of the Railroad Company, dated November 7, 1903. In one, Eberlein swore: "*That the said lands are vacant, unappropriated, and are not interdicted mineral or reserve lands, and are of the character contemplated by the grant.*" R.VI–3829. In the other, he swore: "*That he has caused the lands selected in said Company's list No. 89 to be carefully examined by the agents and employees of said company as to their mineral or agricultural character, and that to the best of his knowledge and belief, none of the lands returned in said list are mineral lands.*" R. VI–3832.

The latter affidavit followed the language of the regulation of the Secretary of the Interior which had been promulgated on July 9, 1894, in reference to railroad selections, as follows:

> Where the lands selected by the company are within a mineral belt, or proximate to any mining claim, the railroad company will be required to file with the local land officers an affidavit, by the land agent of the company, which affidavit shall be attached to said list when returned, setting forth in substance that he has caused the lands mentioned to be carefully examined by the agents and employees of the company, as to their mineral or agricultural character, and that, to the best of his

knowledge and belief, none of the lands returned in said list are mineral lands. 19 L. D. 21.

This selection list was rejected on November 17, 1903, by the local Land Office because the lands selected were situated in territory which had been "suspended from disposition" by the General Land Office by an order dated February 28, 1900. R. VI–3756.

The Railroad Company filed its notice of appeal from the order of rejection on December 11, 1903 (R. VI–3865), and on the same date the local Land Office forwarded the papers to the General Land Office (R. VI–3767), but the appeal was not prosecuted.

On February 11, 1904, the lands were "relieved from suspension" (R. III–1555) and the General Land Office advised the local Land Office that the application to select might be granted then if no other objection existed, and list No. 89 was returned to the local Land Office for appropriate action and the local Land Office accepted the list. R. VI–3835.

On June 20, 1904, Eberlein made an additional affidavit, which was filed in the General Land Office July 20, 1904, and which was similar to the second one above referred to filed November 14, 1903. R. III–1572.

On the 4th of August, 1904, the General Land Office, having found that there were errors in the assignment of the base lands, returned the old selection list No. 89 to the local Land Office with directions to "return the same to the company in order

that a new list may be filed, properly describing the lands," and the local Land Office, on August 10, 1904, communicated this ruling to the railroad (R. VI–3778–9), and on September 6, 1904, a new application, or selection list, was filed by the railroad in the local Land Office for the same lands but containing correct base lands. R. VI–3771–2.

This list was accompanied by affidavits of Eberlein, dated August 31, 1904, in the identical language of the two affidavits above referred to dated November 7, 1903, which accompanied the first selection list. R. VI–3847–51.

This selection list was accepted by the local Land Office on September 12, 1904, and forwarded to the General Land Office, and upon this selection list patent No. 135, for the lands in suit was issued on December 12, 1904.

The record is clear that the patent was issued upon the selection list filed on September 6, 1904, and not upon that filed in November, 1903, for the reason that the description of the lands in the patent is identical with the description in the list of September 6, 1904, but differs from that in the list of November 14, 1903 (R. VI–3775–6), and E. C. Finney, of the General Land Office, who handled this matter, so testified saying that "under the practice of the General Land Office, . . . the selection would be only effective from the time that a proper base was assigned for the tract selected as indemnity." R. III–1588–9. "In practice and legal effect the

selection becomes a valid selection only from the time that a proper base is submitted." R. III–1594.

ASSIGNMENT OF ERRORS.

The Government's assignment of errors is as follows:

1. Error in finding and deciding, contrary to the facts set forth in the bill of complaint and established by the evidence, that the lands embraced in the patent dated December 12, 1904, from the United States to the Southern Pacific Railroad Company, were not mineral lands excluded from the operation of the grant made by the Act of Congress approved July 27, 1866, 14 Stat. 292, and joint resolution No. 87, approved June 28, 1870, 16 Stat. 382, under which said patent was issued.

2. Error in not finding and deciding, as set forth in the bill of complaint and established by the evidence, that the patent dated December 12, 1904, from the United States to the Southern Pacific Railroad Company, was procured through fraud of the Railroad Company, in that said Company falsely represented to the Land Department of the United States that the lands embraced in said patent were nonmineral and of the character granted by the Act of Congress approved July 27, 1866, 14 Stat. 292, and joint resolution No. 87, approved June 28, 1870, 16 Stat. 382, under which said patent was issued.

3. Error in reversing the decree of the District Court of the United States for the Southern District

of California, entered August 9, 1915, with directions to dismiss the bill of complaint. R. VII–28.

ARGUMENT.

I.

IN A SUIT TO ANNUL A PATENT AS FRAUDULENTLY COVERING MINERAL LANDS, BELIEF AS TO MINERAL CHARACTER IS ESTABLISHED BY PROOF THAT THE KNOWN CONDITIONS AT THE TIME OF THE PROCEEDINGS WHICH RESULTED IN THE PATENT WERE PLAINLY SUCH AS TO ENGENDER THE BELIEF THAT THE LANDS CONTAINED MINERAL DEPOSITS OF SUCH QUALITY AND IN SUCH QUANTITY AS WOULD RENDER THEIR EXTRACTION PROFITABLE AND JUSTIFY EXPENDITURES TO THAT END, AND THIS RULE APPLIES TO OIL LANDS.

The ultimate question for decision is whether the Railroad Company believed, contrary to its affidavits, that the lands were valuable for oil at the time of the proceedings which resulted in the patent. Involved in this, but apart from direct evidence of such belief by responsible agents of the Company, is the preliminary question whether the known conditions at that time were plainly sufficient to engender such belief.

In *Diamond Coal Co.* v. *United States,* 233 U. S. 236, 239, which was a suit to annul homestead patents procured by fraudulent representations that the lands were non-mineral, the Court held:

> To justify the annulment of a homestead patent as wrongfully covering mineral land, it must appear that at the time of the proceed-

ings which resulted in the patent the land was known to be valuable for mineral; that is to say, it must appear that the known conditions at the time of those proceedings were plainly such as to engender the belief that the land contained mineral deposits of such quality and in such quantity as would render their extraction profitable and justify expenditures to that end. If at that time the land was not thus known to be valuable for mineral, subsequent discoveries will not affect the patent. The inquiry must be directed to the situation at that time, as were the applicant's proofs and the findings of the land officers. If the proofs were not false then, they can not be condemned nor the good faith of the applicant impugned by reason of any subsequent change in the conditions. p. 239.

An exposure to the eye of coal upon the particular lands was not essential to give them a then present value for coal mining. p. 248.

There is no fixed rule that lands become valuable for coal only through its actual discovery within their boundaries. On the contrary, they may, and often do, become so through adjacent disclosures and other surrounding or external conditions. p. 249.

The case of *Colorado Coal & Iron Co.* v. *United States*, 123 U. S. 307, relied upon by the coal company, is essentially different from this in that there the court was dealing with a statute excepting from entry lands on which there were "mines" at the time, a matter

particularly noticed in the opinion (p. 328), while here the exception is of "mineral lands," and "lands valuable for minerals." p. 249.

The defendants contend that this principle is not applicable because the Court was dealing with coal lands, basing this contention upon the concluding paragraph of the opinion in which it is said:

> Neither are we considering other minerals whose mode of deposition and situation in the earth are so irregular or otherwise unlike coal as to require that they be dealt with along other lines. p. 249.

The Government contends that the evidence in this case shows that oil in its mode of deposition and situation in the earth is so like coal that the two minerals must be dealt with along the same lines.

Judge Bean held (R. I–77):

> Oil like coal occurs in stratified forms of deposit or rather migrates into and permeates stratified deposits and follows them persistently and continuously unless interrupted by some intrusion to the end. Lands therefore may and often do become valuable for oil through adjacent disclosures and other surrounding conditions, although there has been no actual discovery within their boundaries.

And he accordingly held that the test for "coal lands" laid down in the *Diamond Coal* case was applicable to "oil lands."

The Court of Appeals held that the *Diamond Coal* case was but "remotely analogous" (R. VII–22), since coal is different from oil in that "a coal bed is fixed and unchangeable" whereas oil is "mobile" (p. 19), that a "discovery" in the sense of the general mining laws within the boundaries of the land was necessary to establish its mineral character (p. 17), and that the applicable decisions[1] are those which hold that a vein or lode is not shown to be "known to exist within the boundaries of a placer claim" (R. S. § 2333) by evidence of indications outside the boundaries sufficient to establish *belief* of the fact (pp. 17–19) — cases which were relied on by the Coal Company in the *Diamond Coal* case, as the brief in that case shows (p. 36), but which were there held inapplicable to a statute excluding "mineral land" from agricultural entry.

If the Court had intended to restrict the principle to coal lands, it could easily have done so by simply using the word "coal" instead of "mineral." By using this language, it clearly meant, we submit, that the principle was not restricted to the determination of coal lands but applied to other minerals unless within the terms of exclusion in the concluding paragraph of the opinion above quoted.

There is, of course, no mineral whose mode of deposition and situation in the earth is just like coal;

[1] *Iron Silver Mining Co.* v. *Reynolds*, 124 U. S. 374; *United States* v. *Silver Mining Co.*, 128 U. S. 673; *Sullivan* v. *Iron Silver Mining Co.*, 143 U. S. 431

but stratified forms of minerals such as coal and oil differ essentially from lode or placer deposits and Mr. Justice Van Devanter no doubt was referring to deposits of the precious metals. The evidence establishes the fact that next to coal mining, the mining of petroleum based solely upon geologic evidence is the surest. And in the opinion of the Court of Appeals in the *Diamond Coal* case (191 Fed. 786,796), concurred in by Mr. Justice Van Devanter, Judge Hook said:

> Veins of precious metals are notoriously more uncertain in extent, continuity, and uniformity than deposits of coal.

(*a*) *The evidence shows conclusively the striking similarity of coal and oil in their mode of deposition and situation in the earth.*

A. C. Veatch in 1897 "was assistant in charge of one section of the Indiana University Geological Survey, working in Indiana." In 1898 he was a member of the Cornell University Geological Survey of the Tertiary, working in the coastal plain from New Jersey to Mississippi. 1898 to 1900 he was assistant State Geologist of Louisiana. 1900 and 1901 he was assistant in charge of areal and stratigraphic geology in Cornell University summer school of field geology. 1901 and 1902 he was geologist of Houston Oil Company, working in the Louisiana and Texas oil fields. 1902 he was appointed professor of geology in the State University of Louisiana,

and State Geologist which position he resigned to accept a position in the United States Geological Survey. He was with the United States Geological Survey from December, 1902, until 1910. 1910 and 1911 he was engaged in work in the Trinidad and Venezuela oil fields. Since his resignation from the Geological Survey he has been engaged in work as consulting geologist. While in the United States Geological Survey he was chairman of the coal land and the oil land classification boards. In 1907 President Roosevelt appointed him a special commissioner to investigate the mining laws of Australia and New Zealand. R. II–687, 688.

Mr. Veatch was the expert for the government referred to in the *Diamond Coal* case and whose geological deductions and opinions the Court adopted.

Mr. Veatch testified that he had personally examined the Elk Hills and in reference to the occurrence of oil he testified:

> Where minerals occur in stratified rocks, it is frequently possible to determine with exactness their extent and value and other factors important in their appraisement and development. That is the method which has been employed for many years by practical men in such subjects. Stratified rocks are laid down in relatively regular layers, for the most part, beneath the sea, and are to be contrasted with other rocks formed by igneous intrusions or volcanic outpourings or which have been so altered by metamorphic action as to lose

> their former characteristics. The individual layers of stratified deposits can be traced for many miles, and in many cases hundreds of miles, showing to a great extent the same characteristics, and it is on this regularity or irregularity as shown by the outcrop that practical men base their conclusions and have spent great sums of money in developing minerals of the kind which occur in stratified deposits. R. II–696.

Among the most important substances which occur in stratified deposits "are coal, water, oil and phosphate. . . . They differ markedly from most deposits of ores, and entirely from veins or lodes, which are of very irregular character." R. II–697.

It is on the exposures at the surface caused by uplifting or folding or erosion that the conclusion is based.

> The beds, after deposition, are folded up and eroded, and the effect of this erosion is to enable the geologist to examine the character of the rocks as fully and as carefully as he could in an enormous trench dug through the surface of the earth. Extending for many miles it forms a much more sound basis for judgment than a single development. R. II–697.

Asked if he could draw an analogy between stratified beds of oil and coal, he answered:

> They both occur in stratified deposits and are subject to much the same laws; and you

can—in the case of a coal deposit, where the erosion has entirely removed the strata around a given area, you have the area arising as a hill above the surrounding region. If, in such a case, you find the coal outcropping on one side of the hill and follow that coal bed around the hill, as you can, by natural exposures, and find it goes entirely around the hill, you know absolutely that the coal underlies the hill and are justified in buying that land as coal land in the absence of any development. In a similar way, if you find a coal bed exposed on the side of a valley, dipping beneath the valley, you know that the valley is underlaid with coal, and by the change of slope of the beds you can calculate the depth of that coal bed in that area which is underlaid with coal. In the case of oil or water you can follow the sand bed or other porous bed suitable for containing them, in exactly the same way as you do the coal bed. You can determine the existence of the layer of coal, and in a similar way you can determine the existence of that porous strata in the same way you can calculate the thickness or the depth of that porous bed under different portions of the territory. You follow the same method. The presence of oil or water in the porous bed can be indicated either by springs along the outcrop, in the case of water, or seepages in the case of oil, or, failing those, their presence may be demonstrated by a well or a group of wells. Such wells or group of wells, taken in

> connection, or such seepages taken in connection, with the determinal persistence of these beds and the geological structure, warrant the development of territory in which you have not drilled. It shows the presence of the substance desired under the lands. R. II–698–9.

A competent geologist, he testified, may determine by such observations the extent of an area containing deposits of coal, phosphate, oil or water, and that it is frequently done. R. II–699.

After reciting the determination by the Geological Survey of underground water basins in advance of drilling, extending from New Jersey to Mexico, and being asked in what way oil differs from water in such determination, he said:

> It differs from water in this, that where water and oil are both present in the porous bed, the water tends to accumulate in the lower portions of the strata or synclines, forcing the oil into the higher portions of the folds or anticlines of the strata; and it is for this reason that it is particularly important, in a new field, to determine the position of the anticlinal features. Water and oil do not always occur in the same porous strata. R. II–700.

Being asked whether the oil value of lands not yet drilled may be determined otherwise than by the drill, he answered:

> I think they can, in the same way that the coal can be demonstrated by the outcrops.

> It is the same principle in every way. It has frequently been demonstrated in advance of the drilling. R. II–701.

Mr. Veatch testified that from a consideration of the conditions existing in 1904, he concluded the Elk Hills are oil lands.

He testified that—

> there are a series of porous beds and associated clays which are well designed, on the one hand, to afford a reservoir for the oil, and on the other hand, to prevent undue leakage, which may be traced for many miles along the flank of the Temblor Range, the east flank, in this case, being the important one for this question. In that area there are seepages which have been there from the beginning, which extend for a distance of over fifteen miles, showing the persistence of the oil saturation in these porous layers. R. II–701.
>
> They [those beds] are exposed on the east flank of the Temblor Range and may be followed there for a great many miles and the porous character readily determined. Now, taking this distance of seepages of fifteen miles, and which is, I may say, greater than that, but that is an area that is adjacent to this that is easily shown, it shows impregnation of oil strata extending at least seven and a half miles from a given center. Applying this distance of seven and a half miles from the outcrop, it includes Buena Vista Hills and the

Elk Hills, and the only question which could remain regarding the oil value of the territory outlined in this way would be with respect to the synclinal areas, the valley lying between the Elk Hills and Buena Vista and McKittrick Hills and the valley lying between the Buena Vista Hills and the outcrop along the front of the range. Both the Buena Vista Hills and the Elk Hills fall within the proven area from geological determinations. R. II–701–2.

They [those beds] dip, in a general way, towards the San Joaquin Valley. The general slope is interrupted by folds which are, roughly, parallel to the main fold of the axis of the Temblor Range, and, forming these folds, rise as groups of hills above the surrounding country, and their structural character is evident even to the most casual observer. . . . They are elongated domes of ideal structure for oil accumulation. R. II–702–3.

If any corroboration were needed with regard to the line of evidence outlined, it is found in the seepages in the Buena Vista Hills and in the Elk Hills; and any questions which might arise with regard to the persistence of the oil, as shown by these seepages, are conclusively set aside by a great series of wells which had been sunk prior to 1904 down the dip from these seepages, and connecting, showing that the seepages represented oil in commercial quantities. R. II–703.

On cross-examination, Mr. Veatch being asked to say in short form what he used as the basis of his conclusion that the Elk Hills are oil lands, answered:

> Along the east flank of the Temblor Range there is a series of porous beds exposed, which can be traced for many miles readily. Along this outcrop or near it where there has been a slight faulting, there are seepages of oil. These seepages extend from below Sunset to North of McKittrick, showing a persistence of the oil impregnation in those porous beds. These porous beds dip to the eastward or northeastward, toward the San Joaquin Valley, and are interrupted by a number of folds. That is, the gentle slope is interrupted by a number of folds, these folds being of ideal character for oil accumulation. One of these folds is the Elk Hills. It is, broadly speaking, an elongated dome, and from the persistence of the oil along the outcrop as shown by those seepages, and that showing also corroborated by the great number of wells that have been sunk down the dip from this outcrop prior to 1904, indicates to me that the Elk Hills is very good oil land. R. II–803–4.
>
> Q. And after you had made a careful and detailed examination of the surface, you were able to say in your own mind, were you, that you knew absolutely that underneath that dome was oil, in paying quantities?
>
> A. No; not at all.
>
> Q. Then what conclusion did you reach?

A. I reached the conclusion that that was to me valuable oil land, that is, it had a commercial value as oil property.

Q. What do you mean by that?

A. Because of the very great probability of oil occurring there. It is not possible to say certainly that there is oil there, that is, there is oil in commercial quantities. If there is oil in this region, it certainly occurs in that locality, and that is a place where I would certainly advise drilling and where a man would be amply justified in spending money in drilling a well. R. II–743.

Asked as to a coal outcropping around the side of a valley, Mr. Veatch testified:

> I could not guarantee to any man that there would be commercial coal there, but I would say that the possibilities of developing coal were so great that it has a value expressed in dollars as coal land. I would expect that man to make a commercial success. I would advise him on that basis the same as I would on oil land. I would not guarantee that the oil land was a commercial proposition, but I would say that I believed that it was and that it would justify him in spending his money on the coal field likewise. R. II–793–4.

Mr. Veatch testified further than he was confident that he would have formed the opinion that the Elk Hills were valuable oil territory "if I had examined that territory in 1903 or '04, and I may add that any competent geologist would have reached the same conclusion at that time." R. II–819.

He further testified "there is no doubt that it is oil land" (R. II–822), and "It is conclusive in this: That I would advise a person to acquire that for oil land. I would advise him to drill it as oil land. I would not guarantee that he would get a commercial well. I would not guarantee in a case of coal that it was a commercial proposition from the outcrop." R. II–820. "Just as in a coal mine you would have to mine your coal before you knew it was commercial." R. II–823.

> The value of oil land—oil land has value which has no well and which has not been proven in the sense of proving it by a well. But it is a common commercial transaction to sell land and pay an oil-land price for it where there is not a single well on the land and which is not proven in that way.
>
> Q. Sold for speculative purposes?
>
> A. Sold as a business proposition. R. II–825.

Asked what he meant by the term value, he answered:

> A commercial value as an oil proposition. . . .
>
> I used it as having a value as oil land—having a commercial value as an oil property. R. II–826.
>
> Lode mining and oil mining are entirely different things. There is a much greater certainty in a petroleum proposition than there is in any lode mining, as Dr. Branner said, I agree with him perfectly where he regards coal mining and oil mining the most

certain forms of mining. As I explained the other day, I do not regard any business proposition as a certainty. R. II–827.

The evidence in the case of lode claims is entirely different from the evidence in a case of economic minerals occurring in stratified deposits. R. II–885.

Asked further on cross-examination as to the difference between coal and oil, he answered:

My experience has been, as testified, specially in stratified deposits. We are dealing with oil which occurs in a stratified deposit; coal occurs in stratified deposits; and the two things are analogous in a great many ways.

Q. But they are not analogous in this, that coal stays where it is formed and oil does not? Is not that the difference?

A. That is the difference. R. II–907.

Q. Mr. Veatch, in your opinion can the existence of oil be determined without drilling?

A. It cannot be proven in commercial quantities without drilling.

Q. Can its occurrence be determined?

A. I think it can to a reasonable degree. The matter of opinion is based upon experience and on the stratigraphic condition. The geology of the country shows, within the reasonable probability of success of a business venture, that oil occurs there [Elk Hills]. If that were not true there would be no occasion whatever for employing geologists, as the Southern Pacific Company does and a great many other Companies do. R. II–902–3.

I think there is an element of risk, as there is in all business ventures. I would not guarantee that there was oil there, but I would say that there was such a reasonable probability of it occurring there [Elk Hills] that it would justify expenditure. I would certainly advise a company to drill there and would be sure in my belief that they would get a large quantity of oil. If I didn't believe that from the geological evidence I would not advise them to drill. R. II–903.

I have stated repeatedly that no reputable geologist would guarantee the presence of oil in any place. He would simply say the conditions are such as to warrant development, and those conditions in the Elk Hills are ideal. R. II–933. I stated that I would not guarantee a man to find oil. No reputable geologist would. But the conditions were such as would justify him in spending money in acquiring the land and developing a well; that it is certainly oil land. R. II–984. The matter cannot be absolutely determined, but you can determine the degree of probability and that degree of probability is infinitely greater than it can occur in any lode mining. R. II–934.

Coal and oil occur in stratified deposits and are analogous in much the same way. R. II–932.

On re-direct examination, Mr. Veatch testified:

I think the depth [of oil] can be approximated, but it is such an approximation that it is not an exact statement.

Q. Now, there is one method of determining the extent and persistence of imbedded strati-

fications containing oil, and you mentioned only one of the many ways for determination of such, where minerals occur in stratified deposits. You were asked by counsel if you were not the pioneer in the advancement of that simple process of determination, which Mr. Lewers was kind enough to characterize as the horizon theory. Do you know whether that method has been applied in any other kind of lands in other stratifications, for example, in coal measures?

A. Yes; extensively used by geologists in classification of coal lands. R. II–936–7.

Q. Mr. Veatch, do you recognize any analogy between the determination upon geologic evidence of the extent and persistence of coal measures and that of the persistence and extent of areas carrying oil?

A. Yes; in this respect: That you determine the persistence of the porous bed which contains the oil in an analogous way. R. II–937.

Dr. J. C. Branner was educated as a geologist at Cornell University. In 1874 went on a geological survey of Brazil and remained there eight years. Then worked for two years in the anthracite coal region as assistant on the Pennsylvania Geological Survey. Was for several years professor of geology in the University of Indiana. From 1887 to 1892 was State geologist of Arkansas. In 1892 became professor of geology in Stanford University and has been there ever since. He testified that almost ever since he went to California in 1892 he had worked on the geology of the oil fields of California. Visited

the McKittrick field first in 1900 and had examined the lands in suit and adjoining oil territory on various occasions. R. II–1000–2.

After examining the physical condition of the eastern flank of the Coast range and the Elk Hills, and noting the many oil wells in and around McKittrick, the evidence of natural waste of oil and the oil seepages, he testified the geological structure of the Elk Hills was perfectly clear and simple. He said:

> My opinion was that the Elk Hills was the most promising area for petroleum in that region in the vicinity of McKittrick. I formed the opinion that it was oil-bearing. R. II-1003.
>
> That opinion was based on my general knowledge of the behavior of petroleum in the rocks; on my observation of the general geologic structure of the entire area that I went over. R. II–1003.
>
> That opinion was confirmed to a considerable extent by the developments that had taken place there recently, but everything seemed to fit together; that is, the geological structure, the development of the wells, the occurrence of the oil seepages, and everything, pointed to the Elk Hills as a promising field for the finding of petroleum. R. II–1003.
>
> I should say that if any competent geologist, observing the natural waste of oil about McKittrick and the stage of development in 1900 or a year or two subsequent, and visiting the Elk Hills and making some examination of the structural formation, failed to form an

opinion that the Elk Hills were oil in character and that there was an oil-bearing zone underneath those hills, he did not understand his business. R. II–1004.

I am familiar with the methods of quartz and gold mining and with petroleum mining, and should consider that, so far as the metal mine was concerned, the finding of traces of gold or silver on the surface of a ledge or lode did not amount to anything more than the merest suggestion, whereas in the case of the Elk Hills, I consider that the evidence is worth going ahead without any other evidences than the geology itself and disregarding any drilling or actual development in the hills themselves by man, and that evidence existed as early as 1900. R. II–1023.

There is no such uncertainty in petroleum mining as there is in quartz mining. I should say that next to coal mining, the mining of petroleum, based solely upon geologic evidences, was the surest kind of mining I know anything about. R. II–1024.

I think practical men invest money in oil territory in advance of drilling on the advice of geologists, and I regard that practice as fully justified by the results. R. II–1006.

The oil in the California fields originally developed from a series of beds that were known in geology as the Monterey shales—a series of rocks made up of the skeletons of diatoms that have accumulated in great quantities, especially about the southern end of the San Joaquin Valley. R. II–1008.

104964—19——3*

The general geology of the Elk Hills would lead me to infer that Monterey shale was under there and in great thickness. R. II–1020.

The Elk Hills are situated right about in front of the thick portions of these Monterey shales. The thickest parts, beginning up here some way north of McKittrick, come—oh, perhaps twenty miles or more, or so, northwest of McKittrick, and from there down to the vicinity of Maricopa, is the very area in which those shales have those great thicknesses, and these Buena Vista Hills and the Elk Hills lie right off towards the east, northeast, of those hills.

I would not expect the shales under the Elk Hills to be so faulted as to influence the disadvantageous accumulation of oil there. R. II–1022–3.

From my examination and knowledge of the neighboring regions, I have no reason whatever to believe that the oil-bearing sands in the Elk Hills are thin, hard or pinched out. R. II–1023.

As to the depth of oil sands, Dr. Branner testified:

There are only two ways in which that can be determined. One would be to work out the geology with great care and detail over the region—not only in the Elk Hills themselves, but in the surrounding country—to find in what horizon the oil accumulates, and then by fitting one's evidence together and studying it one might come to the conclusion in regard to the depth at which the well would reach the oil-bearing bed. The only other way would

simply be to put a well down and test it. R. II–1020.

The general structure of the Elk Hills is so favorable to the accumulation of oil in that region that if they had gone to five thousand feet and not found the oil, I should still advise a company to not give up hope of finding it. R. II–1008.

If the wells were put down without reference to the geologic structure, they might go to an enormous depth without getting oil, and yet, they may move off to one side and put down a well within a thousand or two thousand feet and get entirely different results. R. II–1008.

I should have advised anybody who might have employed me to report on those propositions, to buy the lands with a view to developing them as petroleum lands, from the surface indications and my knowledge of the surrounding conditions and of the oil formations in general. R. II–1007–8.

Captain Frank Barrett testified that he was 67 years old and had been in the oil business practically all his life in Pennsylvania, West Virginia, Kentucky, Ohio, Texas, California and Indiana. He brought in the first paying well in the Coalinga field. R. I–478.

He testified that he had also had experience in lode or placer and gold mining and he found that a good deal more uncertain than the oil business. That his experience extended back nearly to the time the first oil well was sunk in this country. He said that a practical oil driller could not tell where oil is as well as a scientific geologist, because a

practical driller may not know exactly where to locate his well, while a man who understands the formations and the topography of the country will locate the well and turn it over to the driller. R. I–485–6.

That he visited the Elk Hills in 1899 at the request of a gentleman named Hilbish who employed him at $100 per day and expenses to examine township 30–23 and see if it was good oil-bearing territory (R. I–479–482), and that he made a report in writing recommending the entire south half of 30–23 as good oil-bearing territory and that he has had no reason since that time to change his opinion. R. I–481–4. That was before there was any excitement at all at Bakersfield. R. I–484.

He knew of the asphaltum outcroppings or oil springs and seepages around McKittrick. He observed a pronounced anticline in the Elk Hills. The characteristics of the formations of the Elk Hills are not at all dissimilar to the formation around McKittrick. R. I–480.

He found several seepages of oil in the Elk Hills. Took some of the outcroppings home with him and applied the chloroform test and got traces of oil. R. I–479.

F. O. Martin, at present mineral inspector of the General Land Office, testified that he had been engaged in the study of geological problems both practically and theoretically since 1894. Since 1910 has been engaged almost continuously in the Cali-

fornia oil fields. Had made several examinations of the lands in suit and caused to be prepared a map of township 30–23 and adjoining lands. R. I–609–610.

That he had considerable experience in the geology of oil and had had experience in quartz mining; that oil mining is more certain than lode mining. R. I–617.

> On account of the oil seeps existing to the west of the lands involved in this suit and on account of the favorable structural conditions of the Elk Hills, it was clear to me from the conditions existing in 1904 that the chances of finding oil in the Elk Hills were much more favorable than the chances of finding gold in quartz prospects, judging by the outcrops, because the conditions are so dissimilar between the accumulations of oil and the appearance of valuable minerals. The conditions favor oil. R. I–619.
>
> From the evidence existing in 1904, an ordinarily prudent man would have been justified in the expenditure of money in the Elk Hills with a reasonable expectation of ultimately developing a paying oil property. R. I–617.

John R. Scupham was employed by the railroad in 1865 as assistant engineer and remained as such until 1874 when he was recalled from the field and used as consulting engineer by the directors, Leland Stanford, Charles Crocker, C. P. Huntington, and others. R. I–584–5. He examined and reported on many mineral properties, and upon his advice, various coal

properties were acquired. He reported on the artesian well prospects in the San Joaquin Valley, and brought in the first artesian well in that valley. He has been in the engineering business continuously since that time, including the examination of lands for their mineral value. R. I–586.

In 1887 A. N. Towne, General Manager of the Railroad, sent him to examine the asphalt deposits west of Bakersfield. On that trip he examined the Elk Hills and reported to Towne that they were valuable oil lands. He further testified:

> I said to Mr. Towne and Mr. Crocker that the oil did extend under there and it probably would be very important. I thought I knew, from the manifestations which I observed on the surface, that it did extend under there in paying quantities but I didn't know it mathematically. The surface seepage indicated most positively that there was oil in that portion in the vicinity of the seepage. It was a fresh seepage. Such indication could not be found in an exhausted oil sand. * * * The other manifestations were the heavily bedded shale and sandstone in succession, and the tight clays and other manifestations of oil formations. R. I–597.

Mr. Scupham testified that he had had experience in determining the depth of water in artesian basins and the depth of coal in coal lands and that "there is a relation between the means by which you determine the depth of artesian basins and coal measures and that of oil measures or oil sands. The stratifi-

cation of a particular section would govern in each case and that is why I say they are analogous." R. I–599.

J. A. Taff was a witness for the Railroad Company and one of its geologists. He testified: "In making your geological examinations you determine the successions of the beds and the extent of those beds in which the oil is likely to occur, in the same way, or a similar way, that you examine lands in which coal occurs to determine the extent of the coal bed" (R. V–2768), and he admitted that "there is a certain relation between the occurrence of coal and the occurrence of oil" (R. V–2766), but contended that the rules to be applied in determining the presence or absence of oil in commercial quantities are only to a limited extent applicable in the determination of the presence or absence of coal in commercial quantities. He admitted that he, as a geologist, "in other territory and under other conditions might recommend the investment and expenditure of money with less evidence than the anticlinal structure which we have in the Elk Hills, and the fact that the well was sunk and brought in at the rate of 350 barrels per day until it was stopped by people who were operating in other territory." R. V–2875.

Thus it is seen that the evidence is convincing to sustain Judge Bean's ruling that oil in its mode of deposition and situation in the earth is so analogous to coal as to be dealt with along similar lines, and as Dr. Branner, Mr. Veatch and others said "next to coal mining, the mining of petroleum based

solely upon geologic evidence is the surest kind of mining."

It is true that the evidence on the part of the geologists in the employment of the railroad was to the effect that oil sands are not always persistent, that they may be interrupted by some intrusion or obstruction and may be "thin" or "pinched out." The Government's experts conceded that there may be the possibility of such faults, but the evidence shows that in the case of coal veins similar faults may and do occur and in the *Diamond Coal* case, the identical contention was made there that is made here.

> Special emphasis [says this court], was laid upon the uncertainties incident to coal mining in the cretaceous areas of the west, by reason of the occurrence of faults, wants, thinning and the like and this, it was said, required that actual exposure of coal within the land by an outcropping at the surface, or an excavation, be accepted as the true and only test. But even such a test was largely discredited by statements that "a good outcrop at the surface may represent a want below, or a want at the surface may represent a coal below," and that in following a good discovery a fault or thinning, as well as a want, may be encountered at any moment. P. 246.

(*b*) *The defendants' contention is unsound that the true and only test by which to determine whether lands are oil lands is the drill and the actual production of oil in paying quantities upon the lands.*

The defendants throughout their argument and their briefs in the lower courts have reiterated the contention that the Government must fail in that it has not proven that the Railroad Company knew that the lands contained oil in paying quantities; that the Government has not proven the oil-bearing character of the land in the way their expert, Anderson, said it must be proven—not by known geological conditions—but by the actual production of oil in paying quantities, R. IV–2549.

The Government submits with great confidence that this contention is unsound; and to justify annulment of a railroad patent as wrongfully covering mineral land, it is sufficient if it appears that the known conditions at the time of the proceedings which resulted in the patent, were plainly such as to engender the belief that the land contained petroleum deposits of such quality and in such quantity as would render their extraction profitable and justify expenditure to that end, or when the known surroundings are such that practical oil men would invest in particular lands for oil mining, or advise others to do so, those lands are oil lands and excluded from entry under a railroad grant as agricultural lands, even though oil has not been actually disclosed within their limits.

If the direction and inclination of the dip and other conditions in 1903 and 1904 afforded reasonable ground for believing that the lands in controversy could be mined profitably, then they were not subject

to entry as agricultural lands. An exposure to the eye of oil upon the particular lands was not essential to give them a then present value for oil mining.

If the outcrop, the disclosures in the vicinity and the geological formation pointed with convincing force to a workable bed of merchantable oil, penetrating these lands and these conditions were open to common observation and were such as would appeal to practical men and be relied upon by them in making investments for oil mining, then these lands would be classed as oil lands and excluded from entry as agricultural lands.

The foregoing propositions are taken bodily from the opinion in the *Diamond Coal* case, merely changing the word "coal" to "oil" wherever it occurs.

That opinion further stated:

> There is no fixed rule that lands become valuable for coal only through its actual discovery within their boundaries. On the contrary, they may, and often do, become so through adjacent disclosures and other surrounding or external conditions; and when that question arises in such cases as this, any evidence logically relevant to the issue is admissible, due regard being had to the time to which it must relate. p. 249.

To the same effect is Judge Hook's opinion in the Circuit Court of Appeals (191 Fed. 786). He concludes his opinion with these words:

> The lands were of little agricultural value, but they had a much greater value because

> of the belief in their coal contents founded on evidences upon which men in the business were accustomed to rely. We think the lands were coal lands within the laws of the United States. p. 796.

So in the case at bar the Government was not required to show to an absolute certainty by actual discovery and production of oil on the lands, but it was sufficient to show known conditions which justified the belief that the lands could be mined profitably—such conditions or evidences as men in the oil business were accustomed to rely upon in investing in oil lands. Any evidence logically relevant to the issue is admissible and it is not restricted to the drilling of wells on the lands, as contended by the defendants as the only way of showing oil lands. Such a narrow construction would prevent the Acts of Congress from having any application to the valuable oil deposits of the west outside the very land on which wells have been drilled. Such a view was condemned by Judge Hook in replying to the contention of the Coal Company that the uncertainties of coal mining are so great that in the absence of actual exploration it can not be told that there is coal in any particular piece of land in quantity or quality to justify mining. Judge Hook said:

> Yet, if the acts of Congress are to have application to the extensive coal deposits in the western mountainous regions outside the very land in which they outcrop and

> without exploration by the Government by diamond drill at excessive, if not prohibitive cost, there must be a more liberal view than that advanced in this case by defendant. p. 795.

The defendants' contention that the Railroad Company is entitled to all oil lands except those upon which wells have been drilled prior to patent and oil produced for a sufficient period of time to demonstrate that oil exists in paying quantities, is the same contention made by the Coal Company in the *Diamond Coal* case.

> The experts for the Coal Company [said the Court] proceeded largely but not entirely upon the theory that lands can not be regarded as coal lands unless coal in quantity and of quality to render its extraction profitable is actually disclosed within their boundaries. * * * Special emphasis was laid upon the uncertainties incident to coal mining in the cretaceous areas of the West by reason of the occurrence of faults, wants, thinning, and the like. p. 246.
>
> The expert for the Government proceeded upon the theory that when the known surroundings are such that practical coal men would invest in particular lands for coal mining, or advise others to do so, those lands are to be deemed coal lands, even though coal has not as yet actually been disclosed within their limits. And having in mind the outcropping coal bed, the direction and inclination of its dip, the character of the rocks with which it

> was interstratified, the quality and thickness of the coal at the outcrop, the proximity of the lands to the outcrop, and the topographical and structural features of the vicinity, he gave it as his opinion that the coal bed extended into and through the lands in question and that practical coal men would regard the lands as valuable for coal and invest in them as such. He accordingly pronounced them coal lands within his acceptation of that term. p. 245.

The Court adopted the view of the Government's expert, saying:

> An exposure to the eye of coal upon the particular lands was not essential to give them a then present value for coal mining. . . . The outcrop, the disclosures in the vicinity, and the geological formation pointed with convincing force to a workable bed of merchantable coal extending under the valley and penetrating these lands. These conditions were open to common observation, and were such as would appeal to practical men and be relied upon by them in making investments for coal mining. p. 248.

The Court recognized the fact that the test laid down is not infallible as all mining has "its uncertainties and hazards," but it was the only practicable and workable rule.

The uncertainties of mining, whether of coal, oil or other minerals which are found in sedimentary formations, do not prevent the application of the principle that natural and visible geologic condi-

tions may determine the mineral character of the lands without actual exposure or drilling on the lands.

In cases of this kind, two propositions are established by the *Diamond Coal* case. First; if the known conditions were plainly such as to engender the belief that the lands could be mined profitably, then they were mineral lands, secondly; the known conditions to be considered are not confined to those upon the lands in question, but disclosures and conditions on adjacent lands may determine that the lands were mineral lands.

This doctrine has been long established in the Ninth Circuit. Judge Sawyer, in *Cowell* v. *Lammers*, 21 Fed. 200, 206, in deciding the meaning of mineral lands in a railroad grant, held:

> By the words "mineral lands" must be understood lands known to be such or which there is satisfactory reason to believe are such at the time of the grant or patent.

This is cited with approval in *Davis* v. *Weibbold*, 139 U. S. 507, and in *Cosmos Exploration Co.* v. *Oil Co.*, 104 Fed. 20, Judge Ross gave expression to the same doctrine. See also *Francoeur* v. *Newhouse*, 40 Fed. 618, 621.

The defendants' position is unsound in two important aspects; in that it assumes that there must be actual knowledge of the existence of oil in paying quantities and that this knowledge can only be acquired by the discovery of oil on the lands in

question resulting from the drilling of wells thereon. Their position goes to the extent of claiming that even though the Railroad Company had brought in a well prior to patent on one of the sections in suit, and the discovery of oil was such as to justify the Company in the further expenditure of time and labor in the development of the property, still the section would not be oil land and excluded from the granting act, unless the well was operated a sufficient length of time to demonstrate that it was a paying well.

This is not our construction of their position but as the court will see later in considering the subsequent development on a section adjoining the lands in suit, it was claimed below by the defendants that though a well was brought in on that section by the Associated Oil Company and produced hundreds of barrels of oil a day, yet as it was claimed it had not proven to be a paying well, therefore, the discovery showed that the land was not oil land. It was conceded by the defendants that the discovery was such as to entitle the Oil Company to a patent.

Under the mining statutes, there must be a discovery of mineral within the limits of the claim, to entitle one to a mineral patent. In *Waskey* v. *Hammer*, 223 U. S. 85, 90, it is held:

> The mining laws, Rev. Stat. §§ 2320 and 2329, make the discovery of mineral "within the limits of the claim" a prerequisite to the location of a claim, whether lode or placer, the purpose being to reward the discoverer and to prevent the location of land not found

to be mineral. A discovery without the limits of the claim, no matter what its proximity, does not suffice.

By section 2320, R. S., "no location of a mining claim shall be made until the discovery of the vein or lode within the limits of the claim located." By section 2329 "claims usually called 'placers,' including all forms of deposit, excepting veins of quartz or other rock in place, shall be subject to entry and patent, under like circumstances and conditions, and upon similar proceedings, as are provided for vein or lode claims." And by 29 Statutes at Large 526 (Act of February 11, 1897) "lands containing petroleum or other mineral oils, and chiefly valuable therefor" may be entered and patented "under the provisions of the laws relating to placer mining claims."

What is necessary to constitute a discovery of mineral is not prescribed by statute, but under the decisions construing the mining statutes above quoted, a finding of mineral in commercial or paying quantities is not necessary to constitute a discovery. The law is settled that the requirements of the law are met if there has been a finding of mineral within the limits of the claim and the evidence is of such a character that a person of ordinary prudence would be justified in expending his time and labor in the development of the property.

Judge Ross, in *Cascaden* v. *Bartolis*, 146 Fed. 739, 741, speaking for the Court of Appeals of the Ninth Circuit, in commenting on the instructions given in

that case in reference to the sufficiency of a mineral discovery, said:

> While the Court in one part of these instructions did state to the jury the correct rule, that it was essential to the validity of the location under which the plaintiffs claimed that the discovery of mineral thereon was such that "an ordinarily prudent man, not necessarily a miner, would be justified in expending his time and labor thereon in the development of the property," yet it also, at the same time and in the same connection, expressly and specifically instructed them that it was essential to a recovery by the plaintiffs that they should have proved with reasonable clearness that for the labor and capital expended in working the ground it would yield a reasonable profit, and that unless the jury so found, their verdict should be for the defendant. This latter specific declaration is not only not a correct statement of the law, but it is also in direct conflict with the correct rule elsewhere given in the instructions above set out.

In *Chrisman* v. *Miller*, 197 U. S. 313, 322, it was held:

> By the Land Department this rule has been laid down, *Castle* v. *Womble*, 19. L.D. 455, 457: "Where minerals have been found, and the evidence is of such a character that a person of ordinary prudence would be justified in the further expenditure of his labor and means, with a reasonable prospect of success, in developing a valuable mine, the requirements of the statute have been met."

In an application for a mineral patent there must be a discovery of mineral *within the limits of the claim* of such a character that a prudent man would be justified in expending his time and labor thereon in development of the property, while in a suit by the Government to cancel a patent for fraud, it is enough if the known conditions are plainly such as to engender the belief that the lands contained mineral deposits of such a character as to justify expenditures in extracting them.

In both cases, the common element is the justification of expenditures. In the one case, this justification must be based on a discovery of mineral within the limits of the claim. In the other case, it may arise entirely out of the known conditions on adjacent lands. In neither case is it necessary to demonstrate the commercial productivity of the lands.

We submit that the contention of the defendants that there must be a discovery of oil in paying quantities, upon land before it can be excluded from the granting act as "mineral land," is without support in reason or authority.

(c) *Congress nine years before the issuance of the patent in controversy recognized the soundness and practicability of determining by geological evidence, in advance of development upon the lands, whether they are oil lands.*

By an Act approved February 26, 1895, 28 Stat. 683, Congress provided for an examination and classification of the lands within the limits of the Northern

Pacific Railroad grant under the Act of July 2, 1864, 13 Stat. 365, with reference to their mineral character, and therein made a legislative declaration of what evidence is competent to determine the character of such lands. The grant of the Northern Pacific is exactly similar and in almost the same language as the grant to the Southern Pacific.

The provision in the Act of February 26, 1895, is as follows:

> Sec. 3. That all said lands shall be classified as mineral which by reason of valuable mineral deposits are open to exploration, occupation and purchase under the provisions of the United States mining laws, and the commissioners, in making the classification hereinafter provided for, shall take into consideration the mineral discovered or developed on or adjacent to such land, and the geological formation of all lands to be examined and classified, or the lands adjacent thereto, and the reasonable probabilities of such land containing valuable mineral deposits because of its said formation, location, or character. The classification herein provided for shall be by each legal subdivision, where the lands have been surveyed. If the lands examined are not surveyed, classification shall be made by tracts of such extent and designated by such natural or artificial boundaries to identify them as the Commissioners may determine. Where mining locations have been heretofore made or patents issued for mining ground in any section of land, this shall be taken as prima

facia evidence that the forty acre subdivision within which it is located is mineral land: *Provided*, That the word "mineral" where it occurs in this act, shall not be held to include iron or coal.

While the defendants now contend that the drilling of wells is the only test by which to determine the oil character of lands and deny the practicability of a resort to geological evidence, the record shows that the defendants, for several years before the patent in controversy was issued, were through their oil experts and geologists, by the use of geologic evidence alone, classifying certain of the lands as oil lands upon which there was no development and withdrawing them from sale because of their oil-bearing character. These lands were segregated and classified as oil lands by the Railroad Company upon the same principle as the Government contends the lands in controversy are shown by the known conditions to be oil lands.

Some of the lands so classified as oil lands were leased for oil production purposes to the defendant Kern Trading and Oil Company, a subsidiary of the Southern Pacific, and were adjoining and interspersed with the lands in suit which at that very time the defendants falsely represented as nonmineral lands.

J. B. Treadwell was the oil expert for the Southern Pacific from 1893 to 1903. He made the map, Exhibit 115, showing the lands to be withdrawn by the Railroad Company from sale. The "shaded tracts" were

reserved from sale because in or near oil territory. Treadwell testified that in selecting lands to be withdrawn from sale he "followed the system of taking the trend of the oil and located enough so as to be sure to go far enough on the dip to include all the oil that they in the future might develop and even further." R. I–437.

When Treadwell was offered as a witness for the Government in the beginning of the taking of evidence, he testified that all of his maps had been destroyed by the fire of 1906 (R. I–433), and that he did not include in his withdrawal any portion of the Elk Hills. R. I–435. He did not then know that Exhibit 115 was in existence to contradict him. This shows that he did include a large part of the Elk Hills and sections adjoining the lands in suit and lands further away from the outcrop or producing wells than these lands, and he admitted if these lands had been patented to the Railroad Company, he would have reserved them from sale. R. VI–3458.

"The system of taking the trend of the oil" and "going on the dip" that Treadwell said he followed in determining what were oil lands, was merely that of starting from the well or exposure, ascertaining the dip of the strata and determining geologically that the lands on the dip were oil-bearing, though distant many miles from the well or exposure.

E. T. Dumble, chief Geologist for the Southern Pacific, on September 21, 1903, wrote to Julius

Kruttschnitt, General Manager of the Southern Pacific, advising that the Kern Trading and Oil Company should acquire such lands then belonging to the Southern Pacific as "we consider valuable for oil purposes" saying:

> The attached maps show these under three heads: first, oil lands proven or practically proven, colored red; very probable oil lands, colored green; probable oil lands, colored blue. Of the oil value of the first two classes there is very little doubt; the third depends in part upon the continuance of normal dips and conditions, but in addition it represents untested anticlinals which show good indications of oil. I consider that all of these lands should be under the control of this company. R. V–2912.

Here we have the defendants' chief expert determining from purely geological evidence, the oil value of the lands. Their value depended upon and was determined from a consideration of the normal dips and conditions and the untested anticlinals.

The lease which was prepared of lands to be transferred to the Kern Trading and Oil Company, included section 31 of township 30–23 in which the lands in suit are situated, section 5 of 31–23 and section 25 of 30–22 adjoining the lands in suit. R. II–1106. These lands contained no wells or exposures, yet they were classified as oil-bearing lands and transferred to the company for oil production purposes, it being the "fuel department" of the Southern Pacific. Their value as oil lands was determined solely from

geologic evidence, by following the dip of the strata from producing wells or oil exposures and assuming the continuation and persistence of the oil sands. This was the method the Railroad Company resorted to prior to the patent in the practical operation of their oil production business.

Josiah Owen began his geological work on the West Side oil fields in the San Joaquin Valley in 1902. He was placed by Dumble directly in charge of the field work, and on March 25, 1903, he made a full report to Dumble. R. III–1615.

In reporting on the McKittrick oil field he said:

> There is but one oil horizon in this field. . . . In the direction of Midway I find that the McKittrick fold flattens out in the valley, but other hills further on in the same direction would indicate that it may extend to near the Kern Lake. The Midway oil sands belong to the same horizon as the McKittrick oil sands. R. III–1617.
>
> I find that there is but the one oil sand and I believe it will be possible to trace the same horizon to the Kern River fields. R. III–1620.

The lands in suit are between McKittrick and the Kern River Field. They are four miles east of McKittrick, while the Kern River field is about twenty-five miles east of the lands in suit.

So in 1903 we have the field geologist of the railroad reaching the conclusion that the oil horizon or sands outcropping at McKittrick persisted and continued under the lands in suit and to the Kern River field twenty-five miles further east.

Similarly in the *Diamond Coal* case it was conceded "that the coal horizon—meaning the coal bearing strata shown at the outcrop, but not necessarily the coal—passed through the lands in controversy." p. 246.

From the foregoing evidence, Judge Bean (R. I–77) was fully justified in finding that "lands therefore may and often do become valuable for oil through adjacent disclosures and other surrounding conditions, although there has been no actual discovery within their boundaries," and in determining whether the lands in suit were known to be valuable for oil, he was not in error in applying the test laid down in the *Diamond Coal* case, because of the similarity of oil to coal in its mode of deposition and situation in the earth.

II.

A SUIT BROUGHT BY THE UNITED STATES TO CANCEL A PATENT FOR FRAUD STANDS UPON A DIFFERENT PLANE FROM THE ORDINARY PRIVATE SUIT TO RECOVER REAL ESTATE.

In *Causey* v. *United States*, 240 U. S. 399, 402, which was a suit to cancel a patent for fraud, the Court said:

> These lands are held in trust for all the people, and in providing for their disposal Congress has sought to advance the interests of the whole country by opening them to entry in comparatively small tracts under restrictions designed to accomplish their settlement, development and utilization. And

> when a suit is brought to annul a patent obtained in violation of these restrictions, the purpose is not merely to regain the title, but also to enforce a public statute and maintain the policy underlying it.

In *Utah Power & Light Co.* v. *United States*, 243 U. S. 389, 409, Mr. Justice Van Devanter said:

> As a general rule, laches or neglect of duty on the part of officers of the Government is no defense to a suit by it to enforce a public right or protect a public interest. . . . And, if it be assumed that the rule is subject to exceptions, we find nothing in the cases in hand which fairly can be said to take them out of it, as heretofore understood and applied in this court. A suit by the United States to enforce and maintain its policy respecting lands which it holds in trust for all the people stands upon a different plane in this and some other respects from the ordinary private suit to regain the title to real property or to remove a cloud from it.

In *United States* v. *Minor*, 114 U. S. 233, 240, which was a suit to cancel a patent for fraud, the court points out the reasons why the Government in this class of cases should not be held to the same diligence in guarding against fraud as a private owner of real estate. The Government owns millions and millions of acres of land, each land district often includes 20,000 square miles or more, in which there are only two officers and they cannot visit the lands but are compelled to rely upon the sworn proofs

furnished by the claimant, who has it all his own way, in the absence of any contesting claimant; there is no adversary proceeding whatever.

> The United States is passive; it opposes no resistance to the establishment of the claim, and makes no issue on the statement of the claimant.
>
> When, therefore, he succeeds by misrepresentation, by fraudulent practices, aided by perjury, there would seem to be more reason why the United States, as the owner of land of which it has been defrauded by these means, should have remedy against that fraud—all the remedy which the courts can give—than in the case of a private owner of a few acres of land on whom a like fraud has been practiced. p. 241.

III.

A REPRESENTATION RECKLESSLY MADE WITHOUT KNOWLEDGE OF ITS TRUTH, BUT WHICH IS IN REALITY FALSE, IS A FRAUDULENT REPRESENTATION.

In *Smith* v. *Richards*, 13 Pet. 26, 36, this court held that—

> Whether the party thus misrepresenting a fact knew it to be false or made the assertion without knowing whether it were true or false is wholly immaterial; for the affirmation of what one does not know or believe to be true is equally, in morals and law, as unjustifiable as the affirmation of what is known to be positively false.

In *Cooper* v. *Schlesinger*, 111 U. S. 148, 155, the Court held that "a statement recklessly made, without knowledge of its truth, was a false statement knowingly made, within the settled rule."

In *Lehigh Zinc and Iron Company* v. *Bamford*, 150 U. S. 665, 673, the Court, in an action at law, approved the following instructions:

> A person who makes representations of material facts, assuming or intending to convey the impression that he has actual knowledge of the existence of such facts, when he is conscious that he has no such knowledge, is as much responsible for the injurious consequences of such representations to one who believes and acts upon them as if he had actual knowledge of their falsity.

In *Wecker* v. *National Enameling Co.*, 204 U. S. 176, 185, it is held that "even in cases where the the direct issue of fraud is involved, knowledge may be imputed where one willfully closes his eyes to information within his reach."

In *Mullan* v. *United States*, 118 U. S. 271, 277, which was a suit to annul a patent for fraud, the court said if the defendants were ignorant of the mineral character of the land "it was because they willfully shut their eyes to what was going on around them, and purposely kept themselves in ignorance of notorious facts."

The duty was incumbent upon the Railroad Company to examine the lands to determine their mineral or agricultural character before filing a selection list.

The duty devolved upon the Railroad Company to ascertain so far as it could by reasonable investigation and examination, the true character of all lands which it selected for patent. This duty arose out of the relationship of the railroad to the Government by reason of the exception of mineral lands (other than coal and iron) from the operation of the granting act and by virtue of the regulation of the Land Department promulgated under congressional authority, requiring that an affidavit of the land agent should accompany the selection list "setting forth in substance that he has caused the lands mentioned to be carefully examined by the agents and employees of the Company as to their mineral or agricultural character," and also by reason of the *ex parte* nature of the proceedings.

The investigation which the Railroad Company was required to make was an investigation to ascertain the mineral character of the land. It was the ascertainment of a fact which involved the exercise of science and the application of expert knowledge and could not be done by non-experts or unscientific men. It was the determination of the mineral or nonmineral character of the land, a matter peculiarly in the province of experts in this branch of the science, and men especially trained in the science of geology and experienced in oil mining. At the time the selection lists were filed, the railroad maintained a geological department, with an experienced corps of oil experts, with E. T. Dumble at their head, yet the evidence

shows that there was no cooperation whatever between the geological department and the land department of the railroad and while these experts were making extensive geological examinations of the lands in this territory to determine their oil character, the information acquired by them was withheld from Eberlein, the land agent, and he testified that he didn't even meet Dumble, the head of the geological department until 1904, about a year after he became land agent, and that the only information he had about the lands was from G. A. Stone, his assistant, who was not an expert but had been a land grader, that is, he graded lands as to their agricultural value. R. II–1158.

Stone testified that he made no examination of the lands for the purpose of making the selection in question but acted upon the general knowledge which he had of the country. R. II–1088.

The opinion of the Circuit Court of Appeals stated that:

> Eberlein is to be held chargeable with knowledge of all the conditions which such careful examination, if made, would have disclosed . . . Everything that was known to the Company's geologists and other agents or employees . . . must be imputed to Eberlein, its responsible agent and representative. R. VII–4–5.

IV.

FINDINGS OF FACT OF DISTRICT JUDGE BEAN.

The Government contends that the findings of fact of Judge Bean who tried the case in the District Court are abundantly supported by the testimony and as he made specific findings covering all of the material phases of the case, a consideration of his findings is deemed the clearest way to present the controversy to this Court. His findings are in Volume 1, pages 72 to 79.

(1) THE LANDS WERE IN A KNOWN AND WELL-RECOGNIZED OIL DISTRICT AND WITHDRAWN FROM ENTRY BECAUSE OF THEIR PROBABLE OIL CHARACTER.

Judge Bean's first finding of facts is as follows:

(1) *The lands in controversy were at the time of the proceedings resulting in the patent within a known and well recognized oil district and had been previously returned by the U. S. Surveyor as oil bearing lands, and at the time the selection list was first filed were within a previous withdrawal order of the Department because of their probable oil character.* R. I–72.

This finding is fully supported by the evidence. The official survey of township 30–23 embracing the lands in suit, made in 1901, set forth that:

> This township is situated within what is known as the Midway Mineral District which is the name given to a district within which many successful oil wells have been developed. To the northwest is what is known as the McKittrick District, the center of which is

about Sec. 18, T. 30 S., R. 22 E. To the southeast is what is known as the Sunset District, the center of which is about Sec. 7, T. 11 N., R. 23 W., and the Midway District is on the line of oil developments between the two.

The surface of the ground in T. 30 S., R. 23 E., from the southeast corner running northwesterly shows a geological formation with asphaltum exudations, that is regarded by experts as an almost sure indication of the presence of valuable petroleum deposits.

The land I have surveyed being more valuable for mineral than for agricultural purposes, I return the following sections as mineral land.

Then follows a list of lands including all the land in suit. R. II–686.

The plat of this survey was approved by the U. S. Surveyor General's office for California, August 1, 1902, which plat is plaintiff's Exhibit "E." R. I–107. This was filed in the local Land Office on May 16, 1903, and is entitled "Mineral land (in Midway Min'l District)." R. VI–3761.

On February 28, 1900, the lands in suit were withdrawn by the Government from entry because of their probable oil character and this withdrawal order was well known to the railroad officials (R. III–1476), and was in full force and effect when the first selection list for these lands was filed November, 1903. It was not revoked until February, 1904, upon the application of the Railroad Company. R. III–1544.

The withdrawal order of February 28, 1900, is in volume III, p. 1524.

Not only were the lands withdrawn from entry by the Government because of their probable oil character, but prior to the filing of the first selection list the Railroad Company through its oil expert, J. B. Treadwell, had withdrawn from sale, because of their probable oil bearing character, the lands in this township which had been patented to the Railroad Company and adjoining the lands in suit.

The lands thus withdrawn by the Railroad Company included 23 sections or parts of sections in the Elk Hills, including all of the lands in township 30–23 patented to the Railroad Company, and Treadwell testified that the only reason he did not reserve the lands in suit was because he did not know they had been surveyed.

Treadwell prepared for the Railroad Company a map dated September 17, 1902, which is exhibit 115, on which he shaded the surveyed sections that he regarded as oil lands because in or near oil territory. R. V–3423.

"I did not shade," said he, "the oil lands which were not surveyed, because they were unsurveyed," and he said that he believed at the time he made his map that the lands in suit were unsurveyed. R. VI–3458–9. The survey was not filed in the local Land Office until May 16, 1903. R. VI–3761.

E. T. Dumble, defendants' geologist who succeeded Treadwell, admitted that the shaded sections

"completely enclosed on the north, the northwest and the south and the west, the lands in this suit" and that they were the lands which in 1902 the railroad reserved from sale because they were in or near oil territory. R. V–3003.

These withdrawals by the Railroad Company included every section in township 30–23 and 30–24, which the railroad owned. R. V–3002–4.

When Treadwell first testified in April, 1912, he stated that he made no withdrawal or recommendation for withdrawal of any sections in the Elk Hills, but when the map which he prepared was finally produced, the falsity of his testimony was clear, for his map shows that he withdrew from sale every section of land in the Elk Hills which at that time appeared to have been surveyed and excluded only lands in the Elk Hills which were at that time either unsurveyed or unpatented to the railroad or which he believed were unsurveyed.

It will appear hereafter that the Railroad Company in 1903 decided to segregate its oil lands from its agricultural lands and to convey them to a company for the purpose of developing oil and to this end the geological experts of the Company made up a list of the proven and probable oil lands owned by the Company, to be conveyed to the Kern Trading and Oil Company, which had been organized as the oil development company of the railroad. This

104904—19——5★

lease was presented to Eberlein, the land agent, in August, 1904, to sign on behalf of the railroad but when he found the list included lands adjoining and interspersed with those he had selected for patent he declined to sign it saying "we practically fix the mineral status of the land [selected for patent] by this lease." R. II–1079. This list of lands shows that the railroad experts recognized the lands in suit as within the oil district.

Again when Eberlein was endeavoring to get the patent in suit, he, on December 10, 1903, wrote to D. A. Chambers, Washington (D. C.), attorney for the railroad, as follows: "I am particularly anxious in regard to this list as the lands adjoin the oil territory, and Mr. Kruttschnitt is very solicitous in regard to it." R. III–1577.

The Court of Appeals, referring to the withdrawal order of February 28, 1900, stated that "in our view this order was intended to withdraw lands from agricultural entry only, and it was so generally understood." R. VII–7. The court also said that "the question is perhaps of but slight importance," but it seems to have attached importance to "the total want of oil land entries, notwithstanding suspension from agricultural entries."

We think the court was in error in this as the order is not restricted to agricultural entries, but in terms "suspended from disposition until further orders," the designated lands, and E. C. Finney, who prepared

the order and also the letters of December 10, 1903, and February 11, 1904, referred to in the opinion testified that it was intended to withdraw the lands from all forms of entry and it was so understood in the General Land Office. Finney testified that the lands were suspended "from all forms of disposition. No entry or selection could be allowed during the pendency of the order." R. III–1591.

Finney further testified: The effect given the order of February 28, 1900, "by myself and other employees of the general land office, was it suspended from all disposition the lands described, and that no filings or selections of any kind could be properly received during its pendency, that no mineral entry for petroleum could be made." R. III–1582.

The evidence also shows that some of the mineral locators in this region did not develop their locations because they understood the withdrawal order would prevent them from getting a patent. R. I–125, 503, 510.

All of the "Petroleum Withdrawals and Restorations affecting the Public Domain" have been collected and published in Bulletin 623 of the United States Geological Survey, issued in 1917. The withdrawal in question there appears on page 61 along with six others in identical form, and immediately following are five others in which the form is: "Suspend from disposition under agricultural laws." This difference of expression signifies a purpose to

suspend from all forms of disposition in the former class, including the withdrawal in question, as Finney testified, and to suspend only from disposition under the agricultural laws in the other class where that alone was intended. The result is that the absence of oil entries during the period of suspension, which seemed important to the Court of Appeals as tending to show that the land was not regarded as mineral by prospectors, is without significance.

(2) THE LANDS ARE OF NO VALUE FOR AGRICULTURAL PURPOSES.

Judge Bean's second finding of fact is as follows:

(2) *They are rough broken, arid lands, of no substantial value for agricultural purposes or any other purpose than their oil contents.* R. I–72.

The above finding is amply supported by the testimony of the following witnesses and indeed there is no evidence to the contrary:

B. K. Lee, R. I–277; S. P. Wible, R. I–324; Frank Barrett, R. I–481; J. I. Wagy, R. I–248; W. H. McKittrick, R. I–539; Chas. W. Lamont, R. I–582; F. O. Martin, R. I–615; S. G. Drouillard, R. I–117; F. J. Sarnow, R. I–165, 173, 181; J. W. Kaerth, R. I–418; H. P. Dover, R. I–462; Colon F. Whittier, R. I–475; N. C. Farnum, R. I–508; Parker Barrett, R. I–526; L. D. Bell, defendants' witness, R. III–1805; Samuel Shannon, defendants' witness, R. IV–2143.

Some of the witnesses stated that in a good season there would be some grass for grazing in the spring, and other witnesses stated that the land had no value even for grazing.

(3). EBERLEIN'S AFFIDAVITS THAT HE HAD CAUSED THE LANDS TO BE CAREFULLY EXAMINED WERE FALSE.

Judge Bean's third finding of fact is as follows:

(3) *The statement in the affidavits of Eberlein that he has caused the lands to be carefully examined by the agents and employees of the Company as to their mineral or agricultural character was and is untrue.* R. I–72.

In June, 1903, *C. W. Eberlein* went to San Francisco to take up the matter of the reorganization of the three land grants of the Southern Pacific and on August 3, 1903, he took charge as acting land agent of its land department and his formal appointment was dated September 2, 1903. R. II–1037–8.

The affidavits accompanying the first selection list were filed November 14, 1903. Eberlein had never seen the lands and knew nothing whatever about them personally. He testified that before making the non-mineral affidavit he did not send any one over the lands to examine them and ascertain their character; that he relied upon Geo. A. Stone, but Stone made no special trip to ascertain the mineral or agricultural character of the lands. R. II–1088.

Geo. A. Stone testified that he was Eberlein's assistant and supervised the preparation of selection list 89 under Eberlein's direction.

> I made no examination of the lands in suit, myself, for the purposes of selecting them. Such knowledge as I had of the lands was general in character from my general knowledge of the country. R. II–1029.

The lands were placed in the list at the suggestion of E. T. Dumble, who was consulting geologist of the Southern Pacific at the time. R. II–1028–9.

Stone further testified:

> I regarded the selection of these lands as irregular. Mr. Dumble, as the geologist, I thought pressed the selection for reasons best known to himself. I supposed, as geologist, he thought they were oil lands. He pressed the selection of this land probably within thirty days prior to the list in 1903, not earlier than September or later than November. R. II–1030.

Stone was a pensioner of the Southern Pacific at the time he testified and as soon as he was subpœnaed he went to see the railroad attorney (showing that he was not unfriendly to the railroad) and told him that the list was made up at the suggestion of Dumble. R. II–1030.

Judge Bean in his opinion on this phase of the case said that the—

> insistence of the defendant throughout the case has been that no examination of the lands to

> ascertain their mineral contents had been made by any agent or employee prior to the issuance of the patents, although they had for a year or more maintained a corps of expert oil geologists who were actively engaged in examining and classifying lands in the vicinity for the purpose of ascertaining their character. R. I–73.

The corps of expert oil geologists referred to were J. B. Treadwell, E. T. Dumble, Josiah Owen and F. M. Anderson whose activities in the oil fields began in 1899 and continued to the date of the patent in 1904 and will be referred to at length in the progress of this brief.

E. T. Dumble testified:

> The lands in 30–23, which are the subject of this suit, were not examined geologically to my knowledge prior to the selection thereof in the fall of 1903. R. V–2997.

Eberlein testified that there was no co-operation between the land department and the geological department of the Railroad Company, and that when he learned, in the fall of 1904, that Dumble and his assistants were examining unpatented lands, he protested. R. II–1091–3.

It is inconceivable, we submit, that Eberlein in good faith could have made the affidavit in November, 1903, that he had caused the lands to be carefully examined by the employees of the company as

to their mineral character and that they were non-mineral lands, when he admits that he had not caused them to be examined by any one, but relied upon Stone's general information and he knew that Stone was not a geologist and not in any way qualified, if he had examined the lands, to determine as to their mineral character and when he knew at that time that the company maintained a geological department, with an experienced corps of geologists and oil experts.

Not only did he not call on any of these experts to make any examination of the lands before making the non-mineral affidavits, but the record shows that when he learned Dumble and his assistant geologists were in fact examining unpatented lands, he objected and protested, because it might charge him with knowledge of their oil character and this knowledge he did not wish to acquire. R. II–1091.

Here is what Eberlein wrote:

> The New York Office has forbidden the giving out of any more printed lists of lands because of the unsatisfactory condition of our titles which must not be disclosed. The examination of our S. P. lands, not yet patented, by our oil experts must be stopped as information that they may obtain or give as to mineral character prior to patent will forever prevent our getting titles. . . . Mr. Dumble and his men should not be furnished by us with any data whatever except as to

> *patented* lands. For reasons above given such information will be embarrassing to them and to us and may make them witnesses against this company in mineral contests hereafter. R. II–1095.

While this letter was written in 1908, Eberlein testified that it was but a continuation of the protests which he began to make in September, 1904, just at the time he filed the non-mineral affidavits upon which the patent in suit was issued. R. II–1092.

Eberlein was asked this question in reference to his statement in the above letter that the examination of unpatented lands must be stopped: "Was that statement a continuation by you of the accustomed protesting which you said started as soon as they offered the lease to you?" He answered: "Oh, yes; that is simply the same old thing, only we were suffering a great deal more from the activity of Mr. Dumble at that time—his interference almost every day." R. II–1098.

Asked why he underscored the word "patented" in the last paragraph in the above letter, he answered:

> That is axiomatic in this connection. Mr. Dumble should certainly have nothing to do with any lands except such as were patented. If he did, it was simply—we had no control over Dumble and didn't know what he was doing and no means of finding what he was doing. R. II–1099.

He pointed out in 1904 to General Manager Markham that these examinations "were charging the company with notice." R. II–1093.

In an effort to convince the Court below that Eberlein's affidavits were not made with any fraudulent purpose, it is stated in defendants' brief that "whether or not Stone's examination was sufficient is not important; nor is the fact important that Eberlein did not have these lands examined by geologists then in the employ of another department of the company. These men were not subject to his orders."

There is no evidence that Eberlein made any request to use the geologists of the company, but on the contrary, he testified that when he learned they were examining unpatented lands which he was about to select, he protested and insisted that their examinations should stop because in that way the Company would acquire knowledge of the true mineral character of the lands and in any contests in the Land Office they would be witnesses against the Company. The fallacy of defendants' argument is so transparent that further comment is deemed unnecessary.

"Moreover," said defendants in their brief below, "there is no showing of any circumstances suggesting to him [Eberlein] that such an examination (by geologists) was required."

What further showing of circumstances indicating that such an examination was required could there be than the following? First, his duty in the premises under the granting act giving the Railroad only non-mineral lands and requiring him to select the non-mineral, under rules promulgated by the Secretary of the Interior, which required him to have them carefully examined as to their mineral or agricultural value. Second, the knowledge that the lands had been suspended from disposition because of their probable oil character and were in the oil district. Third, the knowledge that the selected lands adjoined the proven oil territory and that the railroad company was proposing to transfer to the Kern Trading and Oil Company, its oil development company for oil production purposes, its lands adjoining and interspersed with those he was undertaking to have patented and his refusal to execute this lease because it would fix their mineral status.

Eberlein could blindly go ahead, shut his eyes to these known conditions and pregnant circumstances, swear that he had caused the lands to be carefully examined, which he knew to be false, and yet it is seriously contended that such conduct does not indicate bad faith and that Eberlein had no just reasons for believing the lands in suit were oil lands.

In attempting to excuse Eberlein's failure to have the lands examined before selection and in an effort

to minimize the force and effect of his sworn statement that he had caused them to be carefully examined, the defendants in their brief filed in the Circuit Court of Appeals say "he had no reason to do so." He knew the regulation of the Department required him to have them carefully examined. What better reason could be suggested? Again counsel urged as an excuse for Eberlein not having these lands examined that "they were far removed from producing oil territory." Eberlein wrote to Chambers on December 10, 1903, that the reason he was anxious to get them patented was because "they adjoin the oil territory." R. III–1578. And he knew they were adjacent to and interspersed with lands owned by the company which the oil experts had classified as oil lands, to be turned over to an oil development company for the purposes of producing oil to be used as fuel for the railroad locomotives.

An attempt was made by the Railroad Company to excuse Eberlein's failure to have the lands examined because the Government had them examined by Ryan, but the inception of the fraudulent purpose to acquire these lands was when Eberlein made and filed his first set of nonmineral affidavits in November, 1903, and this was before Ryan's examination. Ryan was not instructed to examine these lands until December 10, 1903, and he made his superficial examination in January, 1904. So when

Eberlein made his first false and fraudulent affidavit, the lands had not then been examined by Ryan, and the same motive which actuated him in swearing falsely prior to Ryan's examination actuated him in swearing falsely in the affidavits filed subsequent thereto, and besides, between the time of filing the first set of affidavits in November, 1903, and the second set in September, 1904, and up to the issuance of the patent on December 12, 1904, many circumstances had come to Eberlein's attention which must have convinced him of the oil value of the lands for which he was attempting to secure a patent as agricultural lands.

Before and during the period of more than a year while the proceedings, which resulted in the patent in question were pending, the only thing Eberlein did in reference to the lands in suit was to inquire of his assistant, Stone, at the time he made the first affidavit in November, 1903, as to the character of the land. Here is what Eberlein said he did: "Just a general inquiry, when I made the affidavit as to whether there was any of it mineral." He was not sure Stone informed him that he had been over the ground but it was his understanding that Stone was familiar with it. R. II–1158.

The court was compelled to find that Eberlein's statement that he had caused the lands to be carefully examined as to their mineral character was untrue.

(4) THE DOCUMENTARY EVIDENCE AND EBERLEIN'S CORRESPONDENCE SHOW THAT THE RAILROAD OFFICIALS KNEW THAT THE LANDS WERE OIL BEARING.

Judge Bean's fourth finding of fact is as follows:

> (4) *I think it clearly appears from the documentary evidence in the case, and particularly from the correspondence from Eberlein's files (a portion of which was kept separate from the general files of the office and guarded with the utmost secrecy until compelled to be produced on this hearing) that at the time the selections were made and the patent issued, the officers of the company in charge of the matter were conscious that the lands were, if not actual, at least probable oil bearing, and that the selections were made and strenuously urged to patent for that reason, and not because of their agricultural value.* R. I–73.

Judge Bean briefly reviews the evidence upon which this finding is based. As it so conclusively establishes the fraudulent purpose of the responsible officials of the railroad and is so pregnant of their conscious wrong doing and of their purpose to secure these lands because of their mineral character, a more extended examination is thought advisable.

J. B. Treadwell was the oil expert of the Railroad Company until March 1, 1903, and in September, 1902, made his withdrawal map, Exhibit 115, showing the lands of the company to be reserved from sale and both E. T. Dumble and Josiah Owen, railroad geologists, were furnished this map in 1902. R. V–2901–2.

In November, 1902, E. T. Dumble accompanied J. B. Treadwell to the West Side oil fields to inspect the oil properties and reported to Julius Kruttschnitt, Vice-President and General Manager of the railroad and in charge of its oil matters on the Pacific Coast, under date of December 4, 1902, giving his views of the extent of the oil lands in the San Joaquin Valley and concluded by saying:

> I propose to take up their examination in a systematic way during the coming year in order to determine as far as can be done from surface indications and geological structure where oil is to be expected in this region with especial reference to deposits in our own lands. So far as I can judge from a trip I have just made over this territory, this work promises results of greatest value to the company. R. V–2906.

In March, 1903, Dumble succeeded Treadwell and Josiah Owen was placed directly in charge of the oil fields as Dumble's assistant and under date of March 25, 1903, Owen made a report to Dumble in which he stated that there was but one horizon and that he had traced its outcrop from the McKittrick to Sunset and found that there was but one oil sand and he believed he could trace the same horizon to the Kern River Field, about twenty-five miles east of the lands in suit. R. III–1619–20.

Owen transmitted with this report a map which is Exhibit 157, showing the anticline running from section 6 of 30–22 through the lands in suit. He

stated that this fold north of McKittrick exposes oil sands in several places and in some of the exposures the sands are strongly impregnated with asphaltum and producing wells ought to be found along these exposures. R. III–1634.

The first direct reference to the lands in suit in the correspondence is in a letter of September 26, 1903, from C. W. Eberlein, Acting Land Agent, to Julius Kruttschnitt. Kruttschnitt replied to Eberlein on October 9th, by wire and by letter from New Orleans and on the same date he wrote D. A. Chambers, the attorney for the Railroad Company in Washington, D. C. The Government endeavored to secure the production of these letters and telegram, or copies, but without success, though Eberlein and Kruttschnitt were examined and Chambers' files were searched. R. III–1477.

On October 12, 1903, Chambers wrote to Kruttschnitt. This letter is entitled "Survey of part of township 30–23, plat approved August 1, 1902", and the first paragraph is as follows:

> I have received your letter, dated New Orleans the 9th inst., in relation to the above survey, with copy of Mr. Charles W. Eberlein's letter to you of the 26th ult., and copy of your telegram to him in reply, dated New Orleans the 9th inst.
>
> I find that the plat of part of the above township, approved August 1, 1902, embraces Sections 15, 17, 19, 21, 23, 25, 27, 29, 33 and 35. R. III–1474.

These are the identical sections involved in suit. In this letter Chambers further said:

> Mr. Eberlein says that no selections of any of these lands had, when he wrote, been made by the Southern Pacific R. R. Co., but that he expected to tender a selection list within a week or ten days from the date of his letter to you, and he suggested that you might ask that special attention be given here to the patenting of this list.
>
> As soon as advised that such list has been transmitted by the R. and R. to the General Land Office, I will at the earliest possible date urge the issuing of a special patent for the lands selected.
>
> Please call Mr. Eberlein's attention to the fact that the Commissioner of the General Land Office, by his telegraphic order of February 28, 1900, to the R. & R. at Visalia, suspended from disposal the lands in T. 30 S., R. 23 E., together with the lands in a great many other townships, upon allegations that the said townships contained petroleum.
>
> Upon inquiry to-day I find that this withdrawal order as to T. 30 S., R. 23, E., has not been revoked, and will not be until a Special Agent has reported that said lands are not petroleum lands.
>
> Mr. E. C. Ryan (office at Los Angeles, Cal.) is the Special Agent who has been directed to report upon a large body of lands in the Visalia land district, embraced in the Commissioner's order above referred to. Mr. Ryan has been

104964—19——6★

here lately, and has been urged by officials of the Land Office to report as rapidly as possible upon the townships involved.

I presume the Register and Receiver may not approve the lists of the lands in this township which Mr. Eberlein has tendered or will tender, because of the Commissioner's aforesaid order of February 28, 1900. If Mr. Eberlein will write me just what lands he desires to select in T. 30 S., R. 23 E., I can ask the Commissioner of the General Land Office to direct Special Agent Ryan to examine said lands as quickly as possible and make special report as to their character. R. III–1474.

While the Railroad Company claims that it had nothing to do with the selection of Ryan to make the examination, this letter shows that Chambers intended to ask the Commissioner to appoint Ryan to do the work. He was the man the railroad wanted because it knew he was not qualified to examine the lands geologically. And in Chambers' letter of December 10, 1903, to Eberlein, advising him that he had requested an examination of the lands by a special agent and that the Commissioner had directed an examination, he said "I presume the special agent is Ryan, but I am not advised positively about this." R. III–1482. And again in his letter of December 16 to Eberlein, he wrote that he "supposed this special agent is Mr. Ryan but was not sure." R. III–1485. Chambers knew what was going on because in his letter of January 13, 1904, to Eberlein, he wrote that "*confi-*

dentially" he had been allowed to read the letter of instructions from the Commissioner to Ryan of date December 10, 1903. R. III–1488.

On October 18, 1903, Eberlein wired Chambers in regard to the lands in suit and on October 19, Chambers wired Eberlein, suggesting that he should "immediately select" these lands, adding "this ought to be protection against adverse claimants filing or alleging settlement later than our selection. Right of railroad company to indemnity lands is determined by their status at date of selection." R. III–1479.

Here we have Chambers urging haste and immediate action to get in ahead of adverse mineral filings or agricultural settlements. Chambers was evidently of the opinion that the filing of the selection list would cut off adverse claimants.

He realized from the examinations and reports which had been made by Treadwell, Owen and the other railroad oil experts, that unless the lands were immediately taken up, they would be lost to the railroad by mineral entries and he wanted their status fixed as agricultural lands forthwith. The official survey of these lands had been filed just a few months before.

On October 24, Chambers wrote Eberlein confirming his telegram of the 19th, saying:

> I thought you should tender an indemnity selection list for such lands, notwithstanding that township is now suspended from entry

> on account of allegations that it contains petroleum, and that if the R. & R. refuse to accept the list, you should take an appeal to the Commissioner. R. III–1480.

While this correspondence was going on between Eberlein, Kruttschnitt and Chambers, G. A. Stone, Eberlein's assistant, was preparing the selection list for these lands, Dumble, the Company's "consulting geologist," having pressed for their selection because he thought they were oil lands. R. II–1029.

When Dumble forwarded to Kruttschnitt on September 21, 1903, the letter or report of Owen, the associate geologist, of March 25, 1903, he enclosed "maps". R. V–2913. The maps enclosed were, we contend, Exhibit 157, Owen's map of untested anticlinals, tracing the Elk Hills anticline across the lands in suit, and Exhibit 115, Treadwell's map showing withdrawal of lands surrounding the lands in suit, because in or near oil territory. The defendants' claim that these were not the maps sent to Kruttschnitt will be adverted to later.

Both Kruttschnitt and Dumble disclaimed having anything to do with the selecting of the lands in suit, while Eberlein testified that he had no personal knowledge of the lands but relied upon Stone who testified that Dumble was pressing the selection of these particular lands. In this connection the following statement about this selection list in a letter from Eberlein to Chambers, dated December 10, 1903, is significant:

> I am particularly anxious in regard to this list as the lands adjoin the oil territory, and Mr. Kruttschnitt is very solicitous in regard to it. R. III–1577.

On November 7, 1903 (Stone having prepared the selection list), Eberlein made the two nonmineral affidavits accompanying the list and heretofore referred to, and filed the same in the local Land Office at Visalia, Cal., on November 14, 1903. R. VI–3752.

On November 17, 1903, the Local Land Office rejected the list because the lands had been "suspended from disposition" by the order of February 28, 1900, of the General Land Office. R. VI–3756.

On November 30, 1903, Chambers wired Eberlein recommending an appeal to the Commissioner of the General Land Office (R. III–1481), and on the same date requested the Commissioner to have an investigation of these lands made immediately by a special agent with the purpose of having them released from suspension. R. III–1483.

On December 9, 1903, W. F. Herrin, General Counsel of the road advised Chambers that an appeal had been taken and on December 16, Chambers wrote Herrin that the Commissioner of the General Land Office had ordered an examination of the lands as requested and said further in reference to the appeal:

> It did not seem advisable to me that the Company at this time should take steps to

> get a hearing as to these lands. R. III–1483–4.

He also discussed the suggestion that Chambers had made that he try to induce Ryan, the special agent, to make a report. Eberlein did not think it would do to ask Ryan for a report on the lands selected by the Company, but he suggested that the Department be asked to suggest to Ryan that he make a report of so much of the lands within the suspension limits, which embraced a very large area, as he had examined and

> we would then be relieved from the danger of having called particular attention to any locality. R. III–1577–80.

No one can read this letter without concluding that Eberlein was satisfied that the lands were oil-bearing and that a careful examination would reveal their true mineral character to the Government land officers.

On January 6, 1904, Eberlein criticized Chambers for not following the suggestion in his letter of December 10, 1903, that no request be made for examination of special lands selected by the railroad and on January 13, 1904, Chambers replied that he had taken the course he did before receiving Eberlein's letter, but assured Eberlein there was no danger because the order to Ryan was general and quotes the order in which it is stated that the Department has no force to assist him and that his report will be based upon examinations heretofore made and his familiarity with the country generally. R. III–1485–7.

This letter of January 6 in which Eberlein disapproved of Chambers' action in asking a special examination of the lands in suit, was not produced by the railroad though Mr. Hoehling, Chambers' successor, was subpoenaed to produce all the correspondence between Chambers and Eberlein. R. III–1478, 9.

On January 22, 1904, E. C. Ryan, Special Agent, made his first report, recommending that the lands in controversy be relieved from suspension and on February 11, 1904, upon receipt of this report, the order of suspension was revoked by the Commissioner of the General Land Office. R. III–1555.

Nothing further was done with the appeal which had been forwarded to the General Land Office on December 11, 1903.

On March 22, 1904, Ryan, Special Agent, made an additional report covering 45 townships and including the lands in suit, in which report he recommended that those lands be relieved from suspension on which there were no wells producing oil in paying quantities (R. III–1560–7), and on April 5, 1904, the Local Land Office was notified that the lands in township 30–23 were relieved from suspension. R. III–1568.

On June 20, 1904, Eberlein made another affidavit that he had caused the lands in suit to be carefully examined as to their mineral or agricultural character. This was received by the General Land Office July 20, 1904. R. III–1573.

On August 31, 1904, Eberlein caused a new selection list, with correct base lands to be filed, and made two affidavits identical with those which accompanied the original list and filed the same September 6, 1904, and it was upon this list that the patent was issued on December 12, 1904. R. VI–3775.

(*a*) *Eberlein refused to execute the lease to the Kern Trading and Oil Company in August, 1904, because it fixed the mineral status of the lands in suit and the Government would have good ground for refusing patent, if the facts were known.*

The Kern Trading and Oil Company, one of the defendants, had been organized by Kruttschnitt on May 31, 1903, as the fuel department of the railroad and it was his plan to transfer to that Company all the oil lands of the railroad for the production of oil. R. V–3100.

Kruttschnitt had requested Dumble to prepare a statement of the property to be taken over by the Kern Trading and Oil Company, and on September 21, 1903, Dumble furnished the statement, saying:

> The Kern Trading and Oil Company should acquire by purchase or lease such lands now belonging to the Southern Pacific Company as we consider valuable for oil purposes. The attached maps show these under three heads; first, oil lands proven or practically proven, colored red; very probable oil lands, colored green; probable oil lands, colored blue. Of the oil value of the first two classes, there is

> very little doubt; the third depends in part upon the continuance of normal dips and conditions but in addition, it represents untested anticlinals which show good indications of oil. I consider that all of these lands should be under the control of this company. R. V.–2912.

On August 2, 1904, a few weeks before Eberlein made the last non-mineral affidavits, a lease transferring from the railroad to the Kern Trading and Oil Company many thousand acres of oil lands, including lands interspersed with those in suit and one section in township 30–23, in which the lands in suit are located, and adjoining these lands, was presented to Eberlein to sign on behalf of the Railroad. The lease was presented by C. H. Markham who had succeeded Kruttschnitt as General Manager of the railroad, and who was president of the Kern Trading and Oil Company, and had executed the lease as such President. R. V–3086; II–1101, 8.

Eberlein realized that the execution of this lease by him would not square with his conduct in signing the nonmineral affidavits, as the lease conveyed to the oil company for the production of oil, lands adjoining those he was trying to secure for the Railroad Company as non-oil-bearing, agricultural lands. Dumble, the Company's geologist, had selected the lands to be included in the lease. Eberlein, in December, 1903, had advised Chambers that Kruttschnitt was very solicitous about getting this patent because the

lands adjoined the oil territory. Now it was proposed by the Railroad Company to fix the mineral character of the lands by conveying the adjoining and interspersed lands to a subsidiary company for the purpose of developing their oil contents. This lease presumably would be recorded and it couldn't be kept secret. So Eberlein being anxious to secure the patent and likewise not being willing to be placed in this inconsistent and anomalous position, refused to sign the lease. R. II–1128.

The lands in the proposed lease included about 25,000 acres adjacent to the lands in suit and located along the eastern base of the Temblor Range beginning northeast of McKittrick and extending southeast for 30 miles to Sunset. R. II–1106.

Owen was the railroad geologist in the field, reporting to Dumble, and he told S. P. Wible, banker and oil operator, just about the time of the selection in 1904 that if the railroad selected the lands in township 30–23, it would be selecting mineral lands; that he (Owen) had reported them as mineral lands, and the Railroad Company had no right to select them. R. I–324–5.

Eberlein having received the proposed lease August 2, 1904, with request that he sign it, declined to do so for the reasons which are set out in his letters, but he did not relax his efforts to get the patent and on August 31, 1904, made the third and last set of nonmineral affidavits and filed them September 6.

On September 3, 1904, between the time of making and of filing the last nonmineral affidavits, Eberlein wrote to W. D. Cornish, Vice-President of the railroad, located in New York, in charge of land matters, a letter marking it "personal" in reference to the lease to the Kern Trading and Oil Company, which was then with him for his signature.

He wrote that he was totally in the dark as to the object of this corporation; that he was told in a general way that it was organized for the purpose of taking over the oil lands of the railroad and operating the same; that the proposed lease covers all the lands now in the ownership of the railroad that either "are or are supposed to be oil bearing." Continuing he wrote as follows:

> I can stave off the delivery of this document for some time yet, I think, for the reason that if the knowledge of this lease becomes public property it will probably cause us a great deal of trouble in the United States Land Office, and may result in the loss of a large body of adjacent lands which may hereafter turn out to be mineral and oil bearing. * * *
>
> I have just succeeded in getting the special agent in charge to make a report releasing our land from interdictment.
>
> If it becomes known that we have executed a lease of lands interspersed with those already under selection by us, and that the lease is for oil purposes, it seems to me that it will immediately encourage oil speculators to file

> upon the lands so selected and that the government will have good ground for refusing patent, inasmuch as we practically fix the mineral status of the land by this lease. R. II–1075–8.

Eberlein in this letter requested Cornish to wire him, but not hearing from him, Eberlein testified that he went to New York in the fall of 1904 and carried the secret file of correspondence with him (R. II–1257) and held a conference about this lease and they—

> agreed as to the impropriety of a lease at that time. . . . He [Cornish] was very positive in his instructions that I was not to sign it or to recognize it. He considered it an improper lease to be made, having reference to the selection list of lands in the immediate neighborhood. R. II–1125–7.

Eberlein further testified that he and Cornish

> naturally recognized at least the very ambiguous position in which we would be placed, both of us, by that lease, if that lease were made—and especially if I made the lease, I having also made the selection list which was at that time unapproved. R. II–1128.

After Eberlein wrote to Cornish on September 3, his next letter was on September 10, 1904, to C. H. Markham who had presented to him for signature the lease to the Kern Trading and Oil Company.

He wrote:

> There is a very urgent reason for delaying the execution of these papers.

> We have selected a large body of lands interspersed with the lands sought to be conveyed by this lease, and which we have represented as nonmineral in character.
>
> Should the existence of this lease become known it would go a long way toward establishing the mineral character of the lands referred to, and which are still unpatented.
>
> We could not successfully resist a mineral filing after we have practically established the mineral character of the land.
>
> I would suggest delay at least until this matter of patent can be adjusted. R. II–1055.

On September 19, 1904, Dumble wrote Markham a letter in which he returned Eberlein's letter of September 10, which Markham had sent to Dumble. On October 5, 1904, Dumble wrote Eberlein requesting a conference. On October 7, 1904, Eberlein answered suggesting a conference the next day, in room 71, where they could have a room to themselves. R. II–1065–6. On October 8, 1908, Eberlein through his assistant, Stone, furnished to Dumble plats showing the status of the railroad lands in certain townships, including township 30–23 in which the lands in suit are situated. R. II–1067.

On December 7, 1904, Dumble wrote W. H. Bancroft, Acting General Manager, as follows:

> In connection with our correspondence regarding the transfer of property to the Kern Trading & Oil Company, I have had a conversation with Mr. Eberlein and it seems for

> reasons of policy regarding certain unpatented lands that it will be best not to execute the lease of lands between the S. P. R. R. Co. and K. T. & O. Co. at present. R. II–1072.

This conference with Dumble was more than two months before the patent was issued. Dumble disclaimed having anything to do with the selection of the lands in suit, though Stone said he pressed for their selection. After the fire of 1906, following the earthquake in San Francisco, Dumble was trying to find the lease of 1904. Eberlein was approached and denied any knowledge of any lease and on March 15, 1907, Dumble wrote to Eberlein reviewing the correspondence with reference to the lease and among other things said:

> Early in December we had a further conference on the matter and you explained that you were rushing certain lands for final patent and that the immediate execution of the lease showing our idea of what were oil lands might interfere with you and we agreed to defer the execution until that danger was passed. On December 7, 1904, I wrote Mr. Bancroft explaining this and suggesting that the lease be held up temporarily. R. V–2957.

Dumble being asked what was the danger he referred to, replied:

> Danger of interfering with him [Eberlein] and the danger that these lands might be delayed and not be patented because of their mineral character. R. V–2986.

(*b*) *The Correspondence Concerning the Lease of Oil Lands to the Kern Trading and Oil Company was kept separate from the general files and guarded with the utmost secrecy.*

The "personal" letter to Cornish from Eberlein, dated September 3, 1904, protesting against the signing of the lease is the beginning of the correspondence which Judge Bean finds "was kept separate from the general files of the office and guarded with the utmost secrecy until compelled to be produced" by the Government.

Eberlein testified that the correspondence with reference to the proposed lease was not kept in the files at all but in the safe deposit vaults of the California Safe Deposit and Trust Company and when needed it was brought into the office and kept in a separate place in the safe. R. II–1082–1133. Eberlein testified Cornish's

> instruction was that I was to keep those to myself. He said they might hereafter be necessary for my protection. They have been kept by me ever since.—And incidentally for his own protection. R. II–1128.

G. A. Stone was the only person who had access to that safe. Eberlein said the file remained constantly in his individual possession until it was "pried out of" him at the hearing in Los Angeles. R. II–1272.

Cornish, as we have seen, instructed Eberlein to secretly preserve the correspondence relating to the

Kern Trading and Oil Company lease, beginning with the letter of September 3, 1904, from Eberlein to Cornish.

Eberlein was asked if he ever had any conversation with Cornish after the fire of 1906 in reference to the disposition or destruction of this correspondence and Eberlein testified that on a private car out of Ogden in the fall of 1907 Cornish "said that inasmuch as the papers of the company in the Land Office were destroyed," he had destroyed all of the papers he had received from Eberlein. R. II–1074–5. It turned out, however, that the correspondence, while greatly damaged by the fire, was not destroyed and Eberlein caused copies to be made from the scorched papers, and that is how this correspondence happened to be preserved.

The same secrecy which had obtained in the filing and preservation of this correspondence was maintained in having it copied. The copying was done two weeks after the fire under the supervision of G. A. Stone. Mrs. Cunningham, who was the copyist, testified that when Stone—

> handed me these letters he said for me to copy these papers and not to allow them to go out of my hands to anyone else in the office, none of the stenographers, but I was to keep them myself and return them to him personally. . . . Mr. Stone told me to see that they were correct and to compare them with Mr. Koch.

> He told me to go over and sit on one side of the room near a little bay window of the office and compare them in an undertone, which we did. . . .
>
> There was an air of secrecy about the handling of these papers. He told me not to give them into the hands of any other clerk in the office. . . . If there was a duplicate of this file in the office before the fire I didn't see it, it was not kept in the general files. . . . I was impressed at the time that these papers were practically private and he said little things to give me that impression. . . . I concluded there was something very secret and vital about those papers. R. II–1321–3.

If Eberlein, after the selection list was filed but before patent, acquired knowledge or information showing that the lands selected were mineral, though his affidavit was innocently made at the time, it would have been his duty to disclose the after-acquired knowledge or information to the Land Office.

> Though a party making a representation may at the time believe it to be true, and have made it innocently, yet, if, after discovering that it was untrue, he suffers the other party to continue in error and to act on the belief that no mistake has been made, this, from the time of the discovery, becomes in contemplation of a Court of equity, a fraudulent representation, even though not so originally. *Kerr on Fraud and Mistake* (3rd. ed.), 55, 56.

It will be recalled that when Eberlein filed the selection list in November, 1903, he had recently taken charge of the Land Department of the Railroad Company, and he claimed to have no information about the lands. But before he filed the rearranged selection list in September, 1904, he knew the Railroad Company, through its geological department had segregated the oil lands then owned by the company from its agricultural lands and that the lands interspersed with the lands he had selected for patent were classified as oil producing lands and he had refused to execute the lease conveying these adjacent oil lands to the Kern Trading and Oil Company, because if these adjacent lands were believed by the oil experts of the company to be suitable for oil development, it followed that the lands he had selected for patent were likewise valuable for their oil contents.

When he acquired this knowledge he had not filed his rearranged selection list. Instead of saying to the Company, "I will not proceed further with this application, because I cannot in good faith make the non-mineral affidavit" as it was his duty to do, what did he in fact do? He advised Judge Cornish, Vice-President in charge of land affairs, C. H. Markham, General Manager, and E. T. Dumble, Chief geologist, that what had been done must be kept secret. If knowledge of it reached Washington, the Government would have good ground for refusing the patent. Eberlein was careful to see that he should not be put in an inconsistent position, by *openly* doing two acts which were utterly inconsistent—that

is, represent under oath that one section was non-mineral for the purpose of securing an agricultural patent and represent under his hand and seal that an adjoining section was so valuable for oil, that it was to be conveyed to a company to develop its oil contents for commercial purposes. The known geological conditions and structure of both were identical.

Cornish agreed with Eberlein that the lease was improper. Dumble agreed with Eberlein that the situation was fraught with danger—"danger that the Land Office would refuse the patent because of the mineral character of the land" to use Dumble's language, if knowledge of the conduct and belief of the railroad officials should become known. Accordingly, it was agreed that the lease should be held up until the patent should be obtained and Eberlein proceeded with his application for the patent. He never signed the lease and secretly kept it in a private vault, satisfied that should this patent be attacked (as he testified he anticipated, R. II–1093) the files of the company would not compromise him, for he had not signed the lease and the correspondence about it was in a private vault. That Eberlein tried to so act as to be in a position to claim that he was in no way connected with the lease and knew nothing of it, if any trouble should arise, is shown by the fact that in February, 1907, he disclaimed any knowledge or information about the lease, although at that time he had in his possession all the correspondence concerning it. This had been badly charred by the San Francisco fire of 1906 and he had destroyed it after

having it copied in a most secret way. He thought that all the records had been destroyed except this secret file which was saved from the wreck by being in a private safe separate from the general files. That this correspondence, which conclusively shows the conscious wrongdoing of those concerned, was unearthed and secured by the government for this trial is a most fortunate circumstance in the interest of truth and justice. Eberlein testified that the only way that the Government got hold of it was that "it was pried out of him" at the hearing at Los Angeles. R. II–1272.

(c) *Stone's threats, after his discharge, to reveal to the Government the confidential knowledge he possessed in regard to the irregularities in connection with the patenting of lands, and especially the selection of the lands in suit, resulted in his securing a pension from the Railroad Company.*

It will be recalled that G. A. Stone was land grader under Madden and when Eberlein succeeded Madden in 1903, he retained Stone and appointed him his assistant and Stone acted as land agent during Eberlein's absence and that Eberlein relied upon Stone in selecting the lands in suit and that Stone made up the list because Dumble pressed him to do it. Stone was the only man in Eberlein's office who had access to the file of the Kern Trading & Oil Company. It was he whom Eberlein selected to have copies made in 1906 of this file.

In December, 1907, Eberlein discharged Stone because he would not do what he was told to do, and on January 8, 1908, Stone wrote to General

Manager Calvin advising him that Eberlein had discharged him without good cause and asked that he be given employment in some other department, calling attention to his long service. He sent a copy of this letter to Kruttschnitt and to Judge Cornish and wrote Kruttschnitt as follows:

> As land examiner and assistant land agent I have obtained a knowledge of the lands and records not possessed by any other official or employee of the company, but notwithstanding this, and though I have for several years borne a large part of the burden, Eberlein has seen fit to force me out. I think the quality of my work and the confidential character of my employment in the land department indicate that the best interests of the company will be served by not turning me down after long and faithful service. R. V–3117.

Calvin wrote Stone that he had no jurisdiction over the affairs of the land department and could offer him no other employment.

On February 14, 1908, Stone wrote to Eberlein suggesting retirement if his services were no longer desired, but he received no reply to this letter. Thereupon, under date of March 23, 1908, he wrote again to Kruttschnitt referring to the above correspondence with Calvin and Eberlein and concluding his letter with this threat:

> I served the company faithfully and well many years and hoped that its interests would always be mine, but if a hearing and fair

> treatment are not accorded me without further delay, my services will be at the disposal of the Newspaper Press, the United States Attorney General, and others. R. V–3116.

Before the receipt of this letter Kruttschnitt had, on February 19, wired Cornish as follows: "Referring to our conversation about G. A. Stone, will you please let me know what the trouble is in the matter." Cornish replied by wire that "Stone was dropped in the interest of economy and because he was no longer needed for the kind of work which he preferred to do." On February 24, Kruttschnitt communicated to Calvin the contents of Cornish's telegram. Following this threat of exposure Stone was pensioned though he had been discharged for insubordination.

It is safe to conclude that Kruttschnitt would not have permitted Stone to be pensioned after his threatening and insulting letter but for the fact that he knew it was for the best interests of the Company, as Stone suggested. If they turned him down, he would reveal to the Government the facts in regard to the patenting of lands which would show fraud, many of which facts he alone of the employees knew, for he had "a knowledge of the lands and records not possessed by any other employee." It was this knowledge that the officials did not wish the Government to obtain; knowledge as to the facts surrounding the selection and patenting of the lands in suit; knowledge of the records concerning the secret transfer to the Kern Trading and Oil Company; Stone being the only employee who had access to this file.

Kruttschnitt knew of Stone's connection with these matters. The lease to the Kern Trading and Oil Company had never been recorded or made public. R. V–3103.

(5) THE KNOWN CONDITIONS AT THE TIME OF THE PROCEEDINGS WHICH RESULTED IN THE PATENT WERE PLAINLY SUCH AS TO ENGENDER THE BELIEF THAT THE LAND CONTAINED OIL DEPOSITS OF SUCH QUALITY AND IN SUCH QUANTITY AS WOULD RENDER THEIR EXTRACTION PROFITABLE AND JUSTIFY EXPENDITURES TO THAT END.

Judge Bean's fifth finding of fact is as follows:

> (5) *From a careful examination of the evidence I have reached the conclusion that the topographical and structural formation and character of the lands and of the surrounding area, their proximity to and the known extent of oil development and oil lands to the south and west, and extending out and towards the lands in question, the seepages on or near the lands and the anticlinal structure thereof, and the then known surrounding conditions "were clearly such as to engender the belief that the lands contained mineral (oil) deposits of such quality and in such quantity as would render their extraction profitable and justify expenditure to that end" at the time of the proceedings which resulted in the patents. R. I–77.*

The known conditions will be considered as follows:

(A) The anticlinal structure of the lands in suit.

(B) Their situation with reference to the diatomaceous shales which are the source of oil in California.

(C) The seepages, oil sands and other indications of oil in the Elk Hills and upon the lands in suit.

(D) The indications of oil in the vicinity of these lands.

(E) The oil development in the McKittrick, Midway, Sunset and Kern River Fields.

(F) The dip of the oil sands and strata exposed in the outcroppings along the oil development from McKittrick to Sunset.

(a) *The Elk Hills are of anticlinal structure which is most favorable for the accumulation and retention of oil.*

The lands in controversy are situated near the center of the Elk Hills and lie on both sides of its summit. R. II–690.

A. C. Veatch testified: The Elk Hills

> are an elongated group of hills extending northwest and southeast, about sixteen miles long, six or seven miles wide in the widest portion, which rise rather abruptly from the San Joaquin Valley, on the western side, to an elevation of a thousand to twelve hundred feet above the level of the valley. R. II–688.

They are separated on the south from the Buena Vista Hills by a relatively level valley from which they rise to an elevation of five or six hundred feet. R. II–688. They are a semi arid desert, sparsely covered with sage brush and having no agricultural value whatever. The Elk Hills are structural hills, by that is meant they are an anticlinal fold, in which

the present topography shows the essential shape of the fold and that fold

> has a few subordinate wrinkles in it, and it is those little wrinkles in the grand uplift or fold which have been referred to as different anticlines. They are anticlinal axes of minor folds. The whole hill itself is a great fold.

The anticlinal plunges and that gives an elongated dome shape. R. II–714. The Elk Hills "are elongated domes of ideal structure for oil accumulation." R. II–703.

The structural character of the Elk Hills is evident even to the most casual observer. R. II–702. Structural hills like the Elk Hills are not made by erosion, by the action of water, but are formed by the twisting or torsion of the crust of the earth, which gradually folds the stratified beds up until the hills are formed by the pressure. Erosion following the folding up of the beds enables

> the geologist to examine the character of the rocks as fully and carefully as he could in an enormous trench dug through the surface of the earth. Extending for many miles it forms a much more sound basis for judgment than a single development. R. II–697.

F. O. Martin, expert geologist, testified the Elk Hills

> may be termed an anticlinorum, meaning thereby an anticlinal ridge with a major anticline and smaller wrinkles, folds, running parallel or nearly parallel to the main ridge.

> . . . The dips on either side of the main ridge are low and gentle, giving it a rather broad summit and a more or less dome-like appearance. R. I–612.

Josiah Owen, the railroad geologist, in his report of March 25, 1903, to E. T. Dumble, enclosed a map (Ex. 157—R. V–2977) in which the anticlinal structure of the lands in controversy is shown.

W. H. Ochsner, another railroad expert, testified:

> Where the anticline is as clearly defined as in the Elk Hills we have the elements of an ideal spot by an anticlinal structure. R. IV–2211.

F. M. Anderson, defendants' chief expert, testified:

> The Elk Hills as a whole is rather a broad fold of dome-like character, in the main.

The anticline of the Elk Hills is a broader arch than that of the Buena Vista Hills. R. IV–2618.

The following practical and experienced oil men testified as to anticlinal structure of the Elk Hills:

Ira. M. Anderson, R. I–160; *S. G. Drouillard*, R. I–125; *F. J. Sarnow*, R. I–173–4; *M. S. Wagy*, R. I–179–180; *B. K. Lee*, R. I–227–232; *S. P. Wible*, R. I–320; *Colon F. Whittier*, R. I–469; *Frank Barrett*, R. I–480; *Chas. W. Lamont*, R. I–581, and many others.

The well defined anticlinal structure of the Elk Hills is conclusively shown.

The Circuit Court of Appeals said:

> The railroad company's geologists who were in the territory at various times during this

> period, . . . must have further concluded that the several uplifts are structural, that is they are the results of a folding or of foldings of the earth's crust, and they would have known that such a fold or anticline is a favorable formation for the accumulation and retention of oil. They would have determined that the principal dip of the country is northeasterly, and the general trend of the fold axes is northwesterly and southeasterly. R. VII–5–6.

Having shown the anticlinal character of the lands in suit, let us next consider its geological significance in relation to the occurrence of oil.

F. O. Martin, one of the government expert geologists and mineralogists, testified:

> In my opinion the most favorable indication that the Elk Hills must be considered oil lands is the structure of the territory being of an anticlinal character. It is a well known fact that along the summits of anticlines, petroleum tends to accumulate and that the anticlinal summits are the most favorable spots for petroleum to accumulate. R. I–613.

Dr. J. C. Branner testified that the general structure of the Elk Hills was perfectly simple and basing his opinion on his general knowledge of the behavior of petroleum in the rocks stated that—

> the conditions for the accumulation of petroleum were favorable along certain folds that were easily seen by any geologist,

and

> My opinion was that the Elk Hills was the most promising area for petroleum in that

> region in the vicinity of McKittrick. R. II–1003;

adding,

> The general structure of the Elk Hills is so favorable to the accumulation of oil in that region that if they had gone to five thousand feet and not found the oil, I should still advise a company to not give up hope of finding it. R. II–1008.

F. M. Anderson, the chief expert for the defendants, on being asked what sort of structure he regarded as favorable for the accumulation of oil answered:

> Usually an anticlinal structure is the most favorable.
>
> Q. And why is that so, Mr. Anderson?
>
> A. It facilitates the accumulation and retention of oil if the right stratigraphic conditions and other conditions are present.

Oil does not as a rule stay in the diatomaceous shales which are the source of oil, but passes out into an absorbing bed—a porous bed—where it accumulates. R. II–1011. In other words there must be a reservoir to contain the oil and the natural oil reservoirs are found in anticlinal structures.

The opinion of the Circuit Court of Appeals said:

> It is virtually conceded by the experts for the railroad company . . . that an anticline such as is found in the Elk Hills is an occurrence favorable to the accumulation and retention of oil, to which prospectors would hopefully look upon discovering the presence of oil in adjacent territory. R. VII–8.

(*b*) *Diatomaceous shales are the source of oil in California and the Elk Hills are situated just in front of the thickest portion of these shales.*

The generally accepted theory is that diatomaceous shales are the source of oil in California. Dr. Branner testified:

> The oil in the California fields originally developed from a series of beds that were known in geology as the Monterey shales—a series of rocks made up of the skeletons of diatoms that have accumulated in great quantities, especially about the southern end of the San Joaquin Valley. These rocks were given the name "Monterey Shales" because rocks of the same age and general character occur at Monterey in this State. It is a local name. II-1008.

He said, however, that it was a mistake to say that oil was all derived from Monterey shales.

> I instinctively, in looking over lands that I have been called upon to examine for petroleum, have looked about for these diatomaceous shales. Now, those diatoms, you can see from the nature of the case, have been accumulating for an enormous period of time, and they were not necessarily confined to the time in which those Monterey shales were being heaped up; so that we have older beds that have diatoms in them, and we have the later beds, and wherever I have found marine diatoms accumulated in considerable quantities, I have considered that there was a legitimate place to look for petroleum, whether they hap-

pened to be in that particular age or earlier or later. II–1010.

Let us now examine the evidence to ascertain what it shows with reference to the presence of these diatomaceous shales as related to the lands in suit.

Dr. Branner testified that these diatomaceous shale beds—

> down towards the southern end of the San Joaquin Valley, have a thickness of over five thousand feet, and a great thickness like that immediately would make a competent geologist prick up his ears, because he would say: "here is a chance for an enormous accumulation of oil." II–1012.
>
> The Elk Hills are situated right about in front of the thick portions of these Monterey shales. The thickest parts beginning up here some way north of McKittrick, come—oh, perhaps twenty miles or more, or so, northwest of McKittrick, and from there down to the vicinity of Maricopa, is the very area in which those shales have those great thicknesses, and these Buena Vista Hills and the Elk Hills lie right off towards the east, northeast, of those hills.
>
> I would not expect the shales under the Elk Hills to be so faulted as to influence the disadvantageous accumulation of oil there. II–1022.
>
> The general geology of the Elk Hills would lead me to infer that Monterey shale was under there and in great thickness. II–1020.
>
> It seems to me that the best chances for oil in the whole country in that region were in the

Elk Hills and the Buena Vista Hills. In forming that opinion I took into consideration the possibilities of the non-occurrence of oil resulting from the conditions of the sand and the pinching and hardness of the stratum, and other interruptions; I think that any reasonable geologist knows that there is a certain amount of risk in any kind of petroleum mining. He counts on that.

I should say decidedly, that the conditions in the Elk Hills are such as to warrant the ordinarily prudent man in the investment and expenditure of money with a reasonable expectation of developing a paying oil property. II–1024.

I should say that if any competent geologist, observing the natural waste of oil about McKittrick and the stage of development in 1900 or a year or two subsequent, and visiting the Elk Hills and making some examination of the structural formation, failed to form an opinion that the Elk Hills were oil in character and that there was an oil bearing zone underneath those hills, he did not understand his business. II–1004.

From my examination and knowledge of the neighboring regions, I have no reason whatever to believe that the oil bearing sands in the Elk Hills are thin, hard or pinched out. II–1023.

F. M. Anderson, defendants' chief expert, admitted that the Elk Hills lying out some distance from the line of outcrop are in a favorable position for the thickening of the diatomaceous beds. IV–2627.

Judge Dietrich stated in his opinion that the railroad company's geologists from observations readily made must have concluded that underlying the oil zone from McKittrick to Sunset there were shales in which it is supposed the oil originates and beds of sand into which it migrates, and that the principal dip of the country is northeasterly. VII–6.

(c) *The evidence shows that, prior to patent, the Elk Hills, of which the lands in suit comprise the center, contained well known seepages, blowouts, oil sands, deposits of asphaltum and other indications of oil.*

The testimony establishing the existence of indications of oil in the Elk Hills and the lands in suit will now be reviewed.

S. G. Drouillard, a practical oil man and miner for many years (R. I–114) testified that in 1874 he saw an oil seep in section 32 of 30–24, being the township just east of the lands in suit. "The sand at that time was wet from oil. It would adhere to the hand when you would squeeze it together. There was a prominent smell of gas." R. I–116. He found other seeps north and west in the Elk Hills. In 1899, with Chas. Lamont, Wagy and others, he made locations for oil in Midway, Temblor, McKittrick and the Elk Hills. They found on section 15 of 30–24 outcroppings of oil, it was quite a belt of sand cropping. On the strength of these oil seeps, they located the land. R. I–114.

Referring further to the condition of the seepage on 32 of 30–24, when he first saw it in 1874, Mr. Drouillard testified:

> It had a distinct odor. There seemed to be lots of gas in it; it smelled gas and sulphur. It was petroleum gas. I know what petroleum gas is. At that time the seep was wet. It would adhere to the hand and we would pick it up and ball it up and it would stick to your hand. We dug in it possibly four or five inches. There was no water there at that time. This was in the spring of 1874. I was at the seep once in a while afterwards while I was employed riding through the land and the seep remained in the same condition. The last time I saw it was in 1899, when I located it, at which time it was dry. We dug down about two feet into it. We found the gumbo—the sticky stuff—the same as I observed in 1874. It would adhere to the hand. R. I–121.

He showed some of the sand to W. E. Youle and he said it was oil sand. R. I–122.

He found the anticline on section 5 of 30–22, north of McKittrick. There is an oil sand cropping there and he located this. R. I–127. The anticline in the Elk Hills was running parallel with McKittrick, southeast and northwest. The formation of the Elk Hills was exactly like the balance of the country that had oil in it and competent oil men generally regarded it as oil land. R. I–117.

John R. Scupham, consulting engineer of the railroad directors (R. I–585), in a trip that he made into the Elk Hills at the direction of A. N. Towne, General Manager of the road, in 1887, found the oil

seepage in 32 of 30–24 which he testified was "the best oil seepage" that he had seen. R. I–587.

> It was a fresh seepage. Such indication could not be found in an exhausted oil sand. That it was an active seepage was not visible to the unassisted eye, but it showed freshness of the outflow of oil. The stain was a fresh stain. I could not detect actual oil, but the stain of oil was necessarily recent. There had not been a complete evaporation of it. R. I–597.

W. E. Youle, who had had the widest experience and greatest success of any of the practical oil men who testified in this case (R. I–540), testified that he was in the Elk Hills in 1898 and saw oil sands in there then and mineral locations were made as a result of his opinion from a personal observation of the Elk Hills. R. I–551.

> I made a chloroform and fire test of the oil sands I found in the Elk Hills. The result showed bituminous matter—gases. The Elk Hills was full of gas. It was burned with gas all over. It was evidence of a very volatile oil and evidence of an oil that might not have much asphalt base. R. I–552. . . .
>
> The territory from which I took the samples covered a mile, anyway, if not longer, about parallel with the strike of the country. I think I got some of the samples in a gulch. I got some on the hills. I found no asphaltum, but I found a sand that was percolated so much that you could put it on a fire shovel and at it a little and it would blaze. And in

making the chloroform test you could get particles of oil.

You could get oil from the territory I examined on those occasions. R. I–574.

My opinion was that that was a prolific oil field, and if I had had my way, I would have drilled there in preference to over at the McKittrick side. R. I–569.

I saw oil sand pretty near the summit of the Elk Hills. R. I–573. I found through the Elk Hills many evidences of gas. That was shown by the peculiar look of the formation that has been attacked by gas. . . . It is a grayish color and has a glassy appearance, and manifests itself everywhere where gas is escaping. . . . One or two places we put a can over it and let it accumulate, and then lit it. R. I–574. . . . The occurrence of gas would be an indication of oil. . . . It was not marsh gas. R. I–575.

I would have advised any company to furnish the money to the extent of $50,000.00 or $100,000.00 to develop that country. R. I–577.

John Jean testified that Chas. Lamont showed him some oil sands purporting to have been brought from the Elk Hills and Lamont took him out where these oil sands were found. It was a black coarse sand; dry oil three feet in depth and 100 feet in length and breadth. It looked like dry oil, burnt sand. R. I–127. Jean further testified that he reported this to L. G. Sarnow and to J. B. Treadwell who at that time was in charge of oil development

for the railroad at McKittrick. Sarnow was an oil driller. He took Treadwell and Sarnow to these oil sands. This was in 1899. They examined these oil sands at that place and both said it looked good and on the strength of that discovery Jean, Treadwell and Sarnow made oil locations on section 31 of 30–24 near the oil seep. This is the section adjoining the section on which the oil sand was located in 32 of 30–24. R. I–129.

L. G. Sarnow, who had large experience in the oil business and for a number of years had charge of the Kern River field for the Southern Pacific and drilled thirty wells there for Treadwell and three in McKittrick, testified that "the formation of the Elk Hills is shale, gypsum, and sand. It is substantially the same formation over in the eastern flank of the Temblor Range." R. I–134. John Jean showed witness some sand and he wanted to know where it came from. It was a coarse, pebble oil sand and witness was interested in it when he first saw it. Treadwell also saw it. Jean took witness and Treadwell to the place in the Elk Hills where he got the sand (section 32 of 30–24).

> Apparently it was a blow-out. There was an anticline that came to the surface in a way. It was just the same as you would find in Temblor. . . . On the strength of that showing, Mr. Treadwell, and Mr. Jean and I located the land. With reference to that oil sand, we did not locate just on the sand. I remember the sand was on one side of it and we seemed to figure that it came from the

McKittrick or Temblor and we took the land that we thought to be in the strike. R. I–135.

There were three traces of blowouts off a little further to the west, but not as prominent as these others. They might have been in section 30 to the north. I would not say, although it was right next to where we located. That is as near as I can get to it. I never had any tests made of that material. I didn't need any. I didn't think so. That was oil. I don't think it was possible that I was mistaken as to that containing oil, although I wouldn't say it is not possible. I have never known of similar blow-outs being tested by chloroform tests and showing nothing. R. I–141.

M. S. Wagy, an oil producer of many years experience, testified that he made locations for oil in the Elk Hills in 1899 or 1900. That he found a break or blow-out-seepage in the N. W. ¼ of section 32 of 30–24. The sand there was practically dead. There was an odor of oil in it; it was stained black; it was oil sand. S. G. Drouillard told him about the indications there and got him to go in there. R. I–175–6. He testified that he and his associates, Chas. Lamont, Mr. Packard and others located eight or ten sections in 30–23 and 30–24. He would throw the deposit he found there on the fire and it would make a smoke and smell and would blaze up after it was heated and give an odor of oil or gas. R. I–177. Later on tunnels or shafts about twenty feet deep were dug near those locations and showed indications of oil. R. I–178.

In 1899 he regarded the Elk Hills as good oil territory because "we had the same indications as we had where we were getting oil. Better indications than in the Kern River field where we were getting oil." R. I–180. Witness testified there were other indications of oil in the Elk Hills. There was an outcropping on section 26 of 30–23. R. I–181.

Samuel P. Wible became interested in the oil business in Kern County about 1898 and drilled wells in Kern River field, McKittrick, and Temblor. In 1902 he went into the Elk Hills to examine them and investigate their oil possibilities. He heard there was a seepage on section 32 of 30–24 and saw it afterwards.

> It is not what you call an oil seepage; it is what you call a brea bed. Evidently oil or gas had been in it at one time and dried out at the present time. R. I–318–9.

In 1903 or '04 Wible went through the easterly part of the Elk Hills with Josiah Owen, geologist for the Southern Pacific, who was engaged in examining and classifying its lands. He was going to show witness the outcrop on section 32 of 30–24. Owen had been in there before and "was very familiar with the formations of that country and particularly with reference to the Elk Hills, including township 30 South, Range 23 East." He testified he knew Owen regarded the Elk Hills as oil territory. R. I–320–1.

Witness testified that—

> there is a decided oil showing in what I would call the North extension of the Elk

> Hills. It is beyond the railroad tracks to the west. The evidence consists of oil sand crops in a number of places. As early as 1901 and before 1904 there were two oil wells on section 6, in Township 30 South, Range 22 East, and there was one on fractional section 1, Township 30 South, Range 22 East. These wells were on the same anticline; the one I refer to on the Elk Hills. R. I–321.
>
> The formation of the lands in Township 30 South, Range 23 East, and 30 South, 24 East, consisted of shale, sandstone and clay and Fuller's earth and gypsum. . . . In that formation, Fuller's earth and gypsum generally occur in conjunction with oil. R. I–322.

F. J. Sarnow, oil driller for the Southern Pacific, testified there are oil outcroppings in the Elk Hills on section 14 of 30–22.

> There are oil crops and sand on the east side of the railroad there on that section and there is dry oil and overflow on the west side of the wagon road.

He testified that there were four or five outcroppings of oil sands in the Elk Hills.

> I know of oil sands in the hills southwest of Miller & Lux's ranch. They were around in that country about section 25, of 30–23 and section 30 of 30–24. R. I–169.

Witness testified that he was then drilling wells in section 6 of 30–22 on the same anticline that runs through the lands in suit.

> This anticline is an outcropping of oils sands and blow-outs and the formation surrounds it. The formation is shale, clay and gypsum. The oil sands show stratification from which you can determine it is an anticline. R. I–173–4.

W. G. Sylvester testified that he first examined the Elk Hills in January, 1900, and found evidence of oil. Started at Headquarters Ranch and saw indications of what he would call asphaltum.

> It was a formation similar to the blow-outs they have at McKittrick. R. I–359.

It was four or five miles west of the ranch and a little south. R. I–356. This would be in 30–24. R. I–359.

> We found a rather recent oil seepage which was somewhat dried out although it would burn giving off an odor like coal oil or gasoline. We found this seepage in a gulch and we found asphalt high up on the hill. I located about ten or twenty claims at that time. R. I–356.

His locations extended into four townships, 30–23, 30–24, 31–23 and 31–24. R. I–357.

J. W. Kaerth, who assisted J. M. Duce in 1901 in making the official survey of the lands in suit, testified that their camp was on section 33 of 30-23 and he found evidences of oil and asphaltum over a good portion of that township. R. I–420. They called them asphaltum reefs or ridges. R. I–417.

> The surface of them was a sort of grayish color. As we broke into them they were quite

> black, but the outer surface was gray. The material would burn. We did burn it in our camp fires. R. I–420. I remember two or three small oil seepages on the land, what appeared to be oil seepages, small places on the land. R. I–418.

Witness testified that he made the field notes of the survey, transferred them into a book and turned them over to Mr. Duee. In the notes he wrote the general description of the land:

> I characterized the land as mineral. That was done by reason of what I observed on the ground, in the way of asphaltum reefs and oil seeps. R. I–423.

Attention has already been called to the plat of the official survey of 30–23, filed in the Local Land Office in May, 1903, setting forth that the surface of the ground in this township "shows a geological formation, with asphaltum exudations, that is regarded by experts as an almost sure indication of the presence of valuable petroleum deposits." R. II–686.

H. P. Dover testified that since 1901 he had been in the oil business and there was in 30–24 a kind of blow-out in a large gulch which showed indications of oil in both sides—discolored clay and some sand.

> It showed a stain of oil in my opinion We detected it a little with ether. R. I–461.
>
> There was a little seepage of oil in section 23 of 32–23. . . . It was not like the seepage in 32 in the Elk Hills. There was oil in 32 oozing out of the ground. R. I–467.
>
> I am interested in one other section in the

> Elk Hills; section 30, I think, 30–24. I think it is near the blow-out. R. I–462.

Chas. Brisco, who was engaged in the business of oil prospecting and development at McKittrick from 1897 to 1904, testified that he found—

> a small brea bed—dried oil, dried asphaltum—in the Elk Hills, in the east slope of the Hills about 12 or 15 miles south and east of McKittrick. This was about 1901 or 1902. Before 1904, witness took Josiah Owen, the geologist for the Southern Pacific, to this brea bed. It consisted of dry dirt and asphaltum, all mixed together. . . . It would burn as we tried it. R. I–335–6. There was dried oil there, that is, it was dried in the dirt and shale.

Mr. Owen said to witness that "it was a fissure that had been blown out there. . . . "This is good enough, hang on to it." R. I–340–1.

> Wherever you find brea it is an indication that there is an oil belt there or near there somewhere and it has been oozed out there by the gas. R. I–341.

N. C. Farnum, actively interested in the oil business for many years, testified that he made a detailed examination of the Elk Hills in 1899, looking for oil sands and other evidences of oil (R. I–495), and located an oil seepage in section 32 of 30–24 in a canyon.

> The sand at the oil seepage in 32 of 30–24 had been saturated with oil. I tested it. R. I–496.
>
> I am very well acquainted with the gap the railroad comes through to McKittrick. It is

> in 14—30–22. There is a well defined anticline there. . . . There is evidence of waste oil there; dry oil in the sand there. R. I–496.

W. E. Youle reported to witness that—

> there had undoubtedly been oil in this canyon, on section 32—30–24, and that the country between there and section 14, in 30–22, where the anticline is exposed by the action of the water, had the appearance to him of oil land. R. I–498.

Frank Barrett, sixty-seven years old, who has been in the oil business practically all his life (R. I–478), testified that he first visited the Elk Hills in 1899 to examine them and was paid $100 per day and expenses, and "found two or three places where there had been seepages, . . . it was not asphaltum, it was oil." R. I–479. He took some of the outcropping home with him and from the smell you could just get a little odor of oil, but when he crushed it and applied the chloroform test, he got traces of oil. This oil seepage was in 30–24 near section 23 and witness thinks it was in section 17. R. I–480.

> It was not in section 32–30–24. R. I–482. "I found some three or four seepages where oil had seeped out and caked. All of the lighter properties, of course, had evaporated. . . . There was one blow-out that I saw that was a live seepage with actual oil coming out of it. . . . It was in the Elk Hills. R. I–483.
>
> This is the seepage that witness located as being in section 17 of 30–24.

> I don't think the characteristics of the formation of the Elk Hills are at all dissimilar to the formation around McKittrick and not dissimilar to that at Taft and Maricopas. R. I–480.

Colon F. Whittier, who had been in the oil business fourteen years and the output of whose wells was one million barrels of oil the past year, testified that there is some asphaltum showing in the railroad gap in section 14 of 30–22, some oil sands—dry oil.

> I have examined the shales or sands around McKittrick. The shales are practically the same as the shales in the Elk Hills. R. I–469.

Parker Barrett, oil operator, who located the ground on which the Lake View *gusher* well was drilled, testified:

> I have been interested in lands in the Elk Hills. . . . I know of an oil seep in the northwest quarter of 32 of 30–24 and have seen it. . . . I had heard of this seepage a good many years. . . . That seepage assisted me in my knowledge in thinking that the lands were good oil lands. R. I–524.
>
> He testified that just about where the railroad passes the gap, section 14 of 30–22, there are asphaltum beds and brea. R. I–526.

F. O. Martin, one of the Government experts, testified:

> I found an oil seepage in the northwest quarter of section 32 of 30–24. That gas seepage is situated near a place where the anticline has been somewhat deflected, giving

> the hydro-carbons a chance to exude to the surface. The existence of that seepage was plain evidence to me that the lands must be underlaid by petroliferous deposits. Further, having seen and examined the oil exudations to the west, near the town of McKittrick, I found that the formation underlying said oil seepages near McKittrick extended easterly to the Elk Hills, and that no break being visible between the formation at McKittrick going easterly to the Elk Hills was evidence to me that the formation must be the same,—that is, that the formations overlying the oil sands at McKittrick and the formations overlying the oil sands at the Elk Hills are the same. . . . I have observed seepages in the Buena Vista Hills as denoted on the map. These seepages are in sections 10 and 11 of 32–24. The formation of the Buena Vista Hills and the Elk Hills are the same. R. I–613, 614.

Chas. W. Lamont, occupation, mining and prospecting since 1897, testified that he went into the Elk Hills in 1899 with his partner, S. G. Drouillard, who was an old prospector and found indications of oil. The largest was a blow out on section 32 of 30–24.

> We picked some of the shale and sand where the blow-out was in section 32. It was decomposed shale and there was strata of oil sand there, and the shale was very hot. . . . That formation after we got under the surface was very hot. In fact it was too

hot to handle pleasantly. The indications of oil there was just the oil sand and that shale we know goes with an oil formation.

On the north and along the line of contact from McKittrick towards Sunset right close to the lake, we saw live oil coming out of the ground, floating on the mud and water, towards the easterly and northerly end of the Elk Hills. R. I–580.

After seeing these indications of oil, I located seven sections of land right in what I took to be the anticline along there, and then I formed another company and located several more sections. I don't remember how many. The first seven sections located were located westerly from section 32, the original discovery, and extended over to 30–23. . . .

I concluded that section 32, where the oil sand was, was the top of the anticline, I have seen indications of oil in section 14 of 30–22, where the railroad goes through. . . . It looked like oil sand and brea. It would be what I took to be the west end of the anticline at that time. R. I–581.

Ira M. Anderson testified that he was fifty-two years old and had been actively engaged in the oil business ever since he was fifteen or sixteen years old (R. I–154), and that he examined the Elk Hills in 1899 and 1900 and found there shale, gypsum, oil sand and brea:

I made chloroform tests of the earth and rock and shale that we found in the Elk Hills. The tests showed oil and oil sand. As to my opinion

> as to whether or not the Elk Hills was oil producing territory, the formation was there to show that it was. The shale is there, the clay is there and the oil sand is there. I found blow-outs in the Elk Hills. There was a place across from Miller & Lux's headquarters where the gas blew out. . . . It was on the east side of the summit line of the Elk Hills, pretty near the top of the line or ridge of those hills. R. I–155–6.

Dr. J. C. Branner testified:

> Near the middle of the northwest quarter of section 32–30–24 about on an anticline are oil seeps. . . . The seepage was important as an indication of what was underneath. R. II–1015.

F. D. Lowe testified that he went into the Elk Hills in 1900 for the purpose of making some oil locations. He had at that time heard of the discovery of oil evidences in the Elk Hills. Had heard various people speak of the blow-out in 32 of 30-24. Three hundred yards due north of the northeast corner of section 11 of 31-24 he found what appeared to him to look like oil sand in a gulch. He found a similar indication in the center of section 2 of 31–24 and a third indication half a mile east of the section line of section two.

> These oil sands showed stains and looked as though they were very much dried. . . . We afterwards made locations. R. I–146.

He testified that they incorporated a company, levied an assessment and erected an eighty foot

derrick at the N. E. corner of section 11 of 31–24, near where he had made the first discovery.

> We got down about five hundred and sixty feet and struck small showing of oil and at various times we got gas. We piped the gas . . . and cooked with it. R. I–147.
>
> When the bit would come up, little drips of oil would break and run down in a little streak. I am certain that it was oil. R. I–150.
>
> When we were down about five hundred feet we struck gas and we lit a paper and dropped it in the casing and when it reached down a few feet there was a terrific explosion. R. I–153.
>
> I found the same character of formation in the five hundred and sixty foot well that we drilled out there on section 11 as in the Kern River Fields . . . where the wells were paying wells. R. I–147.

J. I. Wagy testified that in 1900 he discovered a seepage in section 32 of 30–24. It was a small outcropping of sand in the bottom of the canyon. He took some of the sand to H. A. Blodget of the firm of Jewett and Blodget, which had extensive holdings in the Sunset field and Blodget sent his superintendent and oil expert, W. E. Youle, to examine the seepage. On the strength of this discovery, Wagy, Blodget, Youle and others formed a company and located for oil a number of sections in the Elk Hills in 30–23, 31–23, 30–24 and 31–24, including the top of the hills, embracing the lands in suit. R. I–239–243.

Chas. F. Haberkern testified that he was engaged in the development and mining or prospecting of lands in the Elk Hills and vicinity and was a director and one of the original locators of the Eight Oil Company in which Josiah Owen and E. T. Dumble were stockholders. R. I–349.

In August or September, 1904, he went all over the Elk Hills with Owen.

> I know of an oil showing, or out-crop, or gas blow-out, in the northwest quarter of section 32 of 30–24. At that time Mr. Owen and I visited that oil seep. . . . My associates and I, in pursuance of that examination made by Mr. Owen and me, later located lands in 30–23. We located the even numbered sections. The reason we didn't locate any odd numbered sections at that time, although I wanted to do it, when Mr. Owen and I went out again he said that he was working for the railroad company and not to take any railroad land. R. I–350.

B. K. Lee testified that he had been engaged in the oil business at McKittrick continuously since 1900 (R. I–224) and that "on section 2 of 31–23 there was an oil seepage" (R. I–225) and that—

> there are asphaltum indications on section 14 of 30–22. On the north flank of the anticline on this section there is a bed of coarse gravel. . . . A superficial examination shows nothing but yellow gravel, but when you break into it, it is covered with dry oil. R. I–230.

A. C. Veatch, the Government expert, referring to the seepage or gas blow-out in section 32 of 30-24, testified:

> I examined the seepage on two occasions and found a stained sand exposed at intervals for several hundred feet, on the west side of the gulch in which it is situated, and in one or two places on the east side. This sand contains some free sulphur. Tested with chloroform it gives no oil. The sand shows some carbon,—particles of carbon,—and it is my conclusion that it represents an escape of gas from the oil-bearing zone, the gas carrying some oil with it; that this oil has been deposited in the sand together with sulphur coming from the gas and that it has been fired—the gas has been lit—and that owing to incomplete combustion a little carbon has been left in some of the sand, which makes it probable to my mind that any one or more persons in the past could have tested that and gotten positive results of oil, if the oil had not burned out. It would probably be also a volatile oil that would evaporate. If there were other earth movements, it would be possible, I think, at some future time, to get a positive test of oil. R. II-712.

While Veatch's test showed no oil in 1912, yet it corroborates the evidence of Youle (R. I-552), Farnum (R. I-496), I. M. Anderson (R. I-155-6), H. P. Dover (R. I-461), Barrett (R. I-480) and others that when they made their tests prior to the patent with ether, oil was found. The evidence estab-

lishes the fact that the seepage was often set on fire which burned out the oil owing to incomplete combustion and left particles of carbon, found in the sand by Veatch.

The defendants offered three geologists, Ochsner, Anderson and Taff, all of whom had been for a number of years in the employment of the Southern Pacific or its subsidiary companies, in an effort to show that the seepage in section 32 of 30–24 was not an oil seepage.

W. H. Ochsner, geologist of the Kern Trading and Oil Company and the Associated Oil Company, both subsidiaries of the Southern Pacific, testified:

> I examined the occurrence to see just what its appearance might be and I came to the conclusion very rapidly that it was an organic occurrence and not an oil seepage by merely looking at it, from the relation between this formation and the close and impermeable strata exposed underneath. I did not burn it nor test it with chloroform. R. IV–2215.

F. M. Anderson, who went to work for the Southern Pacific in 1903, testified that when he was preparing for this trial, he first visited this seepage on 32 of 30–24 and he gave it as his opinion that it was "a gas seepage." R. IV–2474. "The gas is hydrocarbon gas and partly sulphuretted hydrogen gas . . . not necessarily petroleum gas. . . . Largely, I think, methane gas." R. IV–2474–5. He said he tested the sandy material with chloroform, benzine and other reagents and that the

chloroform and benzine showed no evidence of asphaltum, while the other solvent showed a dark stain in the solvent, which he couldn't explain. R. IV–2476–7.

J. A. Taff, assistant geologist of the Southern Pacific since 1909, testified that this blow-out was not a gas seepage, as Anderson had testified it was. Taff admitted that he was not a chemist and had the sand tested by his assistant, A. J. Heindl, who was not examined, and they got no perceptible indication of color in the chloroform indicating the presence of bituminous matter. It burned slowly but he couldn't see any indication of petroleum in the alleged seepage. R. V–2762. He admitted that natural gas usually is closely associated with petroleum and in part has the same origin (R. V–2836), and that methane gas forms the chief characteristic of natural gas. R. V–2828. This explains why Anderson could not say that it was not petroleum gas, but that it was "not necessarily petroleum gas."

Chas. H. Allison, one of defendants' witnesses, admitted on cross-examination:

> I saw specimens of sands taken from the side hills and from the gulches and the canyons from the outcroppings in 30–23 and believed in the mineral and oil character of the land as prospects and I contributed money to set up the stakes and give notice of our claims upon the ground. Several of my co-locators went out on the land and placed the location notices

> and after examining the land they returned and brought with them and showed me numerous specimens of bituminous rock and a mixture of that rock and asphaltum which, when a match was applied, burned indefinitely. R. III–2001.

L. E. Doan, another witness for defendants, admitted that there was an outcropping of oil sand in sections 26, 22, 16 and 15 of 30–23, and that "it extends three miles practically right on the outcrop." R. IV–2074.

J. B. Treadwell, who was in charge of oil development for the railroad from 1893 to 1903 and who recommended the withdrawal of lands from sale because of their probable oil contents, visited the seepage on 32 of 30–24 in 1899 and he said it "looked good" and he and John Jean and L. G. Sarnow located for oil on section 31 of 30–24 near the oil seep. R. I–128–9.

Treadwell made out the notices (R. VI–3426) and told L. G. Sarnow it was good for oil. R. I–135. He also told F. J. Sarnow he thought there was oil in the Elk Hills. R. I–165.

Josiah Owen, who was in charge of the railroad oil lands from 1903 to 1909, was dead at the time of the taking of testimony but the reports and maps made by him and the evidence of a number of witnesses establish the fact that prior to the patent he was well acquainted with the seepage on 32 of 30–24 and the other indications of oil in the Elk Hills and believed they were oil lands.

Owen's reports and maps have already been referred to as well as the testimony of S. P. Wible (R. I–321), Chas. Brisco (R. I–340) and others to the effect that each of them visited the seepage on 32 of 30–24 with Owen and that he expressed a favorable opinion as to the value of the lands in suit as oil lands.

The seepage or blow-out on 32 of 30–24 was so well known that the following witnesses for defendants admitted they had heard of it though they had not been to it; *E. J. Miley* (R. III–1742); *R. K. Howk* (R. III–1844); *B. M. Howe* (R. III–1906), and *Chas. T. Burks* (R. IV–2067).

The foregoing excerpts from the testimony conclusively establish, we submit, the existence of seepages, gas blow-outs, oil sands, brea, asphaltum and other indications of oil in the Elk Hills and on the lands in suit. The well known outcrop or seepage on section 32 of 30–24 while not on the lands in suit, is in the township in the Elk Hills lying just east of the lands in suit.

The existence of the foregoing seepages, oil sands, gas blow-outs, asphaltum and brea in the Elk Hills, indicated the presence of oil in the lands in suit, which lie in the very center of these hills. These conditions as well as their significance were well known prior to patent.

W. E. Youle testified:

> In California the existence of oil sands is always a good indication of finding oil in paying quantities. I will make the statement

> broad. You show me an oil seepage with a proper development and I will show you an oil field; and if you can find any instance it is not so, it is something I don't know of. From my experience in the California field, I will say that such an oil sand indication is always an indication of the presence of oil in paying quantities. I make that statement unqualifiedly and I know of no exception to it whatever. R. I–556.

W. H. Ochsner, one of defendants' geologists, testified:

> A cropping of oil-sand is a beginning of first hand evidence that petroleum is present in the neighborhood and it is the first step in the study. It would call forth the first suspicion, the first interest. A cropping of oil sand which shows unmistakable evidence of having been impregnated by petroleum or bituminous matter is absolute evidence to the mind of any competent geologist that if oil does not exist in that formation now, it must have existed at some time in the past. That is unequivocally true. R. IV–2212.

Reference will now be made to the testimony showing existence of outcrops of oil bearing sands, seepages and other indications of oil, not in the Elk Hills themselves, but in the vicinity of the lands in suit.

(*d*) *Oil bearing sands, seepages, asphaltum and other evidences of oil in great abundance in the vicinity of the lands in controversy.*

Having considered the evidences of oil in the Elk Hills, attention will now be directed to the testimony

showing the indications of oil in the vicinity of the Elk Hills, that is, in the McKittrick, Midway and Sunset fields and in the Buena Vista Hills.

Judge Dietrich said:

> The railroad Company's geologists, who were in the territory at various times during this period doubtless noted oil seepages and oil sand outcrops for many miles along the line of the McKittrick development and in several places along a line or zone westerly from the Midway field,

and that—

> it is virtually conceded by the experts for the Railroad Company that in the McKittrick-Midway-Sunset zone it was known that there was oil in considerable quantities, susceptible to profitable extraction. R. VII–8.

Prior to patent there were 281 producing oil wells between McKittrick and Sunset, a distance of 30 miles, but before referring specially to the oil development, the Court's attention will be called briefly to the evidence showing the seepages, outcroppings of oil bearing sands and other indications of oil in that vicinity as they existed prior to the date of the assailed patent.

McKittrick-Midway District.

Township 30–22: McKittrick is in section 21 of this township which adjoins and lies west of the lands in suit. The Circuit Court of Appeals found that "particularly in the McKittrick field the presence of oil in large volume reasonably near the surface and economically susceptible to extraction was abundantly shown."

Chas. Brisco testified:

> I first went to McKittrick in 1897 or '8 and I remained there until August, 1904. I know about the oil seepages or oil indications in and about the town of McKittrick and the hills there. Those indications consisted of oil running out of the ground and seeping, and gas pockets and places where the gas was bubbling up. When it would rain the gas would bubble up and oil would run out down the hill. I guess I noticed this around there in a hundred places. I also noticed evidence of waste of oil there in former times. There was what we called a Tar Flat . . . about half a mile south and east of McKittrick. R. I–335.

H. M. Shreve testified that he first became interested in oil properties near McKittrick in 1888 or 1889 (R. I–446), and that "in various parts of 30–22, right in the immediate vicinity of McKittrick, there are large showings of liquid asphaltum oozing from the ground." R. I–455.

H. A. Blodgett testified that he was "a pioneer" in the McKittrick, Sunset and Midway fields and made locations for the purpose of drilling for oil beginning ni 1878.

> These locations commenced northwest of McKittrick and extended three or four miles right down both sides of what is now McKittrick, right on down the strike Southeast. By strike I mean strike or outcrop, the strike or the break that was evidenced by oil seepage. These oil seepages were visible, very much in evidence and they extended for four

> or five miles along the strike or break Northwest and Southeast. That was the general strike of the oilbearing formation through that country. R. I–361.

Witness helped organize in 1893 and was a director of the Standard Asphalt Company, a subsidiary of the Southern Pacific Railroad Company, which operated at McKittrick. R. I–363.

Ira M. Anderson described the places in the vicinity of McKittrick where he "found extraordinary evidences indicating the country to be an oil country" in 1899 or 1900. He found asphalt, oil, sand and gas on 34 of 30–22.

> The sun would melt the asphalt and it raised up and in the center of it there would be gas coming up and if you lit it, it would come up like a candle. This asphalt covered over there for probably an acre. These conditions were known in general to the populace around there at that time. R. I–155.

He found deposits of asphalt all over the flat going east from McKittrick in sections 22 and 26 of 30–22 and similar deposits north of that in the Elk Hills. R. I–161–2.

B. K. Lee testified to outcroppings of oil sands on sections 8, 17, 18, 20, 28, 29, 34 and 35 of this township (R. I–224–5) and *S. G. Drouillard* on section 5 of this township. R. I–127.

John Dean (R. I–131), *F. J. Sarnow* (R. I–169), *C. F. Whittier* (R. I–470), and many other witnesses described the seepages, asphaltum and oil sands and other indications of oil in 30–22.

In reciting the testimony as to the evidences of oil in the Elk Hills, reference was made to the evidence of the seepage in the railroad gap in section 14 of 30–22, which section is at the northwest end of the Elk Hills (R. I–321) and a mile west of the lands in suit.

Townships 30–23 and 30–24: The testimony as to the indications of oil in 30–23, in which the lands in controversy are situated and in 30–24 lying just to the east was referred to in considering the evidences of oil in the Elk Hills.

Townships 31–21, B. K. Lee testified to the outcroppings of oil sand in this township and on the line of contact with the Temblor Range R. I–225.

C. F. Whittier testified to a large oil outcropping or seepage on sections 14 and 24 of this township. R. I–470.

Township 31–22: This township corners with the lands in suit on the southwest. *C. F. Whittier* testified as to an oil outcropping on section 19. R. I–470. *Ira M. Anderson* testified that he found asphalt and oil sand in section 2. R. I–155.

W. E. Youle, testified to a quite prominent seepage two and one-half or three miles southeast of the large seepage right at McKittrick. R. I–361.

Township 31–24: This township corners with the lands in suit on the southeast and is in the Elk Hills and reference has already been made to the testimony of *F. D. Lowe* as to the oil sands in this township and the well drilled by him on section 11 showing oil and gas which was used for cooking. R. I–146–7.

Township 32–22: This township is six miles southwest of the lands in suit. *C. F. Whittier* testified as to oil seepages on sections 1 and 2.

Township 32–23: This township is six miles south of the lands in suit. *S. G. Drouillard* testified:

> I know of seeps in 32–23 near the corner of 23, 24, 25 and 26, in the Midway. That is where I located. We found great blocks of asphaltum there. We lifted some of them up and there was oil on the under side of them, seeping out. You could turn up a block of it and find the drips of oil. R. I–116.

B. K. Lee testified to outcroppings of oil sand on sections 21, 22 and 26 (R. I–225) and *C. F. Whittier* testified that there was an oil seepage on section 6 and "several others between there and Maricopa" (R. I–470), which is in the township south of 32–23.

Buena Vista Hills.

Township 32–24: The Buena Vista Hills cover a part of this township. *H. P. Dover* testified that he saw a gas blow out in 1900 on section 11, "two or three hundred yards long where it crops out" and the discovery of the gas blow-out influenced him in making a location there. R. I–462.

Parker Barrett saw a gas blow-out on this section (11) in 1901. R. I–525.

B. K. Lee testified that in 1903 Josiah Owen mentioned an oil sand cropping in section 11 and said that he found evidence of gas in eleven places in the Buena Vista Hills. R. I–230. Section 11 is near the big Honolulu well.

C. F. Whittier testified that in 1903 he found natural indications of oil in the Buena Vista Hills. Found a prominent cropping called a blow-out and he set it on fire and it burned two weeks. R. I–470.

F. M. Anderson, defendant's geologist testified in September, 1903, he and Josiah Owen went into the Buena Vista Hills as far as section 11 of 32–24 and examined various outcrops in that vicinity and made estimates of the thickness of the strata exposed about the Hills and noted the deposits in section 11 and took them to be deposits of asphaltum. R. IV–2403. Again in 1908 he visited these deposits and still believed them to be asphaltum but in 1910 when he was examining them for the purpose of this trial, he doubted whether they were. He said these deposits differed chiefly in quantity from the well known gas blow-out or seepage on 32 of 30–24. R. IV–2478.

Sunset District.

W. E. Youle testified that in 1890 he examined the Sunset Field, which is about fifteen miles south of the lands in suit and found springs of oil and outcroppings. There were seepages in many places along the line of contact with the Tremblor Range and around Sunset, the evidence of these was very plain from three to five miles and a great deal of money was invested there on his opinion. R. I–544–5.

Ira M. Anderson testified that in 1901 he examined the West Side fields:

> The Sunset, McKittrick and what has since become the Midway Fields are all about the

> same. I found oil sands all through there and oil seeping out of the ground and gypsum all through that country. Where you find gypsum you will find oil. I found that in Sunset. At that time they were producing oil in Sunset and McKittrick. Between McKittrick and Sunset the formation was about the same. There were these blowouts through there, asphalt and oil, and places where you could see what was asphalt around there and gas coming through the center of them. That condition extended generally from McKittrick to Sunset. R. I–154.

John Jean (R. I–131), *F. J. Sarnow* (R. I–169) and other witnesses testified to seepages in the Sunset Region.

H. A. Blodgett testified that in July, 1904,

> there was practically a continuous proven field from the southeast of Sunset to four or five miles Northwest of McKittrick barring a slip that would be now from Fellows to McKittrick. That slip is now proven territory. R. I–362.

Much other testimony could be recited to show the oil indications of the lands lying practically on all sides of the lands in suit but enough has been shown to demonstrate their oil character and these known geological conditions plainly showed that these lands were chiefly valuable for their oil contents.

This brings us to a consideration of the actual development for oil prior to the date of the assailed

patent on the lands from McKittrick to Sunset and also in the Kern River Field.

(e) *Oil development in the McKittrick, Midway, Sunset, and Kern River Fields prior to patent.*

H. A. Blodgett testified that on July 1, 1904, there was a continuous chain of wells from a point several miles southeast of Sunset up into the Midway and then there was a gap of two miles and then operations extended through McKittrick into the Temblor Hills. R. I–362.

The Government offered in evidence as Exhibits HA, HB and HC, the Barlow and Hill maps of the McKittrick, Midway and Sunset Oil Fields, published prior to August 31, 1904, giving a correct picture of the oil conditions in these Fields at the time (I–109), *W. H. Hill* testifying that "they are based on my personal visits to each and every claim." I–111. Two-thirds of these maps were sold in the oil fields in Kern County and some to the Southern Pacific Company. R. III–2033.

The Circuit Court of Appeals found—

> that in the aggregate there were in these three fields (McKittrick, Midway and Sunset) in 1904 between two and three hundred wells (part of them producing) and particularly in the McKittrick field the presence of oil in large volume reasonably near the surface and economically susceptible to extraction was abundantly shown. R. VII–5.

These maps and other evidence show that 281 wells had been drilled from Sunset to McKittrick, a distance of about thirty miles. R. IV–2137.

The map, Exhibit HA, of the McKittrick Field shows twenty-two producing wells in section 20 of 30–22, one in section 27, two in section 28, seventeen in section 29, six in section 34.

These forty-eight wells are from three to four miles west of the lands in suit and there were many other wells in this township as well as in 30–21.

It will be recalled that Exhibit 157, being the map made in 1903 by Josiah Owen, the railroad geologist, shows an anticline running from section 6 of 30–22 through the lands in suit and Barlow and Hill's map, Exhibit HA, shows two wells on this section and Owen, in his report of March 25, 1903, to E. T. Dumble, transmitting Exhibit 157, said "producing wells ought to be found along this exposure."

The Kern River Field, east of the lands in suit, was developed in 1899, and at the time Barlow and Hill's map of this field, Exhibit HD, was published, contained several hundred producing wells. Owen was of course, familiar with this field and in his report to Dumble of March 25, 1903, he wrote:

> I have traced the outcrop of the Oil Horizon all the way to Sunset Oil Field and find that there is but the one Oil Sand and I believe it will be possible to trace the same Horizon to the Kern River fields. There are several reasons for believing that they all belong to the same zone. R. III–1620.

(f) The evidence demonstrates that the dip of the oil sands and strata exposed in the seepages and outcroppings for thirty miles along the oil development from McKittrick to Sunset is towards and under the lands in controversy.

Having shown from the foregoing testimony the long line of seepages, oil sands and wells extending from McKittrick to Sunset, and just a few miles west of the lands in suit, the geological connection between these lands and the lands in suit will now be taken up and it will be demonstrated that the dip of the oil sands and strata exposed in the seepages from McKittrick to Sunset is towards and under the lands in controversy.

It will be conclusively shown that the oil horizon, that is, the oil bearing strata shown at the outcrop, passes through the lands in controversy, as in the *Diamond Coal* case "the coal horizon—meaning the coal bearing strata shown at the outcrop but not necessarily the coal—passed through the lands in controversy." 233 U. S. 246.

On this phase of the case, the opinion of the Circuit Court of Appeals stated:

> The Railroad Company's geologists, who were in the territory at various times during this period, doubtless noted oil seepages and oil sand outcrops for many miles along the line of the McKittrick development and in several places along a line or zone westerly from the Midway field. From observations readily made they must have concluded

> that underlying this zone there were shales in which it is supposed the oil originates, and beds of sand into which it migrates. They must have further concluded that the several uplifts are structural, that is, they are the results of a folding or of foldings of the earth's crust, and they would have known that such a fold or anticline is a favorable formation for the accumulation and retention of oil. They would have determined that the principal dip of the country is northeasterly, and the general trend of the fold axes is northwesterly and southeasterly. R. VII–5–6.

And further in that opinion it is said:

> It is virtually conceded by the experts for the Railroad Company that in the McKittrick-Midway-Sunset zone it was known that there was oil in considerable quantities, susceptible to profitable extraction, and that an anticline such as is found in the Elk Hills is an occurrence favorable to the accumulation and retention of oil to which prospectors would hopefully look upon discovering the presence of oil in adjacent territory. They also concede that it then appeared probable that some oil would be found, but not in sufficient quantities or near enough the surface to warrant extraction and marketing. R. VII–8.

A. C. Veatch testified that along the east flank of the Temblor Range for many miles there are a series of porous beds and associated clays, well designed on the one hand to afford a reservoir for oil and on the

other hand to prevent undue leakage, and the seepages show the persistence of the oil saturation in these porous beds. R. II–701.

> They dip, in a general way, towards the San Joaquin Valley. The general slope is interrupted by folds which are, roughly, parallel to the main fold of the axis of the Temblor Range, and, forming these folds, rise as groups of hills above the surrounding country, and their structural character is evident even to the most casual observer. R. II–702.

These folds which he referred to are the Elk Hills and Buena Vista Hills, which he described as "elongated domes of ideal structure for oil accumulation" and "both fall within the proven area from geologic determinations." R. II–702–3.

Mr. Veatch further testified:

> If any corroboration were needed, . . . it is found in the seepages in the Buena Vista Hills and in the Elk Hills; and any questions which might arise with regard to the persistence of the oil, as shown by these seepages, are conclusively set aside by a great series of wells which had been sunk prior to 1904 down the dip from these seepages and connecting, showing that the seepages represented oil in commercial quantities. R. II–703.

At page 702 he stated that the seepages extended along the Temblor Range fifteen miles and the oil horizon extended eastward 7½ miles, but on page 719 he stated that his statement was an error and explained that the distances are thirty miles and fifteen respectively.

> In my determination of the region at the time of the examination, I laid it off on a map on which the scale is approximately two miles to the inch. I measured it as fifteen inches and seven and a half inches and the note was made in inches and transposed to miles inadvertently. R. II–719.

F. O. Martin testified that having examined the oil exudations and seepages near McKittrick, he found that the formation underlying said seepages extended easterly to the Elk Hills and no break being visible in the formations going easterly was evidence that the formations overlying the oil sands at McKittrick and the formations overlying the oil sands in the Elk Hills must be the same. R. I–613–4.

Dr. J. C. Branner testified:

> I should say that if any competent geologist, observing the natural waste of oil about McKittrick and the stage of development in 1900 or a year or two subsequent, and visiting the Elk Hills and making some examination of the structural formation, failed to form an opinion that the Elk Hills were oil in character and that there was an oil bearing zone underneath those hills, he did not understand his business. R. II–1004.

Additional excerpts from the testimony of Dr. Branner and others bearing on the geological deductions were made in this brief when considering (1) the analogy between coal and oil; (2) the anticlinal structure of the lands in suit; and (3) their situation with reference to the diatomaceous shales.

W. E. Youle testified that the formation at Sunset dipped into the valley and that the conditions around McKittrick were about the same as at Sunset. R. I–544–5.

> The McKittrick side was dipping towards the Elk Hills and the asphalt at the McKittrick side had faulted and broken; but on the Elk Hills side it was not broken so much but folded up, and I made up my mind that there was a fountain head of oil for all this alike. R. I–579.

In 1893 C. P. Huntington and other officials of the Railroad visited McKittrick. Youle was at that time superintendent of the Standard Asphalt Company, a subsidiary of the railroad company. He drove Mr. Huntington around and they went on the west side of the Elk Hills and he explained to him that the formation was "dipping towards those Hills" and that he did not believe that that country was a "shoe string at all but it was a great big field." R. I–550–1.

W. H. Ochsner, one of the defendants' geologists and a former employee of the Kern Trading and Oil Company and the Associated Oil Company, both subsidiaries of the Southern Pacific, admitted that he first formed an opinion of the Elk Hills as a possible or probable oil bearing territory as a result of his work in 1907. R. IV–2203. He further admitted:

> Assuming that there is a cropping of oil-sand showing at some date in the past the

> waste of bituminous matter in the Elk Hills, and taking that assumption into consideration in connection with the correlation of the oil-sand outcroppings along the McKittrick front and down as far as Sunset where the valley makes a contact with the Temblor Range, I would say that the facts would be a strong element in favor of warranting a competent geologist to advise a man to invest money there with the hope of producing oil property, and I believe many competent geologists have advised the investment of capital on less evidence than that. R. IV–2211.

Ochsner testified that Josiah Owen said:

> If there is a spindle top in California it is on top of the Buena Vista Hills. By that he meant that the dome was filled with oil (R. IV–2210), which would produce gushers in great quantity. R. IV–2213.

E. T. Dumble, in his letter of September 21, 1903, to Julius Kruttschnitt, enclosing maps showing the lands of the Railroad Company considered valuable for oil purposes to be included in the lease to the Kern Trading and Oil Company, wrote:

> The attached maps shows these under three heads: first, oil lands proven or practically proven, colored red; very probably oil lands, colored green; probable oil lands, colored blue. Of the oil value of the first two classes there is very little doubt; the third depends in part upon the continuance of normal dips and conditions, but in addition, it represents untested anticlinals which show good indications of oil. R. V–2913.

Attention is called to the concluding part of this extract in which it is said that the oil value of the third class depends in part upon the continuance of normal dips and conditions. One of Owen's maps shows the dips from the East flank of the Temblor Range toward the lands in suit.

Josiah Owen, in his report of March 25, 1903, to E. T. Dumble said:

> The fold north of the McKittrick and runnin[illegible] nearly parallel passes through Sec. 5–9 between 11 & 15 through 13 of Town. 30, R. 22. This fold exposes the oil sands in several places and in some of the exposures the sands are strongly impregnated with Asph. and producing wells ought to be found along this exposure. R. III–1617 . . . In the direction of Midway I find that the McKittrick fold flattens out in the valley but other hills further on in the same direction would indicate that it may extend to near the Kern Lake. R. III–1617–8.
>
> I have traced the outcrop of the oil Horizon all the way to Sunset Oil field and find that there is but the one Oil Sand and I believe that it will be possible to trace the same Horizon to the Kern River fields. There are several reasons for believing that they all belong to the same zone. R. III–1620.

These extracts from this report show that Owen knew the relation of the lands in suit to the seepages and oil sands extending from McKittrick to Sunset.

The Elk Hills anticline as traced by Owen, on Exhibit 157, "is the anticline or fold north of McKittrick and running nearly parallel." He predicted producing wells ought to be found along this exposure and Barlow and Hill's map of 1904 shows that there were two oil wells on section 6 of 30–22 through which this anticline runs and which continues on through the lands in suit.

V.

THE TESTIMONY SHOWS THAT EXPERIENCED, PRACTICAL OIL MEN GENERALLY BELIEVED, PRIOR TO THE DATE OF THE ASSAILED PATENT, THAT THE ELK HILLS WERE VALUABLE FOR THEIR OIL CONTENTS.

In the *Diamond Coal* case the Court said (233 U. S. 245):

> The expert for the Government proceeded upon the theory that, when the known surroundings are such that practical coal men would invest in particular lands for coal mining or advise others to do so, those lands are to be deemed coal lands, even though coal has not as yet actually been disclosed within their limits. And having in mind the outcropping coal bed, the direction and inclination of its dip, the character of the rocks with which it was interstratified, the quality and thickness of the coal at the outcrop, the proximity of the lands to the outcrop and the topographical and structural features of the vicinity, he gave it as his opinion that the coal bed extended into and through the lands in

> question and that practical coal men would regard the lands as valuable for coal and invest in them as such. He accordingly pronounced them coal lands within his acceptation of that term.

The testimony shows that practical oil men and experienced operators, prior to 1904, generally entertained the belief that the lands in controversy were valuable oil lands.

W. E. Youle, who, the defendants in their brief filed below, admit "was one of the oldest and most experienced experts and operators," testified "my opinion was that that [the Elk Hills] was a prolific oil field and if I had had my way, I would have drilled there in preference to over at the McKittrick side" (R. I–569), and that he had no reason to change his opinion since. R. I–554–5. That he regarded the Elk Hills as a "great big field" as early as 1893 when C. P. Huntington visited that region and Youle gave him his reasons for believing it valuable oil land (R. I–550–1), and that he would have advised any company to furnish the money to the extent of $50,000 or $100,000 to develop the lands in controversy with the reasonable expectation of developing a paying oil property. R. I–577. Youle found oil sands in the Elk Hills and he made "a chloroform and fire test" and the result showed bituminous matter gases. R. I–552. He and his associates located for oil in 1898. R. I–551.

S. G. Drouillard, who had "mined most of his life" and who made locations in the Elk Hills in 1899,

testified that they were "generally regarded by competent oil men as oil territory in 1899" R. I–122, and "that they were supposed to be in the oil belt." R. I–124. Township 30–23, in the middle of the Elk Hills, was regarded by all the people as good oil territory. R. I–125.

H. A. Blodgett, a member of the firm of Jewett and Blodgett, which was part owner of the Standard Asphalt Company, a subsidiary of the Southern Pacific Company, was a pioneer in the West Side Oil fields and was one of the largest and most experienced operators in those fields. R. I–360. He testified that he believed that the indications in the Elk Hills were good and he and his associates made a number of locations in there in 1899, and kept them up for six years and spent a good deal of money on these locations (R. I–367), and intended to develop them. Youle was superintendent for many years for Mr. Blodgett's operations at Sunset and at McKittrick, where he was in charge of the Standard Asphalt Company. R. I–366.

N. C. Farnum testified that he had been almost continuously in the oil business in Kern County since 1899. Made a detailed examination of the Elk Hills in 1899. R. I–495.

> I formed the opinion absolutely that the territory in the Elk Hills was oil territory at that time. I have had no reason to change that opinion since and still believe it to be oil territory. R. I–499.

He and his associates located lands at that time in the Elk Hills.

> I know my associates did not, at that time, regard the land as merely a prospect; we considered it better than a prospect. We spent a good deal of money there, and a man don't usually spend a great deal of money on a prospect. We were assured in our own minds as well as we possibly could be without drilling, that it was an oil territory; and I still consider it as such. R. I–510.
>
> Knowing all the conditions then existing, we would have sunk a well for the reason that we had determined to drill a hole in the Elk Hills no matter what it cost us, as far as we could go and as far as money would go. That was the absolute determination, not to be deviated from, until the Government withdrew the land. R. I–512.

Frank Barrett, sixty-seven years of age, has been in the oil business all his life. Brought in the first paying well in the Coalinga field. President of two companies and interested in others. Was employed in 1899 and paid $100 per day and his expenses to examine the Elk Hills (R. I–478–9), particularly 30–23 (R. I–482), for a company that wanted to go in the oil business.

> From my examination I believe these lands to be good oil bearing territory . . . .
>
> I made a report on the land, and a favorable one in writing. I recommended the lands as good oil bearing territory and have had no reason since that time to change my opinion. R. I–480–1.

Chas. M. Lamont, occupation mining since 1879, testified that he examined the Elk Hills in 1899 with S. G. Drouillard, an old prospector, and located for oil several sections westerly from 32 of 30-24 and they extended over to 30–23.

> I certainly regarded the Elk Hills country at that time as good oil territory and the only conclusion I have come to since then is that it was better than I thought it was in the first place. R. I–581.

The oil depression beginning in 1901 was the cause of their failure to develop the property.

W. E. Ott, Superintendent of the Southern Pacific's property at McKittrick beginning in 1901, testified that all of the time he was there and up to the present time "it was a general belief amongst oil men that the Elk Hills were oil territory" and that he "always thought there was oil there." R. I–277–286.

L. G. Sarnow, an experienced practical oil man who at one time was in charge of the Southern Pacific field at the McKittrick and later moved to Kern River and had charge of the field there, testified that he and J. B. Treadwell, examined the Elk Hills in 1899 and both thought the land was good for oil, though deep, and that they made locations. R. I–135.

F. D. Lowe, who drilled a well in the Elk Hills in 1901, testified he "talked with people that were in a position in which their opinion was worth something, . . . and that they believed there was oil there" and "in paying quantities." That was the opinion generally among men interested in the commercial

production of oil. R. I–149. The witness gave the names of several operators who entertained that opinion.

B. K. Lee, an experienced oil operator at McKittrick, testified that he recommended the purchase of 159 acres of land in section 36 of 30–23 for its oil value and it was purchased. R. I–229.

C. F. Whittier, one of the largest oil producers and operators and a practical prospector in this territory, testified that the total output of his producing wells was about a million barrels a year. R. I–469.

> I believe the Elk Hills have value for mineral; for oil. . . .
>
> I had talked with some personal friends of mine as to the situation and intended to go in there and make some locations and do development work and get a patent to the land, but I was unfortunately crippled so that I couldn't go over there then.
>
> I am interested in the oil business from a producing standpoint and not from a speculating standpoint. R. I–471.
>
> It was the general impression of the oil men of my acquaintance around McKittrick, as early as 1904, that the Elk Hills would become oil bearing—would be proven to be oil bearing. R. I–474.
>
> From my observations of 30–24 and 30–23 and the Elk Hills generally, the conditions were such in 1904, or up to that time, to justify an ordinarily prudent man in the expenditure of money with the reasonable expectation of developing a paying oil property. R. I–476.

Ira M. Anderson, oil producer and prospector of wide experience, testified that he made chloroform tests of the earth, rock, and shale found in the Elk Hills in 1899 and 1900 and the tests showed oil and oil sands and the formation was there to show that it was oil producing territory. R. I–156.

Judge Dietrich, after quoting from the testimony of Dr. Branner, Frank Barrett and W. E. Youle, stated:

> By "oil territory," it would seem to be clear that these and other Government witnesses mean territory where the observable geological conditions are such as to justify expenditures in prospecting, and prospecting by those who are able to take the chances. R. VII–15.

Dr. Branner testified:

> I should say, decidedly, that the conditions in the Elk Hills are such as to warrant the ordinarily prudent man in the investment and expenditure of money with a reasonable expectation of developing a paying property. R. II–1 25.

This is an exact compliance with the test laid down in the *Diamond Coal* case that—

> the known conditions . . . were plainly such as to engender the belief that the land contained mineral deposits of such quality and in such quantity as would render their extraction profitable and justify expenditures to that end. p. 239.

It is true that Dr. Branner said "there is nothing absolutely certain about putting down an oil well in a new region; there is a certain amount of risk about it." R. II–1025.

So in the *Diamond Coal* case, one of the witnesses for the Government said:

> He could not take a "solemn oath" or "be positive" that unexplored lands in the vicinity of the outcrop and in the direction of the dip contained valuable coal, but his testimony said this court "was plainly to the effect that the outcrop, the direction and inclination of the dip, and other conditions in 1899 and 1900 afforded reasonable ground for believing that a considerable territory lying west of the outcrop could be mined profitably." p. 244.

Dr. Branner said that in forming his opinion:

> I took into consideration the possibilities of the non-occurrence of oil resulting from the conditions of the sand and the pinching and hardness of the stratum and other interruptions. R. II–1024.

Likewise in the *Diamond Coal* case, the Government witnesses and the court took into consideration "the uncertainties incident to coal mining by reason of the faults, thinning and the like."

These uncertainties were emphasized by the Coal Company's experts and the Court recognized the fact and stated that coal mining has "its hazards and uncertainties," just as Dr. Branner said petroleum mining has "a certain amount of risk."

Dr. Branner was thoroughly familiar with the various kinds of mining and he testified that "next to coal mining, the mining of petroleum, based solely upon geologic evidences, was the surest kind of mining that I know anything about." R. II–1024. While *A. C. Veatch*, the noted expert, said that he did not know absolutely that underneath the dome of the Elk Hills there was oil in paying quantities, yet he "reached the conclusion that that was to me valuable oil land, that is, it had a commercial value as oil property," and that it was "a place where I would *certainly* advise drilling and where a man would be *amply* justified in spending money in drilling a well." R. II–743.

Youle, the most experienced operator, and *Whittier*, the largest producer, and others, testified, as we have seen, that they would have advised the expenditure of money in the development of the Elk Hills with the reasonable expectation of producing a paying oil property, and *Frank Barrett* recommended in 1899 in writing, the Elk Hills as good oil-bearing territory to a company that wanted to go into the oil business, and at that time the lands in suit were worth, in his opinion, as oil lands from $200 to $300 per acre, and aside from their oil value, "I don't think you could raise a black-eyed pea on them." R. I–481.

It seems clear that these witnesses entertained the belief that the lands in suit were oil lands as defined in the *Diamond Coal* case.

Space forbids further extracts from the evidence of the many witnesses for the Government who testified to their belief prior to the date of the patent, in the oil value of the lands in suit, and mere reference is here made to the evidence of some others of these witnesses, to wit: M. S. Wagy (R. I–174–180), J. I. Wagy (R. I–237–244), C. F. Haberkern (R. I–349–350), W. G. Sylvester (R. I–355–357), and H. P. Dover (R. I–461–468).

The defendants seek to draw comfort from Veatch's statement that in his opinion oil could not have been mined at a profit in the Elk Hills in 1904, but he explained that "there are a great many valuable deposits that cannot be mined at a given moment that are perfectly good mineral lands." R. II–886. That depends upon the price of oil at that particular time, the conditions of marketing, the matter of transportation and questions of economic features. R. II–887.

The evidence shows that during 1904 there was a great depression in the oil business in this territory, oil selling as low as seven cents a barrel and that there were no transportation facilities for independent producers, due in large measure to the preference in furnishing cars given by the railroad to its subsidiary, the Associated Oil Company. See references, *infra*, p. 182 *et seq.*

104964—19——11 ★

Judge Hook in his opinion in the Circuit Court of Appeals in the *Diamond Coal* case, 191 Fed. 786, 795, refers to this feature, saying—

> the mineral must be in such quantities as to justify exploitation; but that does not mean a positive, absolute certainty which can only be shown by actual exposure or uncovering, nor that *temporary distance from market makes unprofitable* the mining of any but a very thick vein or deposit.

So in the instant case, a temporary depression in the oil business or a shortage of cars which rendered the mining of the oil unprofitable at that particular period would not prevent the lands from being classified as oil lands.

(*a*) *The belief in the oil value of the lands in suit was also entertained by the experts, officers and agents of the Railroad Company.*

Not only was the belief in the oil value of the lands entertained by practical oil men operating in the West Side Oil fields, but it was also shared in by the oil experts, responsible officials and agents of the Southern Pacific, evidenced both by their words and deeds.

John R. Scupham from 1874 to 1887 was consulting engineer of the Railroad Company and as such examined mineral lands (R. I–584–5), and in 1887 at the request of A. N. Towne, General Manager of the railroad, he examined the Elk Hills and reported that he "thought these hills lying to the east were overlaying the oil measures, and that they would

turn out to be very important in their future development" (R. I–588), and he also told Jerome Madden, the railroad land agent, that he thought that was going to be valuable land and suggested that they ought to have it surveyed and steps were taken shortly after that to have the land surveyed. R. I–589. The record shows that the survey of a part of this land was completed in 1893.

J. B. Treadwell, the railroad expert in charge of its oil development and operations, admitted that he had in 1902 withdrawn from sale "because in or near oil territory" sections 3, 5, 7, 9, 13, 14, 17, 31, of 30–23 and eight sections of 30–24 and several in 31–24. Treadwell also admitted that the above are all the sections in 30–23 which were at that time surveyed. R. V–3423–4.

The above admissions were secured from Treadwell toward the end of the taking of testimony, when he was called to the witness stand by the railroad. At the beginning of the trial, he had been examined as a witness by the Government and stated that "none of my withdrawal orders took any portion of the Elk Hills." R. I–435. When Treadwell was examined the last time he was confronted with Exhibit 115, being the withdrawal map which he had made showing the above sections in the Elk Hills reserved from sale "because in or near oil territory." While Treadwell said on the witness stand that he did not believe the Elk Hills oil lands, his act in withdrawing them from sale shows clearly his belief.

Treadwell in December, 1899, in conjunction with L. G. Sarnow and John Jean, located for oil, section 33 of 30–24. At that time he was oil expert for the Railroad Company and carrying on its operations in his own name and in May, 1902, the Railroad Company secured agricultural patent No. 111 for this section 33. R. VI–3451–9.

Treadwell and other associates also made other locations for oil in the Elk Hills in 1899. R. VI–3427. Jean and Sarnow both testified that before making the location of 33 of 30–24, Treadwell went to the seepages on 32 of 30–24 and he thought the land was good for oil. R. I–128, 135.

Thomas J. Griffin, General Manager of the Splindletop Power Company, and at one time mechanical engineer of the Rio Bravo Oil Company, a subsidiary of the Southern Pacific, testified that J. B. Treadwell in 1902 told him that he had made a careful examination of the Elk Hills and had found oil sands and indications of oil there, and asked witness if he would not like to ship a rig there and they would go in and develop for oil the even numbered sections as soon as the lands were surveyed and that Treadwell had a map showing the character of the land. R. II–1327–8.

Josiah Owen in September, 1902, took active charge of the oil territory of the Southern Pacific in California. R. V–2900. Owen reported to E. T. Dumble who succeeded J. B. Treadwell in March, 1903, as consulting geologist. R. V–2907.

Owen died before the suit was brought but the record is replete with evidence showing the belief entertained by him, prior to patent, that the lands in suit were oil lands. This evidence consists of his maps, reports, letters, statements and acts to which brief reference will be made.

S. P. Wible, an intimate friend of Josiah Owen (R. I–322) and associated with him in the formation of the Eight Oil Company, in 1907, to acquire lands in the Elk Hills (R. I–323), testified that he and Owen examined the Elk Hills together in 1903 or 4; Owen was going to show him the outcrop or seepage on 32 of 30–24. R. I–321. Owen seemed to feel sure that there were oil lands in the vicinity of those oil outcroppings on section 32. R. I–322.

> Just about the time of the selection of those lands by the Railroad, about 1904, the same lying in 30–23, I discussed those lands with Mr. Owen. We were at that time disdussing the mineral probability of the hills for Fuller's earth especially. . . . He said if the railroad selected those lands they would be selecting mineral lands. In other words, they had no right to select them as he had reported them as mineral land. R. I–324.
>
> I had some conversation with him with reference to some land in 30–23, in which he told me that oil could be reached at three thousand feet or over and we didn't drill because we didn't figure that it would pay to drill for it. R. I–328.
>
> From 1903 to 1908 the oil business in the McKittrick vicinity was very dull and there

> was practically no new developments on account of the price of oil and lack of facilities for getting rid of it. R. I–333.

Charles Brisco testified that in 1903 he took Josiah Owen to a brea bed in the Elk Hills and they lighted it. R. I–335. Owen made a careful examination of the Elk Hills and told Brisco that it was good oil territory and that "he thought that would be the best territory of any of it, but would be very deep. R. I–337. Witness had some land located in the Elk Hills and he asked Owen about it and Owen said "This is good enough, hang on to it." R. I–341. *F. O. Martin* testified that in February, 1912, he made a trip with Brisco into the Elk Hills and Brisco pointed out the lands he and Owen had gone over together in 1903. Martin testified that the oil seepage Owen and Brisco examined was on section 32 of 30–24 and the sections traversed by them were 24, 26, 33 and 34 of 30–23, and 29, 30 and 32 of 30–24. R. I–343–5.

N. C. Farnum testified that he met Josiah Owen in 1903 and accused him of taking from him section 27 of 30–22 which he had located in 1899. It had recently been patented to the Southern Pacific Railroad. Owen said Treadwell was responsible for that. Witness was then at work on 26 and he asked Owen what he considered the prospect of getting oil in 26 of 30–22 and Owen said:

> Your section 26 is better land for development than 27, according to his opinion. He stated he thought the whole country from

> 30–22 clear to the lake was oil territory; as he had examined them carefully. That would include townships 30–22, 30–23, and 30–24. R. I–508.
>
> We discussed the general trend of the Elk Hills. I asked him whether he thought we would likely get oil, and he said "Yes"—I don't know his exact language. He said something about the depth we would have to go but I can't say what it was now. I am not sure whether he said it was three or four thousand feet. I think he said it would be deep. R. I–521.

At that time witness and his associates were in possession of their location in 30–23 (R. I–522), which they had made in 1899 in consequence of the report of W. E. Youle and Mr. Farnum's personal observations, and they had also purchased some locations in this section from S. G. Drouillard and his associates. R. I–501.

M. S. Wagy testified that during the time Josiah Owen was making examinations of the Elk Hills, he showed him the sand taken from section 32 of 30–24 and later had a talk with Owen about that country and Owen said he thought that was an oil district. R. I–182–3.

Eight Oil Company.

The Eight Oil Company was organized in 1909 but the lands were first acquired in December, 1907, and January, 1908. The holdings include the following even sections in 30–23, to-wit: 20, 22, 24, 26,

28, 30, 32, and 34 in 30–24. Its development has been confined to 30–24. Among the incorporators were Josiah Owen, 8,000 shares, S. P. Wible and C. F. Haberkern. R. I–347–9.

C. F. Haberkern testified that in consequence of the examination made by him and Owen in 1904, he and his associates later located lands in 30–23. They located only even sections because Owen said "he was working for the railroad and not to take any railroad land. R. I–350. Perhaps a month before we made our locations in 1907 we talked the matter over with Mr. Owen and he said to locate on the even sections in 30–23." R. I–353.

S. P. Wible testified that Owen furnished information of the geological character of the holdings of the Eight Oil Company to that Company and told them that it was possible that the oil measures lay under there at a depth that could be reached.

> Mr. Owen put up his share of the money for doing the development we did there and the locations of the land and the organization of the Company. Those lands were located for oil, Fuller's earth and gypsum and other minerals. R. I–324.

After the Eight Oil Company was organized Owen got 2667 shares of stock for E. T. Dumble. R. I–351.

Capt. W. H. McKittrick testified that he first met Josiah Owen in 1899 and on his advice, invested in some property in Texas which did not turn out very well; that he next met Owen in Oakland in 1903 and at that time Owen said:

> I am awfully sorry about our investment down there but I have something that I will put you on that will make you more money than the mine we might have had in Mexico. I asked him what it was and he said he was not at liberty to tell me then, but would tell me when the proper time came. R. I–527.

That he met Owen again in Bakersfield in 1907 and "he said then that he was ready to put me on to what we were talking about in 1903."

> *He told me that he had been working out in the Elk Hills for a number of years, and that no one knew he was out there at all, and he told me to say nothing about his being out there.* R. I–528.

That he had located large deposits of Fuller's earth and—

> he told me that there might be a possibility of oil there, but that oil could not be found within less than 3,400 feet, but he could not tell whether it was in paying quantities or not, but that he believed that oil was there at that depth. . . .
>
> I can't say that it was my understanding at that time that that depth was prohibitive. Mr. Owen didn't say anything to me about the depth being prohibitive. He said he had been out there so many months, and that he didn't think there was any chance of oil in less than 3,400 feet, that there might be oil at that depth. He suggested the location for Fuller's earth, and did not say that it was for the purpose of getting the oil. R. I–535.

They located the even sections in 30–23 and 30–24 and the Eight Oil Company was organized, and Capt. McKittrick became interested in it. While he understood they located for Fuller's earth, Mr. Wible, who was one of the active men in the organization of the Company, testified the lands were located for oil as well as Fuller's earth. R. I–324.

It is indeed singular that the company should have been named the Eight Oil Company, if it was not organized to produce oil, but Fuller's earth. At the time of the trial, a contest was pending in the local Land Office over a part of these lands in 30–23, the Associated Oil Company contending that they are oil lands. The experts of the Associated Oil Company testified at the contest that it was not Fuller's earth. R. I–530. Oil has been developed there. R. I–531–2. None of the Fuller's earth was ever sold. R. I–352.

The estate of Josiah Owen has received dividends amounting to $15,225 on his stock in the Eight Oil Company and E. T. Dumble has received in dividends $20,502.53. R. I–348.

The foregoing declarations and acts of Josiah Owen conclusively show that he believed the lands in suit were oil lands in 1903 and 1904. If any corroboration were needed, it is found in the reports and maps which Owen made soon after he began his investigations of the oil fields in September, 1902.

Quotations have already been made from his report to Dumble of March 25, 1903 (R. III–1615–20), in

which he refers to "the fold north of the McKittrick and running nearly parallel, passes through sections 5–9 between 11 and 15 through 13 of 30–22," which without doubt meant the Elk Hills anticline which shows on his map, Exhibit 157, accompanying said report, as entering township 30–22 in section 6 and extending through the lands in suit. In said report, he says, producing wells ought to be found along this exposure.

The Southern Pacific Railroad Company in 1904 had a patent to section 31 of 30–23, and in making up a list of the lands of the Company to be transferred to the Kern Trading and Oil Company for the production of oil for the railroad, section 31 was included in this list with the approval of Owen, Dumble and F. M. Anderson, the Railroad Company's experts. This section adjoins the lands in suit, for which Eberlein, the land agent, was endeavoring to secure an agricultural patent and it was on this account that he refused to execute the lease, writing to General Manager Markham on September 10, 1904, "should the existence of this lease become known it would go a long way toward establishing the mineral character of the lands referred to and which are still unpatented." R. II–1056.

E. T. Dumble became head of the geological department of the Southern Pacific in March, 1903, and in charge of oil operations, succeeding Treadwell. R. V–2907–11. Owen reported to him. Both Dumble and Owen were furnished with copies of Tread-

well's map, Exhibit 115, withdrawing from sale a large part of the lands in the Elk Hills because in or near oil territory. Owen sent to Dumble with his report of March 25, 1903, the map delineating the Elk Hills anticline, extending through the lands in suit. Dumble selected in conjunction with Owen and F. M. Anderson the lands to be conveyed to the Kern Trading and Oil Company for oil production purposes, which included section 31 of 30–23, section 5 of 31–23 and section 25 of 30–22, adjoining the lands in suit. *Geo. A. Stone*, who made up the selection list for the lands in suit testified that Dumble pressed the selection of these lands in the fall of 1903 "for reasons best known to himself. I supposed, as geologist, he thought they were oil lands. . . . I regarded the selection of these lands as irregular." R. II–1030.

When the lease to the Kern Trading and Oil Company was presented to Eberlein to sign on behalf of the railroad, he declined to sign it and advised Judge Cornish of his reasons (R. II–1075), saying that the pendency of the selection list was a very urgent reason for delaying the execution of the lease. Dumble was furnished a copy of this letter and on October 5, 1904, wrote to Eberlein asking for a conference and this was held on October 8th and on December 7th Dumble wrote Acting General Manager Bancroft "I have had a conversation with Mr. Eberlein and it seems for reasons of policy regarding certain unpatented lands that it will be best not to execute

the lease of lands between the S. P. R. R. Co., and the K. T. & O. Co. at present." R. II–1072. In 1907 Dumble wrote Eberlein a letter to refresh Eberlein's recollection as to the facts surrounding his refusal to sign this lease, in which Dumble used this language:

> Early in December we had a further conference on the matter and you explained that you were rushing certain lands for final patent and that the immediate execution of the lease showing our idea of what were oil lands might interfere with you and we agreed to defer the execution until that danger passed.

Asked what he meant by this, Dumble testified:

> The danger that I referred to was just as I stated; danger of interfering with him and the danger that these lands might be delayed and not be patented because of their mineral character. R. V–2986.

Dumble testified that he determined the lands which they believed to be oil lands, owned by the Southern Pacific, that should be turned over to the Kern Trading and Oil Company.

> That included other lands than those which were actually developed by wells. The Company owned everything that we thought at that time would be capable of producing oil commercially; I don't mean capable of producing oil commercially at that time. Most of the land was quite a way from any producing wells, and it was taken up with the idea of furnishing the Company with oil for a long period. R. V–2911.

He included 31 of 30–23 in the lands which he thought would be capable of producing oil commercially. This section adjoins the lands in suit. This shows plainly, we submit, that at that time Dumble also believed the lands in suit would be capable of producing oil commercially just as section 31 adjoining in the same township, and that "these lands were valuable for oil purposes" as he wrote Mr. Kruttschnitt on September 21, 1903, when recommending "that the Kern Trading and Oil Company should acquire by purchase or lease such lands now belonging to the Southern Pacific Company as we consider valuable for oil purposes." R. V–2913.

The lands in suit were not then owned by the Railroad Company and that was the only reason they were not included in the list of the lands that Dumble, Owen, and F. M. Anderson believed "valuable for oil purposes."

Thomas J. Griffin testified that E. T. Dumble told him while they were in Texas, both working for the Rio Bravo Oil Company, in the spring of 1904, that "California was the coming oil field and that they owned a great deal of that land and a great deal they hadn't yet taken patents on, but expected to." Griffin further testified that in the same spring while he and Dumble were riding together just north of Bakersfield, Dumble pointed to the West and said "right over yonder about 30 miles is the biggest oil field in the world. . . . We have large holdings and expect to have more." R. II–1330–1.

While Dumble claims that he did not personally examine the Elk Hills, Eberlein protested that Dumble and his men keep off of unpatented lands. R. II–1098.

Dumble was, as we have seen, a large stockholder in the Eight Oil Company which had large holdings in the Elk Hills and he received a dividend of $20,000 on his stock. R. V–3049.

C. W. Eberlein, the acting land agent, who made the affidavits, probably had no personal knowledge of the oil character of the land. The record is clear that he was careful not to become informed, because he swore that he protested against Dumble and his assistant geologists examining unpatented lands as there was no co-operation between the land department and the geological department and if the lands were examined geologically, the Company would be fixed with knowledge and the geologists would be witnesses against the Company in any contest which might arise and so he made the affidavits without having the lands examined, at the same time swearing that he had caused them to be carefully examined.

Eberlein did, however, know that the lands he selected adjoined the oil territory for he wrote D. A. Chambers on December 10, 1903, as follows: "I am particularly anxious in regard to this list as the lands adjoin the oil territory and Mr. Kruttschmitt is very solicitous in regard to it."

Again in August, 1904, when the lease was presented for his signature, containing the list of oil lands to be

leased to the Kern Trading and Oil Company and he examined it and found that it included lands adjoining those for which he was attempting to secure patent, he declined to execute the lease, as the two acts would be inconsistent, and he advised that knowledge of the railroad's conduct in classifying the adjoining lands as oil lands be kept from the government. His advice was followed and he proceeded with his application for patent, filing it three days later, knowing that the geological department regarded section 31 of 30–23 as valuable for its oil, while he was representing to the government that the lands adjoining section 31 were not oil lands.

The Eberlein correspondence shows also that Julius Kruttschnitt, Vice-President in charge of oil matters, was actively interested in securing the assailed patent, "that he was very solicitous in regard to it." R. III–1577.

On September 21, 1903, Dumble wrote a letter to Kruttschnitt referring to untested anticlinals and enclosing maps. At that time Dumble had received Owen's map, Exhibit 157, enclosed with Owen's letter of March 25, 1903. This map shows untested anticlines and it is the only map offered in evidence which shows this and it is one of the maps sent by Dumble to Kruttschnitt. Kruttschnitt claims not to have received this map but only produces one map which he says he received and that is Exhibit 156.

A few days after this letter of September 21, 1903, from Dumble to Kruttschnitt, we find several letters

and telegrams passing between Eberlein and Kruttschnitt in reference to getting a patent to the lands in controversy and on October 12, 1903, Chambers wrote Kruttschnitt that Eberlein expected to tender a selection list for lands in 30–23 and suggested that Kruttschnitt ask that special attention be given to the patenting of those lands. He also advised Kruttschnitt that the lands in question were suspended from disposal upon allegations that they contained petroleum. R. III–1474.

F. M. Anderson's employment as a geologist for the Southern Pacific began in 1903. He assisted Owen in preparing the list of oil lands to be included in the Kern Trading and Oil Company lease, which embraced 31 of 30–23, which was as far from the outcrop as the lands in suit, yet he testified that the lands in suit were too far away from the outcrop to be commercially productive. R. IV–2455.

He testified further:

> My conclusion as to the likelihood of the Elk Hills being then or ever being oil territory was negative. That is to say I did not believe they were oil-bearing or ever would be found to be oil-bearing, at least not in paying quantities — not commercially oil-bearing." R. IV–2454.

It must be borne in mind that this is the expert upon whom the defendants mainly rely and according to his theory no land can be classified as oil land

unless a well has been drilled on the land and oil produced in paying quantities for a definite period of time. R. IV–2548. Measured by this standard, he could very readily say that the lands in question were not oil bearing.

(*b*) *The Southern Pacific was induced to build the branch railroad from Bakersfield to McKittrick because of the belief in the oil producing character of the country tributary thereto.*

H. A. Blodgett testified:

> I remember when the Southern Pacific Railroad Company was put into McKittrick. I had something to do with the proposition of putting it in there. The inducement that promoted the construction of the road was the prospect of a profitable traffic that was to come out of the production of asphalt and oil in that district. I think the road was put into McKittrick in 1893. At that time I was operating an asphaltum business in the vicinity of McKittrick. I interested the Southern Pacific Railroad Company people through Henry F. Williams. . . . I took the matter up with the railroad authorities, particularly Mr. A. N. Towne, the general manager. I had a number of interviews with Mr. Towne and visited him several times at San Francisco. I helped to organize the Standard Asphalt Company. I would say that the Standard Asphalt Company was one of the subsidiaries of the Southern Pacific Railroad Company as it was organized to acquire

property that was to be conveyed in consideration of the building of that railroad. . . . One half of the stock of the Standard Asphalt Company was owned by Mr. Jewett and myself and the other half by the Pacific Improvement Company representing the Southern Pacific Railroad Company. The railroad was put there in pursuance of these arrangements about the organization of the Standard Asphalt Company in the transferring of the stock and has been operated ever since. The right of way from Bakersfield to McKittrick was obtained by Mr. H. Williams and me. . . . The future probabilities of that district or the country tributary to the Southern Pacific branch into McKittrick as an oil producing and oil shipping community figured largely in the inducements which lead to the putting of the road in there at that time. The portion of the road from Lokern to McKittrick was built to furnish transportation for the production of oil and asphalt from that McKittrick field. The probabilities of a great production of oil and shipment of oil in the future from that district was understood by the railroad officials as an inducement to get them to build a road through there as I had personally brought that matter to Mr. Towne's attention. I told Mr. Towne that the deposits of asphaltum in evidence in that district was a drop in the bucket only to the quantity of oil that was tanked underneath and that would be produced. In other

> words the visible evidence of tonnage was as nothing practically, compared to what was underneath. R. I–363–5.

W. E. Youle testified that a short time before the branch road was built he made a report to the railroad officials on the country, stating that it was very fine looking oil territory and he was then asked to go to San Francisco where he met General Manager Towne, and other officials and reported his conclusions to them.

> I was very much in favor of the field, and had reason to feel very sanguine that it would make good territory. . . . That road was commenced very soon after that. I–546–7.

(c) *The fraudulent manner in which the Southern Pacific acquired patent to the lands involved in the Tulare Oil Company contest is in keeping with its fraudulent conduct in securing patent for the lands now sued for.*

This contest is entitled *Tulare Oil and Mining Company* v. *Southern Pacific R. R. Co.*, and is reported in 29 L. D. 269.

To sustain the contention that the Elk Hills were not generally believed, prior to patent, to be oil lands, the defendants in their brief filed below cited this case, saying "this general opinion that the oil territory was very limited even received *official recognition* in 1899." It will be shown that this "official

recognition" was procured by the Railroad Company entering into a secret agreement to conceal from the Government the fact that the land for which it was seeking an agricultural patent was proven oil land.

The contest grew out of an application for patent filed by the Railroad Company for several sections in 30–22 near McKittrick. A protest was filed by the Oil Company, alleging that the lands were mineral. A hearing was held and upon appeal the decision of the Secretary of the Interior was in favor of the railroad. In the meantime the Oil Company had brought in a producing well and was about to ask to have the case reopened. The Railroad Company was advised of the discovery of oil and of the purpose of the Oil Company to reopen the case. Thereafter a secret agreement was entered into between the parties, by the terms of which the Oil Company agreed not to ask to have the case reopened and to permit the patent to be issued to the Railroad Company for the lands, upon the railroad agreeing to make a deed for a part of the lands to the Oil Company as soon as the patent was secured and that a deed to this effect should be placed in escrow, and this was accordingly done and the deed signed by H. E. Huntington, President of the railroad, is dated February 21, 1900. The patent was issued to the Railroad Company May 21, 1901, and the deed delivered to the Oil Company and recorded June 7, 1901. The foregoing appears from the evidence of H. M. Shreve, one of the organizers of the Oil Com-

pany and its secretary at the time of those negotiations. I–446.

It is needless to say that this agreement was kept secret and that the Government had no notice of it until it was brought to light in this litigation.

The fraudulent suppression of the agreement made it possible for the Railroad Company to secure a patent to lands which were mineral, the Oil Company having at that time drilled a producing well upon one of the quarter sections which was in controversy, and it was in consequence of knowledge of this fact that the Railroad Company entered into the fraudulent arrangement that if the Oil Company would not ask for a review of the decision of the Secretary of the Interior, but would let the Railroad Company secure a patent to this proven mineral land, it would deed the land upon which oil had been produced to the Oil Company.

A decision obtained from the Land Department by such nefarious methods instead of being a recognition of the non-mineral character of the land is convincing proof of the fraudulent intent which actuated the railroad in its dealings with the government in its efforts to obtain patents for the lands in this territory. It did not hesitate to suppress evidence and conceal from the Government the mineral character of the land for the purpose of securing an agricultural patent covering well known mineral land. It resorted to these methods and secured its patent in 1901 for

lands near those involved in this suit. It is not surprising that we find the same company resorting to similar means of misrepresentation and concealment two years later in its effort to obtain a patent to lands of the same character. This shows that the same underlying motive actuated the railroad and such evidence is clearly competent upon the principle that where the fraudulent intent of a party is at issue, proof of similar fraudulent acts, whether prior or subsequent to the act in question, is admissible.

Wood v. *United States*, 16 Pet. 342, 360; *Mudsill Min. Co.* v. *Watrous*, 61 Fed. 163; *Penn Mut. Life Ins. Co.* v. *Trust Company*, 72 Fed. 413.

In the *Diamond Coal* case, commenting on an earlier fraudulent effort on the part of the Coal Company to acquire the lands, the court said that it "serves in no small degree to explain the kindred practices employed in the later effort." 233 U. S. 248.

VI.

MINERAL LOCATIONS MADE IN THE ELK HILLS PRIOR TO PATENT COVER EVERY SECTION OF THE LANDS IN CONTROVERSY.

An abstract of the locations for oil made in the Elk Hills prior to patent, will be found in condensed form on pages 1652 to 1696 of volume three of the printed record. These abstracts cover pages 600 to 786 of the volume of "Documents and Evidence not Printed."

The locations cover every section in 30–23 from section 14 to 36, both inclusive, except section 31, for which the Southern Pacific had patent and they also cover sections 29, 31 and 33 of 30–24, which were located by J. B. Treadwell and other employees of the railroad.

These locations were made, beginning in 1899 and covering the intervening years before the issuance of the patent and were promptly recorded in the public records of Kern County. It was contended in the brief filed by defendants in the Circuit Court of Appeals that these locations for oil were made by men "without knowledge of the habits of oil" and that practically all the locators of "these speculative claims were men without experience in the oil business" and it was therefore argued that these locations meant nothing.

A reference to the names of these locators demonstrates that this contention is without support, but on the contrary these locators included the most experienced and practical oil men, including operators, prospectors and drillers. Among the locators were W. E. Youle, S. G. Drouillard, H. A. Blodgett, C. W. Lamont, M. S. Wagy, N. C. Farnum, L. G. Sarnow, F. J. Sarnow and Chas. Brisco.

The defendants admit that Mr. Youle was "one of the oldest and most experienced experts and operators," and the long practical oil experience of the others is shown by extracts from the testimony already incorporated in this brief.

In addition to the above, there were many others of more or less experience who were witnesses for the Government.

Among defendants' witnesses, who were among the locators and were or claimed to be experienced oil men, were J. B. Treadwell, H. W. Thomas, C. H. Allison, C. A. Barlow, Timothy Spellacy, and others. D. Burkhalter, division superintendent of the Southern Pacific at Bakersfield, was one of the associates of J. B. Treadwell in his locations.

The extensive practical experience in the development and production of oil of the foregoing men refutes the contention that their locations were for speculative purposes. It is true that some of the locators were inexperienced in oil matters but their activities no doubt resulted from the fact that they learned that the most experienced oil men, led by Youle, Drouillard and Blodgett, were making locations for oil, coupled with the fact that J. B. Treadwell, the oil expert of the Southern Pacific and in charge of its oil operations, had likewise made locations.

Colon F. Whittier, one of the largest oil producers in California at that time, the output of his wells being about a million barrels a year, testified that he was interested in the oil business from a producing and not from a speculating standpoint and that while he made no locations in the Elk Hills, he had made arrangements in 1903 to do so throughout township 30–24, but an injury to his knee kept him confined

to his house for several years and that prevented him. I–471.

> From my observation of 30–24 and 30–23 and the Elk Hills generally, the conditions were such in 1904 or up to that time, to justify an ordinarily prudent man in the expenditure of money with the reasonable expectation of developing a paying oil property. I–476.

The failure to develop the locations made in the Elk Hills between 1900 and 1904 was due: (1) to the depression in the oil business which occurred in 1901 and continued for several years; (2) to the inadequacy of railroad transportation; (3) to the withdrawal order of February 28, 1900; and (4) to the lack of money on the part of some of the locators.

The defendants contend that the fact the locations made in the Elk Hills, beginning in the winter of 1899–1900 were not developed prior to the issuance of the patent in this case in 1904, shows that they were speculative and not made in good faith with a view of developing oil. An examination of the testimony shows that this contention is unfounded and it clearly appears that the failure to proceed with development work was due: First, to the depression in the oil business which occurred shortly after the first locations were made and continued for several years; second, to the inadequacy of transportation facilities which became acute about that time, due in a large measure to the fact that the Associated Oil

Company, which was furnishing oil to the Railroad Company, was given priority and practically all the tank cars available were furnished to that Company and independent producers could not get cars; third, to the suspension order of February 28th, 1900, withdrawing the lands from disposition, which was not removed until 1904, and lastly, to the lack of funds on the part of some of the locators.

N. C. Farnum, one of the largest oil producers and operators, testified that he and his associates, upon his own observations and Youle's report, made a number of locations in the Elk Hills in 1899 and they also paid $3,200.00 to four locators (R. I–502); they built roads and a camp and kept from one to twelve men there.

> Our object in making these locations was to acquire land for development, as we sincerely anticipated doing. We made arrangements to carry out our purpose in actually drilling for oil. R. I–503.

He testified that they had instructed Mr. Youle to move a complete drilling outfit from Kern River to Elk Hills to prepare for drilling but they were prevented "because the Government had just withdrawn this land" (R. I–503), and this "made it impossible for us to know whether we would ever get a title if we got a well." R. I–510.

> Knowing all the conditions then existing, we would have sunk a well for the reason that we had determined to drill a hole in the Elk Hills no matter what it cost us, as far as we

> could go and as far as money would go. That was the absolute determination, not to be deviated from, until the Government withdrew the land.
>
> In 1902 there was a very perceptible depression in oil. There was a great shortage of cars. . . . The lack of railroad transportation and facilities had something to do with the general depression of the oil business. R. I–504.
>
> It was easier to get cars in 1900 than in later years. It seemed that the injection of the Associated Oil Co. into the oil proposition in Cal. affected the transportation business materially, as they were buyers of oil as well as shippers. R. I–512.

He testified that they kept up their locations until 1906 but they didn't go ahead after the withdrawal was removed in 1904, because conditions changed, particularly between 1901 and 1906.

> Money was hard to get. The price of oil was so low it did not pay to produce it. The transportation conditions were inadequate. R. I–512.
>
> There was a long period there when it was almost impossible for a man who was not connected with the Associated Oil Co. or some of the other—one or two—of the larger corporations, to get cars to handle his oil. That was one of the reasons why our company determined not to sink a well after the government removed its restriction. Another reason was a lack of money. R. I–513.

S. G. Drouillard testified:

> The order of withdrawal of the lands from disposition was a consideration for my leaving. R. I–125.

H. A. Blodgett, the most prominent oil operator in the West Side fields in 1900, testified that there was a considerable oil boom in Kern county in 1899 and 1900 and the excitement kept up for three years and was shared in by geologists and experienced oil men; but two factors, the low price of oil and lack of cars for transportation,

> made the marketing of oil practically prohibitive. Oil could not be produced profitably and investors lost interest. That practically paralyzed that region and developments ceased. R. I–366.

Before 1902 the Railroad Company was buying oil of all producers in all fields in Kern county but in 1902 there was a change in affairs. The Associated Oil Company was delivering large quantities of crude oil to the Railroad and they "took precedence over everything else." R. I–366.

> This change caused a lack of facilities for transportation, shortage of cars, and made it practically prohibitive for the shipment of oil out of the West Side Field and the River Field for independent producers. R. I–370.

Mr. Blodgett testified that he intended to develop his locations in the Elk Hills but—

> the conditions of the oil business were such that it would have been ridiculous to have

spent any money during that entire period extending from 1902 to 1905 or 1906. R. I–389.

The reasons for not developing the property in the Elk Hills was that there was no market for oil. The price was so low that if you had had a thousand barrels a day in the Elk Hills you could not have transported it, it wouldn't be worth a cent. R. I–390.

He testified that the shortage of cars "was a symptom of a desire not to furnish the facilities." R. I–396. The Southern Pacific painted off the letters "S. P." on the tank cars and put on "A. O." The Associated was the only producer that could get tank cars. R. I–401–2. It will be recalled that the Associated Oil Company is a subsidiary of the Southern Pacific. R. VI–3592.

S. P. Wible testified:

From 1903 to 1908 the oil business in the McKittrick vicinity was very dull and there was practically no new developments on account of the price of oil and lack of facilities for getting rid of it. It was only once in a while you could get cars and for that reason you couldn't contract for the oil. The activity stopped almost entirely. The lowest I know of oil being sold for at that time was eleven cents a barrel. R. I–333.

Chas. Brisco testified:

There was a depression in the oil business in McKittrick, I think, in 1901, 2 and 3, and

> it continued a year or two after I went away from there in 1904. During the time that I was there, I was actively engaged in the business of prospecting and development. The cause of the depression was our inability to get rid of our oil. We couldn't sell and we couldn't get it out of the field because there were no facilities for transportation. R. I–338.

This car shortage was quite general. He had charge of the shipping for a while and applied to J. B. Treadwell for cars and he said he didn't have any. R. I–339.

B. K. Lee testified that they drilled a well into the oil sand about the time the slump came in the price of oil about June, 1901. From then until the winter of 1903 things were very quiet. The price of oil would not justify the expense of putting in a pipe line. R. I–231.

L. G. Sarnow testified that he abandoned his location "because oil went down to nothing. It sold in the Kern field for seven cents a barrel and there was not enough money in it to drill for it." R. I–142.

F. D. Lowe, who drilled to 560 feet in the Elk Hills and "encountered oil, quit because of depression in the price of oil and financial difficulties." He quit in the early part of 1901, and the depression continued for a long time thereafter. R. I–151.

Chas. W. Lamont, testified "there was an oil depression from 1901 lasting for several years, and it was just as good as insulting anybody to ask them to

put their money into it at that time. That was the whole reason for our failure to try to influence people there or get money to carry out the locations." R. I-583.

W. E. Youle testified:

> Money was spent on the location made on my recommendation in the Elk Hills; they built roads and did assessment work. They intended to go in there and I got a rig ready to send over, and some way they fell down. They said money was getting scarce, and oil was cheaper and transportation hard to get. R. I-576.

W. G. Sylvester testified that while he believed the land he located to be oil lands susceptible of development and production on a commercial basis, the low price of oil made the attempt to produce oil then too expensive. He drilled a well in 1901, 980 feet on Section 8 of 30-23 but he abandoned the well, "because there was so much gas that the drilling became so expensive that he couldn't stand the pressure." R. I-357.

H. P. Dover testified that his locations in the Elk Hills were abandoned "because of the slump in the oil business in Kern county in 1901 and oil was kind of a drug on the market for two or three years. Nobody would put any money in oil property." R. I-467.

A number of defendants' witnesses corroborated the plaintiff's witnesses as to the depression in the

oil business and lack of railroad facilities resulting in a failure to develop the locations in the Elk Hills.

S. J. Dunlop testified that in 1900 he put a well on each quarter of section 26 of 32–23, made discoveries of oil and obtained patent. "After that there was quite a slump in the oil business and we let the property lie until a railroad had been built in there." R. III–1820.

L. B. McMurtry, a railroad conductor for the Southern Pacific, testified that "in 1901 oil was down to 15 cents a barrel and there was no market and no transportation, and the oil industry certainly fell off considerably at that time." R. IV–2082.

C. H. Meves testified that after the drop in the price of oil at McKittrick, he lost interest in his locations in Elk Hills. R. III–2006.

O. E. Hotchkiss testified that "oil went down to twelve and fourteen cents a barrel and there was hardly any profit in producing oil even if you had a well already drilled. Development was checked." R. IV–2092.

E. J. Miley testified that he stopped drilling in 1903 because of the low price of oil and that in 1904 the oil business was bad, and he quit drilling and abandoned his location after getting some oil. R. III–1707–11.

VII.

THE GOVERNMENT PRIOR TO PATENT DID NOT DETERMINE OR ADJUDICATE THAT THE LANDS IN SUIT WERE NONMINERAL.

> *Judge Bean held that "these proceedings [which resulted in relieving from suspension the lands in suit] were in no sense an adjudication but a method adopted by the department for determining whether its previous order of withdrawal should be revoked and the lands opened to entry. They did not establish the nonmineral character of the lands nor relieve the company from the consequences of submitting false and misleading affidavits and proof upon which the land officers were expected to and no doubt did rely in issuing patents."* R. I-79.

It was contended below by the Railroad Company that the Government investigated the mineral character of the lands when the order was made relieving the lands from suspension and thereby adjudicated that they were non-mineral and to quote its brief "cannot be heard to say it was imposed upon by false representations."

The facts bearing upon this contention will now be reviewed:

It will not be denied, as Judge Bean finds that—

> at the time the selection list was first filed [in November 1903], the lands in controversy together with a large area of other lands were within a previous withdrawal order of the department because of their probable oil contents. At the request of the defendant

> Company the department ordered an examination of the lands applied for by a special agent to ascertain whether they should be relieved for suspension, and upon his report the suspension order was revoked as to these lands and they were subsequently patented to the defendant. R. I–78.

The evidence shows [said Judge Bean]—

> that the agent making the examination and report was not an oil or mineral expert and was instructed by his superior in the Land Office "that it would be unnecessary to go over all the lands but to drive over part of them just as the 'crow flies' and to interview ranchmen, stockmen, etc., as to the location of oil wells producing oil in paying quantities" and "to recommend that those lands be relieved from suspension on which he found no oil well producing oil in paying quantities," and that he acted accordingly, and made no examination whereby he determined or could determine whether in fact the lands were mineral in character. In his report he said that he "found no oil seepages, oil springs, or other indications of oil or mineral of any kind that would tend in his opinion to warrant" the lands being classified as mineral in character, and therefore recommended that they be relieved from suspension. R. I–78–9.

E. C. Ryan was the special agent who examined the lands and he testified that he was not a geologist or mineralogist (R. III–1598) and that he would not know a gas blow-out if he should see one. R. III–1605.

E. C. Finney, of the Land Department, who handled this matter testified that "there was no attempt to send a person with special scientific qualifications to determine the character of the lands." R. III–1587.

The above quotations in Judge Bean's opinion are taken from the evidence of E. C. Ryan at pages 1597–9, Volume III.

Ryan further testified that he "did not make any geological determination of any kind as to their mineral character" (R. III–1598) and that he "never got any instructions either orally or written from the General Land Office to determine specifically the mineral or nonmineral character of these lands." R. III–1601.

In reference to his first report made on January 22, 1904, and quoted by Judge Bean, he (Ryan) testified:

> I said in my report that I made a careful examination of these lands, because I had made a careful examination as to any oil wells that might have been there. That is all. I did not examine the land with reference to oil seepages or oil sands. As I said before, I did not go all over the land and I did not see any. I looked for them but I did not see any along the road over the land that I did go over. R. III–1599.

Ryan on March 22, 1904, made a general report and in reference to township 30–23, embracing the lands in suit, he reported:

> No wells have been bored for oil and in my opinion all the lands in this township should be relieved from further suspension. R. III–1600.

Ryan was the only person who examined the lands with a view of relieving them from suspension. They included about 25 townships. R. III–1598. The officials of the Railroad Company were well acquainted with Ryan, knew that he was not qualified to pass upon the mineral character of the lands and they requested, as we shall see, the General Land Office to have the lands examined by Ryan in order to get them relieved from suspension and restored to their former status so that they would be open to selection under the railroad grant. In addition to the instructions given to Ryan and quoted in Judge Bean's opinion, the General Land Office, under date of December 10, 1903, gave the following instructions to Ryan in reference to the examination of the lands in suit:

> You are accordingly directed, when you make examination of the lands first described to also examine the tracts just enumerated and to promptly thereafter submit report as to whether or not in your opinion same should be relieved from suspension. This office has no available force from which to assign you assistance at the present time. With this condition of affairs in view, you will make report based upon the examinations heretofore made, your knowledge of the lands remaining to be exam-

> ined, and familiarity with the country generally as to whether in your opinion there is any necessity for the continuance of the suspension of the lands in the Visalia, San Francisco and Los Angeles land districts suspended by this office in 1900, and not reported upon, a list of which you have. R. III–1548.

These written instructions were prepared by E. C. Finney and bear his initials. R. III–1586. He testified that:

> My purpose, and that adopted by the Commissioner when he approved the letters directing the examination to be made, was to obtain general information, derived from a general examination of the lands and from whatever knowledge Mr. Ryan might be able to acquire or had already acquired. The Commissioner could not, and did not attempt, under the practice then prevailing, to adjudicate the character of lands upon a special agent's investigation and report. Our purpose, and his purpose, was to obtain general information to guide him in restoring the lands to general disposition, so that desert land claimants, forest lieu selectors, mineral claimants, or any other qualified citizens or corporations might apply to select or enter the land under the applicable laws, upon submitting the proof of the character required by the law and regulations. There was no attempt to adjudicate the character of any particular tract of land in any of these letters which I prepared, or with which I had to deal at this time. R. III–1586–7.

Finney further testified that after revocation of these suspensions:

> I know it was the practice and requirement of the Land Office that such entries and selections should be accompanied and supported by usual proofs as to the character of land and compliance with the law; the revocation of a suspension was regarded and treated as a restoration to the former status. R. III–1587.

From the foregoing it is clearly shown that "these proceedings were in no sense an adjudication but a method adopted by the department for determining whether its previous order of withdrawal should be removed and the lands opened to entry" as Judge Bean held. While the first selection list was filed in the local land office on November 14, 1903, it was rejected on November 17, because the lands were suspended from disposition and the Railroad Company did not file its appeal to the General Land Office until December 11, 1903. R. VI–3767.

The request by the Railroad Company for the examination of the lands with a view of getting them relieved was made on November 30, 1903, and the order of instructions to Ryan as to their examination was made December 10, 1903, and before the appeal was taken.

So it is clear that the proceedings to remove the order of suspension were not had in the appeal from the rejection of the selection list. No appeal was pending in the General Land Office when the instructions were issued to Ryan to examine the lands

with reference to the removal of the order of suspension nor had any appeal been taken or filed at that time in the Local Land Office from its order of rejection of the selection list. Indeed, D. A. Chambers, the Railroad Company's Washington attorney, on December 16, 1903, wrote W. F. Herrin, General Counsel, upon receipt of Herrin's letter advising that an appeal had been taken, that it did not seem advisable to him "to take steps to get a hearing" on the appeal, as the Commissioner had already instructed special agent Ryan to examine and report as to the necessity for the continuance of the suspension. R. III–1483.

The revocation of the previous order of suspension merely had the effect of restoring the lands to the status they occupied previous to their withdrawal from disposition. The nonmineral character of the lands was not established thereby. Though it is contended by the railroad that the withdrawal order was of no consequence, because it was not based on any real determination of the intrinsic character of the land, yet it is strenuously argued that its revocation was conclusive determination by the government that the lands were nonmineral. The railroad officials were thoroughly acquainted with Ryan. They knew that he was not a geologist and not qualified to determine the mineral or nonmineral character of lands. They knew the order revoking the order of withdrawal was based upon a hasty and superficial examination by Ryan and its only effect was to make the lands open to selection.

Eberlein testified that he never saw Ryan or had any communication with him (R. II–1161–2) and this evidence is emphasized by the railroad in its brief filed in the Circuit Court of Appeals. This testimony was given before the production of the letter of December 10, 1903, from Eberlein to Chambers in which Eberlein discussed the best method of inducing Ryan to make a report on the lands in question, saying "it is a matter for serious consideration as how to approach him." R. III–1579. In his letter of September 3, 1904, to Cornish protesting against the execution of the lease to the Kern Trading and Oil Company, "as this would practically fix the mineral status" of these lands, Eberlein said:

> I have just succeeded in getting the special agent in charge [Ryan] to make a report releasing our land from interdictment. I have worked very hard and very steadily to get the United States to complete its report and dispose of this matter. R. II–1079.

The Railroad Company in its brief in the Circuit Court of Appeals in undertaking to answer Judge Bean's finding that Ryan was not an expert, while in effect conceding that the finding is correct, says "he was the man selected by the Government to make this examination" and "there is no evidence that his designation to make the examination or his report was procured or influenced in the slightest degree by the railroad company." This is a remarkable statement in view of the evidence just quoted from Eberlein's letter in which it appears that he and

Chambers were conferring as to the best way to approach Ryan and Eberlein's positive statement that he had "worked very hard and very steadily" and had finally "succeeded in getting Ryan to make a report" releasing the lands from interdictment.

The evidence shows that the plan of having lands which were under suspension examined by a special agent with a view of relieving them from suspension was suggested to the Land Department by Chambers, the railroad attorney. This request was first made October 7, 1903, as to lands in 32–25 and as to a part of section one of 30–23. R. III–1539.

Not only was the Railroad Company active in procuring Ryan's report after he was appointed, but Chambers' letters show that his designation to make the examination was earnestly desired by the railroad. Chambers wrote, under date of October 12, 1903, that he could "ask the Commissioner of the General Land Office to direct special agent Ryan to examine the lands" selected by Eberlein "as quickly as possible" (R. III–1476), and on December 10, before he had been "advised positively," Chambers wrote Eberlein that "I presume the Special Agent is Mr. Ryan." R. III–1482. He presumed this because he had asked that Ryan be designated. It is thus apparent that the attempt of the railroad to disassociate itself from any connection with Ryan's appointment, or with his report is flatly contradicted by the record.

The defendants further say that the Government made other examinations as to the character of the

lands in suit besides the superficial and hasty investigation which Ryan made with a view of furnishing information as to whether the order of withdrawal should be revoked. They refer to an examination and report made by Jay Cummings, a special agent, dated July 13, 1900, but his report did not have anything to do with the lands in suit, but with lands near McKittrick in 30–22 and in 31–22 and in some other townships far removed from the lands in suit. R. VI–3868. Reference was also made below to certain reports made by Geo. H. Eldridge and published in the Reports of the Geological Survey. These reports did not deal with the lands in suit but were confined to the McKittrick-Sunset District. The record is clear to the effect that the only examination which was ever made of the lands in suit by any government agent, prior to patent, was that made by E. C. Ryan with a view of furnishing information to the Commissioner as to whether the lands should be relieved from suspension and thereby restored to the status occupied before the order of suspension was made. The purpose of the Commissioner in ordering the examination to be made by Ryan—

> was to obtain general information to guide him in restoring the lands to general disposition so that desert land claimants, forest lieu selectors, mineral claimants, or any other qualified citizens or corporations might apply to select or enter the land under the applicable laws, upon submitting the proof

> of the character required by the law and regulations. R. III–1587.

(*a*) *The Patent was Issued in Reliance Upon the Nonmineral Affidavits of Eberlein.*

The contention was made below that the Department in issuing the patent relied upon the report of its own employe as to the character of the land and not upon the affidavits accompanying the selection list.

This contention is based upon the above examination and report made by Ryan in connection with the issuance of the order revoking the order of suspension of February 28, 1900. This contention we submit is without merit, and Judge Bean's conclusion was sound that the proceedings resulting in the revocation of the order of suspension—

> did not establish the nonmineral character of the lands nor relieve the company from the consequences of submitting false and misleading affidavits and proof upon which the land officers were expected to, and no doubt did rely, in issuing patents. R. I–79.

The nonmineral affidavits which the Railroad Company submitted with the selection lists were required by the rules of the General Land Office. They were an essential part of the proofs required to be submitted and were the only evidence or proof as to the nonmineral character of the lands, submitted to or considered either by the local or the General Land Office. They were made and filed for the purpose of securing the patent. The patent could not issue until

and unless the Land Department decided upon the proofs submitted that the lands were nonmineral. The affidavits were filed for the avowed purpose of inducing this decision.

Geo. W. Stewart, the local Register at Visalia, with whom the selection list was filed, testified that there was no evidence at all offered or considered by him during the pendency of this list as to the mineral or non-mineral character of the lands except the affidavits of Eberlein, and that was all that he forwarded to the General Land Office. R. VI–3784–5.

E. C. Finney testified that during his entire service, from 1894 to 1909, in the General Land Office, that office ajudicated —

> *ex parte* cases, selections or entries, upon affidavits and other proofs submitted by the entrymen or selectors in accordance with the law or regulations governing that particular class of cases. In cases contested by other individuals or corporations, or by the Government, it was the practice to order hearings or trials, at which the testimony of witnesses might be taken, reduced to writing, and thereafter passed upon by the Land Department. R. III–1584.

In a case where there was no contest, he testified:

> The General Land Office, in acting upon the selection or entry, would not base that action upon the agent's report, but would base its action upon the entry or selection and the accompanying proofs, that is, the proofs submitted by the entryman or selector in support of his filing. R. III–1584.

That after lands were relieved from suspension, it was the practice and requirement of the Land Office, that such entries and selections should be accompanied and supported by usual proofs as to the character of land. R. III–1587.

On cross-examination Finney testified:

> Speaking of the effect given by the General Land Office to the report of any special agent, in the absence of a contest, and ordinarily on a contest, the Department in making its decision on an application for land, decided the same upon the proofs submitted by the applicants, giving no weight to the report of the special agent. R. III–1592.
>
> After the lands had been restored to disposition, as in this case, the withdrawal orders had been revoked, the lands became just like other lands, similarly situated, subject to application or entry under appropriate laws, and the applicant or selector or entryman would have to submit the ordinary proofs required by the laws and regulations and applicable to that particular kind of filing; in all, or practically all, non-mineral filings one of the proofs required to be submitted is a non-mineral affidavit; other proofs might be evidence of publication of notice of the selection for filing. R. III–1593.

The foregoing evidence, and there is none to the contrary, shows that there is no foundation for the contention of the defendants that the Department relied upon Ryan's report in issuing the patent. On

the contrary, the Department in reaching its decision acted upon the proofs submitted by the applicant, giving no weight to the report of the special agent, in the absence of a contest, as in this case.

The evidence already quoted shows affirmatively that the patent was issued in reliance upon the proofs the railroad company submitted in the form of the nonmineral affidavits or Eberlein and that this was the only proof before the Land Office. But in the absence of such evidence, the presumption would be practically conclusive that the land officers did rely in issuing the patent upon the affidavits which were submitted for this purpose. It does not lie in the mouth of the Railroad Company to say that the proof which it submitted for the purpose of securing favorable action, and which it intended and expected the land officers to consider and accept as true, was not in fact relied upon, after it has secured favorable action and obtained the patent. This is unquestionably true in the absence of a positive showing on the part of the Railroad Company that the nonmineral affidavit was not relied upon as the sole cause or one of the inducing causes for the issuance of the patent.

> A man who has made a false representation in respect to a material matter, must, in order to rely on the defense that the transaction was not entered into on the faith of the representation, be able to prove to a demonstration that it was not relied on. *Kerr on Fraud and Mistake* (3d ed.), 75.

It is now settled law that one who chooses to make positive assertions without warrant, shall not excuse himself by saying that the other party need not have relied upon them. He must show that his representation was not in fact relied upon. . . . In short, nothing will excuse a culpable misrepresentation short of proof that it was not relied on, either because the other party knew the truth, or because he relied wholly on his own investigation or because the alleged facts did not influence his action at all. And the burden of proof is on the person who has been proved guilty of material misrepresentation. *Pollock on Torts*, 292. *Griffin* v. *Lumber Company*, 140 N. C. 514, 521.

Where a representation is made of facts which are or may be assumed to be within the knowledge of the party making it, the knowledge of the receiving party concerning the real facts, which shall prevent his relying on and being misled by it, must be clearly and conclusively established by the evidence. The mere *existence of* opportunities (italics author's) for examination, or of sources of information, is not sufficient, even though by means of these opportunities and sources, in the absence of any representation at all, a constructive notice to the party would be inferred; the doctrine of constructive notice does not apply where there has been such a representation of fact. *Pomeroy Equity Jurisprudence* (3d Ed.), sec. 895.

(b) *The representation need not be the sole inducement.*

In *Hindman* v. *Bank* (C. C. A.), 112 Fed. 931, Mr. Justice Lurton held that the false representation need not be the sole inducement moving the plaintiff.

> It is not necessary that the plaintiff should have relied exclusively upon defendant's statements that they should have been the sole, or even principal, inducement to plaintiff's change of situation—but if they exerted a material influence upon his mind, although they constituted only one of several motives which, acting together, produced the result, it is sufficient. 20 *Cyc.* 41.
>
> It is well settled that if a false representation is made and relied upon and is a material inducement, it can make no difference that other motives or causes contributed. If the party to whom a false representation is made to induce him to enter into a contract does so partly in reliance upon such representation, he is entitled to relief on the ground of fraud, though he may also reply partly on an examination or investigation by himself or by others for him. 14 *A.&E.* 113–5.

In *Sioux Nat. Bank* v. *Norfolk State Bank*, 56 Fed. 139, the Circuit Court of Appeals for the 8th Circuit held (syllabus):

> In an action to recover for false representations made by defendant as to the financial condition of a merchant, whereby, plaintiff alleges, he was induced to make loans to such merchant, resulting in losses, it is not a defense that plaintiff also made some other examination and inquiries, for the action may

be maintained if the false representations were a material, though not the sole, inducement to make the loans.

The Court said (p. 141):

> It is well settled that a false representation may entitle a party to maintain a suit even though it was not the sole cause of the bargain or transaction out of which the injury arose. It is enough to entitle a plaintiff to recover if the false representation complained of was a material inducement to the contract or transaction which occasioned the injury, although there may have been other cooperating inducements.

VIII.

THE PROCEEDINGS RESULTING IN THE PATENT WERE EX PARTE, NO ISSUE WAS FRAMED, NO HEARING WAS HAD AND THE PATENT IS NOT CONCLUSIVE AGAINST THE GOVERNMENT BUT IT MAY CANCEL THE PATENT BY SHOWING THAT IT WAS OBTAINED BY MEANS OF FALSE AND FRAUDULENT PROOFS.

The defendants in their brief filed in the Circuit Court of Appeals contended that "the patent is conclusive as to the nonmineral character" of the land.

The testimony in reference to the issuance of the patent has already been reviewed and it shows that the proceedings resulting in the patent were entirely ex parte, no protest was filed, no issue was framed nor was any hearing had, but the Land Office accepted the proofs submitted by the railroad, which consisted solely of the nonmineral affidavits of Eberlein and the patent was issued in reliance upon these.

The following cases show that defendants' contention that the issuance of the patent conclusively established the nonmineral character of the lands is without support.

Washington Securities Co. v. *United States,* 234 U. S. 76; *United States* v. *Minor,* 114 U. S. 233; *McCaskill Co.* v. *United States,* 216 U. S. 504, 509, and cases cited. The same principle is announced in the *Diamond Coal* case, 233 U. S. 236, 239.

The Nonmineral Affidavits were Actionable.

It was contended by the Railroad Company in the brief filed in the Circuit Court of Appeals that "its nonmineral affidavit on information and belief was a mere statement of opinion and not actionable." There are two conclusive answers, we submit, to this contention.

First, there were two affidavits attached both to the first selection list, filed in November, 1903, and to the last selection list, filed in September, 1904, and while one of the affidavits stated that to the best of Eberlein's knowledge and belief none of the lands returned in the list are nonmineral lands, the other affidavit attached to both lists stated that the lands, "are not interdicted mineral or reserved lands and are of the character contemplated by the grant." This was a positive, affirmative, substantive representation that the lands are not mineral.

Secondly, as it was the duty of the railroad to make a careful examination of the lands as to their mineral character before making selection, its affida-

vit setting out that such careful examination had been made and that to best of affiant's knowledge and belief, none of the lands were mineral, made and filed for the purpose of inducing the land officers to find that the lands were nonmineral, is actionable, if the lands were in fact mineral, and a careful examination would have revealed their mineral character, but no such examination was made.

It was further contended in defendants' brief that "the railroad did not make any misrepresentation as to any matter of fact."

This contention is predicated upon the theory that a representation that land is nonmineral is not a representation of a fact, but only the expression of an opinion.

The defendants first contended in this case that the affidavit was not false because petroleum was not a mineral and this position was taken in the face of the repeated rulings of the Land Department which are referred to in *Burke* v. *Southern Pacific R. R. Co.* 234 U. S. 669, 678, in which it is said that since 1873 "the Department has regarded petroleum as a mineral and has treated lands chiefly valuable therefor as mineral lands."

Having lost on this contention, they now seek to avoid liability on the ground that although the representation was false, it was but an expression of an opinion and not actionable.

We submit that a representation as to the character of land is a representation of a fact; that the quality of land is a fact. Indeed, the defendants in

their brief on the facts, filed in the Circuit Court of Appeals, in discussing Judge Bean's finding that the lands in suit were known oil lands, use the following language: "Mineral quality is a fact. In order to be known it must exist." How, then, can it be contended that a representation that the lands were nonmineral in quality is not a representation of a fact?

Numerous cases have been before this court in which patents have been canceled because of fraudulent representations as to the mineral character of the land. One of the latest cases is the *Diamond Coal* case which was a suit to cancel patents issued under the homestead law upon soldiers' additional entries. Each application for entry was accompanied by "an affidavit that there was not to affiant's knowledge any deposit of coal or other valuable mineral in the land and that it was essentially nonmineral." The Court said—

> the affidavits were made and submitted as proof that the character of the lands applied for was such that they properly could be acquired under that law. The land officers accepted the affidavits and the statements therein as true and allowed the entries and issued the patents. 233 U. S. 238.

The case turned upon the question as to whether the representation that the land was nonmineral was false. The Court said:

> Questions of fact . . . such as whether lands sought to be entered are mineral or nonmineral are committed to the land officers for determination; and as their decision must rest

> largely or entirely upon proofs outside the official records, it is possible in *ex parte* proceedings . . . for applicants, by submitting false proofs to impose upon those officers. . . . A patent secured by such fraudulent practices . . . may be annulled in a suit by the Government against the patentee. p. 239.

The proofs submitted in that case were the non-mineral affidavits. They were submitted, as in the case at bar, to prove the lands were non-mineral and therefore could be acquired under the homestead law. The Court found the lands were mineral and ordered the patent annulled.

To the same effect is *Washington Securities Co.* v. *United States*, 234 U. S. 76, wherein four patents were canceled on the ground that the patentee fraudulently procured them upon false representations as to the character of the land.

IX.

THE DEFENDANTS WHO ARE TRUSTEES IN DEEDS OF TRUST EXECUTED PRIOR TO THE ISSUANCE OF THE PATENT ARE NOT PURCHASERS FOR VALUE OF THE AFTER-ACQUIRED PROPERTY AND THE LIEN THEREON IS SUBORDINATE TO THE RIGHT OF THE GOVERNMENT TO CANCEL THE PATENT FOR FRAUD ON THE PART OF THE PATENTEE.

The defendant, Southern Pacific Company, is a corporation of Kentucky and operates the railroad under stock ownership and lease from the Southern Pacific Railroad Company. R. II–1344.

The defendant, Southern Pacific Railroad Company, is a consolidation under date of March 10, 1902, of the Southern Pacific Railroad Company of California, the Southern Pacific Railroad Company of Arizona and the Southern Pacific Railroad Company of New Mexico (R. II–1360), and is the successor in interest of the Southern Pacific Railroad Company mentioned in the granting act of 1866 and the joint resolution of 1870. R. I–28.

The defendants, Homer S. King and James K. Wilson, are trustees under a deed of trust executed by the Southern Pacific Railroad Company bearing date April 1, 1875, securing the payment of $46,000,000.00 of bonds.

The defendant, Central Trust Company of New York, is trustee under a deed of trust executed by the Southern Pacific Railroad Company and the Southern Pacific Company, bearing date September 15, 1893, securing the payment of $58,000,000.00 of bonds and said Trust Company is also trustee under a supplemental trust deed, bearing date August 18, 1898, amending the said former trust deed of September 15, 1893. R. I–25.

The defendant, Equitable Trust Company, is trustee under a deed of trust dated January 3, 1905, which the other defendants aver is not a lien upon the lands involved in this suit. R. I–26.

The defendant, Kern Trading and Oil Company, is a subsidiary of and owned by the defendant Southern Pacific Company, being organized and conducted as its fuel department.

The deeds of trust which it is claimed are liens upon the lands in suit were executed before the Southern Pacific Railroad Company acquired its patent to said lands. So that when the deeds of trust or mortgages were executed the trustor or mortgagor did not own the lands but their acquisition in the future was merely contemplated.

The title therefore of these after-acquired lands is subject to all liens and equities valid against the mortgagor. The mortgagee stands in the shoes of the mortgagor and is in no sense a purchaser for value.

United States v. *New Orleans Railroad*, 12 Wall. 362, 365; *Fosdick* v. *Schall*, 99 U. S. 235; *Central Trust Co.* v. *Kneeland*, 138 U. S. 414, 423.

In *Harris* v. *Youngstown Bridge Co.* (C. C. A.), 90 Fed. 322, 328, Judge Taft reviews the authorities and concludes by saying:

> The mortgagee of after-acquired property is not a purchaser for value and cannot acquire an interest by way of lien greater than that which the mortgagor has himself acquired. The lien of the mortgage attaches to after-acquired property in the condition in which the mortgagor takes it from his vendor, and subject to all known liens and equities valid against the vendor, and also subject to all liens or equities valid against the vendee and mortgagor which arise in the act of purchase or acquisition, and therefore necessarily qualify its scope and extent.

Where the legal title to property has been obtained through fraud, a court of equity has jurisdiction to reach the property either in the hands of the original wrongdoer or in the hands of any subsequent holder, until the rights of a purchaser for value intervene. *Moore* v. *Crawford*, 130 U. S. 122, 128; *Pomeroy Eq. Jur.* (3d ed.), sec. 1053; *Williamson* v. *N. J. Southern R. R. Co.*, 29 N. J. Eq. 311.

X.

SUBSEQUENT DEVELOPMENT IN THE ELK HILLS.

Belief that the land was valuable for oil at the time of the proceedings which culminated in the patent is an essential element of the charge that the nonmineral affidavits were false. Of necessity the conditions adequate to engender such belief were those existing at that time. If the affidavits were not false then they could not become so by any subsequent change in the conditions. *Diamond Coal* case, 233 U. S. 236, 240.

Adhering to this established rule the Government refrained from any attempt to show discoveries of oil in the Elk Hills subsequent to the patent. But the defendants, claiming that the converse of this rule was not binding on them, undertook to show the original good faith of the selection by testimony of the result of subsequent operations. The effort of the defendants was to show that the lands have since been demonstrated not to be valuable for oil, and

thus to prove that the opinions of expert geologists and practical oil men (including those of the Railroad Company), based upon known conditions prior to the patent, were wrong, and that the belief of the railroad officials at that time that the land was valuable for oil was a mistaken belief. If successful, the defendants claim the right to keep the lands, thus procured by means of false affidvaits as to belief of nonmineral character, because they would have been entitled to the lands if the false affidavits had not been made and if their actual character had been then as now demonstrated. This is but the assertion of a right to retain that which has been obtained from the Government by deceit and perjury because it might have been obtained honestly if the railroad officials had chosen to testify the truth and risk an adverse finding. In this the defendants overlook the point that the land officers of the Government, within whose exclusive jurisdiction lies the power to determine the question thus presented to the court, have never had an opportunity to determine it. It was not presented to them and they were prevented from considering it by the dishonest and perjured acts of the Company.

But the defendants were not successful in their effort to prove by subsequent development that the known conditions prior to the patent were not a sufficient basis for belief of oil character. The very beginning of oil development in the Elk Hills soon after the patent under the same conditions

that existed before proves the contrary. More especially is this true because the principal operations shown were those of the Associated Oil Company, a creature of the Railroad Company. Moreover, the result of the operations could not help the defendants upon any theory unless they amounted to a demonstration that the land was not valuable for oil, for only in that event could it be said that the geologists and oil men and railroad officials were mistaken in believing the land to be valuable for oil. In fact, however, the testimony demonstrated the contrary.

It will be seen that while some of the wells drilled in the Elk Hills, beginning in 1910, were unsuccessful because of improper location, insufficient depth, and other causes, yet the evidence demonstrates that several successful, productive oil wells were drilled in 1910, 1911 and 1912 by the Associated Oil Company on the even numbered sections adjoining those in suit.

At that time the Associated Oil Company was a subsidiary of the Southern Pacific and absolutely under its control, W. F. Herrin, the General Counsel then and now of the Southern Pacific, being chairman of the board of directors. R. VI–3593–3603.

(*a*) *Successful Wells of the Associated Oil Company.*

The evidence shows that whenever wells were favorably located with reference to the well known anticline in the Elk Hills and were properly drilled,

oil was struck in large quantities coming from sands of the greatest thickness in the Kern County Oil fields.

The three successful wells drilled by the Associated Oil Company were on sections 24 and 26 of 30–23 and section 30 of 30–24. The Company spent about $170,000.00 on these three wells and spent in development work in the Elk Hills in all about $500,000.00.

At the time the Southern Pacific, through its subsidiary made these expenditures, in 1910 to 1912, the known conditions as to the Elk Hills were the same as they were in 1904 when it obtained its patent for the lands in suit. When W. F. Herrin, General Counsel and E. T. Dumble, Consulting Geologist of the railroad, as members of the Board of Directors of the Oil Company, authorized the expenditure of this money for the development of the lands interspersed with those in suit, they had no greater knowledge as to the geological conditions or the probabilities of obtaining oil than that possessed by the railroad geologists and officials in 1904. The conditions in 1910 were plainly such as to engender the belief that the Elk Hills contained oil of such quality and quantity that it could be extracted profitably and to justify expenditures to that end. And Herrin and Dumble, representing the Railroad Company's stock which controlled the Oil Company, voted to expend more than one-half million dollars because they believed the lands could be mined profitably and the results justified their belief. It

may be claimed that the drilling of a successful well in the Buena Vista Hills by the Honolulu Oil Company caused the Associated Oil Company to begin drilling in the Elk Hills. However, F. M. Anderson, their geologist, testified that there was no connection between the Buena Vista Hills and the Elk Hills and that the formations are in no way correlated. R. IV–2451–3. The successful Honolulu well is on section 10 of 32–24, nine miles from the nearest lands in controversy, while in 1904 there were many successful wells in the McKittrick District, only three or four miles from the lands in controversy.

The Associated Oil Company began its development work on sections 24 and 26 of 30–23 and 30 of 30–24, under leases from persons who made their locations for oil on January 1, 1910, agreeing to pay $500.00 per acre if purchased in one year and $750.00 per acre if purchased in two years from the date of the lease. After the Oil Company erected derricks, they ascertained there were prior locators claiming to have made discoveries of Fuller's earth on the properties (R. VI–3622) and the General Manager reported to the Executive Committee of the Board of Directors, W. F. Herrin, President, in the chair, on December 20, 1910, that he had entered into a supplemental agreement with the lessors reducing the purchase price and that he—

> had a verbal understanding with the prior locators to receive three forty-acre pieces of each quarter section for drilling a well on

each quarter and also lease on the remaining forty in each quarter with option to purchase the same at One Thousand Dollars per acre. R. VI–3623.

On March 20, 1911, the General Manager reported to the Executive Committee:

> In examining into the titles to our Elk Hills property, the present development of which indicates it to be oil producing land, I find that the mineral filings on which we base our title to this property were made subsequent to September 27, 1909.
>
> Mineral filings were made on these lands prior to September 27, 1909, and are now held by Messrs. McKittrick, Jastro, Tevis, et al of Bakersfield.
>
> The claimants under these mineral filings have asked for a patent on Section 24, 30–23 and Section 30, 30–24 by reason of their discovery of Fuller's earth. R. VI–3624.
>
> I recommend the acquisition of these conflicting titles for the reason that they were made prior to September 27, 1909, and the work we have done, if applied against these filings would insure the issuance of a patent to us, providing we discover oil on each quarter section, which I think probable. In fact, we have made sufficient discovery on section 26 to enable us to obtain a patent at this time had the filings owned by us been made prior to the date of withdrawal.
>
> Mr. Scribner had some negotiations with Mr. Jastro looking to the acquisition of these filings made prior to September 27, 1909, and

had agreed upon terms at which we would acquire the same. They afterwards withdrew negotiations. R. VI–3625.

An effort to buy out the prior locators was made but was unsuccessful and the parties under whom the Associated claimed filed a protest in the Land Office at Visalia against the application for a patent based on alleged discovery of Fuller's earth. This is the contest referred to by Capt. W. H. McKittrick and in which L. J. King, Superintendent, and W. A. Williams, geologist of the Associated, testified on behalf of the protestants that there was no commercial fuller's earth in the lands—that they were valuable oil lands and that the Associated had drilled successful wells. These witnesses also testified that other wells which had been drilled in the Elk Hills were unsuccessful because they were not properly located and from errors in drilling and other causes. Exhibits 9–C, 9–E, 9–M, and 9–O.

The Associated Oil Company proceeded with its drilling and on August 29, 1911, the general manager reported that he had issued instructions to proceed with the drilling of wells in 24 of 30–23 and 30 of 30–24; as to the well on 26 of 30–23, to discontinue work as soon as the field department completed perforating it and testing it to see the result obtained. R. VI–3633. He reported that he had ordered work stopped on the well on section 5 of 31–24 and section 22 of 30–23.

In the General Manager's report of September 19, 1911, he said "in reference to the producing well on section 26, Elk Hills, which well is now producing forty-five barrels of oil per day" that he recommended the company should make demand upon the locators under whom it claimed to apply for patent, and his recommendation was adopted. The report discussed the effect of the Pickett Bill, which was passed June 25, 1910, 36 Stat. 847, and in his report of November 28, 1911, the General Manager stated "In view of the uncertainty as to the status of our right to obtain patents to any of these lands, even if discovery is made, I recommend that we discontinue work entirely on these lands with the exception of the pumping of well on Section 26 and the deepening of well on Section 30" (R. VI–3639), which recommendation was adopted. At the meeting of the Executive Committee of the Board, held June 25, 1912, Mr. Wm. Sproule, President of the Southern Pacific, presiding, the following resolution was unanimously adopted:

> Resolved that the General Manager be and he is hereby authorized and directed to instruct the Field Department not to make any further expenditures until otherwise ordered by this committee on any lands in Elk Hills except on the lands in sections 24, 26 and 30, on which wells have been brought in, and to limit the expenditures on said lands to such as may be necessary in the operation of said wells. R. VI–3645.

These official records show that three wells had been "brought in" by this Oil Company, owned by and operated through the officials of the Southern Pacific; that a "producing well" had been developed and that "sufficient discovery had been made to enable us to obtain patent" and that the directors passed a resolution requesting the locators under whom the Oil Company claimed to immediately make application for patent under the provision in their lease that "upon completion of any well in which oil has been developed, lessors shall make application for patent for land upon which the well is located." R. VI–3636.

If the Associated Oil Company had developed the wells on the odd numbered sections in 30–23 involved in this suit, instead of on sections 24 and 26, and had filed a protest against the Railroad Company's application for these lands as agricultural lands, there can be no doubt that the Associated Oil Company would have prevailed in the contest and have secured patents for the land as mineral land.

In a suit by the Government against a land grant railroad to annul a patent fraudulently covering mineral lands, excluded from the granting act, the Government is not in a less favorable position than a claimant who alleges that the land is mineral.

Though the development work by the Associated Oil Company brought in producing wells and entitled it to patents for said lands as mineral lands, yet it is contended that this development work established

the nonmineral character of the lands upon which these wells were drilled and also fixed a similar status to the adjoining lands in suit. Enough has been shown from the records alone of the Executive Committee of the Associated Oil Company to show that defendants' contention is wholly without merit.

While admitting that the three wells on sections 24, 26 and 30 developed oil, the defendants contend that oil was not produced in paying quantities.

P. G. Williams, the auditor of the Associated Oil Company, testified that he prepared from the regular reports or letters sent in by the superintendent in charge, a tabulation of the production of the three deep wells. The production charts were offered in evidence by defendants. R. V–3125.

W. E. White, chief clerk of A. F. L. Bell, the chief engineer of the Associated Oil Company, testified that he prepared graphic logs showing the history of the drilling and production of the three deep wells and that he made these logs from the original drilling reports. These logs were offered in evidence by defendants and constitute exhibits 172–3–4. They would not introduce the original drilling reports.

The Government objected to the introduction of the graphic logs unless the original drilling reports from which the witness stated he made them were introduced, counsel for defendants stating that he had them in court. The Government introduced and read into the record these drilling reports (R. V–3196,

3159) and they cover pages 43 to 562 of the volume of "Documents and Evidence Not Printed."

The logs purport to be a condensation of the daily drilling reports, but an examination of these original reports shows that the logs are full of inaccuracies, mistakes, omissions and other errors, many of which the witness White admitted in his cross examination, beginning at page 3191 of Volume 5, and covering more than a hundred pages. As will appear later herein, the logs greatly reduce the production of the wells as shown by the daily reports. This doubtless accounts for the non-introduction by the defendants of these reports and their introduction by the Government.

As these daily drilling reports cover more than 500 pages of the typewritten transcript, it is impracticable in this brief to refer but briefly to them and then to the reports for only a few months of one of the wells, but the differences between the reports and defendants' logs for these months will suffice to show that the logs are thoroughly unreliable.

The well on 24 of 30–23.

The production of the well on section 24 of 30–23 according to the defendants' charts and logs was 2965 barrels for the month of June, 1912 (R. V–3126), whereas the production as shown by the daily reports from which defendants' witnesses professed to have made their charts and logs was 5160 barrels (pages 555 to 565 of volume of "Documents and

Evidence Not Printed") and the well was shut down for five days during that month.

The graphic logs made by White and the production charts made by Williams showed the same total production for each well and in an effort to explain the great discrepancies between the totals as shown by the drilling reports and the totals made up by these employees, they claimed the reports were only estimates—but this is not the fact but they are the daily record of the production as sent in by the superintendent, King. The difference may be accounted for by the statement made by White that "the total which I have here is *the amount of oil sold.*" R. V-3232. In other words, their total production does not in fact represent the total oil produced but the total oil sold.

The report for June 12th says: "At present time, is making 800 to 900 barrels," and the report dated June 17th says: "making good clean oil, produced at lowest figure 750 barrels of oil yesterday. Without doubt will increase in flow."

The defendants' production chart for May, 1912, for this well shows 240 barrels—but defendants do not call attention to the fact that during this month they were continuously at work on the well and the casing was not perforated until the last of May and the well was not ready for the pump until June (pages 553–4–5 of "Documents and Evidence Not Printed") when, as we have seen, some days it produced from 750 to 900 barrels. The fact that it did not produce before completion is of no importance.

For July the defendants credit the well with 247 barrels. The drilling reports show that from the first to the eleventh the well was shut down, while they were at work on it, and on the 12th it was "placed on the pump at 2,500 feet, flowing about 350 barrels per day through tubing."

On 14th "made about 360 barrels." On 15th "pulled pump. Same sanded up to 2,500 feet," yet flowed 75 barrels. On 16th, 17th, 18th, sanded up, continued to flow 75 barrels per day. On 19th, it flowed 100 barrels and on 20th, 75 barrels though still filled up with sand to 2,500 feet. On 21st "filled it with oil to clean it out and the process of cleaning it out continued throughout the rest of July. Pages 557–8–9 of "Documents and Evidence Not Printed."

So this well was in trouble throughout the month of July and yet the drilling reports show that for the seven days from the 14th to 20th it flowed 830 barrels, whereas the defendants have placed its production for the entire month at 247 and it was upon this basis that Anderson estimated that the well would not pay for itself in ten years. Exhibit 26.

Let us now examine the drilling reports of this well for August, the last of the four months used by Anderson in Exhibit 26. The well is credited by defendants for that month with 150 barrels. R. V–3126. During the first seven days the drilling reports show the well was being cleaned out, yet it flowed 50 barrels on the 3d, and one hundred barrels each on the 4th and 5th. On the 8th the driller lost

the drilling bit, and for the next ten days, while fishing for the bit weighing 250 pounds (R. V–3278) jammed in the casing with less than ¼ inch space through which the oil could flow, the well continued to flow 100 barrels of oil per day until it was closed down under the general order from the Company, with the drill bit still in the well. Pages 559, 560 "Documents and Evidence Not Printed."

The defendants credit this well for August with 150 barrels, while their own reports show they were cleaning it out the first seven days of the month and lost the bit on the eighth and were unsuccessfully fishing for this until they began to cap and close the well on the 19th and that they finished capping it and shut it down with all the other wells on the 23d, still the well flowed, under these adverse circumstances, 1200 barrels in 12 days and in the Superintendent's report for August 10th, he says the 100 barrels per day was "actual measurement in tank."

The drilling reports show that on August 11th, 12th, 13th and 14th this well, while they were fishing for the drilling bit, was not only flowing 100 barrels of oil per day, but was also flowing 3,000,000 cubic feet of gas per day.

The logs and charts offered by the defendants as to the wells on 26 of 30–23 and 30 of 30–24 are no more an accurate or true representation of these wells than are the logs and charts of the well on 24 of 30–23, many of which inaccuracies and misrep-

resentations have been pointed out. The limits of this brief prevent an extended reference to these.

The well on 30 of 30–24.

J. W. Kingsbury, mineral inspector and geologist, testified that on June 10, 1911, he met L. J. King, Superintendent, W. O. Maxwell and Mr. Barnes, representatives of the Associated Oil Company, at the well on 30 of 30–24.

> I remember speaking to Mr. King and asking him for permission to look at the well, and at the same time he informed me that there had been a discovery of a great amount of oil on Section 30 of 30–24, in one of the Associated Oil Company's wells. I went with Mr. King and Mr. Maxwell onto Section 30 to look at the well and saw oil coming from the well, which I estimated at about 2,000 barrels in 24 hours. Mr. Maxwell said that he thought it was about 5,000 barrels per 24 hours. . . . On January 24th, 1912, I went out with Mr. McCabe, Head Driller of the Associated Oil Company, and I gauged the well on Section 30, 30–24, and according to my gauge it was producing 385 barrels per 24 hours and the gravity of the oil was 24.2 Baume. R. VI–3688–9.

James F. McCay testified that he was an oil driller and in charge of the well on 30 of 30–24 and that it started off at 50 barrels of oil per day and after it was put on the pump it gradually increased in volume and he gauged it and it was producing at the rate of 406 barrels per day. R. I–411.

The well on 26 of 30-33.

The evidence shows that the well on 26 was drilled to 3,548 feet, but caved and ruined, then was redrilled from 2,837 to 4,030 feet and again ruined. Before it was redrilled it came in as a gusher. The drilling reports and defendants' log show 159 feet of oil sand in this well and defendants' expert, F. M. Anderson, admitted that this thickness is more than twice as thick as the average thickness of oil sands in wells in the Midway, McKittrick and Sunset fields. R. IV–2629–2635.

Defendants' logs and charts not only grossly misrepresented the production of the three deep wells but the formations are misrepresented and the occurr nce of sands and boulders concealed. Defendants' expert, F. M. Anderson, testified that the Elk Hills were too far removed from any ancient shore line to contain sands sufficient for a reservoir for oil in commercial quantities and that "boulders" were evidences of shore line conditions. The drilling reports specifically show that boulders were encountered on a number of days, but their occurrence was not noted on defendants' logs or charts. The presence of boulders would have destroyed Anderson's shore line theory, hence their suppression.

After the defendants had refused to offer the original daily reports in evidence and the Government had offered them and had established the incorrectness of the defendants' tabulations, it is passing

strange that the defendants failed to offer L. J. King, the superintendent who made the reports, to substantiate their contention that the reports were only estimates. The reports do not profess to be estimates and if King had been offered by them, he no doubt would have stated that the reports as sent in were correct. Besides, there was another reason why King was not examined by the defendants and this was because he had been a witness in the contest at Visalia in which the Associated Oil Company, was contesting, through its lessors, the application for a patent on the ground of a discovery of Fuller's earth of the prior locators of the sections on which these producing wells were located, the Associated Oil Company contending that the wells had established the valuable oil character of the lands. It is also significant that the defendants did not produce W. A. Williams, the chief geologist of the Associated Oil Company, who, W. E. White admitted, made up the logs which were introduced by defendants. R. V–3325. Williams was also a witness in the Visalia contest in which the railroad through its subsidiary oil company was attempting to establish the valuable oil character of these lands with a view of securing a mineral patent, and it could not consistently use the same witnesses in its effort in this case to show their non-mineral character.

(b) Unsuccessful wells.

There were a number of wells which were drilled in the Elk Hills in 1910 and 1912 which were not productive but in nearly every one of them there was a showing of gas and oil. The evidence establishes the fact that they were not successful either because they were not properly located with reference to the axis of the anticline or they were drilled to an insufficient depth, the depth varying from a few hundred feet to approximately four thousand feet, the depth of the three successful wells of the Associated Oil Company. Space will not permit a detailed reference to the voluminous testimony covering these wells.

The defendants' chief expert, Anderson, admitted that the wells in the Elk Hills which were drilled by the Associated Oil Company, and discovered oil, are reasonably near the axis of the anticline and are on lands contiguous, adjoining and interspersed with the lands in suit and that many of the wells which he observed on the fringe of the hills and which were not in operation in 1912 "are remote from the axis of the anticline and all of them are in very unfavorable position, even those on the anticline." R. IV–2640–2.

The defendants in their brief upon the facts in the Circuit Court of Appeals refer specifically to four of the unsuccessful wells, to-wit: Redland Oil Company well on 30 of 30–23, the Hill Crest on 28 of 30–23, The Midway Pacific on 32 of 30–23 and the Scottish Oil Fields on 20 of 30–23.

In the Redland well, John Lang, defendants' witness, testified that gas was found at 520 feet and a

color of oil at 1,050. R. III–1954. At 1,300 feet gas was discovered in sufficient quantity to ignite and set fire to the rig and burned it down. R. III–1956. He further testified that the well went down 2,850 feet and that wasn't deep enough to prove anything definitely about that being oil territory; that oil might be gotten in paying quantities from 3,500 to 4,000 feet. R. III–1963.

As to the Hill Crest well, Lang testified they went down to 1,670 feet and that was not deep enough to test the territory. R. III–1962. He also testified this company hasn't abandoned the property, but keep a watchman there and hope to develop the property as soon as the necessary funds are secured. R. III–1960.

As to the Midway Pacific well, Lang testified it was drilled to a depth of 2,425 feet and that this was not deep enough to test it. R. III–1963. A trace of oil and gas was encountered at 1,535 feet. R. IV–2314.

As to the Scottish Oil Fields well, T. M. Storke, defendants' witness, and one of the organizers of the Company, admitted that the well was not located upon the advice of a geologist. At 850 feet some gas was struck and at 1,400 feet a heavy flow of gas and at 2,600 feet considerable gas and after that gas would break through every now and then. R. III–2044.

> Our well was started in November, 1910, subsequent to the withdrawal order of 1909 and 1910 so if we had discovered oil in com-

> mercial and paying quantities before we pulled our tools from the well we were uncertain as to the validity of any title we might acquire from the Government. R. III–2045.

John Lang further testified:

> The fact that the Government of the United States has withdrawn from entry the land in the Elk Hills has to some extent had something to do with our not doing anything further with our locations as it makes it doubtful whether or not we can get title to the land. The withdrawal, I think, has also had a tendency to discourage capital and has discouraged locators because of their inability to get capital interested. R. III–1955.

Instead of the development in the Elk Hills tending to establish the non-mineral character of the lands in suit, we submit that it has the contrary effect. Dr. Branner testified that it confirmed his previous belief in its valuable oil character (R. II–1003) and others testified to the same effect.

During the trial defendants called for the production of the reports made to the Government by Robert Anderson. President Taft on September 2, 1912, withdrew the lands in suit, together with other lands in the Elk Hills for the use of the Navy and established Petroleum Naval Reserve No. 1. This withdrawal order was based largely upon the geological investigations made by Robert Anderson. His reports, upon demand, were produced by the government but after inspecting them, the defendants did not offer them and they were thereupon

offered in evidence by the Government. In a report made in August, 1912, Anderson stated that he believed in most cases where the wells had not been proven successful that the tests were not adequate and called attention to the three successful wells of the Associated Oil Company. Ex. 5–T. After a visit to the Elk Hills he reported in November, 1912, that in his opinion the reserved area would yield 100,000,000 barrels of oil as a conservative estimate. His original estimate was 250,000,000. He made reference in this report to the development which had taken place in the Elk Hills and he concluded that the southwest fringe of the hills, where the unsuccessful wells had been drilled, would not be as productive as the summit where the lands in controversy are situated and that the only three wells drilled to an adequate depth in the central part of the hills were the Associated Oil Company's wells and that these struck zones in which the oil was under pressure and spouted, the one on section 24 having come in at the rate of 1,000 barrels per day and the other on section 30 having produced from 150 to 300 barrels per day and both sanded up after some days. Ex. 5–V.

The Associated Oil Company has not abandoned its wells in the Elk Hills. M. H. Whittier, defendants' witness and a director of the Oil Company, testified that the Oil Company had not abandoned any of its property in the Elk Hills. R. III–1987. This also clearly appears from the testimony of J. W. Kingsbury. R. VI–3692–6.

CONCLUSION.

We submit that the "known conditions" and other circumstances as established by the evidence in this case are remarkably similar to those in the *Diamond Coal* case, 233 U. S. 236, 241–248. In that case the Court said the evidence established the following facts:

> (1) The patents were all secured by means of affidavits and proofs, . . . declaring that the lands were essentially non-mineral, were not known to contain any deposit of coal and were sought for agricultural purposes, and not for mineral land.

The patent here was secured by similar proofs.

> (2) For many years the district in which the lands were situate had been known to contain coal. They were surveyed in 1874, and the surveyor reported one of the sections as coal land, the others being contiguous to land similarly reported. This was shown in the field notes and upon the official plats.

The evidence here shows that the lands in suit were in a well recognized oil district and surrounded by surface indications of oil and withdrawn from entry because of their probable oil character and the survey of 1901 reported them as mineral (oil) lands and this was shown in the field notes and upon the official plat.

> (3) Along the western base of the eastern hills was the outcrop of another coal bed. This outcrop had been weathered down and

> in some places covered by the wash from above, but it could be traced upon the surface for several miles. It had been opened up at different places and the openings disclosed a coal bed, from 6 to 14 feet in thickness dipping to the west at an angle of from 15 to 25 degrees from the horizontal, as did the cretaceous rocks with which it was interstratified. This coal was of superior quality and recognized commercial value, and the rocks containing it were the coal bearing strata of that region.

The outcrop of oil bearing strata was exposed on the eastern flank of the Temblor Range and its commercial value for oil was demonstrated by more than two hundred producing wells drilled prior to patent, extending for thirty miles from McKittrick to Sunset. This outcrop was west of and within a few miles of the lands in suit and dipped towards them.

> (4) There was nothing upon their surface showing the presence of coal beneath, nor anything indicating that the bed outcropping on the east and dipping to the west did not pass through them.

In our case there were upon the surface of the lands in suit and upon those in the vicinity, oil sands, seepages and other indications of oil and there was nothing indicating that the outcropping did not pass through the lands in suit, but the evidence of Dr. Branner, Veatch and the reports and maps of Owen and other evidence clearly show that there was every reason to believe the outcrop did pass through

the lands in suit, and it is conceded that the anticlinal structure of the lands is ideal for the accumulation and retention of oil.

> (5) Unless valuable for coal, they were not worth to exceed a dollar and a quarter an acre. They were arid sage brush lands, about 7,000 feet above sea level, and afforded very limited pasturage. Without irrigation they were not susceptible of cultivation, and the cost of securing water for that purpose was prohibitive.

The evidence shows that the lands now sued for are of like character.

(6) The expert for the Government (Veatch) having in mind the known geological conditions—

> gave it as his opinion that the coal bed extended into and through the lands in question and that practical coal men would regard the lands as valuable for coal and invest in them as such. He accordingly pronounced them coal lands within his acceptation of that term. This conclusion had substantial support not only in the facts already recited, but also in the fact that the Company's maps, made three years before the suit was begun, showed that it was intended to project its mining operations westward from the outcrop a mile and a half and had designated the intervening lands, which included some of those in controversy, as coal lands.

Likewise in the case at bar the same expert and also Dr. Branner, upon similar geological conditions,

gave it as their opinion that practical oil men would regard the lands as valuable for oil and invest in them as such. This conclusion likewise had substantial support in the fact that the Company's maps and reports, made by its experts two years before patent, showed that it was intended to extend its oil operations eastward from the outcrop beyond the lands in suit and had designated lands interspersed with the lands in suit as oil lands, had segregated them from its agricultural lands, and was going to develop them for oil through its subsidiary, the Kern Trading and Oil Company.

> (7) In short, the company, without care as to the means, sought and acquired the lands because it regarded them as valuable for coal. Its view and purpose were also reflected by its maps and tax returns.

Here the Company's purpose to acquire the lands without care as to the means is reflected in its maps and lease and in the secret file of Eberlein's correspondence.

On account of the known conditions, the belief was generally entertained in 1903 and 1904 that the lands in suit were valuable oil lands. This belief was entertained not alone by the experienced and practical oil men of that region, but also by the geologists and responsible officials of the Railroad Company, evidenced by their acts and deeds, and by the documents and correspondence which furnished plenary evidence of belief in the oil character of the lands and their

purpose to deceive the officers of the Land Department.

In view of the evidence establishing the similarities in the essential facts constituting the known condition in the two cases and in other respects and the close analogy between coal and oil in their mode of deposition and situation in the earth as shown by the evidence, we submit that the rule laid down in the *Diamond Coal* case applies to the facts of this case and tested by that rule, the known conditions at the time of the proceedings which resulted in the patent, were plainly such as to engender the belief that the lands contained oil deposits of such quality and in such quantity as would render their extraction profitable and justify expenditures to that end and that the lands were and are known mineral lands excepted from the grant to the Railroad Company and that the patent was procured by the false and fraudulent representations of the Railroad Company.

It is respectfully submitted that the decree should be reversed.

J. CRAWFORD BIGGS,
Special Assistant to the Attorney General.

FRANCIS J. KEARFUL,
Assistant Attorney General.

FEBRUARY, 1919.

○

CASES ADJUDGED

IN THE

SUPREME COURT OF THE UNITED STATES

AT

OCTOBER TERM, 1919.

UNITED STATES *v.* SOUTHERN PACIFIC COMPANY ET AL.

APPEAL FROM THE CIRCUIT COURT OF APPEALS FOR THE NINTH CIRCUIT.

No. 179. Argued March 5, 6, 1919.—Decided November 17, 1919.

Lands valuable for oil and known to be so at the time of their selection by and patent to the Southern Pacific Railroad Company under the granting Act of July 27, 1866, c. 278, 14 Stat. 292, were excepted from the grant as mineral lands; and a patent for such lands, issued in reliance upon representations that the lands were not mineral, made by the company's officials when they believed the fact was otherwise, is subject to be set aside in a suit by the United States. Pp. 7 *et seq.*

In order to establish the character of lands, in this connection, as lands valuable for oil, it is not necessary that they shall have been demonstrated to be certainly such by wells actually drilled thereon and producing oil in paying quantities after a considerable period of pumping; it suffices if the conditions known at the time of patent, as to the geology, adjacent discoveries, and other indicia upon which men prudent and experienced in such matters are shown to be accustomed to act and make large expenditures, were such as reasonably to engender the belief that the lands contained oil of such quality and in such quantity as would render its extraction profitable and justify expenditures to that end. P. 12.

In this case the conditions evincing oil value in this sense persisted

after the date of patent; and the court therefore does not consider the question whether, if such conditions were proven illusory by subsequent drilling, the demonstration would support the patent. P. 14.

A report of a special agent that lands embraced in a railroad selection were non-mineral, but made in another connection and not relied on by the railroad company in renewing the selection or considered by the land officers in approving it and issuing patent, can not avail against proof that the lands were known by the company to be valuable for oil; nor is it of value as evidence of their non-mineral character if based on a superficial examination by one who was neither a geologist nor familiar with oil-mining. *Id.*

249 Fed. Rep. 785, reversed.

THE case is stated in the opinion.

Mr. J. Crawford Biggs, Special Assistant to the Attorney General, and *Mr. Assistant Attorney General Kearful* for the United States.

Mr. Charles R. Lewers, with whom *Mr. William F. Herrin* and *Mr. Joseph P. Blair* were on the brief, for appellees:

Opinion or surmise that oil might exist, at an unknown depth, from four to ten miles from its nearest known occurrence is not convincing proof that the conditions in 1904 "were plainly such as to engender the belief that the land contained mineral deposits of such quality and in such quantity as would render their extraction profitable and justify expenditures to that end." *Diamond Coal Co.* v. *United States*, 233 U. S. 236, 240.

The "belief" here referred to must be a belief practically tantamount in its effect to actual knowledge, that is, a belief based on facts so complete as to exclude rational doubt. Even actual knowledge (or such a fully warranted belief) on the part of the railroad agents would not justify the relief here asked by the Government if it went merely to the existence of some oil somewhere within the area sued for. This knowledge (or belief) must be shown to

have also comprehended every element of location, quantity and quality which would have given this oil commercial availability and value under conditions then existing. Without such knowledge there could be no fraud, that is, there could be no consciousness that the Government was being deprived of land which it ought to retain. The case of the Government is based on a theory which leaves out of consideration all questions of extent, position, availability or value of oil within the disputed areas. It frankly attempts to obtain a decree on the ground that every acre in suit has that nebulous thing termed an "oil value," that is, a speculative value, because the surroundings are claimed to promise that perchance oil will be found somewhere in the Elk Hills.

If hope or suspicion that oil might be found somewhere in the Elk Hills can give to the particular lands in suit the requisite mineral character to warrant cancellation, the railroad company may lose by judicial decree lands which subsequent drilling may prove to fall unquestionably within its grant. Such a result is hardly in accord with equity.

Only those lands may be lawfully taken from the railroad company which were in fact mineral lands at the time of patent. *Burke* v. *Southern Pac. R. R. Co.*, 234 U. S. 669, 679–680; *Davis* v. *Weibbold*, 139 U. S. 507, 524; *Deffeback* v. *Hawke*, 115 U. S. 392; *Diamond Coal Co.* v. *United States*, 233 U. S. 236, 239.

It is fair to assume that in the use of the two terms "mineral lands" and lands "not mineral" in the various acts of Congress for the disposal of the public domain, all public lands were intended to be described. "Mineral lands" were those which could be acquired under the mining laws. Lands "not mineral" were disposed of by the homestead, railroad, school and other "non-mineral" grants. *Cf. Benjamin* v. *Southern Pacific R. R. Co.*, 21 L. D. 390.

But, if the present contention of the Government is correct, there must be a third class not capable of disposal under any law (see comment of Circuit Court of Appeals on this, 249 Fed. Rep. 797). It is conceded that a mineral patent would not issue for a single acre in the Elk Hills on the showing of mineral made by the Government in this case, because the evidence is not sufficient to prove a *discovery* of mineral. *Chrisman* v. *Miller*, 197 U. S. 313. If there was not a sufficient "discovery" of oil on these lands to sustain a mining location, there obviously was not a discovery of oil sufficient to establish them as actually "valuable" oil lands. The word "discovery" in the mining laws means simply the ascertainment of the existence of the mineral, its disclosure. Unless these lands were known in 1904 to be actually valuable for the oil that was in them, the Government suffered no legal damage by their loss and the railroad company gained nothing not due it under its contract. Without legal damage to the Government there can be no relief on the ground of fraud. *Southern Development Co.* v. *Silva*, 125 U. S. 247; *United States* v. *San Jacinto Tin Co.*, 125 U. S. 273, 285; *United States* v. *Stinson*, 197 U. S. 200, 205.

The government case is founded entirely on the use of the word "belief" by this court in the case of *Diamond Coal Co.* v. *United States*, 233 U. S. 236, 239–240, without recognition, apparently, of the fact that the context indicates that what was there meant by "belief" was a conviction resulting from evidence so full and definite that it points with convincing force to a conclusion which includes not only the fact of the existence of the mineral but its extent and value as well. *United States* v. *Beaman*, 242 Fed. Rep. 876.

In the present case the mineral in question is oil, which is notoriously uncertain in its occurrence, extent and value as compared with coal; and the circumstances were such that a belief that these were valuable oil lands

could not have been a conviction that merchantable oil existed.

The fact that mere "indications" of the existence of oil are not proof of its existence or of its quantity or location has received judicial recognition on many occasions. *Brewster* v. *Lanyon Zinc Co.*, 140 Fed. Rep. 801, 806; *Nevada Sierra Oil Co.* v. *Home Oil Co.*, 98 Fed. Rep. 673, 675.

It is unsound to say that decisions under the mining law are here inapplicable because that law requires ocular demonstration of mineral in the land claimed, All that the word "discovery" means in that law (Rev. Stats., § 2320) is ascertainment of the existence of the vein or lode within the claim, and even in the case of a lode the exposure to the eye may be elsewhere. *Brewster* v. *Shoemaker*, 28 Colorado, 176, 182. The statute concerning placer claims makes no special requirement as to the actual place of discovery. The special statute of 1897 for the location of oil claims makes no change in this respect except the requirement that the proof show that the claim is "chiefly valuable" for oil (29 Stat. 525). Under the placer law it has been held that evidence of gold appearing within the claim, held insufficient in itself to constitute a discovery, might be supplemented by evidence showing greater amounts of gold disclosed in adjacent ground. These cases really hold that the evidence which actually constituted the full discovery came from without the claims. That such a condition might also exist as to an oil claim under exceptional facts is indicated by *Nevada Sierra Oil Co.* v. *Miller*, 97 Fed. Rep. 681, 688, 689. It is obvious that the practical question, with which the mining law is alone concerned, is whether there is valuable mineral within the claim. Evidence which certainly indicates this is discovery, no matter where the evidence is found, and the word "discovered" is used in the mining law in exactly the same sense in which it was used by this

court in the case of *Deffeback* v. *Hawke*, 115 U. S. 392, 404. Mere indications do not suffice.

Cases arising under the mining laws, in which it is held that oil is so uncertain in its occurrence and extent that surrounding conditions do not prove a discovery, are therefore directly in point. *Chrisman* v. *Miller*, 197 U. S. 313, 323; *Miller* v. *Chrisman*, 140 California, 444, 446; *Olive Land Co.* v. *Olmstead*, 103 Fed. Rep. 568; *United States* v. *McCutchen*, 238 Fed. Rep. 575, 591; *Bay* v. *Oklahoma Oil Co.*, 13 Oklahoma, 425; *Weed* v. *Snook*, 144 California, 439; *New England &c. Co.* v. *Congdon*, 152 California, 211; *McLemore* v. *Express Oil Co.*, 158 California, 559; *Dughi* v. *Harkins*, 2 L. D. 721; *Hutton* v. *Forbes*, 31 L. D. 325, 330; *Southwestern Oil Co.* v. *Atlantic &c. Ry. Co.*, 39 L. D. 335; *Butte Oil Co.*, 40 L. D. 602.

That belief not based on clear demonstration is not proof of mineral character, see also *Iron Silver Mining Co.* v. *Reynolds*, 124 U. S. 374; *Iron Silver Mining Co.* v. *Mike & Starr Co.*, 143 U. S. 394; *Sullivan* v. *Iron Silver Mining Co.*, 143 U. S. 431.

Fraud cannot be predicated upon the expression of an opinion concerning the existence of hidden mineral deposits. 2 Addison on Torts, Wood's ed., § 1186; *Southern Development Co.* v. *Silva*, 125 U. S. 247, 252; *Gordon* v. *Butler*, 105 U. S. 553; *Holbrook* v. *Connor*, 60 Maine, 578; *Synnott* v. *Shaughnessy*, 130 U. S. 572.

Mr. Justice Van Devanter delivered the opinion of the court.

This is a suit by the United States to cancel a patent issued December 12, 1904, to the Southern Pacific Railroad Company for eight full and two partial sections of land within the indemnity limits of the grant made to that company by an act of Congress, c. 278, 14 Stat. 292, it being charged in the bill that the railroad company

fraudulently obtained the patent by falsely representing to the Land Department that the lands were not mineral but agricultural, when it was known that they were mineral. From the evidence presented the District Court found that the charge was true and entered a decree of cancellation, and this was reversed by the Circuit Court of Appeals, one judge dissenting. 249 Fed. Rep. 785.

"All mineral lands" other than those containing coal or iron were excluded from the grant, and this exclusion embraced oil lands. *Burke* v. *Southern Pacific R. R. Co.*, 234 U. S. 669, 676–679. As will be seen presently, there can be no doubt that the patent was procured by representing that the lands were not mineral. Whether this representation was false turns upon the character of the lands as known when the patent was sought and obtained. If they then were known to be valuable for oil, as the Government asserts they were, they were mineral in the sense of the granting act.

To compensate for losses to the grant within its primary limits the railroad company was entitled to select other lands of like area within the indemnity limits, approval by the Secretary of the Interior being essential to passing the selections to patent. The established mode of making the selections was by presenting at the local land office selection lists designating the lands lost and those selected, with supporting affidavits showing, among other things, that the lands selected were of the character contemplated, that is to say, were not mineral but agricultural. These lists and affidavits would then be examined in that office and in the General Land Office, and ultimately the selections would be passed to the Secretary of the Interior for his action. That course was followed here.

The original list was presented November 14, 1903, but it encountered obstacles which led to the presentation of a substituted list covering the same lands on Septem-

ber 6, 1904. Both lists were presented by the company's land agent, Mr. Eberlein, and were accompanied by affidavits made by him stating that the lands selected "are not interdicted mineral" but "are of the character contemplated by the grant" and that "he has caused" them "to be carefully examined by the agents and employees of said company as to their mineral or agricultural character, and that to the best of his knowledge and belief none of the lands returned in said list are mineral lands." In acting on the substituted list the officers of the Land Department relied upon and gave effect to the statements in the supporting affidavits, and the selections were accordingly approved and passed to patent.

In truth Mr. Eberlein had not examined the lands or caused them to be examined by others. Nor had any examination of them been made on behalf of the railroad company, save such as is inferable from the conduct of its geologists and others presently to be noticed.

The lands were in the Elk Hills in Kern County, California; were rough, semi-arid and unfit for cultivation; were devoid of timber, springs or running water, and had but little value for grazing. Oil had been discovered in that region as early as 1899 and this had been followed by development and production on an extensive scale. In 1903 and 1904 there were many producing wells about 25 miles to the east and many within a much shorter distance to the west and south, some within three or four miles. The railroad company was then maintaining a corps of geologists—all informed by experience in the California oil fields—and under their supervision was searching for, developing and producing oil for fuel purposes. In 1902, upon the recommendation of one of its geologists, it withdrew from sale many of its patented lands surrounding and adjacent to those in suit "because they were in or near oil territory"; and early in 1903 it entered upon a systematic examination of its lands in

that territory "to determine as far as can be done from surface indications and geological structure where oil is to be expected in this region." In a letter to Mr. Kruttschnitt, one of the company's vice presidents, the chief geologist said when about to take up the examination: "So far as I can judge from the trip I have just made over this territory, this work promises results of greatest value to the company."

The lands in suit were surveyed in 1901 and the approved plat was filed in the local land office in May, 1903. The field notes denominated the lands as mineral and described them as in a mineral district "within which many successful oil wells have been developed." As before stated, the original selection list was presented November 14, 1903. Mr. Kruttschnitt already had written to the company's attorney at Washington requesting that "special attention" be given to securing a patent for the lands when selected; and shortly thereafter Mr. Eberlein wrote to the attorney, saying: "I am particularly anxious in regard to this list as the lands adjoin the oil territory, and Mr. Kruttschnitt is very solicitous in regard to it." Other letters and telegrams show that this special concern or anxiety persisted until the patent was issued.

In 1903 the company concluded to lease such of its lands as were considered "valuable for oil purposes" to a subsidiary company which was to be a sort of fuel department and to have charge of the development and production of oil. The geologists were requested to designate the lands to be thus leased and as a result of their investigation and recommendation several sections adjacent to and some immediately adjoining those in suit were included. The lease was to be signed on behalf of the railroad company by Mr. Eberlein as land agent and was laid before him for that purpose on August 2, 1904. Perceiving at once that its execution would not be in ac-

cord with his action in pressing the pending selection list he took the matter up with some of his superiors. To one he said in a letter: "We have selected a large body of lands interspersed with the lands sought to be conveyed by this lease, and which we have represented as non-mineral in character. Should the existence of this lease become known it would go a long way toward establishing the mineral character of the lands referred to, and which are still unpatented. We could not successfully resist a mineral filing after we have practically established the mineral character of the land. I would suggest delay at least until this matter of patent can be adjusted." To the same officer he protested against the action of the geologists in examining unpatented lands because "it was charging the company with notice." And to another, in New York, he explained "all phases of the matter," with the result that the "impropriety of the lease at that time" and the "very ambiguous position in which we would be placed" were recognized and he was instructed to withhold his signature and to place and keep all correspondence and papers relating to the lease in a separate and private file not accessible to others. He followed the instruction and the special or secret file remained in his possession "until," as he testified, "it was pried out" at the hearing.

But notwithstanding what was brought to his attention through the proposed oil lease, Mr. Eberlein continued actively to press the pending selection, and when, about a month later, he presented the substituted selection list it was accompanied by affidavits wherein he repeated his prior representation that the lands were not mineral. After presenting this list he had a conference with the chief geologist which prompted the latter, when writing to a superior officer, to explain that "for reasons of policy regarding certain unpatented lands it will be best not to execute the lease . . . at present."

The lease was placed by Mr. Eberlein in the special or secret file and some time afterward, when an effort was made to find it, he denied all knowledge of it. The denial was brought to the attention of the chief geologist, and he at once wrote to Mr. Eberlein calling attention to the conference just mentioned, and stating: "You explained that you were rushing certain lands for final patent and that the immediate execution of the lease showing our idea of what were oil lands might interfere with you and we agreed to defer the execution until that danger was passed." The chief geologist was a witness at the hearing and when asked what danger was meant, answered: "The danger that these lands might be delayed and not be patented because of their mineral character."

All that has been recited thus far is proved so well that it is beyond dispute. Fairly considered, it shows that when the patent was sought and obtained the lands had no substantial value unless for oil mining; that the interest and anxiety displayed by the company's officers in securing the patent were wholly disproportionate to the value of the lands for any other purpose; that the lands lay within a recognized and productive oil region which the company's geologists had been systematically examining to determine in what lands oil was to be expected, and that upon the advice and recommendation of its geologists the company was treating and dealing with adjacent and adjoining lands, of which it was the owner, as valuable for oil. Of course among practical men the character—whether oil or otherwise—of these adjacent and adjoining lands had some bearing on the character of those in suit, and this was given pointed recognition when the company's officers halted the signing of the proposed oil lease pending action on the selection list and caused the correspondence and papers relating to the lease to be secreted in a special and private file.

We think the natural, if not the only, conclusion from

all this is that in pressing the selection the officers of the railroad company were not acting in good faith, but were attempting to obtain the patent by representing that the lands were not mineral when they believed the fact was otherwise.

The observable geological and other physical conditions at the time of the patent proceedings, as shown by the evidence, were as follows: The area called the Elk Hills was about six miles wide and fifteen long and constituted an anticlinal fold or elongated dome—an occurrence favorable to the accumulation and retention of oil. The lands in suit were about its center. From five to ten miles to the west was the Temblor Range, the main uplift of that region. Along the east flank of that uplift for a distance of thirty miles was a series of outcrops or exposures of Monterey (diatomaceous) shales, the source of oil in California, and porous sandstone in which oil generally finds its ultimate reservoir. These strata were of exceptional thickness and it was apparent that oil in considerable quantity had been seeping or wasting from the sandstone. The dip of the strata was towards the Elk Hills and there were no indications of any faulting or thinning in that direction. Between the outcrop and the Elk Hills upwards of two hundred wells had found the oil-bearing strata and were being profitably operated, several of the wells being on a direct line towards the lands in suit and within three or four miles of them. In and beyond the Elk Hills were oil seepages and other surface indications of the existence of oil in the underlying strata, one of the seepages being near the lands in suit. Two wells had been sunk in the Elk Hills but obviously had not gone to an adequate depth and were not productive, although some oil was reached by one.

Geologists and men of wide experience and success in oil mining—all of whom had examined that territory and

some of whom had been familiar with it for years—were called as witnesses by the Government and gave it as their opinion, having regard to the known conditions in 1903 and 1904, as just outlined, that the lands were valuable for oil, in that an ordinarily prudent man, understanding the hazards and rewards of oil mining and desiring to engage therein for profit, would be justified in purchasing the lands for such mining and making the expenditures incident to their development, and in that a competent geologist or expert in oil mining, if employed to advise in the matter, would have ample warrant for advising the purchase and expenditure.

Other geologists and oil operators, called by the company, gave it as their opinion that the lands were not, under the conditions stated, valuable for oil; but as respects the testimony of some it is apparent that they were indisposed to regard any lands as within that category until they were demonstrated to be certainly such by wells actually drilled thereon and producing oil in paying quantities after a considerable period of pumping. This is a mistaken test, in that it takes no account of geological conditions, adjacent discoveries and other external conditions upon which prudent and experienced men in the oil mining regions are shown to be accustomed to act and make large expenditures. And the testimony of some of these witnesses is weakened by the fact that their prior acts in respect of these lands, or others in that vicinity similarly situated, were not in accord with the opinions which they expressed.

After considering all the evidence, we think it is adequately shown that the lands were known to be valuable for oil when the patent was sought and obtained, and by this we mean that the known conditions at that time were such as reasonably to engender the belief that the lands contained oil of such quality and in such quantity as would render its extraction profitable and justify ex-

penditures to that end. See *Diamond Coal Co.* v. *United States*, 233 U. S. 236.

The railroad company places some reliance on the fact that after the presentation of the original selection list and before the substituted one was tendered a special agent of the General Land Office examined the lands and reported them as non-mineral. But there is nothing in this that can help the company. The agent's report was made in another connection and was not considered by the land officers when they approved the selection. It did not relieve the company from showing that the lands selected were not mineral; nor did the company understand that it had any such effect. Mr. Eberlein knew of the report several months before he and other officers of the company became troubled over the proposed oil lease and concluded that, if given publicity, it would endanger the pending selection. Besides, if the report could be considered here, it would be without any real evidential value, for it appears from testimony given by the agent at the hearing that he was not a geologist or familiar with oil mining and that his examination of the lands was at best only superficial.

The company makes the contention that drilling done since the patent was issued has demonstrated that the lands have no value for oil. Assuming, without so deciding, that the contention would help the company if sustained by the evidence, we think it is not sustained. The drilling relied upon was done after 1909 upon lands in the Elk Hills other than those in suit. Several wells were started and not more than three were successful. The three were the only ones that were drilled in favorable locations and to an adequate depth, and they penetrated oil sands of considerable thickness and produced a large quantity of oil, but were shut down for reasons not made clear by the record. They were drilled by an oil company which was controlled by the railroad company.

1. Syllabus.

The other wells failed for reasons which prevent the outcome from having any significance here. In some the drilling was not carried to an adequate depth because the right to proceed was thought to be uncertain by reason of an executive withdrawal of the lands.

We conclude that the application of prior decisions to the case made by the evidence entitles the Government to the relief sought, as was held by the District Court. See *United States* v. *Minor*, 114 U. S. 233; *McCaskill Co.* v. *United States*, 216 U. S. 504; *Diamond Coal Co.* v. *United States, supra; Washington Securities Co.* v. *United States*, 234 U. S. 76.

Decree of Circuit Court of Appeals reversed.
Decree of District Court affirmed.
